Clementine—Nellie Fox.—They ran 43 minutes without finding. Their ranging was defective in its irregularity.

Dixie's Flag—Joe Cummings.—They were cast off at 4.49. Flag pointed a bevy in sedge and Joe flushed it. Joe pointed a bevy in woods and was steady to shot. He pointed well a single remaining bird. Following the bevy into woods Joe pointed it. He pointed a single and flushed one. Flag pointed; nothing found. Next, he pointed a single after which Joe pointed one. Up at 5.10. Neither showed good range. Joe showed good p ting capabilities, but apparently was a bit careless.

THURSDAY.

A cloudy, raw morning gradually changed to a good working day, a gentle, fresh wind blowing most of the time. Birds were found in abundance, the judges having a record of twenty-two bevies found by lunch time, but not all of them by the dogs. The interest of the spectators was well sustained. Thirty-five bevies were found when the work ceased.

FINAL.

Tony Gale—Lady Mildred.—They were started at 8.48. This was the concluding heat of this stake. Tony pointed and Lady backed. Nothing found.

He made a similar point in a cornfield. Next he made a good point on a bevy, and Lady back indifferently. Johnson failed to flush the birds, and sent the dog on. They were afterward flushed behind the place where the dog pointed. Sent on. Lady pointed a single bird in sedge and was steady to shot. Next, Lady pointed a bevy, after which she moved on about forty yards and flushed some remaining birds. Tory pointed well a bird in sedge. Next he found and pointed a bevy well.

Up at 9.27. In this heat, as in his previous ones, Tony found his bevies by casting for them and beating out the ground with judgment. He was industrious and constantly seeking for birds. His speed was well sustained, and he showed great staunchness in holding his points steadily when a long distance from his handler. Lady Mildred worked decidedly under the working form of her first heat. While she had capabilities for good work, she did not display them uniformly at their best.

This heat concluded the stake.

The judges soon announced the winners:

First, Tony's Gale; second, Tony's Boy; third, Lady Mildred; fourth, Cynosure; fifth, Lady Clare.

ALL-AGE POINTER TTAKE.

Full reports of Thursday and Saturday's running not having arrived yet, we take the following from dispatches.

This stake had fifteen starters, and the first series was finished on Thursday. Thirty-five bevies of birds were found. The day was cloudy, but favorable. Major Purcell's Lady Margaret, and N. T. Depauw's dog Jingo, ran first. Both were ordinary in pace, range and bird work. The second brace was Major Purcell's dog Cid, and the Charlottesville Kennel's dog Dogwood. The latter ran well and proved himself superior in all qualities. Next came Major Purcell's dog Sam Bang and Robert Leslie's dog King of Lyn. The latter moved well enough, but flushed all the birds he found. Sam Bang did some point work, but was ordinary in other particulars. D. P. Ritchie's Don and H. K. Deveraux's Tamarack, Jr., ran next. The latter was by far the best, though he hardly ran in his best form. G. R. Howse's bitch Lula K. beat W. N. Kerr's dog Little Ned. The Charlottesville Kennel's Delhi ran in good form, far outclassing Major Purcell's Saint Blaise, who is out of the race. Stoddard and Kidwell's Tick Boy and E. O. Damon's dog Strideaway ran a good competition, with honors about even. Charlottesville Kennel's Selah ran better than Louis McGrew's Spot S., the latter being the poorest dog in the stake. C. W. Depauw's dog Verge ran a bye heat, finishing well enough to start again in the second series, which had ten to run, as follows: Dogwood with Tamarack, Jr., Delhi with Tick Boy, Jingo with Lula K. Strideaway with Selah, and Cid with Verge.

FRIDAY.

A severe rain storm prevented any running in the trials today.

SATURDAY.

The conditions were very unfavorable to good work as the ground was frozen hard and very slippery after the rain. In the Pointer All Age stake, the first brace down in second series was Dogwood and Tamarack, Jr. The latter did better point work, though in much of the work there was little difference between the two.

Delhi and Tick Boy came out next and the former kept up his good running, proving superior to the other dog. Strideaway and Jingo—Jingo did the best work in any one heat during the trials, and outclassed Strideaway, who did not range out as he should have done. Lulu K. and Selah and Cid and Verge did only ordinary work.

The winners were: Delhi first; Jingo, second; Tick Boy, third; Strideaway, fourth; Tamarack, Jr., fifth.

Then the All Age Setter stake was started and first series run through. Eighteen starting.

West Point, Miss., January 28. Special to Forest and Stream:

Rain and sleet storm prevented the competition from starting to-day.

(Full reports will appear next week.) B. WATERS.

SOME MORE DOG CHAT.

The annual meeting of the Boston Terrier Club was held at Young's Hotel, Boston, on January 23, and the following officers were elected to serve for the ensuing year: President, Herbert Merriam; Vice-President, Dwight Baldwin; Secretary, Frederick G. Davis; Treasurer, Robert J. Clark; Executive Committee, George N. Phelps, J. F. Holt, William E. Bright, together with the above-named officers. Delegate to the A. K. C., L. A. Burritt.

The annual meeting of the Gordon Setter Club of America will be held at Madison Square Garden, New York, on Wednesday, February 20, at 7:30 P. M. The members are requested to send in their annual dues ($5) and the names of those to be proposed for membership to L. A. Van Zandt, Secretary-Treasurer, 938 Prospect avenue, N. Y.

In our business columns will be noticed the announcement of Mr. F. Schmidt's well-known St. Bernards being placed at stud. The Hell Gate Kennels hold a pretty strong hand in this breed since Mr. Schmidt purchased the bulk of Col. Ruppert's kennel, and we have interesting accounts of the litters sired recently by the Hell Gate dogs. Royal Duchess had a litter of seven by Ch. Otos, and Ruth Cleveland is nursing seven by Kingstonian Count. The well-known Altonette is the mother of nine by Roland, Jr., and Tyra also has a litter of nine by the same dog. Lady Bountiful had ten by Ch. Otos, and Nellie Bly ten by Franciscan. Kingstonian Countess and Glory are also due in a few days. We give these particulars to prove that one breeder at least cannot complain of bitches missing. Naturally the Hell Gate Kennels are crowded, and it is no wonder that Mr. Schmidt wishes to sell some puppies.

Mr. E. Bardoe Elliott, of the Chesterford Park Kennels, Maywood, Ill., writes: "It having come to my knowledge on several occasions lately, both verbally and in writing, that unscrupulous parties are selling and representing dogs as having been purchased at or come from these kennels, I write this to warn all those who may have purchased such dogs, and intending buyers, that no dog leaves this kennel without a certificate of sale stamped: 'The Chesterford Park Kennels,' and signed by me as manager, and therefore to demand this certificate with all dogs represented as having been sold as bred by me, and if it cannot be produced to stamp the party offering such dogs as frauds."

The following intimation was received too late for publication in our last issue. In regard to the Chevalier—Lady Margaret race, Mr. Avent writes that as Major J. R. Purcell might think it too long to wait until after the U.S. field trials to bring off the race, he was willing to have the race run any day during the trials when the judges would not require his dogs for two hours. Major Purcell was advised of this in due season, but we have not heard if the proposed match took place.

The British Fancier has made a new departure by issuing its first Annual Review in book form. This innovation redounds greatly to their credit. A feature of the work is an illustrated account of the Kennels and Homing Pigeon Lofts of the Prince of Wales, at Sandringham. The reviews of the various breeds of dogs in 1894, are very interesting, and valuable for fancier's reference and the portraits of the writers seem to bring us nearer to acquaintance with men whose names are household words in the canine world. From this work the reader can form a very good idea of the standing and merits of the leading dogs of all breeds in England, and acquire a knowledge of the progress or decline of the different breeds. The same scheme is also carried out in regard to poultry and pigeons and the British Fancier is to be congratulated on its enterprise, of which we shall take opportunity to avail ourselves later on.

In bulldogs the Mascoutah Kennel Club desire to encourage the breed in Cook County, Ill., for all their medals are offered to local competition only. The bull terrier list is at first sight rather imposing, but closer examination shows that Cook County and Illinois get the plums, this rather narrow policy should not be carried too far, that is if a good class of outside dogs are expected. The Boston terriers are well provided for, and the B. T. C., with their usual pluck, offer cash specials. Beagles and Dachshounds cannot complain, but in fox terriers one finds the Cook County proviso again prominent. The Chicago Fox Terrier Cup and the Garfield Cup are valuable trophies of $50 and $150 respectively. The Bench Show Committee this year is composed of Walter C. Gunn, Chairman; A. J. Caton, J. Wallace Wakem, W. E. Rothermel, Paul Warren. Of course the president, Mr. W. J. Bryson, will be a busy man again and we trust that Mr. Payson, the treasurer, will have his hands full. Entries close Feb. 16.

The annual meeting of the Philadelphia Kennel Club was held at the Aldine Hotel, on Tuesday, January 22. The following officers were elected to serve for the ensuing year: President, Dr. G. G. Davis; Vice-President, Mr. George H. Thomson; Treasurer, S. Murray Mitchell; Secretary, Dr. Alexander Glass; Directors, Messrs. J. H. Winslow, Francis G. Taylor, Charles H. Phelps, G. Schreiber and Dr. George D. B. Darby. Delegate to the American Kennel Club, Mr. Francis G. Taylor.

We note in our business columns that Mr. Geo. W. Price, offers for sale a more than average good bitch, by Warren Landlord and Warren Chance, by Royal and Diana. Lass won first, open and novice, at late Cincinnati show, first time of asking.

The Grand Jury at Columbus, O., reported on Jan. 25, that the county ought to purchase a pack of bloodhounds to be kept by the Sheriff at the county jail, so that the criminal bailiff as soon as a crime was reported, in outlying districts, ought to repair to the scene and place the dogs on the trail.

Mr. Sam Woodiwiss has cabled the W. K. C. that he will surely bring over a team of bulldogs, old English sheepdogs, and greyhounds.

The Llewellyn setter, Count Beaufort is now being put into bench show condition by Ben Lewis, and will be shown by this "Prince of Handlers" as the advance agent would say. This is confirmation enough to stamp the dog a good one. Mr. Diffenderffer, we understand, would like to sell him at the coming show, as business does not admit of much time being devoted to shooting. Particulars of this dog may be found in our stud columns.

A Brooklyn youngster has a pair of St. Bernards which he drives hitched up to a handsome little sleigh. The dogs are well trained and are said to enjoy the fun. Thus is the original reputation of the St. Bernard turned to practical account in this latter day century.

The sale of the late J. M. Tracey's paintings and sketches will take place at the Fifth Avenue Auction Rooms, New York, on Feb. 18 to 22. The executor, C. Klackner, 7 West Twenty-eighth street, New York, will provide on applications catalogues.

Recently, we noted a rumor to the effect that the bull dog Handsome Dan was dead. We were unable to confirm this news, and a letter from Mr. Dole informs us that Dan is "not dead nor anywhere near it," and will surely face Mr. Matthews in the judging ring at New York. We are pleased to know that the pride of all Yale is still on the campus. Mr. Comstock's Irish terriers Dummurry and Merle Grady are at Mr. Dole's kennels, and the latter dog is said to be extremely fit just now. This is a crack pair for anyone wishing to own Irish terriers that can be depended on to win. Frank Dole will show the best team of a dozen bull terriers that Madison Square Garden has ever seen, at least, that is what wer are told.

The Chicago shows have the same regulations regarding exercising hours as at New York, 12 to 1, and 6 to 7 P. M., and only large dogs are to be exercised on chain. Beside the regular club medals, and a silver cup, St. Bernard breeders can win about $100 in cash specials, and these "talk" as the saying goes when the grasping expressman C. O. D.'s one. Mastiffs are well taken care of by the Mastiff Club, and setter and pointer men will find several specials offered by individuals, that will be worth winning, and the spaniels come in for a good deal of attention, too. While there is not much circulating metal to be found in the Collie announcements, there is plenty of glory in the form of medals and cups.

The committee appointed by the A. K. C., consisting of Messrs. Mortimer, Morris and Webster has not met with much success so far in the endeavor to lighten the burdens under which the exhibitors labor in regard to being compelled to send their dogs to shows by express. A meeting was held Monday last to discuss a letter received from the Trunk Line Association, in which they stated that after due consideration of the petition so numerously signed by the exhibitors, they had come to the conclusion, that in view of the responsibility in transporting valuable dogs, they could not see their way clear to interfere with the existing rule to turn all dogs over to the express companies. It is now thought that an effort will be made to win over the officials of the different roads that compose the Trunk Line Association, aided by letters from influential exhibitors such as J. Pierrepont Morgan, August Belmont, George J. Gould, etc. This question of transportation is assuming a serious aspect, and will, without doubt, interfere with future shows, especially considering the inattention and carelessness of the express companies and the safeguards they seek to throw around themselves, to void off possible damage suits.

The Preston-Morris case is still unsettled, Mr. Preston not having yet settled the case according to the arbitration verdict. There is rumor of more law, but we have not been able to get Mr. Preston's version of the case since Mr. Mortimer's decision was rendered, valueing the bitch in question at $135, and therefore prefer not to enter too deeply into the intricacies of this knotty spaniel problem.

We draw attention to the announcement in our stud dog columns of the placing of the Woodland Kennels' Cocker spaniel Black Duke at public service. It is not necessary to tell spaniel breeders who breed for show, of the merits of Black Duke as a sire, but the one dog owner should know that this dog, while at the top of the tree himself as a show dog, is also the sire of several notable winners. It should be remembered that bitches sent to Canada for breeding purposes are admitted free of duty.

The premium lists of the Western Kennel Co. of Denver, Col., are out, but we have not been favored with one as yet. Mr. John Davidson will judge all classes and entries close Feb. 27. The club is to be congratulated on the grading of entry fees. For the large breeds a fee of $3 is required, and $2.50 for all other breeds except foxterriers, pugs, toy spaniels, Italian greyhounds, and whippets, which pay $2. The large breed get $10 and $5 in prizes, and $2 entry fee is for prizes of $5 and $3. Further informatoin will, no doubt, be afforded by the Secretary, E. T. Weiant, 1724 Lawrence street, Denver.

Mr. E. M. Oldham is now under contract with Spratts Co. to superintend their arrangements at the coming dog shows and represent the firm generally in the sale of their valuable dog foods and medicines. By the way, Spratts medicines have not received that attention among dog men that their well-known efficacy entitles them to.

The Pointer Club's annual meeting will be held February 21, at 3 P. M. in Madison Square Garden, New York.

The White Star Liner, Bovic, due last Monday, brought over fifteen greyhounds consigned to Messrs. Baring, Magoun and Co., and one greyhound for Messrs. J. Girdwood and Co., beside the two wolfhounds, already spoken of elsewhere, for the Terra Cotta Kennels.

The Poultry, Dog and Pet Stock Association, of Victoria, B. C., intend holding a dog show Jan. 29 to 31.

We draw the attention of coursing men to the announcement of the Altcar Coursing Club's Produce Stake, for dog and bitch puppies at $20 each, half forfeit; or if declared out by August 15, $5 forfeit, or if declared out by May 15, only $2 forfeit. Entries, which must be accompanied by $2, close March 1, second forfeit of $3 must be paid on or before May 15; third forfeit of $5 must be paid on or before August 15; balance, $10 must be paid on or before 6 P. M., the night of the draw, viz.: October 14, 1895. To winner $100 added by the Altcar Coursing Club of America and 35 per cent. of all moneys; runner up, $50 added by the club, and twenty-five per cent. of all moneys; third and fourth, 10 per cent. each of all the moneys; four winners of two courses 5 per cent. each of all moneys. (Should more than 32 dogs start, division of moneys will be made satisfactory.) For further particulars nominators must write T. W. Bartels, Denver, Col.

* * *

We have received no further word from Detroit in regard to the coming dog show. We suppose all due preparations are being made.

* * *

As we go to press we learn that an extra class, 102 A, has been provided at New York for field and spaniel puppies and a challenge class, 127 A, for curly poodles. Spratts' Patent offer a $5 cup for the exhibitor having the largest number of dogs at the show, which must be bona fide property of the exhibitor.

* * *

The St. Bernard Club offer additional specials. A silver cup each, for the best St. Bernard dog and bitch; a silver medal, each, for the best American bred rough coated dog and bitch and the same for the best American bred smooth dog and bitch These are open to members only. The American Spaniel Club offers for the first time their new American Spaniel Club Trophy, value $100, for the best sporting spaniel over 28 pounds to be won four times. Dr. S. J. Bradbury offers one Tom Thumb camera, value $10, for best field spaniel bred by the exhibitor, also $5 for the best field spaniel puppy. Donor not to compete. The National Greyhound Club offers the Tubby Hook Cup for the best bull terrier dog, same conditions to govern as when previously offered. The Vetera class will be for smooth foxterriers over seven years of age, instead of over five years as stated in premium lists. The Westminster Kennel Club offers $25 cash for the best pointer got by their stud King of Kent.

The New Haven Fox Hound Club had good sport at Woodmont, Conn., on the 15. A fox was soon started, and at the close of a long chase shot by A. R. Andrews, between Round Point and Gulf Mill. Another fox was put up, but after a long run the hounds were drawn off. The fox shot weighed 13 pounds. So far this winter the members have shot five foxes. Those who took part in the Woodmont run were: Robert and Frank Meecham, Major Todd, H. Thompson, J. B. Robertson, R. Penn, J. Savage, A. Treat, John Rockefeller, and A. R. Andrews.

* * *

On Jan. 18, the members of the Rose Tree Hunt Club enjoyed a good run. The fox was started in Upper Providence, Pa., at 10 A. M., and led the hounds a merry chase, darkness ending the run with reynard far enough in the van to save his brush.

* * *

The officers of the Meadowbrook Hunt Club were elected Jan. 22, at Delmonico's New York, and are as follows: President, William Jay; Vice-President, H. V. R. Kennedy; Master of Hounds, Frank Gray Griswold; Secretary and Treasurer, Egerton L. Winthrop; Stewards, Sidney Dillon Ripley, O. W. Bird, Ralph N. Ellis and E. L. Winthrop.

* * *

The Southern Railway company is evidently not a soulless corporation, for their efforts in the encouragement of sport are well known to sportsmen. We are advised that a Fox chase will take place at Asheville, N. C., February 20, and that indications point to the attendance of a large number of hunting men from clubs in the North. The Southern Railway company have made special rates for the transportation of horses, etc. Now that the hunting set are frost bound, a run down south will give good sport, and serve to keep horses and men in condition for the spring meets up north.

There will be a meeting of the Irish Setter club, of America, held at Madison Square Garden, on Thursday, February 21, at 3 P. M.

Capt. Robt. A. De Leslie, of the Detroit Snap Shots, writes that his club will open its 1895 season at 160 Michigan avenue, Detroit. A cordial invitation is tendeed any marksman who may find himself in that city during the next twelve months.

The condition of the contest for the Kemp trophy, which is competed for annually by the companies of the Seventh Regiment, N. G. N. Y., are as follows: Each company is allowed to enter a team of 25 men, and each man on the team is allowed to fire five shots standing and five shots prone at the 200 and 500 yard ranges. The trophy is held by the winning team until the close of the succeeding competition.

Retrieving.

Hoosick, N. Y., Jan. 10.—Editor Forest and Stream: I had quite an animated discussion one day last week, with one of the prominent sportsmen of this town in regard to breaking dogs to retrieve. He was very much opposed to it, and was very angry with me because I upheld it, even going so far as to say that any man who taught, or allowed his dog to be taught to reirteve, was not fit to own a dog.

Now, I am not a very old or experienced dog handler, and therefore did not like to argue with him, yet I am far from being convinced that he is right, and would like to hear the opinions of some of the older and more experienced sportsmen in regard to the matter. J. A. C.

Spaniel Lost.

UPPER MONTCLAIR, N. J.—*Editor Forest and Stream:* This morning the servant let out a black field spaniel that had just been given to me. He naturally ran away, where, I do not know; but I expect, as he was a handsome dog, some one has found and kept him. If any fellow sportsman has him offered for sale or hears of a strange black spaniel and will give me any information which will lead to his recovery I shall be duly grateful. I can give no means of identifying him than that he was suffering from a severe canker in his right ear.

E. K. LEFFINGWELL.

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where WE get back a good deal more than cost of catalogue and postage.

A SHOT AT A DUCK.

Was ever shot at a wild duck so fateful to men and empires as this?

A father and his son were hunting wild fowl on a northern marsh. The young man shot at a duck, dropped it, and hurried to gather it. Reaching the spot where it had fallen, he found himself in an oozy, treacherous slime, into which he began rapidly to sink. In response to his son's cries of alarm, the father hastened to the rescue, and being a man of prodigious strength succeeded in extricating him, but not before he himself had become thoroughly wet through.

The two duck hunters hastened home. That home was the palace of Spala. The father was Alexander III., Czar of Russia; the son was the Grand Duke George. From the chill that resulted from the exposure undergone in saving his son from the duck bog was developed that malady which ended in the death of the Czar.

Thus the fortunes of a dynasty were changed by a chance shot at a wild duck on the marsh. Was ever such a shot at a duck before or since?

PERHAPS THE MISSING LINK.

Many years ago when the evolution theory first began to attract general attention, and still more when it began to find general acceptance, there was much inquiry for the missing link, and the phrase became then a cant term much in use. If it was true, as most naturalists maintained, that man was merely a more highly developed form of the brute, there should be some way of narrowing the gap which confessedly existed between the lowest human and the highest brute—between the Australian, let us say, on the one hand, and the orang utan, on the other. To this objection the men of science could only reply: "The record is not complete. We believe that some time, somewhere, remains will be found to bridge over this gap. There will be found the bones of an animal higher in development than the highest of the anthropoid apes (orang, chimpanzee, and gorilla), yet lower than the lowest man; but as yet we have not a particle of evidence that such a creature ever existed."

When they had said this the men of science went about their business, and worked on such material as they had. For example, Huxley proved that the birds were descended from the reptiles; Marsh made out the family tree of the horses, tracing them back to a little four-toed animal as large as a fox, which lived in early tertiary time, and which he showed to be the ancestor of the horse of to-day; while other men did much good work in similar lines. Still the people who did not believe in evolution, and who thought the distance which separated man and the higher apes, greater than that between the birds and the reptiles, cried out for the missing link, but it was not to be had.

It is true that not a few ancient bones of men had been discovered in caverns of Europe, mingled with skeletons of animals, such as the hairy rhinoceros, cave bear, elephant, cave lion, and other long extinct species; but in most cases the human bones so found did not belong to men of low type—were not, in fact, markedly different from the men of to-day. There was one skeleton, that of Neanderthal, and one jaw-bone, that of Naulette, which were distinctly of low type—but while the Neanderthal skull had a low forehead and prominent brow ridges, somewhat ape-like, yet its cranial capacity was about seventy-five inches, or about the average human capacity, while the bones of the arm and thigh, though very stout, were proportioned about as in man. Huxley said of the skeleton: "In no sense can the Neanderthal bones be regarded as the remains of a human being intermediate between man and the apes."

Within a short time, however, remains have been discovered in the Island of Java, by Dr. Dubois, a surgeon in the Dutch-Indian Army, which seem to indicate that at last the much sought for "link" has been discovered. These remains consist of a part of a skull, a molar tooth and a femur, or thigh bone of a large anthropoid ape, which is believed to represent a new genus and family intermediate between the Simiidae or apes and the Hominidae or men. These remains were found near each other, though not actually together, imbedded in a volcanic tufa near Trinil, in the Madiun Province, in Central Java.

The skull has a brain cavity absolutely larger and in proportion to its size much more capacious than in the apes, and its capacity is about two-thirds that of the average man. It is long in proportion to breadth—thus differing from that of the chimpanzee—and has none of the crests for the attachment of muscles which are found in the gorilla. The tooth is somewhat ape-like. The thigh bone is almost exactly like the same bone in man, the resemblance being so close that only a careful comparison could distinguish them.

This animal which Dr. Dubois calls Pithecanthropus erectus" walked erect like man and in size, brain power, and erect posture is much nearer man than any known animal living or extinct.

Further researches will sooner or later throw much more light on this newly-discovered near relation of all of us.

THE ILLINOIS SITUATION.

A game bill has been prepared and sent to Springfield, which, if adopted, will open the Chicago and Illinois markets for the sale of game all the year around, without let or hindrance. The section relating to sale, reads as follows:

"It shall be lawful to buy or sell any of the game birds or water fowl mentioned in this act commencing five days after the opening date and closing five days before the ending of the legally constituted open season. Any person, firm, or corporation offending shall be fined on conviction $10 for every game bird or fowl found in his or their possession coming from the State of Illinois, and said game shall be confiscated and turned over by the warden to the charitable institutions of the county in which seized."

This contains not an iota of prohibition of game selling at any time. We do not wonder that the Chicago commission merchants and their attorneys are solid in support of the Blow bill. They themselves could not have drawn one to suit their demands more perfectly. If the bill shall go through in this shape, the markets will be open the year around.

This is the situation; and it is one to demand the immediate, determined, and resolute action with which the Sportsmen's Association have met it, now that at this tardy hour they have had their eyes opened to the true nature of the section. In this fight against this impudent and iniquitous measure the Association officers and committees should have the support of every citizen of Illinois who would prevent the immediate destruction of its game supply. This is a time for Illinois sportsmen to rally for the fight under the Association's banner. The battle is not for Illinois alone, but for every State whose game goes to the Chicago market. The fate of the Blow bill at Springfield will be watched all through the West; satisfaction at its defeat will be as genuine in the Dakotas as in Illinois.

Warden Blow's sneer at the State Association as a body neglectful of its protective work is under the circumstances peculiarly ill-timed and foolish. He accuses it of sleeping on post; but the fact is that this man's righteous indignation at the Association's somnolence has been excited because he has just now found it wide awake and on guard. It is precisely as if a fellow bent on mischief were to blackguard as a sleepy sluggard the alert watchman who had taken him by the throat and turned him back. Warden Blow has run up against a body of men who are very wide awake. If he has not found this out yet, he will realize it before he gets through the Illinois Legislature any bill which permits the sale of game the year around.

Mr. Blow complains that the Association wants game laws for the benefit of sportsmen. Now that is a queer complaint for a game warden to make, is it not? Of course they do. If sportsmen did not want game laws for sportsmen there would be no game laws, nor game, nor wardens to take care of the game at a salary of $1,500. Take away from Illinois the game protective work of sportsmen for the last twenty-five years and what would be left? Certainly not Mr. Blow's game warden job. He would not be warding, for there would be nothing to ward. The revenue Mr. Blow has derived from his work as an officer he owes to the sportsmen of Illinois. The slurs contained in his letter indicate a frame of mind quite unbecoming in a creature toward its creator.

SNAP SHOTS.

William B. Moore, of Moscow, Me., seventy-seven years of age. Killed his first moose sixty-one years ago. Before nine out of ten of you who read this paragraph were born. Has killed a moose every year since. More, too; 276 all told, in newspaper report. A large number of moose for one man. But consider that he has been sixty-one years in doing it. Who can equal the record?

Does a Connecticut brook trout ever grow to the length of six inches? The editor of the Hartford Courant believes not. The General Assembly is considering the adoption of a law prohibiting the killing of fish under that size, and the Courant man solemnly warns his readers that the law might "better prohibit trout fishing outright than to relegate it to the regions of the unattainable." With such a law, he urges, the underbrush would renew its youth and obliterate the familar tow-paths that now mark the margin of every brook in Hartford county. Unquestionably tow-paths and fingerlings do go together; but there are fishermen even in Connecticut who would prefer the underbrush and the big fish. If Rev. Joseph H. Twitchell, or some other equally qualified angler of Hartford, would make it his business to open the eyes of the Courant writer by plunking down on his desk some of these fine days an adult, mature, full-orbed nutmeg trout from a Connecticut stream, it would wean the editor from his fingerling and tow-path nonsense and convert him to common sense and a six-inch trout law.

Fish Commissioner R. E. Follett, of Connecticut, has been fined $300 and costs for having netted trout in Massachusetts waters. A man convicted of illegally netting fish is not fit to be a fish commissioner. Other peculiar conditions of this official's holding his place are that he is not a resident of Connecticut, but of Massachusetts; and that he is reputed to be interested in a private hatchery from which as a public official he is said to buy fish for the State. Under such circumstances if for one's official illegal netting one were often fined as a private individual, he would find it necessary as a private individual to sell himself a good many trout as a public official in order as a public official to recoup himself as a private individual.

The Massachusetts Association banquet last week was the occasion of celebrating the society's coming of age. It has had twenty-one years of useful existence, and gives full promise of living as much longer and of doing quite as much in the future as it has in the past. We trust that we may chronicle for it a year of progress and achievement under the leadership of President Clark.

There ought to be a thorough overhauling and reorganization of the New York Fish Commission. The way not to do it is to accept the resignation of the politician commissioners now in office, and to substitute others as has just been done in the case of Mr. Hamilton resigned and Mr. B. H. Davis appointed to succeed him. Mr. Davis is known as a politician, and that very fact is sufficient to raise grave doubts as to his fitness for the place. We understood that Messrs. C. W. Babcock, of Rochester; Edward Thompson, of Northport; D. Bauder, of Rheims; James E. Richmond, of Canajoharie; Moses S. Parmelee, of Malone, and A. N. Cheney, of Glens Falls, are candidates for commissionerships. Of all of these, Mr. Cheney is the only one known to the public to be equipped with practical knowledge of fish and fish culture. His qualifications in this respect are so preeminent that the citizens of this State cannot well afford not to avail themselves of the services Mr. Cheney might render.

To organize a fish commission with the sole view to the most efficient administration of the State's fishery interests; to appoint men to the office having regard alone to their fitness for it, and requiring of some of them in office only the legitimate duties of the position—this would be a novel state of affairs in New York. Unless the scheme proposed by the Senate Committee shall be thwarted, we shall have just the reverse—a political machine, manned by politicians for political purposes. Such an arrangement will mean public robbery. That is the plain, simple, accurate definition of it.

The Sportsman Tourist.

PIONEER LIFE IN MAINE.

BY GEORGE SMITH,

In accordance with the suggestion of those who had listened many times to these stories of the dangers and privations of the pioneer settlers, the following account of the early settlement of the town of Freedom, Me., and pioneer life in that region, accompanied with a brief record of the years spent in the West, was written by the author at the age of eighty-one.—D. C. SMITH.

My Dear Son: Agreeable to your wishes, I have sat down to narrate some incidents of my father's family. Of their ancestry, I know but little, except that his father's name was Joshua Smith, a descendant of old Parson Smith, who was a chaplain in the French and Indian War, and a resident of Old York, Mass., as I have been informed; that his father's wife's name was Elizabeth Hodgdon, of South Berwick, Me., and my father after serving in the Revolutionary War with Great Britain came to South Berwick about the year 1780, and there married Mercy Andrews, the daughter of John Andrews, an emigrant from England.

His father, having sold out his possessions in Old York, determined to emigrate to what was then called the District of Maine. He settled on the Damariscotta River, then called Jones' Creek. My father, having heard of the wonderful chance there, for the lumbering business, soon followed him, and there, with his other brothers in partnership, followed the lumbering business for several years. The country back being entirely unsettled, and game, such as bears, beavers, and moose being plenty, they made much business in following up the several streams, taking great quantities of game as they proceeded up the river on snow-shoes in winter. Frequently they would kill several moose on their route that they would bury up in the snow with other smaller game; then returning home they would take their handsleds and go after the game till all was brought home and well saved for future use. In this way they supplied themselves with an abundance of meat for several years til the settements became cleared up, as no domestic animal could be kept at first, on account of their being destroyed by the bears that infested that region.

About the year 1793 they made an excursion into the interior, up the Sheepscot River to its head waters, which had their source at the west side of Hogback Mountain—as they called it—this was also, on the eastern side, the source of the Megunticook stream, leading into Camden Harbor. Here, at the westerly side, right opposite the source of the river, they discovered a beautiful tract of land of some six hundred acres, which they had surveyed, and then divided it into four lots, numbered 1, 2, 3, 4, and gave each one a chance to draw for it in a lottery of their own making. The names of the four brothers were Stephen, Joshua, James, and John. My father being the oldest, they agreed he should draw first, and he drew lot No. 1, on the most southerly part of the survey, with which he was well pleased. He then sold out all his right in the lumbering business to the others, and having collected in all about $200, and hired two ox-teams on Jan. 1, 1795, he started the first family up the Sheepscot Valley, through a howling wilderness not less than forty miles in extent. As no roads were in existence at that time, they had to follow the lumbermen's trail as best they could till they struck the "Great Pond"—so-called—on that stream, now in the town of Palermo, and there they were left by the teams to get along as they could. Here happened to be a lumberman by the name of Turner, encamped with his wife and two children. My father got the privilege of his family's staying there a few days till he could clear a road some ten miles to a settlement of three or four men, who had settled near "George's Pond," as they called it, which is now in the town of Liberty.

My father's family now consisted of seven persons besides himself and wife, the oldest about fourteen years old. Their names in order were James, Miriam, Joshua, John, George, Stephen, and Benjamin, a babe at the breast. We all tarried at Turner's till father and his boys had bushed out a road, so that a horse and sled could pass through to this new settlement, by which means we made out to get through to the settlement in about two weeks. Here my father got permission to live in one end of a log-cabin, without floor or windows; the other end being occupied by a Mr. Leighton and his wife. We remained here till the next May.

The First Log Cabin.

During this time my father and this man felled trees—the first ever felled in what is now the town of Freedom—sufficient to build a log-cabin 18x24. At the end of the winter they had got up the walls only, and as the spring was warm and early on May 5 my father having a spotted line and beaten trail all the way through a gigantic forest to his log-cabin, a distance of four miles, determined to show us our future home. Therefore, early in the morning on May 5, 1795, we were all six paraded in Indian file, father and mother with the babe in her arms. We soon entered a most darksome forest, which led us over and down a long, tedious hill two miles in extent. We were often seen seated on the fallen logs to get breath to renew the journey. In this manner we reached our new dwelling about noon. But, oh, reflect ye complaining ones! if this were your situation, how could you endure it?

A log-cabin without a roof.

With no floor but the ground.

With neither chimney nor stove all around. But we soon had a nice floor of new boughs, and before night the same cover on the roof.

In this situation, with not a square rod of ground to improve the ensuing year, with not a domestic animal, except cat and dog, with no road, with no neighbors, with no stock of provisions on hand, nor any to be had short of thirty miles, through a dismal, uninhabited wilderness three-fourths of the way, with nine in the family all told to supply with bread—in this situation father had often to go to the nearest market, which was at least twenty-five miles or more to what was called Damariscotta Mills, to buy corn, as that was the only kind of bread then in use. Having bought two bushels, he was obliged to hire a horse if he could, and in case he could not obtain one, he had made for himsef a large knapsack that would hold a bushel of corn, and swinging this to his back, with gun in hand, he would start for home through a dismal forest with nought but spotted trees as a directory. He would reach home the second day, and after waiting one day would return and get the other. This was the process the first two years, till he got a few acres felled and cleared, so as to be able to raise Indian corn on the burned land. Although the burned timbers lay on the ground, the corn was inoculated among them with sharp sticks, and a good crop was always the result. At that time, as no grist mill was nearer than twenty miles, he invented a samp mortar by cutting off a log two feet across and three and a half feet high, and then setting it up endwise, and building a fire on the top, which he kept burning two days and nights. At the end of this time, he had a cavity twelve inches deep; this he completely scraped out, and it then became a nice mortar. Placing it in one room of our cabin, he fixed a spring pole, to which was attached a heavy pestle, with a cross-pin through it, in reach of the hands; in this way in fifteen minutes a peck of corn would be reduced to handsome samp and meal of a nice quality, which were separated by sifting. The meal being made into thin cakes and basked on wooden trenches before a blazing fire formed an excellent bread.

But, as bread alone, without butter or milk soon becomes stale to our tastes, and as our father and mother were never at a great loss for a remedy, my father would rise early in the morning, take down his gun, and visit the inhabitants of the forests who were making the woods vocal with their music, which would often have to stop, while they beat time to the thrilling crack of his deadly fowling-piece. In this way a valuable acquisition was made to our bread without milk or butter, and this was frequently varied by the addition of a squirrel or hedge hog. This first year was the most distressing, on account of our arriving too late in the spring to improve the abundant chances for making maple sugar, which, ever after, was one of our greatest blessings. Thus passed the first two years of our campaign in one of the most gigantic forests that ever grew in Maine, which my father and his boys caused to bow to their sturdy blows every day during the summer of 1795.

January, 1796, came in with terrible snowstorms. Snows fell to the depth of three and a half feet in all directions, but we had our cabin well finished off with a good roof, covered with new spruce bark; with a good hewn plank floor; a good stone chimney up to the mantle-piece four feet high, with jambs five feet apart and topped out with "cat and clay," as it was then called; the old cabin well "chinked" with moss, and plastered with clay; with an abundance of the best wood in the world, right at our own door that needed no hauling—thus situated we considered ourselves a happy family when enjoying in the evening a blazing fire, such as no one in these days will ever see.

The ensuing spring, father got everything ready beforehand for making maple sugar. The trees being so near the house the sap was brought to it, and that was our first sugar-camp; and never was a family of children any happier than when the first batch of sugar was stirred off, and each one was allowed a good lump on an old-fashioned pewter plate. Father and his boys made about four hundred pounds of sugar, and in order to save it, he hewed out some ash-holders, and in these stored it with good success. This same spring he had about four acres of felled trees to burn, and as the spring was dry he got an excellent burn, and then planted corn among the logs.

A Visit From a Bear.

Having the prospect of raising a good crop of corn, he thought it best early in the spring to get a swine that he might raise pigs. When brought home she was allowed to go at large wherever she pleased, and the weather being warm she frequented a brook that ran close by the house, where she would lie and bathe in the day-time. Our stock was increased by four pigs. One day, when these were about two weeks old, my father happened to be absent from home, when about noon we heard the hog squeal at the brook. My mother caught the gun from the hooks, and rushed down to the brook with her dog in advance, just in time to see a bear, with the hog in his arms going up the hill on the other side of the brook. She set the dog on him, and he dropped the hog to give fight to the dog, which bit him behind; in this way he showed himself openly to my mother, who was so terrified at so monstrous a creature, she could do nothing but scream aloud. Although she had all the means of war in her hands she forgot to use them, and the bear was allowed to finish his dinner of fresh meat on the top of the hill. But his supper, the next night, cost him rather more dear. On returning home, father determined to have redress, and make him settle for his dinner like a gentleman. Accordingly, he collected the fragments of the stolen dinner, and having surrounded it with a hedge—except a small door at one end—within the inclosure he set his gun well loaded, drawing its line across the door-way with the remnants of the dinner at the further side of the inclosure, and in this way he gave the bear a good chance to come to his supper. The night being dark and rainy, father thought it very favorable, as he said, they always took such nights for mischief. This evening we determined to keep awake, in hopes of hearing the salute on his arrival, but sleep took possession of us all too soon for us to enjoy the privilege so much desired. Toward the latter part of the night we heard father jump out of bed, saying to mother: "He has got it." And, sure enough, in the morning when we went to the yard, there he lay fast asleep with his head just across the line. Never was there greater rejoicing in one family since Wolf took Quebec, than was in our little household. He was in excellent order, and weighed about two hundred pounds. We had him salted down in one of father's new-fashioned sugar tubs, and never was meat eaten with a better relish than this. Father often said he was "well satisfied, that the bear paid well for his dinner;" but mother did not feel so thankful as the young pigs left motherless on her hands, needed milk, and we had none to give them. However, necessity being the mother of invention, she made nice sweetened porridge, and fed them with a teaspoon till they learned to eat, and so she succeeded in raising two of them.

This year my father raised a nice crop of Indian corn, the first ever harvested in what was afterward called Beaver Hill Plantation—so named from a beaver's having been caught—some four hundred feet above the stream, at its base. There was a beautiful flowing spring at that altitude, across the mouth of which he had built a dam, no doubt for summer bathing. The inhuman trappers could not let him enjoy this in peace; therefore, because he wore a coat so much finer than theirs. they murdered him for the sake of his fine coat, but he has the honor of having given a name to this hill, and his works are yet to be seen.

Adventure With a Bear.

As we had an abundance of corn, my father thought he could keep a cow, and immediately bought one, which added greatly to our living. In three years from this time we had three others of the same kind. Their only pasture was the woods, and being belled, they had to be hunted up every night before sundown. Only the oldest boy was trusted to enter the darksome woods, and that with gun in hand, well loaded, and supplied with ammunition. Thus equipped, one dark, rainy day in July, 1799, he set off early to hunt up the cattle. After traveling down into a low meadow he heard the bellowing of a cow in distress. He hastened to the place from whence the noise seemed to proceed, and running to the side of a brook through the thick alders, on the other side, he discovered a huge bear with a cow down on her side, he tearing and eating her back and shoulders. He drew near as possible, and discharged his gun at him, loaded with two balls. This gave him such a hint he thought it best to retreat. My brother dared not move till he had reloaded his gun, thinking the bear might return. In the meantime the cow made out to rise, and crossed the brook toward him. In his excitement he became completely lost to himself, and had not the cow been able to lead the way he would not have seen home that night, but he followed her and came out safe. This was a heavy blow to us, as she was the only one that gave milk. For three years we had lived without milk, and now in the best part of the season for making butter, all was gone for that business.

The next morning the cow could not be made to rise. As much as two feet of her back was laid bare to the bone, and the weather being so warm and flies so thick, father thougth it best to kill her. "No," said my mother—a woman of indomitable courage—"you make a good booth over her to keep off the hot sun, and I will take care of her myself; the children can gather her food." She made a covering sufficient to cover the hole in the back, and with the roots of the Life of Man and Sarsaparilla she made a salve, and a wash compounded of many other herbs; these she daily applied. By this treatment, in thirty or forty days, the cow was able to rise alone, and by Sept. 1 was completely healed, though with rather a crooked back. She was perfectly dried up, and being well fatted was sold for beef to some young men who had come to see the country and take up a possession. This enabled my father to buy another cow in the spring, and as one of the heifers came in that spring we had two cows.

Increasing Prosperity.

From that day forward my father began to rise in property; every year felling from five to ten acres of trees to be burned and planted with Indian corn, and the last piece sowed in to grain and laid down to grass. In the year 1800 he bought the first sheep he ever had, but he was almost obliged to take them into the house to keep them from the bears. He made a log pen, tight and close, well covered over with heavy timbers, with a strong door well barred inside, and this was joined to the house. The sheep had to be put into the pen every night. The bears were not pleased with such treatment, and determined to storm his castle the first convenient opportunity. Consequently the first dark night that offered itself they were on hand, and having approached his castle, although it looked so strong, they concluded to try their hands at its strength. They succeeded in making a breach in its walls, by which they entered, and after examining the whole number and putting their mark on all they carried off the seventh as a fee for their trouble in handsomely marking all the others.

The New House.

My father thought he was now able to build a frame house and barn; as his stock and hay were yearly increasing, he decided to have the barn first, and it was raised July 6, 1802. The roof was covered with long shingles, laid two feet to the weather. The walls were not boarded, as there were no boards to be had at that time, but it was filled with hay, to the ridge-pole, the first year. The next year he began on a house frame, and got it all ready, but did not raise it till 1804. The roof of the house was shingled without boards; the ribs being laid twelve inches to the weather. Hearing of some boards about twelve miles distant, he went in search of them, and bought enough to wall in our house—the dimensions of which were 36x30 feet.

As boards were so scarce, and good pine timber so abundant, he determined to make boards more plenty, and having a most excellent privilege, he at once built a good saw-mill, and got it going the second year, and now, for the first time, we had our buildings well covered.

In the year 1806 we bade adieu to our old log-cabin, and moved into our new house, which had a stone chimney with three good fire-places and a large oven in the same. These two buildings were the first built in—what was then called Beaver Hill Plantation—now the town of Freedom.

Eclipse of 1806.

This year, 1806, it had been predicted that some great calamity would befall the inhabitants of the world. It had been asserted by a traveling preacher, who was going about the country, that a wonderful phenomena was to take place on June 16; that there would be total darkness at noon, that the stars would be seen as at midnight, and it might be the Day of Judgment, for aught he knew, or could tell. All of which did take place, as I can testify, being an eye witness. The day was perfectly clear, and when the sun was two-thirds covered the whole western hemisphere, from north to south, became black as sackcloth, and on earth it was the same. This was a most gloomy scene to all. Work of all kind was suspended, and many took to their houses, called their children around them, and sat in fear and gloom as the darkness increased every minute. Total darkness set in at twelve o'clock, candles were lighted, and fowls went to roost as at night. The gloom and darkness lasted ten

minutes, when the westerly limb of the sun began to appear again, and well do I remember how glad I was that the sun was going to shine again, as all around were feeling so chilly. A cold summer followed, and no corn was raised in Maine. I have been thus particular in describing this eclipse, as no one now living will ever experience the dread and terror that filled the hearts of their ancestors in their ignorance of the cause of this phenomena.

About this time it seems important that I should say something of my father's family, as there was something singular about it. My father's name was Stephen, he lived to be eighty-six years old; my mother's name was Mercy, she lived to be seventy-eight years old. They had twelve children, eleven of whom, nine boys and two girls, grew to be men and women. Eight of these nine boys were produced at four births; their names were Joshua and John, George and Stephen, Paul and Silas, Samuel and Eli. Eli died in infancy. The single ones were James, Miriam, and Benjamin, and Rebecca. Rebecca, the youngest of the family, died at the age of seventeen years; the next that died was James at the age of fifty; the next was Stephen at the age of thirty-six—mate to George—the next was Paul—mate to Silas—called the seventh son, who, it was said, performed many cures by the laying on of hands, and many medicines of his own invention; the next was Silas—mate to Paul—who was a medical doctor. While attending cholera patients in the city of Miamisburg, O., he took the cholera himself, and died in twelve hours, at the age of fifty years; the next was Joshua—mate to John—who was the first of the boys who went to Ohio in 1810, a mechanic by trade. He afterward joined the Mormons, went to Nauvoo, and there died, aged about fifty; the next was John—mate to Joshua—a mechanic also, who went to Ohio, but returned again to Maine, and in about a year after the death of his wife and three children, died at the age of fifty-eight. The remainder of the family now alive, are: Miriam, now in her eighty-eighth year, a widow of indomitable will, who may outlive all the rest of the family. She has no children. The other two, are George and Benjamin. Benjamin is an architect, seventy-eight years old. He has had three wives, and is now a widower with three children, two boys and one girl. His sons are likely men, living in the State of Michigan. George is also a mechanic, but has carried on a farm thirty years in the town of Freedom, county of Waldo, State of Maine. He is now eighty-one years old, being born Aug. 30, 1791, and was married March 28, 1821, to Mehitable Clifford, who was born in the year 1792, in the town of Candia, State of New Hampshire. Six children, four boys and two girls, compose our family; they are Amelia, Francis, George Warren, David Clifford, Ben. Franklin, and Nancy Cordelia.

[TO BE CONTINUED.]

DOWN IN THE MARSH.

The time is about October 20, 1894; the scene the Mississippi valley. A wild rice lake surrounded by smaller lakes with strips of timber between, the Wisconsin bluffs on one side and the Minnesota's on the other. Look sharp, and on a point extending out into the larger lake you will see two brown specks; you may see them and you may not, for they are as near the color of their surrounidngs as it is possible to be; and it is getting dusk. The strip of golden light that fringes the tops of the Minnesota bluffs is fast growing dim. But as we look a streak of fire darts forth, accompanied by the sharp crack of the nitro and the dull thud of a falling mallard tells the whole story. Now, dear reader, suppose the two brown objects above referred to are you and I; the reeds and rushes around about us are beginning to crackle, indicating the change from sunshine and warmth to that of dampness and frost; a few mallards are still coming in, but it's getting too dark to shoot with any degree of certainty and we let them drop into the wild rice, which they do with a contented quack, safe at least for one night from the bombarding which has been going on all along the line. And we are glad of it, for we belong to the army of protectionists which are fast growing. We are not pot hunters, and never sell any game; and as we have enough ducks for our own use and a few for friends let us shoulder them and go to camp, which is about half a mile away over in the timber, beautifully situated on the bank of the little Zumbro river, a stream that for its size has yielded a wonderful amount of fur, fin and feather in years gone by. Our tent is a 12x18 wall with fly, inside of which are nearly all the comforts of home—a mighy good place to go to about this time of day or night.

As you are a stranger in these parts, I'll lead the way, for if you don't know the way out here you never would find our camp to-night except by accident. Of all places to get lost, a wild rice marsh in a dark night is the worst. I have been there and know whereof I speak. But look at the old dog as he stands there on the trail, wagging his tail and looking back at us, he knows it's time to go to camp, and if you were to follow him he would take you there by the shortest route. He did that very thing by me one night in a snow storm when I could see no trail and scarcely anything else. Now I am particularly anxious to get back to camp to-night, for there on a box at the head of my bed lie the two last numbers of Forest and Stream which were sent to me to camp to-day, one of which contains the soap story from the "Man from Corpus Christi."

"A merrier man within the limits of becoming mirth
I never spent an hour's talk withal."

And an hour later finds me reading that soap episode aloud to the boys, one of whom rolls out under the tent into the Zumbro, and another, a late comer in, just eating his supper, nearly chokes to death, and the dogs are barking and it seems as though pandemonium has broken loose generally when a head is thrust through the opening of the tent and a voice inquires: "What's the matter here, you fellows all going crazy?"

"Well, pretty near it," said I as I recognized a neighbor who was camped with some friends nearby. 'You just take this over to your camp and read it to the boys," and I handed him Forest and Stream containing the "Soap Story." He did so, and a little later, as we were tucking ourselves in our blankets, we could hear, amid the rain drops that were just beginning to patter on the tent, a sound of boisterous laughter pealing up through the woods from the camp below.

Natural History.

A TALK ABOUT PHEASANTS.

Pheasants have attained such popularity throughout the country, and I receive so many letters requesting information on various points concerning their habits, that I have not the time to answer each in full. I am therefore going to request the medium of your columns and give a few words of advice which may be of some use to amateurs of these birds.

For instance, I am often asked if they are polygamous or monogamous; they are most decidedly the former, having just the same proclivities in this respect as the barn yard fowl, to which they are distantly related. In the breeding season each cock will collect a harem round him, by cajoling sundry hens, and depriving weaker brethren of their lady loves. In their company he will strut in burnished plumage through the glades in springtime, but his roving eye will ever be on the watch for newcomers. Should he meet another bevy of beauty in charge of their lord, the two males will do battle at once, whilst "bright eyes behold their deeds," and at its close the vanquished will leave to his opponent all the sweets that the victory can afford.

Again, many persons, knowing how pheasants love the shade, think that these birds will inhabit the recesses of large forests. It is true that the pheasant is essentially a woodland bird, desiring the harborage that wooded country affords. However, they never wander far into a large forest, though roosting among the branches at night, and sheltering themselves therein during the noontide heat of summer. But it is over the adjacent fields that they wander morning and evening in search of food. They are a woodland bird, in that they spend much of their life within its borders, but the open fields are their feeding grounds, and where they cannot obtain an abundance of "meat and drink" handy they will never make an abiding place.

I continually am asked if pheasants can stand the cold of the Northern States. Well, they are a success in Nova Scotia, and I think that is sufficient recommendation to calm all fears in this respect. I have stocked one of the largest preserves in Vermont, whence I receive yearly most excellent accounts of the shooting enjoyed there. I have 1,000 birds now in front of my window, in the deep snow, protected solely by a few leafless apple trees and heaps of brush. In addition, my land lies on an exposed ridge. No, I do not dread the winter's cold at all for them, and the birds never look so handsome as when displaying their glossy feathers against the snow. During the first year that I kept these birds here, I had perhaps a half dozen slightly frost bitten, but now they are proof against any attacks of Jack Frost.

Let me urge that every game preserve should be systematically ridded of its vermin, winged and furred. The pheasant, after its second month, always slumbers on a branch out of harm's way, and therefore is not such an easy prey to their foes as quail and other game that roost on the ground. But during their early infancy they are defenceless against snakes, minks, weasels, hawks, and all such depredators. Trap all ditches, culvers, hedges, stonewalls and streams unceasingly, especially during the winter. Such labor will be found to be amply repaid when the bag is counted up in the autumn. I heard that at Tuxedo Park, owing to the persistent trapping by their late gamekeeper, the head of partridges had wonderfully increased.

So many persons insist on having the pure Chinese pheasant (Phasianus torquatus) in preference to any other that I must reiterate my words of caution about these birds. In no country where pheasant shooting has assumed the rank of a national pastime have the Chinese variety been permitted to usurp the place of the dark necked English pheasant (Phasianus calchicus). In England the cross between these two breeds, termed the English ring-necked pheasant, is very common, but even there many of the best sportsmen have eliminated all trace of the Chinese bird from their coverts. On the Continent, in most places the dark-necked bird is alone known. Every authority agrees in condemning the pure Chinese pheasant. It is a tremendous wanderer, here to-day and there to-morrow. This evil propensity does not belong to the English bird, and even in the cross is not so conspicuous. This half-breed is as fertile and hardy as the pure Chinese, but larger and less of a tramp. I believe that the pure English pheasant would flourish here, but as it is said to be less strong than the Chinese I do not advise the propagation of the former as much as I denounce that of the latter. In a word, the English ring-necked pheasant is the kind to rear throughout the length and breadth of the States for sporting purposes, as it combines all the best qualities of both parents and discards their drawbacks.

As regards the size of the Chinese pheasant, I do not find that specimens I have seen from Oregon compare with those I have here, and I imported myself. Perhaps I may be thought to view them with a prejudiced eye, but I have heard others make the same remark. I fancy that years of careful rearing and selection of stock and abundant feeding have originated a finer strain than the wild bird. I cannot say I have had a very large number from Oregon to compare with mine, but the opinions of several people I have consulted coincides with my own. Roughly, I should say that the average weight of the pure English pheasant was nearly a pound more than that of the pure Chinese, the cross between the two approaching nearer to the former in this respect. The Chinese pheasant is a great runner, he gets over the country with his legs, not his wings, and does not care to fly till forced to. I own that he may rise quicker than the heavier built English bird, but who shoots a pheasant till well on the wing except boys and pot hunters? The English pheasant lies far better to a dog and will not commence his leg work till he has been flushed and flown his bolt.

Another point I am often asked is, if the eggs will deteriorate in fertility during a long journey. This just depends on the way they are packed. I have sent eggs on a four days' jaunt that hatched out better than some bought by the same person only twenty miles away. And the same with birds. Experience in dispatching and such matters renders disappointment at the other end almost unknown, except when the treatment on the road has been brutal or lengthy delays have caused the utmost precautions to "gang agley." Where eggs have not given a proper return I have seldom found it attributable to aught else but carelessness on the part of the purchaser. This subject is too long to enter on now, but I will just give these few words of advice:

Alwasy have the sitting hens waiting for the eggs, not vice versa.

Give the eggs a day's rest after unpacking them.

Never place the hen on them till she is quite firm on her nest, and never in the daytime.

Keep the eggs clean, the nest airy and the hen quiet. Verb. sap. These are the fundamental truths which every hen wife knows, and many pheasant rearers ignore. After the sale of many thousands of eggs during the season, I generally get one or two letters of complaint, but on investigating the source of such discontent I always find it attriubtable to the neglect of the above sine qua nons. When I have letters to prove that from eggs I have sold such results are frequent as 95 birds out of 100 eggs, 289 out of 300, 450 out of 500, and 800 out of 1,000, I feel I know whereof I am speaking. Another word of warning: Many people buy eggs late in the season, when they are cheapest, and thereby think that they are creating a saving. It is the dearest possible plan. As the season advances the cocks lose their vigor, the hens lack shell forming material, and the young birds are far harder to rear. Skill and experience can in some degree counteract such difficulties, but they exist all the same.

Another question frequently put to me is, What is the right kind of pheasant to cross with the game fowl. My reply always is, "Don't." A pheasant and a game fowl are each noble birds; the sterile hybrid loses the best features of each, a bad game bird, a worthless fowl. I heard of a man once in Scotland whose fancy ran on this mixture, but his name never gained celebrity, and I expect his craze is spent long years ago, as well as his money. Pheasants are lovely fighters in the breeding season, so are tomcats; but neither of them are of use at the stud to progagate nondescripts inheriting their pugnacity. A pheasant, a game fowl and a cat are most excellent each in their way; so leave well enough alone. The only kinds of pheasants that will breed with the game fowl are the English, the Chinese and the Japanese (Phasianus versicolor), which are very closely related to each other, and are distantly connected with the game fowl through the jungle cock, which is said to be the primeval ancestor of the world-wide barnyard rooster.

With your permission, I will return to the discussion of these birds again shortly, and hope that meanwhile others may recount their experience with the Phasianidae.

VERNER de GUISE.

MAHWAH, N. J.

A SPARROW TRAGEDY.

A tragedy in bird-life came under our observation last spring in which the punishment most certainly did "fit the crime," and no particle of sympathy stirred our breast for the victim. It happened in this way:

A bird-box had been put up at the end of a grape arbor for the express accommodation of a pair of house wrens, who visited the garden every May. For three or four weeks previous to the coming of the wrens the quarrelsome English sparrows had fought among themselves time and time again for the possession of the bird-box. But no matter who was the victor, he was unable to utilize his hard won prize, for with a wisdom born of experience, we had made the entrance to the box so small that the broad-shouldered foreigners could not get in. At last the day came when the wrens arrived from their southern home, and right glad we were to hear again their joyous little song and to watch their lively antics.

They were exceedingly sociable and seemed to know no fear; one would hop up to the kitchen door and perched on the edge of the step, look in, flirt his short tail and chatter away as if to say: "I'm not afraid, you're big and smart, but you can't catch me!" And how they would scold when "Topsy," the old black cat, would get up from her nap in the wood-shed and slowly walk up the garden-path. After many animated discussions and several examinations of the bird-box, both inside and out, it was deemed satisfactory by the pair and building operations begun; or rather we should say the furnishing of the house was begun. It was interesting to watch the tiny feathered home-makers. One would fly up to the little round hole with a long stick in his bill, held in the center. Of course, he could not enter with it in that position—at right angles to his body—so carefully working it along in his bill until he could hold it by the end, he would dive in, pulling it in with him. At other times his mate would meet him at the door and relieve him of his burden, arranging it indoors to suit her own fancy.

This peaceful state of affairs did not last long, for one of the "rats of the air," as a writer has very aptly dubbed the English sparrows, discovered the wrens at work, and with a wild war-whoop fell upon them. They in emphatic language told the sparrow to attend to his own affairs, but he continued his attacks until the wrens, tormented beyond endurance, turned on him, gave him a good thrashing, and compelled him to fly for his life. Maddened by his defeat, in less time than it takes to write it the burly fighter returned to the scene with a dozen "hoodlums" like himself. Outnumbered now, the wrens were forced to retire from their half-completed home, taking refuge in a pea-patch in the garden.

The sparrow mob, after yelling themselves hoarse over their victory, seemed determined that they would get inside the wrens' home this time, and to that end the leader made a dash at the little door. Unable to force himself in further than his shoulders, he attempted to back out. And now were the wrens avenged! In some way the sparrow's head became wedged fast in the tiny door, and there he was, a prisoner. Alarmed by his wild struggles for freedom, his one-time friends flew off and left him to his fate. Ready to aid him in his lawless attack on the innocent wrens they desert him as soon as he gets into trouble himself.

Whether he died of remorse, or chagrin, or starvation,

we cannot be certain; suffice it to say that soon after the incident just described, the dead body of the criminal disappeared and the wrens returned to finish their home. The box was completely filled with sticks and "rubbish," a cosy little bed of feathers being prepared for the five little brown speckled eggs, and later the wren babies.

The sparrows seemed to profit by their lesson, for the wren-box was given a wide berth all the summer by the noisy, quarrelsome crew, and the wren family, as the story books say, "lived happily ever after."

N.B.—Tell it not in Gath, publish it not in Askelon, but it is rumored that the life of the wicked sparrow ended, not by remorse or starvation, but at the hands of a person unknown to the authorities, who discovered the trespasser fast in the wrens' door-way, climbed up the arbor, seized him, and with one vigorous twist dislocated his cervical vertebrae. "Sic semper tyrannis!"

PENNSYLVANIA.

THE POST BEEF HERD.

Not very much is known, and singularly little has been written about the tendency in animals, wild and tame, to confine themselves to particular localities. The ranchman knows that the horses and cattle, which feed on his range, divide themselves up into little bunches, each of which selects for itself some special area where they spend all their time, rarely moving far from it, except when they may be obliged to take journeys to water, or at some change of the seasons, when they may move from summer to winter range or back again. We all of us know how common it is to find in a certain piece of woods or in some particular swamp, all through the season, an old partridge, which makes its home there, and which we feel sure is always the same bird.

A similar condition of things prevails among our larger game animals. White tail deer are greatly attached to particular localities, and when undisturbed confine their wanderings within very narrow limits. If to-day an old white tail buck is run with dogs, he may make a long chase and cover a wide stretch of country, but to-morrow he will probably be found in his old home again. In the same way antelope, mule deer, mountain sheep, and white goats show their attachment for localities, and unless persistently disturbed wander but little.

In domestic stock, such as horses and cattle, this attachment to locality is so strongly marked that it is a very common thing for animals that have been driven to a range hundreds of miles distant from that on which they have been accustomed to feed, to travel back to their old haunts as soon as they are turned loose. We have known cases where one-third of a large bunch of horses, driven to a new range four or five hundred miles away, were, a year later, gathered again on their old home range.

During many years experience with big game we have often had similar facts thrust on our attention, but the attachment that wild animals feel for particular localities and the slight disposition that they have to wander is remarkably well shown in the story given below, which we recently heard from the lips of Captain G. W. H. Stouch, Third Infantry, a veteran soldier of nearly thirty years experience on the plains. Nothing could better exemplify the buffalo's attachment to locality, and its natural inertia, than this story which is given as nearly as possible in Captain Stouch's own language.

In the fall of 1866 I was directed to proceed with Company C. to re-establish old Fort Fletcher on the north fork of Big Creek, sixteen miles below the present Fort Hays, Kansas, when on Oct. 16 we marched down to the site chosen, and went into camp, I noticed half a mile above us on the creek bottom a considerable herd of buffalo feeding; there were, perhaps, eight or nine hundred of them. As soon as I saw them it occurred to me that I would leave them undisturbed, and that so long as they remained there they might furnish us a supply of beef at very little cost of time or trouble. I therefore ordered the men not to hunt up the creek, or to disturb these buffalos in any way, instructing them to do all their hunting down the stream.

In order to put my idea in practice at once, I detailed one of the soldiers as hunter and butcher for the company, and told him to go up the creek and kill a buffalo, but not to show himself either before or after firing the shot—merely to kill a fat cow and then to remain under cover until I joined him with a wagon. He did so. At the report of the rifle the buffalo fired at ran a few steps, and then lay down, while those nearest to it made a few jumps, looked around, saw no one, and then went on feeding. From the camp we were watching the result of the shot, and as soon as fired I went with a wagon to bring in the meat. As the wagon approached the carcass, the nearest buffalo moved out of the way without showing any special fear, and the wagon returned to camp with its load. This was repeated daily, the buffalo never being frightened either by the shot or the wagon, and seeming to become more tame as time went on, often approaching within a few hundred yards of where we were at work erecting the buildings.

About Nov. 1 Troop E., Seventh Cavalry (under Lieutenant Wheelan, Second Cavalry) arrived to re-enforce the post, and about Nov. 19 Company B., Thirty-seventh Infantry (under Lieutenant Phelps), also arrived. I explained my plan of operation to these officers, and requested them to detail hunters from their companies, and to order their men to hunt down the creek and not to disturb what I had come to regard as the post beef herd. They did so, and the herd still remained with us.

One morning in Feb., '67, a sergeant whom I had sent the day before with a small detail to make a scout, rapped at my door, and reported his return. Among other things, he said: "Lieutenant, I met our buffalo herd traveling up the creek about fifteen miles from here. They were moving slowly, just feeding along."

I determined to see if they could not be brought back, and taking twenty-five men (accompanied by Lieutenant Cooke, Third Infantry, Adjutant Assistant-Surgeon Fisk, and Mr. Hale, the post trader) rode up the creek and entered the valley above the herd. Then forming a skirmish line across the bottom, we very slowly advanced toward the buffalo. When they first noticed us the leaders seemed uncertain what to do, but as they had been accustomed to seeing large partiess of us, instead of running, as I feared they might, they at length turned about and began slowly to work backward in the direction from which they had come. By nightfall the herd was on its old feeding ground, and there we left it, and there it remained until spring, and would no doubt have remained longer, but unluckily the Seventh Cavalry, under General Custer, rode in upon it as they came down the creek to the post for supplies after their unsuccessful chase after the Cheyennes, who had run away from General Hancock. General Custer detailed two troops with orders to secure meat for the command. After chasing it, and killing forty-four head, the herd was scattered and never returned. The herd supplied the post (consisting of about 300 officers and men) with fresh beef from Oct. 16, 1866, until about April 20, 1867.

Water Prevents Freezing.

Editor Forest and Stream: I have observed that domestic fowls and small domestic animals, usually kept in enclosures and under roofs, frequently suffer from frost bitten toes, ears, etc., while the wild game survives unscathed cold and stormy periods which would be injury or death to confined animals and birds. I have noticed also that ruffed grouse, wild turkeys, quail and deer are generally found near the streams in extremely cold weather and not far up the sides or on top of the hills, as they often are in moderate weather. This is the case with all game with which I am familiar. A mountaineer friend, who has noted this circumstance and always uses the knowledge to his advantage when hunting, attributes it to the instinct of the game, and he believes that the water "draws" the frost away from anything near it, and gives this as the reason why grouse never have frozen feet while poultry kept away from any considerable amount of water often suffer. It is said that "care will kill a cat," and no doubt pampered domestic birds are less hardy than their wild relatives, but "Pennsylvania Dutch" farmers place tubs of water under blossoming trees to prevent them from freezing, then why not in the hen coop? I believe the wild birds practice this plan of roosting near the water for protection in extremely cold weather and would like to hear what some other Forest and Stream woodsmen know about it.

GREENSBURG, PA. DEACON.

A Frozen Wildcat.

Town Creek, Ala.—Jake Bear, painter and lockmaster of lock No. 5, witnessed a novel sight on Dec. 29.

While tricyling over the railroad on the tow-path between locks five and six he discovered a large wildcat with one foot on the north rail, standing motionless. Jake came to a sudden halt, but as the cat did not move, he advanced to investigate. He found the cat benumbed with cold, with its feet frozen hard and fast to the rail. As the entire body of the animal was bedecked with ice, and frost it is evident that it had swam across the canal, either to elude pursuers or in search of food, had climbed out on the tow-path to survey its surroundings, and been overcome by the cold.

At any rate, it was frozen to the rail when discovered by Jake Bear, and with life almost extinct. Jake promptly dispatched the cat with a club, and turned it over to Mr. Reuben Patterson, the taxidermist, who has preserved it in form and features. The facts, as stated above, will be verified by Major McFarland, chief of the department, at Muscle Shoals.

J. H. WALLACE, JR.

Remora and Shark.

I have followed with great interest Mr. Alfred C. Harmsworth's articles on Florida fishing. There is a sentence in the last paragraph of the third article that should be revised. It reads: "Attached to him were a number of those little flat-headed fish which are said to follow the sharks in all parts of the world, and are known as pilot fish." The little flat-headed fish referred to are no pilot fish but remoras. I have seen sharks swimming in the clear waters of the Mexican Gulf, with one or more of these parasites attached to their backs. To all appearances they allow the sharks to do the foraging while they get their share of the spoils without any exertion on their part. Their upper jaw is somewhat corrugated, and they maintain their hold through suction.

IVANHOE.

[The remora was described and illustrated in our issue of Nov. 25, 1893.]

White Wild Turkeys.

While in Amelia County, Virginia, on a deer hunt a few days ago, I was invited to the hospitable home of Mr. Wickliff Jackson, where I found a gang of eleven pure wild turkeys. They were raised from wild turkey eggs found in the woods. They are so gentle that they will eat from the childrens' hands; but are taught to go in a pen for most of their food.

W. G. D.

Nov. 6, 1894.

Tough Old Ganders.

It may be of interest to some of the readers of your valuable paper to know of the old age to which geese live. This subject came to my notice last fall while spending a few days with friends at a gunning-stand at Lakeville.

"You see that old gander out there on the point of the beach," said an old veteran in the party. "Well, that chap I've gunned over for thirty years, and I know the man what owned him for ten years previous to my owning him."

This seemed incredible to me, but later a gentleman told me that he had a gander that he knew was seventy years old, and how much more he could not say, as the old fellow had been wounded from a flock of wild geese. The most remarkable part of it is, that Old Ephriam, as the gander is called, was father to six handsome goslings last spring. On looking into the matter I find that it is a very common occurrence for geese to live to the ages of from fifty on to ninety years. I should like to hear from others regarding the ages of geese.

R. CLEMENT STEVENS.

Game Bag and Gun.

A WINTER DAY WITH GROUSE.

Grouse hunting near the heart of what is to be "Greater Pittsburgh.

When the gay holiday season had once more come, bringing its accustomed pleasures to all, and, in addition a week's vacation to the writer, my annual longing for the free, Bohemian life on the farm came also. Yielding to this desire, I decided to spend the days of my vacation in once more shooting over the rugged hills of my "Old Homestead."

On Dec. 26 I hurriedly gathered up my hunting paraphernalia, borrowed my neighbor's Gordon setter dog "Dan," hurried down the street to make the 3.15 train east, glad with the joyous anticipations of a week's hunt. While the train rumbled along over the rails, I noticed the wind had veered around from the south to the east, and a fine dust-like snow was beginning to fall.

It snowed uninterruptedly until the next afternoon, by which time it had dropped fully fifteen inches of the fleecy whiteness over the brown earth. The wind then veered to the north, when it grew bitterly cold, registering somewhere near twelve degrees below zero.

Friday, in spite of the protests of my friends, who declared we would be frozen, my brother Dave and I determined to drive eight miles back into the country to the home of my childhood, in quest of the wiliest of all American game birds—the ruffed grouse.

As the roads were unbroken, and the drifts up over the fences, we decided to drive those eight weary miles in a buggy.

It was a weary ride, indeed, but I comforted myself by recalling to mind the many happy years I had spent in quest of this the gamest of all game birds; I recalled the only time I had ever seen this stately bird unrestrained in its native haunts, when, as a barefoot boy with cheek of tan, I had driven the cows to a pasture near a forest. While I was resting in the angle of a worm fence I peeped between the mossy rails and saw a splendid pair of grouse emerge from a patch of briars followed by their ten lively children almost full grown.

They had evidently just fared sumptuously upon the ripe blackberries that hung in great clusters on the bushes from which they had just come; and were in a jolly good humor. They would make a ludicrous attempt at fighting, ruffle up the tufts of feathers on their necks. One would rush away eagerly pursued by all the others. The mother gave a few peculiar clucks, when the whole brood started up the hill as on a dress parade, a step or two, then their magnificent tails would unfold like my lady's fan, the bronze tufts on their necks swell out like a blower pigeon's. They took a few more steps, uttered a few short notes, and then another grand panorama of plumage. Oh, what a magnificent bird the male seems as he instinctively stretches up his bronzed neck to scent any possible danger! Did more grace, beauty, or strength ever walk in feathers, as he stands up so bright, so keen, and so alert, but Jack, the "chum dog," is on my track, and comes tearing through the dry stubble the old patriarch scents danger. There is a beating of wings, like the rush of mighty winds, and the whole colony is off and my opportunity to learn the domestic secrets of the American ruffed grouse is at an end.

By nine o'clock Saturday morning eager and expectant, we started across the fields to Leslie's Thicket, a fair jungle of thorns, crab apples, hazel bushes, and briars.

Bierhorst, my neighbor, of whom I had borrowed Dan repeatedly told me: "I never knew Dan to flush a pheasant." My personal experience with the grouse of Pennsylvania had led me to consider him an exceedingly coy bird, but Dan worked so slowly and cautiously that I had no reason to doubt my friend's word. We had not yet entered the thicket until Dan was on the alert, and showed signs of great excitement. He crept along through the deep snow for fully sixty feet, and finally came to a stand about forty feet from a fallen white oak. When I had so located myself so as to get a good shot no difference how they flew Dave threw in a stick and seven as fine specimens of the noble ruffed grouse as ever gladdened the heart of a hunter came up with a rush and a roar, and shot down the long ravine straight away from me. I pulled both barrels on the fast vanishing birds; but neither shell exploded.

Only those who have experienced similar disasters can comprehend my chagrin and disappointment, when on examining my gun I found both plungers frozen fast. I coursed and marked down the last of the vanishing birds. I decided he had found cover on a high ridge about 500 yards ahead. Dan looked both disgusted and discouraged.

In a small clump of thorns and wild cherries nearer than I had thought, Dan again began to show signs of excitement. He slowly and stealthily crept through the snow finally making a staunch point in front of a large stump partially covered with briars and fallen brush. I had melted out my gun by striking matches, snapped it a number of times to be sure the plungers would work freely. I could see the tracks of the bird leading into the cover.

This was the critical moment. Dave threw in an exploded shell that failed to bring the bird up, then a club was tossed in that brought it up with a rush and a roar, and it plunged to my left toward a ravine. I cut loose with my right barrel loaded with No. 6 shot, scoring a clean miss; letting my trusty left barrel go loaded with No. 4s, I noticed the bird sort of squat as he passed out of sight around the bend in the ravine. "He's hit," shouted Dave, as he plowed through the snow in the direction it had flown. About one hundred yards down the ravine we located him in a tree top, and with some difficulty we caught him. I assure the reader it was with feelings of shame that I noticed the poor bird's wing was badly wounded.

We retraced our steps, hunted out the same thicket thoroughly, hoping to raise the others; but our efforts were unavailing.

We crossed the ravine into the clear woods, where my brother flushed a bird about seventy-five yards to my left. He had a single barrel, muzzle loading gun that had a reputation for long distance shooting. Dave excused his neglect to shoot, on the ground that his gun was no good, and again: "I am only along with you for company."

Nevertheless the bird's sudden departure had evidently taken his nerve, for the space was open and the bird was flying almost straight away, yet he failed to shoot.

We coursed the bird, and followed him down through the woods to a small draw where I noticed Dave acting very strangely. Right out in an open spot that had been cleared he made a half-point, crept forward six or eight feet, and made a sort of a point but seemed uncertain. We soon learned the cause of his difficulty. Right at the dog's nose was a slight rift in the snow, as if a stone had fallen into it. "The pheasant's in that hole," whispered Dave. This I was inclined to doubt, thinking the bird on a tree across the fence, but as I never had hunted the birch pheasant, or grouse in deep snow I was willing to investigate. I walked up to the hole, took a step in the direction he seemed to have gone, when up came the pheasant right at my feet, and took a left quarter. I was a magnificent shot, and I lost no time in covering my bird. I fired bringing him down at about seventy-five yards distance. The others of the covey we failed to find.

We crossed a large hollow and skirted along the brow of the hills. I halted to examine my gun to see whether the plungers would still work, the tired dog lay at my feet, Dave walked on.

I saw a pleasant, leisurely walk out in front of him from a ledge of rocks under the roots of a pine-tree, and patiently waited till Dave shot it.

We hunted on down the valley but succeeded in bagging only a rabbit. On the homeward march I saw Dave cautiously creep up to a white oak-tree, peep out from behind, and dodge back again and finally take deliberate aim and fire. I had raised cain with him for shooting his first pheasant sitting, and hardly thought he would disregard my wishes so soon. I was amazed to see him run to the spot and triumphantly hold up his second pheasant, shouting lustily: "Hammerless guns are no good, muzzle loaders are the thing!" Thinking there might be more birds around I hunted out a thicket to my left, but the dog was by this time so tired that he stayed at my heels and refused to hunt. His persistence in hanging at our heels on account of being tired, suggested to our minds the "ward heeler," an individual born tired, so we dubbed the dog "The Third Ward Heeler."

When we got home I heard Dave telling the folks at the house of his good fortune. He was showing his two plump pheasants, when I noticed that one's feathers were very much ruffled and it was frozen stiff. When I asked: "What's the matter with your pheasant?" He then told me. Said he: "I saw the pheasant lying dead in the snow, and to play a joke on you I pretended to shoot it, so as to have as many pheasants as you." The poor bird had been wounded, and had flown under the snow, and finally crawled out in the open air to die. We had hardly got done laughing about the joke when who should drop in but Jack Williams, the crack shot of the whole country side. We told Williams where we put the birds up, how often we flushed them, and where, adding that we had found a bird that had been wounded lying dead in the snow. "Did you find it at the lower end of Snyder's point near that brush fence?" said Williams. Yes, that was where Dave had found it. "Well," said Williams, "I shot that pheasant last night just at dark. I knew it was badly wounded; I hunted for it, but couldn't find it." Thus the noble bird had died in its heroic efforts to escape its most dreaded enemy, the hunter.

Feeling that the tramp over the hills of my father's farm had made me ten years younger in spirits, I returned to the city to take up the tread mill of daily toil, with the bright hope in my heart that some sweet day I may again hie away to the woods of the old homestead and hunt the wiliest of all game birds, the American grouse.

JAMES M. MORRIS.

OMAHA MEN AND WOMEN.

Omaha, Jan. 26.—At last Nebraska has had a good old-fashioned snowstorm, and the beautiful snow covers the earth all over the State from six inches to a foot in depth. This, with what is certainly yet to come in future storms of snow or rain, will certainly once more fill up our lakes and marshes. Anyway, the wild fowl enthusiasts are counting on this, and are correspondingly happy, for plenty of water means plenty of shooting in the spring. The rabbit hunters all over the State have been industriously at work since the snow fell, judging from the piles of jacks and cottontails that adorn the sidewalk along commission house row. On Friday one firm received a consignment of 500 jacks and 202 cottontails. Nebraska is a great State for rabbits, but what becomes of all that are shipped into this market is a mystery. They are certainly not consumed here, however, I know that stewed and baked jack rabbit is a common dish among the poor. Jack's retail at from 10 to 12 1-2 cents, and cottontails as low as 5 cents. A good-sized jack will provide a good, substantial meal for five or six persons, and I know of no other meat as cheap in the market. Still, if everybody in the town subsisted on jack rabbit I don't believe they could get away with the car loads that come in here with every cold snap.

Previous to the present wintry spell, we enjoyed a two weeks interval of unprecedentedly mild weather. House and store doors were kept wide open through the day, the trees and shrubbery buds began to swell, honey bees and flies emerged from hibernation, and the general condition of things was like the opening of a very warm spring. Some good bags of geese were made along the Platte, and a few mallards were received in the market. I saw jay birds on my way down town every morning, and last Thursday, the day before the storm, I heard a robin chirping petulently in the big trees in Senator Thurston's yard. Blue jays, I think, remain here more or less all winter, for it must be remembered we have had three very cold snaps out here, in one of which the mercury fell eighteen degrees below.

By the way, our newly-elected United States Senator, John M. Thurston, is an ardent sportsman, and is well up in the lore of mountain, woods, and stream. Of late years he has done but little shooting aside from an annual trip to the Rockies for big game, but has been devoted more to the pleasures of the line and rod. At the gentle art he is an adept, and so is Mrs. Thurston. She handles a rod and reel with the dexterity of a master, and for that matter is quite a shot with shot-gun or rifle. She accompanies Mr. Thurston on all his outings, and is a great lover of outdoor sports and pastimes. She is a splendid horsewoman, and rows a boat like a champion. In fact, Mrs. Thurston is a very charming and a very superior woman, and will be an accession, indeed, to the social circle at the capital. We have still another lady here who is famous for her capabilities in the field or on the stream—Mrs. E. S. Dundy, Jr., daughter-in-law of Judge E. S. Dundy of the United States Court. She can do about as good work over one of her husband's fine dogs on chicken or quail as the average sportsman, and last winter at Sutherland, Fla., in a team target shoot, in which were a number of expert gentlemen wing shots, carried off the palm by killing 23 out of 25 birds. For this feat her husband shipped her a high grade 16 Lefever, with instructions to challenge the best shot at that resort. Mrs. Dundy is a magnificent rider, rower, and swimmer, and these accomplishments, together with her rare beauty and intellectual attainments, makes her a popular person indeed. Mr. and Mrs. Dundy and Miss May Dundy sail from 'Frisco for Japan Feb. 9.

Speaking of Mrs Dundy reminds me that Judge Dundy himself is worthy of a line or two. He is known out here as one of the greatest bear hunters in the whole West. Notwithstanding his age—he is in the sixties—he makes annual late summer trips to the mountains in quest of his favorite game He goes alone, with guide, dogs, and arsenic, and spends from four to eight weeks in the lonely fastnesses of the Big Horn range, and has yet to score his first failure on bear. Last September he killed two big grizzlies, two cinnamon, and a silver-tip.

SANDY GRISWOLD.

BOSTON AND MAINE.

Boston and Maine.—Mr. J. E. Hutchinson, President of the Boston Fruit and Produce Exchange, is a lover of quail shooting, and with his friend, N. L. Chaffin, makes a trip South for this pastime almost every season. The party left Boston, Jan. 25, for North Carolina, and will be absent some three or four weeks. The company is composed of A. M. Tucker, N. L. Chaffin, Captain Harrison Aldrich, Mark E. Tucker, wife, and daughter, John P. Tucker, G. A. Abbott, and Mr. Hutchinson. They are to visit a particularly good hunting ground, and good accounts of sport may be expected.

Fish Commissioner Henry O. Stanley has been in Boston the past week. He came fresh from the legislative halls at Augusta, Me. He is strongly in hopes that no "very foolish" game and fish laws will be suffered to pass and receive the signature of the Governor, though the air is full of them, and every session is thronged with petitions for peculiar and special laws. With some slight changes in the present code of game and fish laws, and a sufficient appropriation for their enforcement, he believes that the game and fish in Maine can be well taken care of, in the most reasonable manner for all concerned. He is liberal in his ideas; believing that Maine is the best supplied of any State in the Union with big game, and can soon be equally supplied with fish, since she has already the best trout and landlocked salmon in the world. The proposed law preventing the killing of cow and calf moose at any time he has little doubt of the friends of the moose being able to pass. About the success of any law closing September, or a part of it, to partridge shooting, he has grave doubts. A good and liberal appropriation for the better protection and propagation of fish and game he thoroughly expects. He has strong hopes that a measure putting special and minor laws, affecting the fish and game interests into the hands of a commission will be passed.

A resolve was introduced into the Massachusetts Legislature the other day making an appropriation of $5,000 for the introduction of Mongolian pheasants into the State. The measure has not yet met with any special opposition. It is understood that the market interest agrees not to oppose the appropriation, provided that the friends of fish and game protection will not attempt further legislation against their business; that of selling game in the markets.

SPECIAL.

SOUTH DAKOTA GROUSE FIELDS.

The Wakpa Shicka or Bad River, in South Dakota, is fed along its entire course by countless creeks, which empty into it on either side. These creeks are fringed with a dense growth of buffalo berry bushes, diamond willows, and wild roses. These often reach back from twelve to thirty miles from the river, through the draws, and then expand. Here is the natural haunt of the ruffed grouse. The Missouri River into which Bad River empties directly opposite the beautiful little city of Pierre, the growing and busy capital of South Dakota, is the dividing line between the pinnated grouse or prairie chicken and the sharptail. Seldom, indeed, does the sportsman find a pinnated grouse on the west side of the Missouri, while on the east side, along the rugged bluffs which mark its tortuous course, a day's shooting will result in bagging probably an equal number of each; and going ten or twenty miles east you will find nothing but the pinnated birds. On rare occasions I have bagged a bird bearing the distinctive marks of both—viz., feathered legs and sharp tail and an apparent intermixture of color, in fact a sort of "what-is-it." I have always considered them a hybrid from cross matings.

But I hear some impatient one say: "That's enough about the birds; let's go after them." All right; go down town and tell L. and Mc to be ready to start at five o'clock to-morrow morning as the close season is over to-day. We will get a livery team and canopy top spring wagon, cross on the pontoon bridge, drive up Bad River to Willow Creek by six o'clock or quarter-past, and hunt until ten, then lay up in the shade until perhaps four, then after the evening's shoot we can drive home.

As per programme we start at half-past four, a little ahead of schedule time, but all the better as it bids fair to be a hot day, with not a sign of a cloud in sight. Our shells are loaded with 8's, and both dogs are in good shape for hunting. That little shower in the night has cooled off the ground, the dogs will work well. Our "impatient sportsman" handles the ribbons nicely, and the six miles are soon covered, L. and Mc having had their usual wow-wow with each other, occasioned by L. asking Mc if he were sure that he "had them located," an old gag dating back to the previous fall when Mc rounded us up one October afternoon to go after geese ten miles north of town, assuring us that he knew "just where they were lighting by the thousand." Our business was laid aside for the day, shells were hurriedly loaded, and we made the trip only to find on enquiring of farmers that not a goose had been seen that season.

On reaching the mouth of Willow, we turned up an old trail leading along the west side, and half a mile travel brought us to the first "likely" place. Our guns were quickly gotten out of the cases, and telling our driver the route we were soon at work. The black dog struck a scent, and following it up came to a stand, backed by his mate, on a covey of at least twelve grouse, eight of which were bagged. By ten o'clock we were nicely ensconced in a shady nook, with thirty-eight birds in the ice-box, which is an absolute necessity in hot weather hunting. The dogs were suffering from the intolerable heat, and did not have much show for good work. Our driver was very enthusiastic over our success, which we assured him was only moderate, and I arranged that he should take my gun for the evening's shoot, while I drove for the rest of the day. This suited him exactly, and the start was made about 4.30 P. M., it having clouded over in fine shape in the meantime. The dogs worked well, the birds lay close, and the boys had sixty-six grouse by seven o'clock—one hundred and four for the day's shoot.

This is an actual day's experience, and has been "laid in the shade" several times by other parties, who stood the sun and kept at it all day long. My memory also recalls trips when twelve birds were all that were bagged. In fact, in '93 the grouse were never so numerous hereabouts, while in '94 we could not account for their scarcity. No severe storms occurred during the hatching season, nor could any early prairie fires have been the cause. Yet a bag of twenty for a day's shoot was good, and one of thirty-five or forty very unusual. Can any one say why this was so?

CAMP FIRE.

PIERRE, South Dakota.

KEEPING WARM.

Not all of the ardent sportsmen of this country are hardy, robust men, inured to privation, exposure, and fatigue In fact, I believe most hunters will agree that a large proportion of their ilk are men of sedentary habits and indoor occupations, men who enjoy more keenly their occasional outings because they are deprived of daily contact with Dame Nature. For such men, especially those who are within reaching distance of the plains, I beg to suggest a few points.

Every one knows that to reach good shooting, as a rule, long wagon or stage rides are required and that after hours of exposure to intense cold he is apt to arrive on the grounds so benumbed that he has lost all interest in the sport (if that be possible), and is apt to swear that he will never again go out in a storm—only to forget ("just at the moment he should not") his resolves the first time an opportunity arises to try the trip again.

Experience of eight years traversing the plains, long before the railroads laid their iconoclastic hands on the beauties of that section, resulted in five years of misery whenever winter came. After that three years of absolute immunity from suffering with cold. To tell the truth, most of the time, even during the severest weather, I was, when in my buggy, too warm. My method was inexpensive, and required but few "ingredients."

In the first place procure a thin board two feet long and eight inches wide. Get a common railroad lantern, such as switchmen use, and some sperm oil to fill it. With wire firmly attach the base of the lantern to the board. Around and above the lantern make a cage "wick-up" shape about three inches larger than the lantern. Your wires will be sufficient for this, and allow ready access to light, or fill, or remove globe for cleaning.

When you get into the buggy arrange blankets so that cold cannot get in from under the seat, light lantern, turn it down low—don't forget that or you will have some new blankets to buy—pull blankets up over your knees and tuck in the sides. In five minutes you will feel as if you were sitting with your feet upon a chair by a country hotel stove.

Of course, the object of the board is to enable you and your partner to each put one foot on it, and thus prevent the lamp from overturning in case of sudden fall, or movement, as you can always tell by the "feel" just where the lantern is.

Don't use kerosene—it's too dangerous. I knew four persons to be killed by an explosion, who were using a lantern, which upset through not being secured as above described.

If starting out, as I assume, in mid-winter, and you expect snow, the warmest and most comfortable foot-gear is a pair of thick felt stockings, worn over a light pair of socks—reaching to the knees. Over these wear a common pair of buckle arctics—your feet can't get cold thus equipped.

Underneath your common winter underwear put on a suit of cheap cotton gauze underwear. You will understand why if you ever try it. Any cloth turban cap that pulls down over your ears will do. Don't use a cap with a vizor. The wind whistles under it in a storm, and speedily gives you a bad headache. If you can't stand the glare of the sun use a pair of colored goggles, with rims leather covered. These are especially useful in a blizzard, as they protect your eyes from the ice crystals in the air. They should be used, summer or winter, the first few days on the prairie until one gets accustomed to the strong light.

For the neck use a moderate sized silk handkerchief, and carefully fasten it in place with a strong safety pin. For the wrists, a good long pair of wristlets must be worn.

Now, one of the most important points. To protect the hands properly a pair of cotton, or lisle thread, or very thin buckskin gloves; close-fitting but perfectly flexible. Over these place a pair of extra long sheep mittens, woolly side inside, skin side outside, rather loose, and with gauntlet laps reaching half-way to the elbows—over your overcoat cuffs.

Frequently during the day game may spring up along

the road, and one of the party should have a weapon handy. In such event just grab the gun with left hand, catch tip of right-hand mitten between your teeth and jerk it off, in a second you are all ready for a shot you could not have secured if you had had to fool with a pair of thick, clumsy gloves. Besides gloves are cold.

Frequently the harness gives out, or for some reason you want to use your fingers freely. The thin pair of gloves recommended enables you to do so without chapping your hands, and with this equipment your hands are always warm and flexible, and you can do in a moment what would be almost impossible with stiff, benumbed fingers.

Never, under any circumstances whatever, go out in the prairie without a compass, and plenty of matches in a waterproof box; and be sure to always have these on your person. Prairie fires are most dangerous in fall and winter, and the matches will be needed at a time when stores are not convenient. A little ingenuity will enable the duck hunter to utilize the lantern suggestion in his blind, greatly to his comfort.

For rough, rainy weather, or in extreme cold weather, the common cowboy's "slicker" beats any rubber coat or mackintosh ever made.

If you are fond of "a wee drop," one caution—never while on a long, cold ride, indulge in whiskey—en route. A tipple before starting might be permissible, perhaps, and quantum suff. after arrival, but you will keep warmer if you leave it alone while on the trail.

ALGODON.

A DAY IN SOUTHERN CALIFORNIA.

What a faithful friend to the man of clear conscience is memory, for it lays before him such pleasant recollections, and I think this particularly true of the man who loves his gun. The day before Christmas I found myself in the lovely city of Los Angeles, with nothing to do. To the active man far from home this is sometimes a sad state of affairs. I found it was likely to be so with me unless I found something in the way of amusement. I was certainly very tired of walking up and down the street, looking at dolls in the show windows. A day or two before this my friend, Mr. Rice, with a genuine Massachusetts twang to his voice, had said there were plenty of quail over at Sierra Madra, where he was staying, and that he would like me to try and help him get some. He had tried, but found them very flighty. Recalling this cordial invitation, I immediately telephoned Mr. Rice I would be with him in just one hour and a half, forgetting at the time that I had to borrow a gun from one of the most charming hotel clerks in the world, hire a team, change my clothes and drive fourteen miles. However, the fever was on and we made it in just two hours. We reached Sierra Madra in great spirits. The livery horses didn't and why shouldn't we? The way was for fourteen miles along a road of palms, green hedges, flowers and orange orchards all surrounded by snow capped mountains glistening under the rays of what would be an early May sun in New York State. Past the Hotel Raymond at the peak of an immense mound of every kind of flowers in full bloom, through Pasadena, with its lovely avenues of homes and sunshine, with the prospect of quail further on, to say nothing of our most modern host at the villa. Surely this sort of a drive on this sort of morning with a hammerless gun, under the seat, was inspiring, and the fever grew worse.

Half an hour later we began to shoot, and that, too, within half a mile of the villa. We had no dog. No use taking a dog along. You can find plenty of quail without one and not lose any time looking for such animals. I am quite sure a dog would need an experienced and faithful guide to keep tab on him in that brush on those foothills. We had plenty of shooting, if we didn't get many birds, and a splendid day's outing. These California quail are beautiful birds, of a bluish color, with remarkably rich brown marking on the breast and the male bird carries a plume of blue black on his head.

Mr. Rice claims that there is no bird on earth that can get up and get away as quickly as these blue quail. I asked him if he ever tackled any of those brown three-year-olds in North Carolina. He hadn't, and I thought not, or he wouldn't kick so much at the gait of these Western toughs.

Now, most hunting trips, if they are hunting trips of the right sort, have a moral as well as a healthful benefit. This one was not without one or both that day. Mr. Rice killed his first bird. This may seem strange, but I assure you he had hunted there before this day many times, and he had not only hunted them, but actually fed one covey night and morning on the wheat from his neighbor's barn and sat under an orange tree eating last year's oranges, watching them feed. What Mr. Rice needs is five expert traps and five thousand clay pigeons. Jenkins' standing with the guests of the Hallenbeck and with his family was never so high. Three quail and I have forgotten how many cottontails were proudly displayed on the counters, while Charles called "front" with a vigor and a voice before unknown to him. And I—well I staved off a spell of the blues; witnessed how heaven itself has endowed that wonderful country with a perfect health-giving climate, a place where the tried, tired and weary can find rest, out of the land of snow and darkness into the land of sunshine and flowers, a veritable garden of loveliness. And my birds—well, I trust, sincerely trust, that Mrs. Doan enjoyed the brace I sent her. If she enjoyed them with the same relish I did her Christmas dinner next day all is even, and I shall ever be thankful that I killed that particular pair of birds.

But farewell Los Angeles and Southern Califorina. I carry away an impression of your fairness and fitness that will last me a lifetime, even though I should never visit you again. I shall go there, however, if I have to walk. The snow of Montana is now dritfing under the sash of my window and my ardor has cooled off. The trunk must be packed and that same faithful memory calls me to duty where a shotgun is not needed. But I sometimes think a good stout club would come in handy. Needless to say, I am not journeying for pleasure, but in the capacity of commercial traveler. THOS. ELMER.

Butte, Mont., Jan. 13.

BUTCHERS RED AND BUTCHERS WHITE.

It seems that there is yet some big game in the Far West. Mr. Charley Hardy, of Auburndale, Mass., but now at Colorado College, Colorado Springs, is an enthusiast with the rod and rifle, and has done considerable hunting in the Eastern States. But his health not being sufficiently robust for the East, he has been obliged to leave Harvard for a college in the high altitudes of Colorado. He writes a business friend here who also loves hunting and fishing, a letter from which the following extracts are made: "I was very glad to hear that your trip in Maine was a success. The game must be increasing, if you saw so many deer in so short a trip, and I imagine it must be due to the vigorous enforcement of the game laws of that State. At present I am on a hunting trip in Northwestern Colorado, between White and Bear Rivers, just west of the Continental Divide. We are in the winter range of the deer—a little too low for the elk—and to give you an idea of how plentiful they are, it will be enough to say that in three days mountain lion hunting I counted on each day, respectively, 251, 137, and 124 deer within good gunshot. Thus far I have hunted for five days, perhaps three hours a day, and have killed nine. It takes about three or four deer a week to feed the dogs, not to mention what we eat ourselves. Most of our time is devoted to hunting lions, and in two weeks we have killed four, the largest of which was seven feet five inches long, and measured thirteen inches around the forearm. What with the Utes, the lions, and the hunters, it is a wonder that the deer are not thinned out, but they are quite as plentiful as ever, according to old hunters. The Utes hunt about ten miles to the west of us, and each brave kills an average of eight or ten deer a day, merely to sell the hides at fifty cents apiece. The settlers and the cow men raid their camp and stampede their ponies about twice every year, and drive them back into their reservation in Utah. But they come back again each succeeding year, buying unauthorized permits from their agents. There is talk among the cattlemen of driving them out with arms, and for good, but whether they will carry this threat into effect will be more or less decided by the decision pending in the courts concerning the Utes in Utah." SPECIAL.

Editor of Forest and Stream: The wanton butchering of game in this country and especially in the Far West is not confined to market hunters as the following account will show:

Last fall Mr. Gerry, a son of Eldridge T. Gerry, of New York City, accompanied by his doctor, went big game shooting in White River country, Colorado. They had for guides the Tatkenbaugh Bros., of Glenwood Spring, Col.

These two young gentlemen were in the woods not quite a month, and they admitted killing thirty-one head of game—deer, antelope, and one elk. But even this slaughter did not satisfy these butchers, for a great many deer were found around their camp without even their throats cut. A man named Roberts counted twenty dead deer in the vicinity of their camp on the Williams Fork of the Bear.

From hints dropped by the men who acted as packers, etc., it may be inferred that the slaughter was simply awful, and that deer were killed right and left just to see them fall.

What makes this so much worse is that all the deer were killed when in the velvet, and so the butchers could not save horns or meat.

It is a common report in Colorado Springs that young Gerry's father retained a lawyer in the Springs in case his son had trouble with the game wardens.

Here we have two men who have not the least bit of a sportsman in their make-up, but who, protected by great wealth, are allowed to kill game to their heart's content without having a word said from anybody.

I trust you will have space to publish this in your valuable paper, and you will also add a few words yourself. WALTER S. CASH.

CHICAGO AND THE WEST.

Death of Mr. Low.

Jan. 30.—Too late for announcement in this week's Forest and Stream came as sad a piece of news as could befall this community of sportsmen, and one which it would be less sad if we need not announce at all. The death of Mr. Wolfred N. Low was not expected, few of his friends knew that his old throat trouble had finally taken him to bed, and at last proved fatal. Yet his death on Monday last is now part of the record of disaster to the craft of Western sportsmen.

Mr. Low was forty-eight years of age. His death occurred at his residence, No. 1,708 Barry avenue, ensuing after a final illness of about one month. The funeral was held at eleven o'clock Wednesday last from the Hesperia Lodge Rooms, 76 Monroe street, and was attended by large numbers of Chicago sportsmen, among whom Mr. Low was the most beloved of men. The funeral cortege left the lodge rooms for Rosehill Cemetery.

Mr. Low was in all ways a prominent and stalwart figure in Illinois sportsmanship, and especially represented much of the legal bone and sinew of the State Sportsman's Association, on whose law committee he had long served.

Mr. Low had been a member at the Chicago bar for twenty-five years. He enlisted in an Illinois regiment, and served through the war. After being graduated from Oberlin law school he began practice in this city. He was a prominent figure in G. A. R. circles, and had twice served as President of Illinois State Sportsman's Association; President of the Veteran Union League, and Commander Columbia Post. He was also an active member of Hesperia Lodge, A. F. A. M., Cumberland Gun Club, Prairie Gun Club, Eagle River Hunting and Fishing Club, Calumet Heights Club, and Chicago Bar Association.

His death leaves a vacancy in sportsmanship, and an ache in many sportsmen's hearts.

The Passing Show.

Feb. 2.—Mr. H. McMurchy, of the Hunter Arms Co., and a large and persistent cold with him, spent a short time in Chicago this week, stopping here twice en route to and from St. Louis. Mr. McMurchy and his cold will soon start on the annual Coast trip, and will go via the Southern route, to see what can be done for the latter. Mac reports a slow improvement in the gun trade.

Mr. Fred Biffar, of the H. & D. Folsom Arms Co., of New York and New Orleans, was also in Chicago on business this week, spending some time socially with Mr. McMurchy, the two being friends, after the lonesome fashion of traveling men, who have to live in hotels and dislike themselves therefor.

Mr. A. F. Young, a very old angler and a skillful one, paused in Chicago, on the way East to Ithaca, where he will finish the winter. Mr. Young is the sort of angler who makes his own rods, and makes goods ones. He showed me a fifty-yard fly casting-line which he had just completed. It was dull grey, and all made of braided horse-hair of that natural color. This was a line that would make Izack Walton turn in his grave in envy, if he knew of it. Mr. Young is an ardent trout fisherman, but he says the lake market fishermen have ruined what was once fine shore fishing in Lake Michigan for the large brook trout.

Mr. James B. Meikle, of Omaha, fish commissioner of that State of Nebraska, paused at the Forest and Stream office this week. Mr. Meikel says that protective work is still primitive in his State, though there is need of it. He has introduced a bill making an appropriation for fish and game protective purposes, and hopes for brighter days in the near future, in which wish all sportsmen will join him.

Back to the White City.

Mr. Blake B. Babcock, of Hornellsville, N. Y., writes me a letter which carries one back to the days of the White City. I will let it speak for itself. He says:

"Several months ago you published an article in the Forest and Stream, describing your encounter with Harold B. Rose at the World's Fair, and you wrote so feelingly upon the subject it occurred to me you might like some inside history of your little friend. The conditions upon which Harold and Carlton went to the World's Fair were that they were to make notes of everything that interested them and write it all up when they returned home. They were not allowed to look in any guide book or magazine while writing, but had to depend upon their own notes and memory. This explains their readiness to fire questions at everybody they met. They were in search of material for their work. The only help they had was in grammar and spelling, as you will readily see upon an examination of the book which I send you with this letter. The fall and winter term of school having opened, Harold did not take his trip to the Adirondack Mountains as he fully expected to do with his Uncle Edwin and myself. We will probably take both the boys on a hunting trip in Maine next fall."

The book written by these boys shows the many views which newspaper enterprise has made famous to the public, but the most entertaining portions of it are the naive, but usually succinct and clear comments on the things which impressed the boyish authors at the Fair. As I said at that time, few more interesting visitors ever came into the Forest and Stream exhibit at the Fair than these two bright, little fellows, and to be again so uniquely and nicely reminded of them and of the glorious days of the immortal pageant is a pleasant experience for which I must express my thanks.

E. HOUGH.

909 Security Building, Chicago.

Notes From New Mexico.

Santa Fe, N. M., Jan. 27.—Our Legislative solons are at work now and we tried to get a "no sale plank" through, but the people are not educated up to that at present. A bill has already passed the Council that is a great improvement over the old absence of law, and it has a good chance of passing the house. When it gets through I will send you a copy of it. The slaughter of deer by market hunters has been greater than usual, and is still going on in the deep snow of the Sangre de Cristo range, and choice venison is worth five cents a pound.

Some months since some gentleman from a location in Texas inquired about a good cross for a wolf dog. My idea is that there is no need of a cross of any kind. I think it is much better to mix the breeds in the pack instead of in the dogs. This gentleman spoke of wanting a pack of about thirty, and my advice would be to get about ten each of foxhounds, staghounds, or more properly speaking, deerhounds, and greyhounds. I would get the puppies and raise them together and train them to hunt together. The foxhounds should be from some large strain noted for courage and fighting qualities. I would rather have such a pack than any cross breed dogs that were ever raised. I have never tried the Russian wolf hounds, but should presume that they would be good to put in such a pack.

Speaking of three barrel guns, I want to say that I have used several combination guns of various makes and for mountain hunting like them very much, especially in a grouse, turkey and deer country.

My favorite, which I am now using, is a 12-gauge, with .40-70-330 rifle, all weighing 8½ pounds. It suits me to perfection for an all-round camp gun. I think that .40-70-330, is one of the best cartridges ever made, and I am glad to see that the Winchesters have gotten out a model 1886 to use this load.

I took a short trip to the plains in November for antelope, and saw lots of them, but they are not the antelope of ten years ago. They are very highly educated at present, and do not seem inclined to take many chances. I only scored one hit and brought home a young spike-horn.

My principal amusement these days is to take the greyhounds out after jack rabbits, which is really good sport. H. B. HERSEY.

The Game of North Carolina.

The Newbern (N. C.) Annual Fair, which occurs on the 18-23 days of Feburary, offers no less than $287 as premiums for live specimens of game, birds, and animals, indigenous or visitants, to the tide water region of that State. An enumeration of the same is interesting, the list being especially large, to wit:

Quail, woodcock, English snipe, graybacks, single rail, double or king rail, doves, plover, meadow larks, willets, curlew, yellow shanks, beach robins, wild turkeys, and the following varieties of water fowl and ducks—namely, mallards, shufflers, black ducks, sprigtails, baldfaces, green and blue wing teal dippers, noddies, water witches, coots, white brant, black brant, bald brant, spoon bills, redheads, canvasbacks, bullnecks, hairyheads, south-southerlies, summer ducks, blue-peters, shelldrakes, whifflers, cormans, boobies, blue herons, bitrons, shipcoks, marsh hens, swans, loons, and geese—the local names being given as in premium list. There are also $125 offered as fish premiums, and $56 for oysters, besides prizes for dogs (two classes), pigeons, and domestic fowls and poultry, amounting for these, in all, to $330. Some thirty varieties of these are specified. These exhibits are always very interesting. One year no less than eighty varieties of fresh water and salt-water fish were displayed on ice at the same time, all directly from near-by waters, and also nineteen varieties of oysters. There are no oysters like the best of North Carolina oysters. Readers of this paragraph ought to take in the show.

C. H.

Aiming at the Neck.

San Luis Potosi, Mex.—Editor Forest and Stream: There is nothing like a little experience to take the wind out of foolish thorizing. Just after writing somewhat dogmatically that a shot in the neck with a fairsized bullet would always stop a deer, I went hunting. A little deer that I walked up on one day, after a few big bounds, stopped to look at me. With great cunning he got behind a decayed oak stump which had two forks. When he placed his head and neck in the time of the fork, thought it was broad daylight, it took me perhaps a minute to make him out, so nearly was the color of his neck matched. I was about half sick, and couldn't hold my gun steady. The first shot was a miss, but at the second he came down with a thump. I was sure the 45 Gould bullet had smashed his neck, and turned around to get a shot at his companion. It was fire minutes, perhaps, before I returned. When I got near where he lay, he jumped up with a grunt and dashed into the bushes. He had bled a good deal and struggled on the ground. I followed him nearly half a mile by the blood, but failed to get him. He ran rather blindyl at first, striking obstacles of various kinds, but afterward seemed to get his head. He might have had a broken jaw, but I think the shot was in the neck. At any rate it was a capital illustration of the validity of Mr. Meyrick's objection. Moral—Be careful how you disagree with experienced riflemen, and when you knock a deer down, go and make sure of him.

Mexico.

Sea and River Fishing.

CHATS OF THE ATLANTIC SALMON.

In commencing these chats on Atlantic salmon in Canadian rivers it would perhaps be not amiss to inquire for a little as to their habits. The cause of their migration from sea is well known to be the propagation of their species. Whenever the ovaries reach a proper state of development the fish leave the sea, uniformly finding the river in which they spent their youthful days, and it is now conceded that they make no mistake in finding it. How they do this is somewhat of a mystery. If not endowed with some instinct and simply seeking for fresh water, would they not ascend the first river they came to, leaving others barren. Every salmon river has its own variety, distinct in contour, size, markings and color. No two rivers produce fish exactly alike. Even when a river has large affluents entering miles above tidal waters, and where the salmon swim together for miles, each variety as it comes to its own branch invariably takes it. How do they know it? We know they left it when they were six inches long. A few of them are four pounds now, a few 10, but the majority from 20 to 35.

I have no doubt that the larger ones have made previous visits, and it is yet a disputed question whether they have done so annually or biennially. From all the experiments I have made I think the visit is made only every second year. Some say they have the sense of smell; others of taste, and they may have both to a certain degree. Trout have, we know, but I do not believe the salmon has any while in the fresh water. As he takes no food it would be useless to him.

There is one peculiarity about the grilse. He returns from 2½ to 3 years old, always a male fish fit for procreation, weighing from 3 to 4 pounds. His arrival is erratic, both as to time and numbers. Some years there are very few. Some rivers never have any; others again as many grilse as salmon. We may suppose they have been destroyed at sea, or anything else we choose; only this, that they did not go astray, and get lost in old ocean.

Instances have been given of a few salmon being caught by cod fishermen. I should say quite possible, as the fish is a voracious feeder at sea and on the coast. Any fish from a capelin to a mackerel he will take.

We can only judge of their speed in swimming by the times of catching at different points of the coast or estuaries on their approach to the rivers. On their entering no freshet or water will turn them. I have caught them forty miles above sea water with the sea louse attached and with a partly digested capelin in the stomach, conclusively showing that their speed must be very great.

One thing will cause a salmon to run down stream. Should he have been gaff wounded, or escaped with the hook fast to him. I know this by salmon caught in this condition on the upper side of nets on the way back to sea and hooked from 10 to 15 miles above.

No doubt the early run fish go furthest up the stream. They seem to know they will want good water to reach their old homestead. Still, a few remain in the lower portions of the river. I think I hear you ask, How do you know this? First, by having caught fish on the lower pools in July and August bearing unmistakable signs of having been three months in fresh water, and second by taking them seventy or more miles up the river before a fish was supposed to have arrived. In all our rivers nearly all the run is in by July 15th. In the smaller streams the early portion may run up whilst the water holds good, but the larger portion lie out in the months and estuaries, ripening the ova and waiting for the October water. This in many places has given rise to a theory of a late winter run, but such a theory is disproved by the fact that in this conutry such fish have their ova as far advanced, or nearly so, as those fish which have been four months in the river. I remember a small stream or brook on P. E. Island, from which I tried to obtain some parent fish. I watched it without result until Nov. 12. After that date the fish came in, and in one night spawned on three miles of the small stream, showing the knowledge they possessed that it was not safe for them to appear by daylight.

I believe that in many Scottish rivers the autumn runs are of gravid fish, which have ripened outside waiting for the fall run of water. Even the late or fall run of the sockeye salmon on the Fraser river are nearly ripe, spawning with the July run, we have very few of those fish in the Restigouche, the river with whose fish we are trying to chat about.

Canada. JOHN MOWATT.

TROUT AND SALMON FLESH.

How do you account for the pink color of the meat of salmon and trout? is a question frequently asked of Forest and Stream, and it is sometimes varied by a request for the explanation of individual differences in respect to the intensity of that color.

A theory, widely disseminated and pretty generally accepted, attributes the pink tint to the small fresh-water and marine crustaceans which form the favorite food of the fish. That theory has been advocated by Agassiz, Day, Gunther, Goode, and others and is referred to by Richardson, Yarrell, Seeley, and various writers without accepting or rejecting it.

Agassiz has stated his views about as follows: "The most beautiful salmon-trout are found in waters which abound in small crustacea, direct experiments having shown that the intensity of the red color of their flesh depends upon the quantity of gammarinae (fresh-water shrimps), which they had devoured." According to Richardson, Dr. Knox's researches give a nearly similar result, by proving the red substance which is generally to be found in the intestines of a salmon that has recently quitted the sea to consist of the eggs of echinodermata (sea-urchins, sand-dollars, etc.) and crustacea. To this rich aliment he attributes the brilliancy of the scales of a salmon in prime condition, and the high flavor and deep color of its flesh.

Gunther, in his "Introduction to the Study of Fishes," thus expresses his opinion: "Chemistry has not supplied us yet with an analysis of the substance which gives the pink color to the flesh of may salmonoids; but there is little doubt that it is identical with, and produced by, the red pigments of many salt and fresh-water crustaceans, which form a favorite food of these fishes."

In his "American Fishes," Goode says: "When salmon live in the lakes they prey upon minnows and other small fishes, but those of the sea delight also in small crustaceans and their eggs, to which they owe the vivid color of the flesh." On a subsequent page, he writes: "In the sea, too, the flesh assumes a reddish color, due no doubt to the absorption of the pigments of crabs and shrimps eaten by the fish. Red flesh is also found in some inland races."

Dr. Ray, in "British and Irish Salmonidae," pages 213, 214, has the following about the colors of the flesh of the Von Behr or brown trout (S. fario): "The difference in the color of the flesh of trout is interesting for several reasons, and may be seen from as highly colored as in a salmon to being perfectly white, but this color is not invariably a test as to its suitability for the table, for some white-fleshed forms are excellent, and those which are rosy fleshed not invariably so, still the reverse is generally the case. I carefully examined a large number in Sutherlandshire, mostly from Loch Assynt, in June, 1886, and found the flesh to be of all colors, from as red as a salmon to quite white, but as food they seemed all equally good. "Although, as I have already stated, in some places the redness of the flesh appears to be caused by the diet of the fish, and that fresh-water shrimps, Gammari, are one of its causes, such does not seem to be always the case. In the stream Churn, passing Cowley and Colesbourne, an affluent of the Gloucestershire Colne, there are quantities of the Gammari, but the flesh of the trout is white, and it is not until they near the Colne that they get a slight pinkish tinge, yet all are equally good. T. Medwin, Angler in Wales, remarked that 'trout which feed on leeches cut up red.'

"A correspondent of Land and Water, June 14, 1884, observed that 'hitherto it was a very exceptional thing to take any other than white-fleshed trout (above Totnes weir); now, however, that the dapping season has commenced the large fish in the deep water above the Totnes weir have been taken in considerable numbers; similar-sized fish were last year all white-fleshed trout, but now a large proportion of them are pink. I consider this is caused by the fish feeding in the tidal waters below Totnes weir on shrimps and other salt-water food, and they are able by means of the fish pass to get up again to the fresh water which formerly they could not do except in floods, and then rarely.' "

Seeley, in "Fresh-Water Fishes of Europe," quoting from and commenting upon Dr. Day, says in substance:

"Crustaceans abound in the lower part of the Itchen beyond Alresford, while there are none in the upper part of the stream; the flesh of cooked trout (S. fario) from the lower river cuts pink, while the upper part is nearly white. Where S. fontinalis has been introduced into rivers of Cardiganshire, it is good and rich, with a peculiar gamboge color; but in Perthshire it is fat with firm flesh of a beautiful pearly white, while in other localities it is said to be pink. The same species of trout is known similarly to vary in contiguous streams in Wales."

The statements given above are purposely quoted at some length in order that the basis of the theory as to color of flesh may be clearly shown. There is nothing in any of them to indicate how the theory came to be accepted by its advocate—not a single experiment by which to establish the truth of the hypothesis. At the best the relation between the pink flesh of crustaceans and that of certain trout and salmon is merely an inference, and there is little reason for accepting the conclusion as to cause and effect.

Yarrell must have felt suspicious as to the subject when he wrote: "The qualities of the salmon as food are ascribed to the richness of the crustaceans, etc., upon which the fish subsists; but the salmon trout (salmo trutta) lives very much in some localities on the same kinds of food and never acquires the same exquisite flavor."

Seeley could not have accepted the theory without question, for he said: "Not much is known of the food of the salmon while they are in the sea, but they feed greedily on sand-eels, smelts, sea-urchins, star-fishes, shrimps, and other crustacea, and the fry of all kinds of sea fishes. In rivers they take bait such as lug worms."

Another author, Richardson, I believe, states that "salmon do not feed exclusively on crustaceans and the eggs of echinoderms at sea, but upon sand eels, capelin, herring, and various marine animals. At the mouths of rivers they take artificial flies freely, and the common earthworm is a deadly bait."

The land-locked salmon does not feed upon red crustaceans, nor do the fresh-water trouts; yet their flesh is frequently as highly colored as that of the sea-run salmon. The fry of the sea salmon while in fresh water subsist upon small insects, worms, larvae of flies, and beetles, and these little fish have pink flesh, although their food is not red. A Greenland trout, described by Fabricius, feeds upon capelin, herrings, sticklebacks, small crabs, worms, and spawn of fishes; yet its flesh is beautifully colored.

The lake trout ("namaycush") feeds principally, in some waters, upon suckers, burbots, and lake herring, and its meat is reddish or orange. The white fishes live chiefly upon small crustaceans and insects, but they have white flesh. The lake herring is notorious as a consumer of the eggs of white-fish, and they do not change the color of its meat. The grayling eats crustaceans, including fresh-water shrimps, and its flesh is white. The smelt also subsists chiefly upon shrimp in some rivers, yet it is a white-meated fish. The cod consumes many highly-colored crustaceans. The common mackerel and the river alewife do the same, but none of these have salmon-colored flesh.

The fresh-water shrimps or fleas, called gammari in the books, vary greatly in color, few of them being pink or red. There is probably no other crustaceans as well known, and as widely distributed in our trout waters. A little examination at Caledonia Creek, for example, where the shrimp are highly colored, will show that the trout (brook trout) feeding upon the same shrimp vary greatly in the color of their flesh. In Colorado recently the writer opened a great many brook trout, introduced from the East, all of them males of about the same size, all taken at the same time and place, and found the color to range from whitish to deep salmon.

It is not a pleasant task to attack accepted theories, but due consideration of the facts set forth above has forced me to state my disbelief in the long current explanation of the cause of the pink flesh of salmon and trout. In the presence of so many contradictory observations the explanation simply does not explain.

T. H. B.

OUR FIRST FISH IN THE PACIFIC

"Well, by the great horn spoon!" It was Jack who was speaking, and we were standing at the far end of the wharf at Long Beach, Southern California, staring at a fish he had just landed, as it lay wriggling on the wharf. It was a mackerel about eight inches long; and as Jack proceeded to unhook it, he further remarked: "If this isn't enough to cramp a dog."

"Keep still, say no more, here is the mate to it," I said, as a jerk at the line on the end of my twenty-foot bamboo pole admonished me that I had a fish hooked. I swung the fish up, describing the larger part of a great circle in so doing, and laid the fish alongside of Jack's. He gave a snort of disgust, then I laughed and he laughed.

"We have caught trout on the North Shore, no larger than those mackerel," I said.

"Yes, in some small stream, but here we have the whole Pacific Ocean, and this is the fishing it affords us."

There was more than a suggestion of infinite scorn in Jack's tones as he said this, but we baited our hooks again and cast into the briny deep, which was at least eighteen feet below us, and was rising and falling in regular pulsations as the long swells came in and breaking several hundred feet in from where we stood, ran far up on the sands which form the beautiful beach from which the place takes its name. There was no suggestion that it was winter. The calendar read Dec. 3, but the sky was blue and the sun was hot, the trees masses of living green, to be sure, they were orange, lemon, eucalyptus, and pepper trees—but then——

In the distance were the mountain peaks bare and brown, later we saw some of them white with snow. Off to the west Point Fermin, jutted out far into the sea, on the extreme point stood the light-house and a long uplift of land thirty-five miles south-west from where we stood showed where Santa Catalina Island rose from the ocean, and furnished a good breakwater for San Pedro Bay. Here and there a white sail marked the place of a fishing-boat; a long trail of smoke off southward was a signal to us that an ocean steamship was on the up course. Over in the roadstead toward Point Fermin, a large three-masted vessel was discharging a cargo of lumber by means of "lighters," for the lumber docks of San Pedro. But what are these lubberly-looking forms which come pitching and rolling, leaping and diving, swirling and swashing along just outside the breakers? There must be a hundred of them. "The porpoises," quoth Jack, "great pigs of things, they remind me of a lot of awkward school boys playing." They evidently know what they are about, for when near the wharf all go under water and do not reappear until a good distance beyond, and then on they go down toward Alamitos Bay. What is that black head sticking up out yonder for a half moment then disappearing? That's a seal. The seal came nearer until we had a good view of it. "Git down there, you critter," Jack said, as it thrust its head out of the water quite close to where our lines were. "The beast grinned at me," he said, apologetically, as the seal disappeared at his command. Now there is a commotion, down the wharf where a sail-boat has run up. We go to see what is the cause of the excitement, and find the boat has a shark in tow. It is quite dead, and with much ado is hoisted on the wharf. It is a thresher shark, a

trifle over eight feet long. We punch it in the side examine its teeth and slap the planks with its queer tail.

"Hain't you glad you're here, old fellow?" said Jack, giving me a punch in the ribs.

"Just see the strange beasts, and fishes, and things which do abound hereabouts."

"Yes," I responded. "But the fish are not noteworthy either for size or variety."

"That's so," he cheerfully assented. "But then we're fishing in the Pacific Ocean just the same."

I could not deny this, so we went to fishing again. How many did we get? Honest now. Well, we caught and safely landed seven mackerel, ranging from five to eight inches long; five smelts of about the same size; two sardelloes, and one pompano. Laden with these, all told, including basket, they would weigh perhaps three pounds, we wended our way homeward at the time of the going down of the sun, and thus ended our first fishing in the great and mighty ocean.

MYRON COOLEY.

COLTON, Cal.

GUDDLING TROUT.

Auburn, Cal.—Some time ago there were several articles upon this form of sport; and it seemed to be the concensus of opinion that it was no sport at all. Some of the writers even questioned the possibility of capturing trout in the hands, in the way described. The term "guddling" was even sneered at, as a fitting name for an unsportsmanlike pursuit. I confess that in my youth I used to "guddle," myself occasionally, the knack of it having been handed down in the family from my Scotch "forbears." Poor, misguided boy, I did not know it was unsportsmanlike in those days! Doubtless had I done so, I would never have tickled a trout.

So, when the question of guddling was "on," in Forest and Stream columns, and I found the popular sentiment overwhelmingly against the practice, I discreetly held my peace.

The other day I was reading one of the works of the Scotch author, S. R. Crockett, and came across a chapter entitled "Legitimate Sport." It gave me such delight in the reading that I thought I would quote, almost entire, for the benefit of the readers of "our" paper. I will have to preface the story with a short explanation.

The work quoted from is entitled "The Lilse Sunbonnet," and no doubt has been read by many who will see these lines; but for the benefit of those who have never seen it, I am going to beg the author's permission to steal the chapter.

It is a good, clean, healthy love story, such as I confess to an enjoyment of, even yet. It is strong of the Scotch vernacular, and in that respect also is congenial to my taste.

The young hero of the tale, Ralph Peden by name, and a divinity student by occupation, has had a slight misunderstanding with his sweetheart, Winsome Charteris, and she slips out of the house while he is in conversation "wi' her granny," and takes her away to a mountain stream in "fair Galloway," in company with a cottar's lad named Andra Kissock. This "bit laddie," Andra, has a fervid imagination, and about this time is fevered by some letters from his brother in far America, and in consequence is continually "playin' Injun," as our youngsters would term it. This explanation is needed to make intelligible some of Andra's actions and expressions, and now to our tale. I quote:

"Ralph passed through the yard to the gate which led to the hill. As he was crossing the brook which flows partly over, and partly under the road at the horse watering-place, he looked down into the dell among the tangles of birch, and the thick viscous foliage of the green-berried elder. There he caught the flash of a light dress, and as he climbed the opposite grassy bank on his way to the village, he saw immediately beneath him the maiden of his dreams and his love-verses. Now she leaped merrily from stone to stone; now she bent stealthily over till her palms came together in the water; now she paused to dash her hair back from her flushed face. And all the time the water glimmered and sparkled about her feet. With her was Andra Kissock, a bare-legged, bonnetless squire of dames. Sometimes he pursued the wily burn trout with relentless ferocity, and the silent intentness of a sleuth hound. Often, however, he would pause, and with his finger indicate some favorite stone to Winsome. Then the young lady, utterly forgetful of all else, and with a tremulous eagerness, delicately circumvented the red-spotted beauties.

Once, throwing her head back to clear the tumbling avalanches of her hair, she chanced to see Ralph standing silent above. For a moment Winsome was annoyed. She had gone to the hill brook with Andra, so that she need not speak further with Ralph Peden, and here he had followed her. But it did not need a second look to see that he was infinitely more embarrassed than she. This is the thing, above all others, which is fitted to make a woman calm and collected. It allows her to take the measure of her opportunity, and assures her of her superiority. So, with a gay and quipsome wave of her hand in which Ralph was conscious of some faint resemblance to her grandmother, she called to him:

"Come down and help us catch some trout for supper."

Ralph descended, digging his heels determinedly into the steep bank till he found himself in the bed of the streamlet. Then he looked at Winsome for an explanation. This was something he had not practiced in the water of Leith. Andra Kissock glared at him with a terrible countenance, in which contempt was supposed to blend with a sullen ferocity characteristic of the noble savage. The effect was slightly marred by a black streak of mud, which was drawn from the angle of his mouth to the roots of his hair. Ralph thought from his expression that trout-fishing of this kind did not agree with him, and proposed to help Winsome instead of Andra.

This proposal had the effect of drawing a melo-dramatic "Ha, ha!" from that youth, ludicrously out of keeping with his usual demeanor. Once he had seen a play-acting show unbeknown to his mother, when Meg (his sister) had taken him to Cairn Edward September fair.

So, "Ha, ha!" he said, with a look of smothered desperation which to the unprejudiced observer suggested a pain in his inside. "You guddle troot!" he cried, scornfully, "I wod admire to see ye! Ye wod only fyle (dirty) yer shoon, an' yer braw breeks!"

Ralph glanced at the striped underskirt over which Winsome had looped her dress. It struck him with astonishment to note how she managed to keep it clean and dry, when Andra was apparently wet to the neck.

"I do not know that I shall be of any use," he said, meekly; "but I shall try."

Winsome was standing poised on a stone, bending like a little maid, her hands in the clear water. There had been a swift and noiseless rush underneath the stone; a few grains of sand rose up where the white underpart of the trout had touched it as it glided beneath. Slowly and imperceptibly Winsome's hand worked its way beneath the stone. With the fingers of one hand she made that slight swirl of the water, which is supposed by expert "guddlers" to fascinate the trout, and to render them incapable of resisting the beckoning fingers. Andra watched breathlessly from the bank above. Ralph came nearer to see the issue. The long, slender fingers, shining mellow in the peaty water, were just closing when the stone, on which Ralph was standing precariously, toppled over and fell into the burn with a splash. The trout darted out, and in a moment was down stream into the biggest pool for miles.

Winsome rose with a flush of disappointment, and looked very reproachfully at the culprit. Ralph, who had followed the stone, stood up to his knees in the water, looking the picture of crestfallen humility.

Overhead on the bank Andra danced madly like an imp. He would not have dared to speak to Ralph on any other occasion, but guddling, like curling, loosens the tongue. He who fails, or causes the failures of others, is certain to hear very plainly of it from those who accompany him to this very dramatic kind of fishing.

"O' a' the stupid asses!" cried that young man. "Was there ever sic a beauty? a pund wecht gin it was an oonce! an' to fa' off a stane like a six-month's wean."

His effective condemnation made Winsome laugh. Ralph laughed along with her, which very much increased the anger of Andra. Andra was moved to the extremity of scorn.

"Hey, mon!" he called to Ralph, who was standing in the water's edge; "hey, mon!" he cried.

"Well Andra, what is it?" asked Winsome Charteris, looking up after a moment. She had been busy thinking.

"Tell that chap fra Enbro (Edinburgh)," said Andra, collecting all his spleen into one tremendous and annihilating phrase—"him that tummilt aff the stane—that there's a feck o' paddocks (a good many frogs) up there in' the bog. He micht gang up there an' guddle for paddocks. It wod be safer for the like o' him!" The ironical method is the favorite mode or vehicle of humor among the common orders of Galloway. Andra was a master in it.

"Andra," said Winsome, warmly, "you must not——"

"Please let him say whatever he likes. My awkwardness deserves it all," said Ralph, with becoming meekness.

"I think you had better go home now," said Winsome; "it will soon be time for you to bring the kye home."

"Ha ye aneuch troots for the mistress's denner?" said Andra, who knew very well how many there were

"There are the four that you got, and the one I got beneath the bank, Andra," answered Winsome.

"Nane o' them haf the size o' the yin that he fleyed (frightened) frae ablow (below) the big stane," said Andra.

"It's near kye-time," again said Winsome. "I'se no gaun a fit till I hae showed ye baith what it is to guddle. For ye mauna gang awa' to Enbro, an' think that howkin' (wi' a lassie to help ye) in among the gravel is guddlin'. You see here!" cried Andra, and before either Winsome or Ralph could say a word, he had stripped himself to his very brief breeches and ragged shirt, and was wading into the deepest part of the pool beneath the waterfall.

Here he scurried and scuttled for all the world like a dipper, with his breast showing white like the bird, as he walked along the bottom of the pool. Most of the time his head was beneath the water, as well as all the rest of his body. His arms bored their way round the intricacies of the boulders at the bottom. His brown and freckled hands pursued the trout beneath the banks. Sometimes he would have one in each hand at the same time.

When he caught them he had a careless and reckless way of throwing them up on the bank without looking where he was throwing. The first one he threw in this way took effect on the cheek of Ralph Peden to his exceeding astonishment.

Winsome again cried "Andra!" warningly, but Andra was far too busy to listen; beside, it is not easy to hear with one's head under water, and the frightened trout flashing in lightning wimples athwart the pool.

But for all that, the fisherman's senses were acute, even under the water; for as Winsome and Ralph were not very energetic in catching the fish which found themselves so unexpectedly frisking on the green grass, one or two of them (putting, apparently, their tails in their mouths, and letting go, as with the release of a steel spring) turned a splashing somersault into the pool. Andra did not seem to notice them as they fell, but in a little while he looked up with a trout in his hand, the peat-water running in bucketfuls from his hair and shirt, his face full of indignation.

"Ye're littin' them back again!" he exclaimed, looking fiercely at the trout in his hand. "This is the second time I hae catched this yin wi' the wart on its tail!" he said. "D'ye think I'm catchin' them for fun, or to gie them a change o' air for their healths, like fowk thot come frae Enbro?"

"Andra, I will not allow——" Winsome began, who felt that on the ground of Craig Ronald, a guest of her grandmother's should be respected.

But before she had got further, Andra was again under water, and again the trout began to rain out, taking occasional local effect upon both of them.

Finally Andra looked up with an air of triumph. "It taks ye a' yer time to grup them on the dry land, I'm thinkin'," said he, with some fine scorn; "ye had better try the paddocks. It's safer." So, shaking himself like a water-dog, he climbed up on the grass, where he collected the fish into a large fishing-basket which Winsome had brought. He looked them over, and said as he handled one of them:

"Oh, ye're there, are ye? I kenned I wad get ye some day, impidence. Ye hae nae business i' this pool, anyway. Ye belang hauf a mile faurer up, my lad; ye'll bite off nae moir o' my heuks. There maun be three o' them i' his guts, the noo——"

Here Winsome looked a meaning look at him, upon which Andra said:

"I'm juist gaun. Ye needna tell me that it's kye-time. See you an' be hame to tak' in yer grannie's tea. Ye're moir likely to be ahint yer time than me."

Having sped this Parthian shaft, Andra betook himself over the moor with his backful of spoil.

There now, you sneerers at guddling; how do you like that picture?

Can you not smell the moist, sweet scent of the purling stream; can you not see the dancing shadows of the leaves on the white sand; or the "frightened trout flashing in lightning wimples athwart the pool?"

Go to! There is fishing and fishing! It all depends upon the spirit in which it is done—whether for sport, or I was going to say, profit—but will substitute greed.

AREFAR.

"We Anglers."

Mr. Joseph Ferris, of No. 202 Hope street, Glasgow, sends us an angling song, which in words and air is so taking that we have reproduced the musicfto go with it. WE ANGLERS.

Wha on a bonnie morn in May
Get up before the break o' day
And to the rivers make their way?
We anglers, we anglers,
And even altho' the weather's wat
Wha no a button care for that
Nae mair than duck or water rat?
We anglers, we anglers.

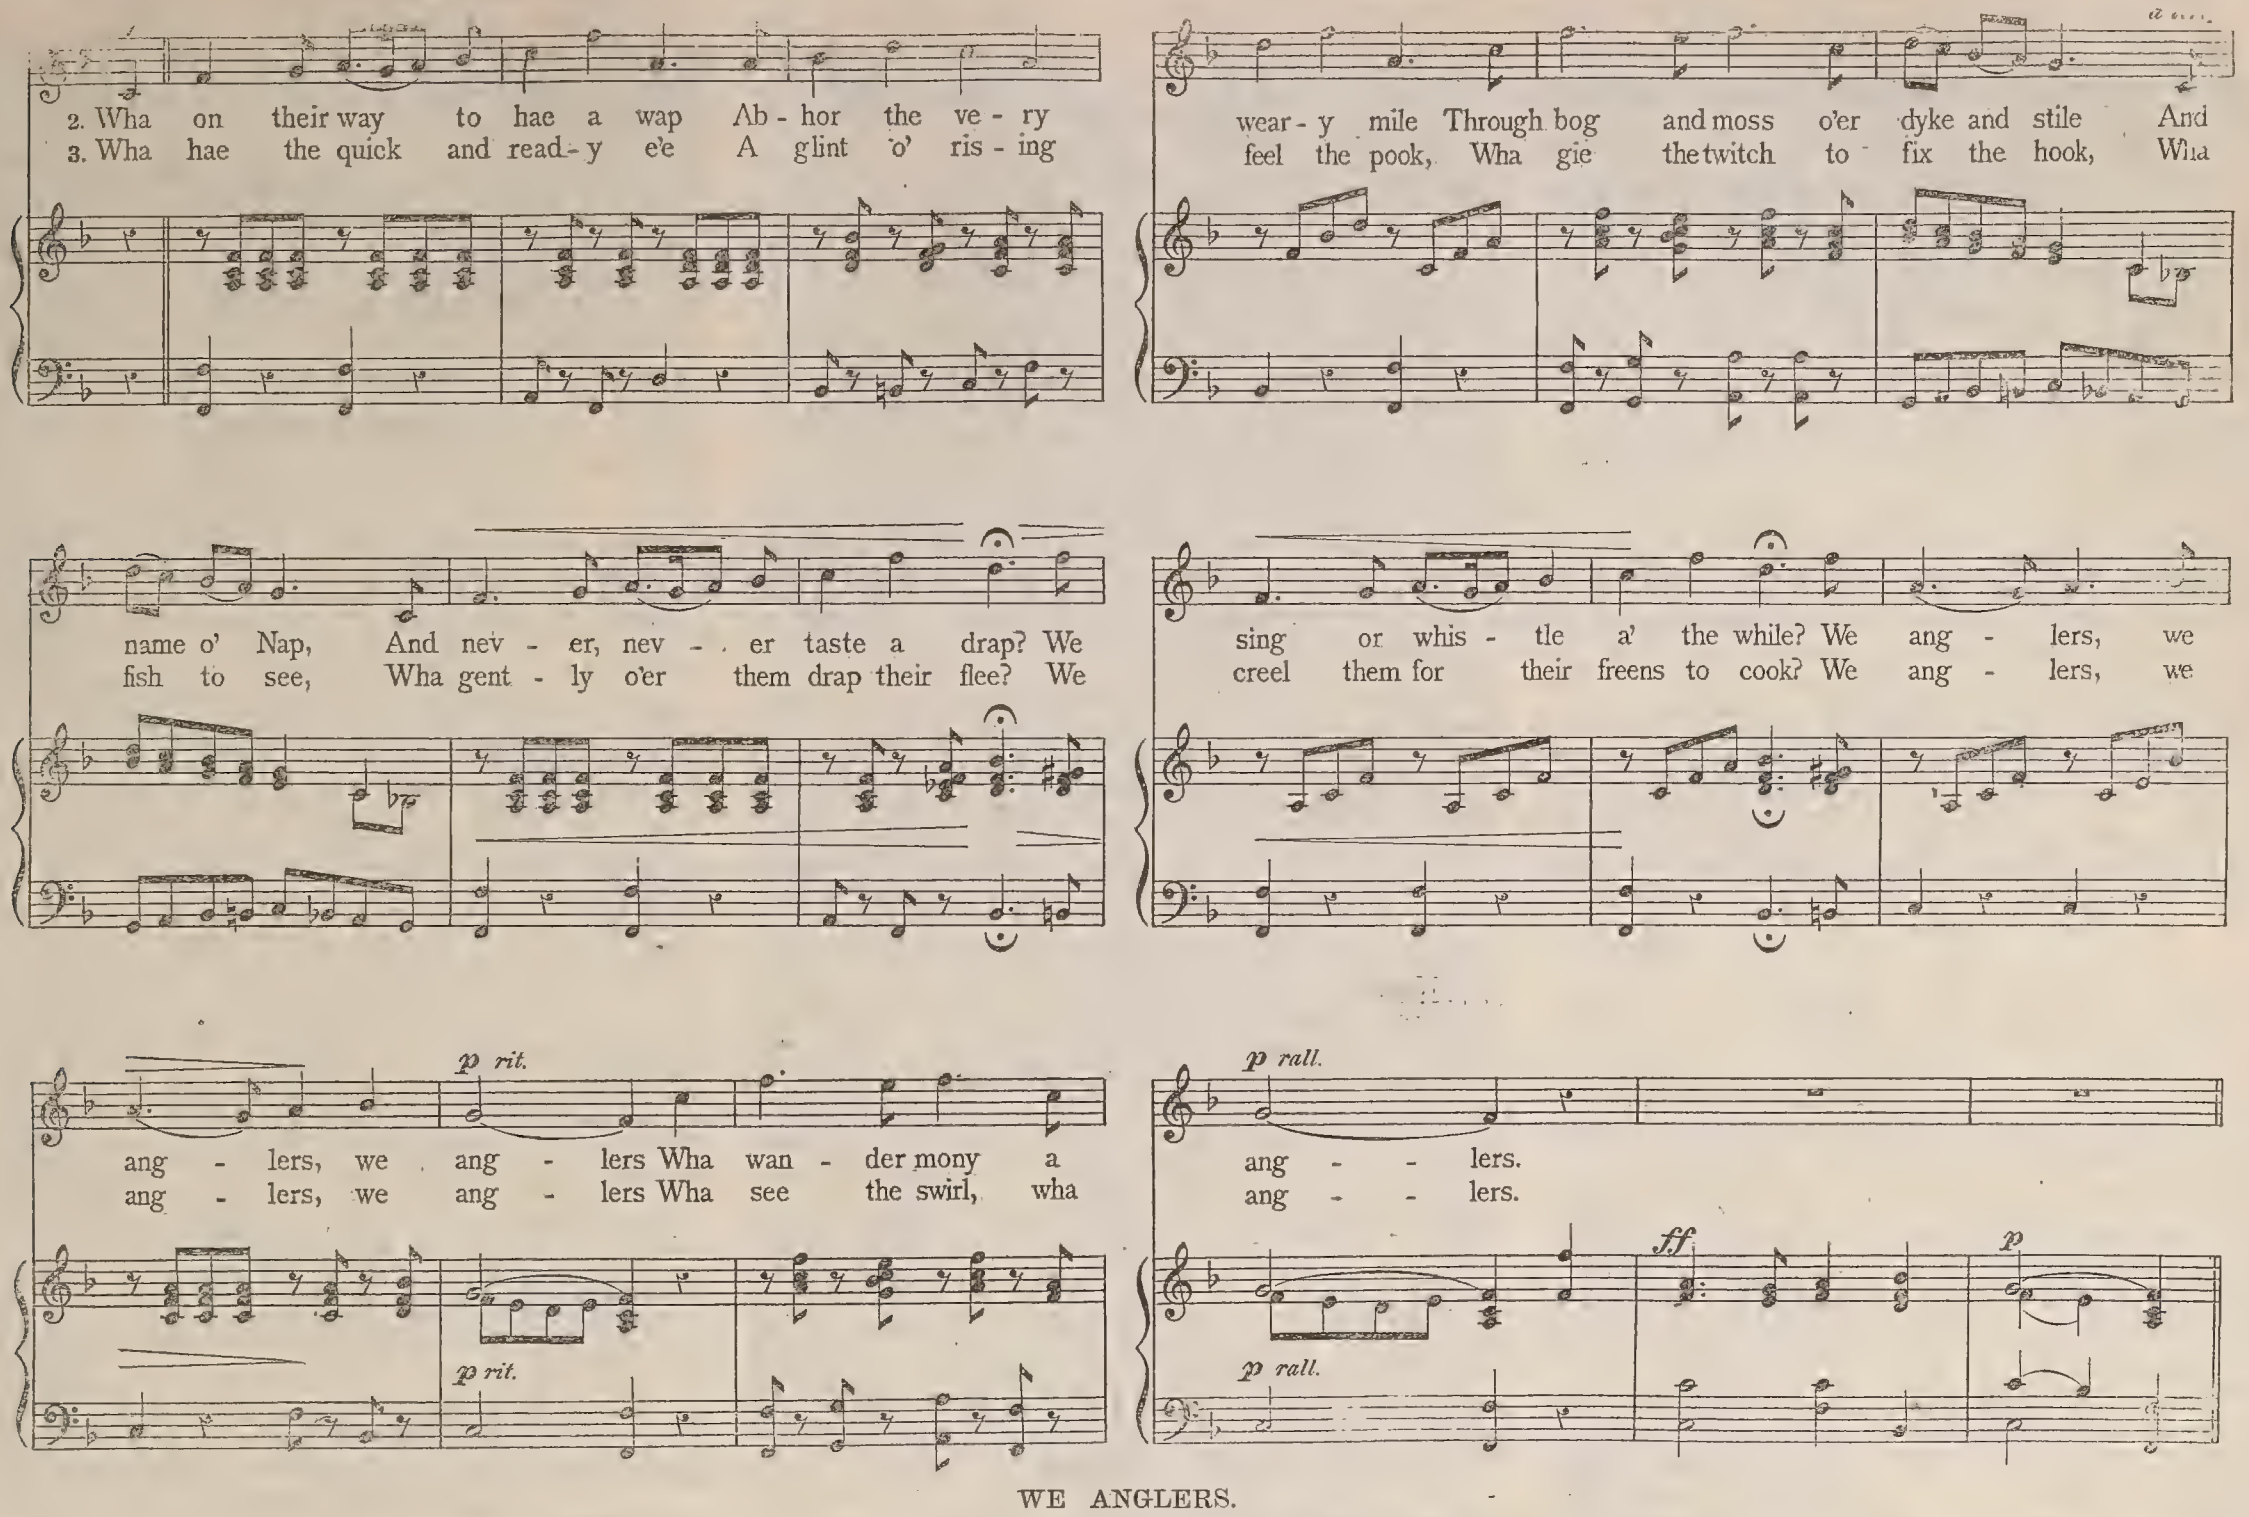
Wha on their way to hae a wap
Abhor the very name o' Nap,
And never, never taste a drap?
We anglers, we anglers,
Wha wonder mony a weary mile,
Through bog and moss, o'er dyke and style,
And sing and whistle a' the while?
We anglers, we anglers.

Wha hae the quick and ready e'e
A glint o' rising fish to see?
Wha gently o'er them drap their flee?
We anglers, we anglers.
Wha see the swirl, wha feel the pook,
Wha gie the twitch to fix the hook,
Wha creel them for their freens to cook?
We anglers, we anglers.

And when the fish are takin' weel,
Wha sometimes get a guid fu' creel,
Wha like its sonsy wecht to feel?
We anglers, we anglers.
But "noos and thans" things look gey black
When troot and greyl'in winna tak,
Wha then vow they will ne'er gae back?
We anglers, we anglers.

Wha after just a guid nicht's rest,
Forget their vows and a' the rest,
And start again wi' keener zest?
We anglers, we anglers.
Wha o' contentment keep the key,
Wha're just as gude as men can be,
Wha hardly ever tell a lee?
We anglers, we anglers.

MASSACHUSETTS ASSOCIATION.



Boston, Jan. 31.—Editor Forest and Stream: The annual dinner of the Massachusetts Fish and Game Protective Association—an occasion always looked forward to with a great deal of interest—came off last evening at Young's Hotel, and from a variety of causes it was the general opinion that it was the most successful symposium ever enjoyed by the members and their friends. The committee entrusted with the arrangements were: John Fottler, Jr., chairman; Wm. B. Smart, secretary; B. C. Clark, C. I. H. Woodbury, Walter M. Brackett, Dr. Heber Bishop and W. B. Hastings. I can bear witness that they all did faithful work, especially Dr. Bishop and Artist Brackett, to whom were entrusted the important items of music and decorations. The walls of the hall were hung with the best fish and game paintings of Mr. Brackett and his son, Arthur. Splendid heads of elk and moose were shown, while upon the tables were elegantly mounted specimens of all the game birds, including a fine specimen of the Mongolian pheasant, which is to be introduced into this region under the auspices of the association. The invited guests present were Gov. Wolcott, Rev. M. J. Savage, Capt. John C. Wyman, Speaker Meyer of the House of Representatives, Rev. E. A. Horton, Senator Smith, chairman of the Fish and Game Committee; Fish Commissioners E. A. Brackett of Massachusetts, Wm. H. Shurtleff, Wm. H. Griffin and Nathaniel Wentworth of New Hampshire, J. W. Titcomb of Vermont, and Henry O. Stanley of Maine, P. A. Chase, president of the Metropolitan Park Commission; A. M. Howe and Theodore H. Tyndale, well known members of the bar. For the musical part of the programme Dr. Bishop furnished Tom Henry's orchestra and a band of colored singers furnished instrumental and vocal music, and you may be sure that there was plenty and all good. The menu was an elaborate one, and included about all the game in season, in addition to a saddle of moose that had been in the cold storage several weeks and which proved very toothsome. When cigars were reached President Clark spoke as follows:

Brethren of the Massachusetts Fish and Game Protective Association:

I cannot deny myself the pleasure of congratulating you upon this brilliant gathering, and of extending in your name and on your behalf to all our guests who have honored us with their genial presence to-night, the heartiest and most cordial welcome which the warmest hospitality can offer.

I need hardly remind the older members who are present that this occasion is the twenty-first birthday of our Association, dating from the time when in 1874 our organization began its existence and was duly incorporated by the authority of the General Court under the name of the "Massachusetts Anglers' Association."

At that time the purpose of the Association as defined in the Act of Incorporation was "for the purpose of securing and enforcing proper restrictions upon the taking and killing of fish,

WE ANGLERS.

shell-fish, and bivalves; the promotion of fish culture, and the introduction of new species and varieties of fish, and to disseminate information relating thereto."

Three years later we assumed our present name, and to our powers were added "the promotion of the culture and the introduction of new species of game."

In reviewing the history of the Association from its infancy to the time when we have attained our majority, the most noticeable and striking fact is the growth and development of the Association, in the constantly increasing interest in this as well as in other States, near and remote, in the culmination of enlightened public sentiment in relation not only to the preservation and protection, but to the propagation of fish and game.

"Much has been done but more remains to do," and when we learn of the laws which have been passed in Minnesota and Dakota, and nearer home, the contemplated action of the Legislatures of Maine and New Jersey, we may well realize that in our own State of Massachusetts, which commenced to legislate on this subject seventy-three years ago, our laws still need amendments and additions, and we should see to it that we do not fall behind.

With associations as with men, we must fully realize those strong words of James Russell Lowell:

> "No man is born into the world whose work
> Is not born with him. There is always work
> And tools to work withal, for those who will."

In the brief space of time at my command I can only give you one illustration of the kind of work which engages, at the present moment, the attention of this Association.

I refer to the proposed legislation in regard to lobsters. An increase of more than 50 men engaged in this fishery in 1894, an increase of over 3,000 pots, and a decrease of more than 52,000 lobsters in the total catch, the decrease from 71,000 egg-bearing lobsters in 1890 to 32,700 in 1893, and 34,500 in 1894, have at last impressed not only the consumers of this most desirable food supply, but also the fishermen themselves, who now seem to be alive to the fact that at no distant day this industry, by which they live, will be of little value unless some decided step is taken, and that immediately.

A single illustration, as to locality, will suffice. At Cohasset, on the South Shore, there are engaged in the capturing of lobsters 22 men who took during 1894, 80,000 lobsters, this being the third locality in our bay in point of importance.

A close season has been always objected to by these men, but to-day at the hearing before the Joint Committee at the State House I presented a paper signed by 19 out of the 22 fishermen, asking for a close season for the months of June and July.

If this action is taken and the penalty of a fine and the confiscation of any pots found set in the Bay is enforced, and no lobsters allowed to be sold in the State during those months, there will be no difficulty as to the future supply of mature lobsters.

The abundant increase naturally yielded is seen from the fact that the 4,026 egg-bearing lobsters collected at the United States Commission Station, at Wood's Holl, Mass., produced 97,635,000 eggs, which produced 69,000,000 fry, or seventy per cent. of all eggs taken; 14,000,000 of the eggs were bad, so that the true per cent. hatched was 83.

The introduction of the Mongolian Pheasant promises to be a great success in Massachusetts. Twenty eight of these birds were sent to Oregon in 1881, and their increase was phenomenal. The game warden estimated the number killed last season in three months, in Linn County alone, at 13,000, and two years ago 1,200 dozen of these birds were sent to one dealer in San Francisco. This is a fine game bird, and a delicious morsel of food. It is hardy and has two recommendations, the importance of which can hardly be overestimated It feeds on the pests and enemies of the crops, and it does not drive out other birds.

Now we have the advantage of thorough organization, and a modest though constantly accumulating fund, and judging from the statement made to you recently by my predecessor in office, that of late years there has been no measure advocated by us which has been defeated, and, on the other hand, no measure has crystallized into law which we have opposed, we have every reason to believe that we have only to use our best efforts wisely and carefully in the prosecution of the work before us, and we may have faith that they will be crowned with success.

And now one word, in closing, as to the motive which should serve to encourage us in our labors, for I take it that the best results are accomplished in this world by individuals and by the associations where there exists a sentiment which acts as an inspiration. Back of the artist's and the sculptor's work is the dream which neither ever realizes in marble or on the canvas—back of the great lawyer's argument and fee lie his worship of law, order, and justice—back of the work of the great physician with its compensation is the privilege of helping the world to bear its pains—back of the work of the clergyman with its beneficent and kindly ministries lie the souls of men and the reflection that he works not only for time but for eternity—back of the skill of the manufacturer is a finer product than was ever woven or twisted by loom or spindle—and so if the "undevout astronomer is mad" far more so is the undevout and thoughtless hunter. For the appreciative sportsman there exists a vast world of beauty, where nature, in all her varying moods, conspiring to delight his eye and feed his better nature, spreads before him all her treasures, and he is rested and refreshed by her for all the work of life as he views the darting life of the fish, the ever-recurring miracle of the flight of birds, the tints of the sea-shell, the rustle of the autumn leaves, and the plash of the wave on the pebbly beach.

> "He goes forth under the open sky, and lists
> To Nature's teachings, while from all around—
> Earth, and her waters, and the depths of air—
> Comes a still voice. The hills
> Rock-ribbed, and ancient as the sun; the vales
> Stretching in pensive quietness between;
> The venerable woods; rivers that move
> In majesty, and the complaining brooks
> That make the meadows green; and poured round all,
> Old ocean's gray and melancholy waste,"

all are his.

A great heritage has come to him, and feeling the responsibility of having, to some extent, dominion over the fish of the sea and over the fowls of the air, and in gratitude for his enjoyment of it all he unselfishly desires to do something, in his small way, to hand this inheritance down unimpaired to those who shall live when the dust rests upon his memory.

The other after dinner speakers were Gov. Wolcott, Speaker Meyer, Rev. Mr. Horton, Captain Wyman, Rev. Mr. Savage, Mr. Tyndale and Commissioners Shurtleff of New Hampshire, Stanley of Maine and Titcomb of Vermont. They were all interesting, containing, as they did, appropriate hits at some of the peculiarities of rod and gun men, as well as sound and practical words upon the importance of fish and game protection. In conclusion let me say that Mr. B. C. Clark, the new president, has three important qualifications for his new position—means, inclination and time. In the past he has employed all these liberally in behalf of the association—that he will do in the future goes without saying.

WM. B. SMART.

Revolvers Not Essential in Florida.

Hawthorn, Fla.—Editor of Forest and Stream: I have read carefully all of Alfred C. Harmsworth's letter on Florida fishing. His statement that we dislike Englishmen from envy is not true. Whenever Englishmen show desirable qualities they are fully appreciated. But in most cases Englishmen show so little common sense, good judgment and attractiveness, that we feel disgusted, or a sympathy for them, not envy, I assure you.

The main point I wish to speak of is this statement in his letter of Jan. 26: "Down in Florida, and especially in South Florida, human life is held at a discount. A shooting is almost an everyday occurrence." Then he advises all Britishers or men from the Northern States, to take a revolver and have it at all times. He says that we have a large lot of villains here, and that our juries will not return verdicts against them for fear of revenge. These are ugly falsehoods.

I appeal to the thousands of pleasure-seekers and sportsmen who come to Florida every winter, to bear witness that each and every one of them who have come here, acting as they should, if they have not had the very best return for it. They have had no need for the revolver, unless to shoot a snake, 'gater, or at a mark. Eleven or twelve years ago, when whiskey was sold in every little town, and the cowboys would get drunk and raise the wind, it was quite frequent that one of them got a bullet that was deserved. Now things have changed. In very few places without police force sufficient to control these things is there any whiskey sold? The people of Florida to-day are the most temperate, most moral, and most ready to do a stranger a favor of any State in the Union. There is less stealing here than in any place I know of. We leave our houses all open night and day, in the country and small towns. Mr. Harmsworth's friend, Hart, is a fair sample of the Florida cracker—kind, obliging, faithful, brave, and easily satisfied. The twelve years that I have been shooting and fishing all over Florida, I have met many like Guido Hart, but none that want to shoot me.

W. S. MOORE.

THE SHARK AS GAME FISH.

"Some years ago I had the temerity to advocate, I think in the Forest and Stream, the shark as a game fish, describing some of my experiences with these creatures in Florida from the mouth of the St. John's to Loggerhead.

When a dozen men are arrayed against a shark it is an unequal fight, but let one man challenge an ordinary ten-foot shark and there is sport for either one and sometimes for both.

Some of the finest sport I have ever had with a rod was with a small oil shark at Santa Catalina Island, Southern California. Vicious sharks are unknown here, but on the west side of the island in a perfect miniature harbor, that almost cuts the island in two, is found a harmless member of the family, known as the oil shark, which affords fine sport. It attains a length of about 5 1-2 feet, and a weight of from 40 to 70 pounds, and apparently frequents the shallow waters of the upper harbor to feed.

One morning we left Avalon, the little town of the island where the hotels are, for Catalina harbor, making the trip of about fifteen miles in an hour and a half, and anchoring in Isthmus Cove, walked over the narrow isthmus to the harbor where we soon took our places on the beach. I had a 16-ounce bass-rod which I had fitted with a short split bamboo trout tip. The line was 500 feet of 18 strand cuttyhunk, very small and light, two feet of piano-wire leader, and a stout, though not large hook, about the size used for cod and hake in the East.

The fish were well out from shore, and it was necessary to unreel about one hundred feet of line, and throw it out, as the bait was a three-pound fish, too heavy to cast with the rod.

There were five in the party, all trying to break the record for the largest fish on the lightest rod. I had fastened my line on a small stick as a tell-tale, and it was not long before it dropped and began to run out. I gave it about twenty feet, then hooked my fish. As it felt the cold steel, the shark, a finely-shaped, harmless fellow at least five feet in length, dashed clear of the water in as fine a rise as I ever saw a black bass make, shook its head

a moment, falling back with a crash and making the reel sing and play. A companion timed me, and doing my best it was about twenty minutes before I could bring this fancy fish to the beach in a foot or more of water and within reach of the gaff. It fought me at every turn, taking in all four hundred feet of line; making desperate rushes in every direction, and several times almost taking me into the water to save the rod. Repeatedly the fish, which is known to science as "Galeorhinus zyopterus," went into the air; then it would rush at the beach quicker than I could reel in and turn and make a run down the harbor that threatened rod, reel, and line. It was a good pull for a boy to haul the thrashing fish out of water, but finally we had it on the sands where it was found to weigh a little less than sixty pounds, which I considered a good catch for twenty minutes when the trout tip of a split bamboo and an 18-strand line is taken into consideration.

Each of the party caught a shark. One completely demoralized a rod, while many hooks and much tackle was lost on others; but I think I could have managed a six-footfish with ease.

If we had not known the fish to be sharks we would have considered the fishing fine sport; in fact, it was certain no game fish made a better fight for its life than did these sharks of Catalina Harbor.

This section of the island has no hotel, but there is a good one eight miles away at Little Harbor, and others at Avalon, reached by launch daily; or if one desired to camp, the isthmus, winter and summer, is a good locality, quail, dove, and wild goat being plentiful in the immediate vicinity. There are no dangerous sharks here, the place being famous for its bathing; the sharks being a small-mouthed oil shark.

PISCATOR.

ANGLING NOTES.

Silk Worms.

I have a letter from Mr. Charles F. Orvis which is self explanatory. ''Have just read with interest your article in Forest and Stream on silk worm gut.

"You are, I think, just right in saying that the 'working and dressing' of the silk worm gut is nothing more than removing the outer skin, and I will add that I do not believe a word about anything being used in removing this outer skin, for I feel sure that the skin is nothing more than the covering of the silk sac, and we found after the strands of gut were quite dry that this skin came off quite easily and was quite brittle.

"We drew fine strands of gut from some Chinese worms that we procured, and when this outer skin was removed the surface of the gut was just perfect; glossy and strong and excellent. There has been a good deal of nonsense written about this silk worm gut business, I think.

"The silk composing the cocoons of the native worms we experimented with was of good strength and of large quantity, but the silk sacs in the worms when we came to draw them were not at all well filled. I think it is not possible that the large amount of silk that there was in the cocoons could have come from the silk in the sacs as we found them, but I think the worm secreted the silk rapidly at the expense of its full, large body as it spun the cocoon.

"The sacs in the Chinese worms were as large in diameter as those in the native worms, but they were not as long as the sacs of the natives. The diameter of the sacs of the native worms was very small when compared with the size of the body.

"I do not know that you, being a fly fisherman, will care to have such a long letter about worms, but you should not write about worms unless you expect to hear from others on the subject of worms."

Since the death of Dr. Garlick Mr. Orvis is the only one that I know who has experimented in taking gut from native silk worms, and what he says will be read with interest. Gut from Chinese worms that I have had with the outer skin still on it peeled much as Mr. Orvis states when it was very dry, in fact, would fall off of itself in places when coiling or uncoiling the strands, but in other places it adhered for years. I imagine the process of removing the outer skin is practiced before the skin is thoroughly and fully dry, but I am very glad to have Mr. Orvis from his personal experience confirm what I have written about the enamel or "bark" of the gut. This letter that I have quoted only confirms my belief and brings us back to the starting place, that when that "certain kind of food" for our native silk worms is found, silk producing food and food that will give strength to the gut, we will have the very best leaders that it is possible to procure from silk worms.

A. N. CHENEY.

RED TROUT.

Seattle, Wash.—In your issue of December 1st, Mr. S. C. Rice gives his view of the "red trout" question, and in the issue of January 5th, Mr. T. C. Austin also throws some light on the question. Both gentlemen state, in good faith, that the "red trout" is Kennerley's salmon; yet both are mistaken in my fish, which they confuse with an entirely different individual, as I have taken pains to find out. Kennerley's salmon exist, or, at least, fish tallying exactly with that description exist in both Lake Union and Lake Washington, and are yet running to a limited extent, while the fish described as "red trout," so called, have ceased their run entirely.

Mr. Austin describes the actions and appearance of a small fish, which I first noticed at the portage between the two lakes, about the time the salmon commenced to run up from the Sound, and which I took for young male salmon, from the fact that those of ten or twelve inches in length were all males, while those of only a trifle larger size showed a preponderance of females. In general appearance they resemble very closely the jack salmon of the Sound, except that they are very light or pink-red in color, the spots showing darker on this ground color. This fish is what I now suppose to be Kennerley's salmon, and it is running yet to a limited extent. I found them also in the same stream that I found my red trout in, and also in other small steams flowing into Lake Washington. But these fish are not the red trout at all.

The fish I had reference to in my article is still, I believe, one which differs slightly from, yet closely resembles, the common lake trout, on the way to some particular spawning ground, and must not be confounded with the fish native to the stream which the red trout ascend, for they ascend only the one stream, so far as my knowledge goes at present. The native stream fish are rainbow trout, which are there the year round, and which will, as Mr. Austin says, "take a fly from the midst of the red fish." There are apparently two kinds of trout in Lake Washington and Lake Union, which look almost alike, yet are not alike if examined side by side, one being heavy and chunky in shape, while the other is slimmer and of more graceful lines. They are both caught on the same fishing grounds and with the same bait and on the same day, but are different fish apparently, for many reasons which show on close examination. Now, I have a theory (it is only a theory because I am not at all certain), that the chunky trout spawns in the lake, while the slimmer one goes to the stream, for they do not bite at the time of the red trout run, and I think they are the red trout spoken of in my article on that subject, because they conform in every detail, except color and a decided sick look, with the slim lake trout. They certainly do not bite in the lake at this time, and they do not resemble the fish I take to be Kennerley's salmon except in the same general way that all the family of trout resemble one another.

The case stands this way with me. I find that a fish which I believe to be a species of lake trout ascends one particular creek running into Lake Washington for a few weeks in the fall in countless numbers. I can find no other stream used by this particular fish. In appearance, it is an inflamed, unhealthy red, apparently from irritation and contact with obstacles in the stream; has what appear to be almost running sores, or places which would be produced in flesh by a splinter or thorn entering, festering and then healing up without being extracted, leaving a hard, whitish place of the same general appearance of a sore on the sides. The fins and tail are whitish and sore looking and badly worn. White worms cling to the gills in such numbers sometimes that they must interfere largely with the regular work of these organs. A white worm of different appearance clings close to the body near the root of the fin or where the fin joins the body. The fish is indifferent to the presence of man, though in plain sight. It is of lean and slender form, but has very slight cleft or fork to the tail, a feature generally pronounced in a slender fish of any kind. To sum up, this fish is undoubtedly diseased, wormy, sluggish, sick, sore, and about half-dead. Is it, then, Kennerley's salmon? Is it a fish whose color has gained it the name of little red fish? I doubt it. I am not positive that I know Kennerley's salmon when I meet him, yet, if he is such a disreputable, small-pox looking tramp as the red trout (for want of a better name) seems to be, I think I do not care to meet with him at all.

As Mr. Rice intimates, I can stand a little or a whole lot of contradictory evidence, in fact, I'm looking for it and am glad the gentleman spoke, but I must say decidedly that I think both he and Mr. Austin have drawn a conclusion too quickly and have confused two fish, which have some general characteristics in common. Both gentlemen mention Lake Whatcom as the abode of the "red fish." I have never been to Lake Whatcom, but I think they describe the red fish which lives in Lake Washington, and it is probably identical but it is not the red trout by a long way. I am going to keep on investigating this subject, and if I find that my red trout is Kennerley's salmon, I shall be glad to say so, for I chased up a rumor and found a fish at the end of it, did not recognize the brand, and told Forest and Stream about it, as I think all hunters and fishermen should do when they find anything strange, new or interesting, for it makes good reading, and is the only way to settle many a vexing question and to identify strangers. Forest and Stream has a pretty good-sized and very attentive audience, whose lives are volumes of experience, and there is always some one among them who knows more about some particular subject than his neighbor, and gives information free gratis when called for by a brother knight of the open air. It is an educator, fair, impartial, and just, which gives a man's view as he sees it, leaving the reader to draw his own conclusions, and for that reason should not be abused by making a personal controversy of any subject. I have given my view on the red trout question, deducted from those "untellable" signs which we all understand but cannot express to others, and have read and re-read the views of Messrs. Rice and Austin. All may be right or all may be at sea. Quien sabe? The matter comes to just this: The red trout is either a new species of fish, or rather my hope was to give a description of its habits not well-known before; or else it is Kennerley's salmon doing some very reckless acts and in need of watching anyhow. I shall watch my part every time I get a chance, and at the first opportunity shall paddle over and have a "hias wawa" with John, an old Siwash who has navigated these lakes since he was a boy. May be he will a "tale unfold."

EL COMANCHE.

The British Nobility and Game.

Commenting upon Mr. Hough's note of the Gaiety girls' "gag" that the British nobility were only of use to supply the game markets, Mr. Verner de Guise writers:

"In England when the owner of the shooting has supplied hampers of game to the companions of his day's sport, sent some to his friends, and often to the poor and sick, the balance is not to be thrown away, must be sold to dealers, whereby is afforded an abundance of cheap and pleasant food, a change of diet for the delicate and those whose incomes prevent them from ever shooting a pheasant on the wing, and who would otherwise be deprived of enjoying such a dainty dish. 'Pot-hunters' is the last name to apply to English sportsmen, each head of game costing much more to produce than can be got for it when dead. In addition, consider the thousands of men, who in various ways gain a living from the liberality with which in England game preserves are stocked. It will be a good time when such a practice is the rule throughout the States."

Burpee's Farm Annual for 1895.

Always fresh and original, BURPEE'S FARM ANNUAL for 1895 is even better than ever before. The cover is most artistic and beautiful; lithographed in ten colors, it shows on the front an attractive bouquet of the new Sweet Peas, now so fashionable while on the rear is a bird's eye view of FORDHOOK FARM where many of Burpee's seeds are grown and where there were conducted the past season more than six thousand trials of vegetables and flowers grown from seed. This Catalogue is really a complete book on seeds, as it contains 174 pages, besides several colored plates and special circulars. The illustrations, 400 in number, are all true to nature, being mostly engraved from photographs, while the descriptions of both new and standard seeds are noteworthy for their accuracy. Messrs. W. ATLEE BURPEE & CO. make the nominal charge of 10c. for the Farm Annual, which is less than actual cost of publication, but will be pleased to mail a copy free to many of our readers who intend to purchase seeds this spring. It contains much useful information which cannot be had in any other form, and we strongly recommend all who have occasion to buy seeds to consult the Catalogue of these well-known Philadelphia Seed Growers.—Adv.

Fishculture

The Follett Case Ended.

Editor Forest and Stream:

In the case of the appeal from the District Court in Great Barrington, Mass., February, 1894, where the defendants were convicted of netting trout contrary to law in Lee Brook, in the town of Sheffield, Mass., and were fined, R. E. Follett, $150, and J. M. Davis, $10, has just again come before the January session of the Superior Court in Pittsfield and they were again found guilty. R. E. Follett was convicted of taking illegally sixty fish, for which offense the law imposes a fine of $5 per fish; and J. M. Davis, who aided and abetted him of taking two fish. The evidence in the case divulged the fact that R. E. Follett, who holds the office of Fish Commissioner of the State of Connecticut, is not a resident of that State. He admitted on cross examination that his home and residence was in the town of Sheffield, Mass. It will be remembered that Mr. Follett claimed he had a right to net in this Lee Brook, a portion only of which he holds under lease, because in June, 1893, he turned into the brook from his pond some twelve hundred cultivated trout and which he claims were fed liver and lights near the head of the stream. He admitted netting and taking fish down some two or three miles of the stream, and that in September, when he claimed to net them, some sixty or seventy-five days after he had turned in these cultivated fish, and they had run with the wild trout up and down three or four miles of the stream, he could readily distinguish his trout from the wild ones. The court ruled that after having turned his fish into the running waters of the stream he had no longer any control over them. The sportsmen of Southern Berkshire feel gratified at the result of the trial, because it indorses their views of the illegality of the netting which has virtually destroyed one of the best trout streams of Southern Berkshire, and they desire publicly to express their appreciation of the services of Game Warden Benjamin Smith, of Pittsfield, Mass., and District Attorney C. L. Gardner, who so ably presented the case for the commonwealth.

REPORTER.

New York Fish Commission.

Gov. Morton has appointed Barnet H. Davis, of Palmyra, Commissioner of Fisheries to fill the vacancy caused by the resignation of Robert Hamilton.

Game and Fish Protection.

CHICAGO AND THE WEST.

A Large Illinois Negro Discovered.

Chicago, Ill., Feb. 1.—The Executive Committee, of the Illinois State Sportsmen's Association, met this afternoon. The result is the discovery in the association woodpile of the largest negro known to date. In brief, the committee found that they had been asked to father, and to some extent had unwittingly already fathered, a legislative measure which would, if passed, wipe off the statute books of Illinois every trace of game protective legislation. Moreover, they found that there was extreme danger of the passage of the measure at an early date.

By the above, reference is meant to the so-called Warden Blow bill, which was substantially indorsed by the Executive Committee at their last meeting, as reported in these columns.

At that meeting there was no attorney present from the law committee. The bill purported to have been endorsed at one time by Mr. Wolfred N. Low (this week deceased). No member of the committee suspected any covert meaning beneath the wording of the bill, and it was not examined as to its technical construction. With a few suggestions it was reported on favorably. At once State Warden Blow, who was at Springfield, attending the assembly session, busied himself in the interest of the bill. Members of the State Association did all they could to influence members of the Legislature in its favor. Senator Campbell was induced to assume the task of introducing the bill.

A Good Bill for the Game Dealers.

The discoverey of the contents of the woodpile, of the true inwardness of this bill, is due to just one man, and he happened not to be on the law committee, Mr. F. S. Baird, one of the prominent sportsmen of the association. Mr. Baird read over the measure and found that all it meant, legally construed, was to throw open the markets of Chicago for the sale of game the year round, to abolish the present game law entirely, and clean the State of the game and game laws at one motion. Horrified at this, and made suspicious by some things he had heard, Mr. Baird went to President Shephard, and Chairman Organ, of the committee, and begged the speedy calling of another meeting. Meantime, a telegram, over President Shephard's name was sent to Senator Campbell, not to introduce the bill, and that another meeting was called for Friday afternoon. Warden Blow was by wire invited to attend the meeting, and Senator Campbell showed him the message. Warden Blow was not at the meeting. But this morning's dispatches from Springfield stated that the Blow game bill was introduced yesterday by Representative Snedeker.

The Bill Found Very Faulty.

Thus the sportsmen were put in the unenviable light at Springfield of being divided among themselves and of not knowing their own minds. This in the face of the game dealer's forces, always strong at the Legislature, and in spite of the well-known hostility of the man Altgeld, Governor of unfortunate Illinois, to any measure of game protection.

Such was the state of affairs when, in some consternation, the Executive Committee met this afternoon. There were present, Messrs. Organ, Shepard, Meyer, Wilcox and Price, officially of the committee; Mr. F. S. Baird, the discoverer of the flaw in the bill, Mr. M. R. Bortree, Mr. W. J. Edbrooke, some representatives of the press, and others interested in protective matters. The meeting was made open to all.

Mr. Mott, of the law committee, had prepared an opinion on the bill, with some suggestions of improvement. This opinion was read, after Chairman Organ had briefly stated the purpose of the meeting, which he did by declaring that it looked as though the bill had been drafted in the interest of South Water street, and he did not care who heard him say it. Mr. Mott's legal opinion made the Blow bill out to be an injury and not a benefit. The present law was declared to be much better. The proposed bill would not prohibit the selling of robins, larks, etc., in open market. It made the shooting season too long on game birds, and that at the time when the birds were young

and easily destroyed. It would not forbid the destruction of the eggs and nests of snipe, rail and other birds. The new bill omitted the prima facie clause in the trespass feature, and laid no penalty therein, and provided for too large pay for the warden, and this was not done contingent upon a fund raised by licensing the gun, but was left to stand, an amount of over $7,000, to be paid its poorer deputies, each year, no matter what the license fixed. The "dangerous weapon clause," to stop rifle shooting on open waters, was not germane to the purposes of the bill.

Mr. Mott pointed out that section 13 of the bill permitted the sale of game for three months, but that nowhere in the entire bill was there a word said about prohibiting the sale of game, at any season whatever! This covert clause, he showed, would leave the State practically without a law to control the markets. The bill further covered only Illinois game, and did not forbid the selling of game killed outside the State. Furthermore, while the penalty for illegal killing of game was raised, the fine for illegal selling of game was put at $10, ridiculously low. The bill as framed would permit the trapping and netting of wild turkeys in Illinois.

The Blow bill would seem to be stringent on the exportation of game, but in fact it was too stringent. It had just such a clause as had been shown in Kansas to be unconstitutional, an interefering with inter-state commerce. Decisions kindred to this were of record for Indiana, Maine, New Jersey. The old law was far better. The Blow bill opened too wide a gate also for sportsmen to carry game out of the State.

With these few trifling exceptions, Mr. Mott said in speaking of the report, such as opening the selling season the year round, abolishing the old game law, making the business of the game dealer easier and not harder, and throwing open the gate for destruction of all the game of Illinois, the Blow bill now before the committee, was a pretty good bill. For South Water street it was a very good bill. Mr. Mott thought the bill had been drawn by a very clumsy or a very skillful lawyer, he would not say which. He would not impugn the motives of Mr. Blow, who had shown himself a very active, efficient warden, at out-of-the-city work. He thought Mr. Blow might be sincere, but his place was at executive labors, not legislative, if the criterion was to be the bill now in hand.

This then, was the bill which, if passed, would wipe out the old law, the only fault of which was its weak executive clauses, but which, section by section, almost through its entire length, had been tried, and proved, and passed upon by the Supreme Court of Illinois and found good law for the sportsmen. This, too, was the bill which had unwittingly been indorsed by the committee of the association, and which even now was introduced by the State Warden in spite of the request of the President of the Association not to do so.

Mr. Baird's Plain Speech.

Mr. Baird was asked to speak, and did so with plainness and frankness.

"I do not hesitate to say that the question of protection in Illinois is in more danger than it ever was," said he, "and we will have hard work to save the day now. I say plainly that if this Blow bill was not framed by South Water street, it at least was revised or approved by their lawyers, and of this I have proof."

Mr. Baird was at supper in a Chicago restaurant and chanced to meet Mr. Cooper, a lawyer friend.

"I see you're going to have a new game law," said Mr. Cooper.

"What law?" said Mr. Baird.

"Well, a South Water street client brought one to me and I examined it."

"Was it a good one?"

"Good enough for South Water street," Mr. Cooper said.

"Which one was it?"

"The one they call the Blow bill, I think," said Mr. Cooper.

There was a sigh of astonishment at this, but Mr. Baird said that he made no charge connecting Mr. Blow and the South Water street men, and did not charge Mr. Blow with intentionally getting up any bill to suit South Water street. All he knew was that it did suit South Water street and that South Water street wanted it passed. Still another friend, a member of the Legislature, had told him that a South Water street man had told him that the Blow bill was one the South Water street dealers wanted to see passed, and "were raising a little pot to help it along."

Mr. Baird said that this Blow bill would throw Illinois wide open for the killing and selling of her game, and would help destroy all the game of other States shipping game here to Chicago. It gave a sop to the warden in shape of a good salary, and in return gave the game market open doors the year round, by means of the precious trick which had been pointed out. Mr. Baird said the railroads favored this bill, because they wanted to serve game on dining cars. He had had a tip to that effect. Moreover, he had been told that Gov. Altgeld would sign no other law but this one. Gov. Altgeld was known openly to believe that game should be sold "the same as butter and eggs."

Mr. Baird said South Water street had broken faith with the Illinois Association plainly enough. He was in favor of prohibiting the sale of game absolutely and altogether in Illinois now, and to declare war on the street which favored this bill. But he did not attempt to disguise the fact that the situation at Springfield was serious, and that something should be done at once. It made no difference whether the bill was the product of ignorance or of craft, and he would not say whether a clumsy hand or that of a mighty shrewd lawyer had framed it. In any event it was extremely dangerous, and should be fought at once. He intended to go to Springfield and fight it, no matter what the committee did.

For and Against.

There was a distinct ripple of surprised interest at Mr. Baird's remarks, and much whispered and open comment. The representative of a Chicago sporting newspaper, which has long since committed itself neck and crop to the Blow bill, got up to refute any allegation of duplicity against Warden Blow. The latter had printed the bill four months ago, in the Chicago papers, and had invited comment from sportsmen on it, and had 503 letters of approbation of said bill now in his inside pocket. This should be proof that Mr. Blow's intentions were perfectly open and honest. The representative of the Chicago paper thought you didn't need to publish a sale of game specifically, as would be inferred from the clause allowing only a short selling season.

Mr. Baird—"The Supreme Court of Illinois doesn't infer anything."

The newspaper man further thought game should be sold some of the time, else how could he ever get to eat quail.

A member—sotto voce, "That's so; he couldn't hit 'em.

The representative of the Chicago paper thought Mr. Blow the best warden we have ever had. It was Mr. Blow's theory not to work in South Water street, but to get outside the city and arrest the killers of the illegal game. Mr. Blow had more convictions to his credit than all other wardens. It was wrong to attribute any ill motive to Mr. Blow. To go back on this bill would be a wrangle among the forces of sportsmen on the eve of battle.

It was pointed out by Mr. Mott and others that there was no wish to be unjust to Mr. Blow or to ascribe anything to him without proof. It was not a question of Mr. Blow, but a question of this bill. What should be done about it?

Mr. Wilcox, of the committee, moved to disapprove of the Blow bill and to request the law committee to draft a few slight amendments to the old game law. The motion was carried. Then Mr. Price moved to clear the record by a formal vote of reconsideration of the action of the committee at its last meeting. Mr. Wilcox, in still another motion, which was carried, moved to formally withdraw the approval of the commitee from the Blow bill.

Word from the Warden.

At this step of the proceedings a letter was produced from Warden Blow himself, explaining something of the reasons why he was not present at the meeting. The reading of the letter caused surprise. It was as follows:

Springfield, Ill., Jan. 30.—Officers and Members, Illinois State Sportsmen's Association: Having this day received forwarded mail, requesting me to attend a meeting to be held at the Sherman House, Friday afternoon, February 1, I regret very much not being able to attend. Having in the meantime been informed the object of the above meeting, I will say it does not surprise me to learn the object of said meeting. Having come in contact with a good number of the above members, I have always found them as being opposed to anything anyone else suggested outside of a so-called sportsman. Any change in the game law must be for the sportsman and no one else. Of course, the present proposed law was published, and at the same time suggestions were called for upon the subject. I have in my possession over 500 letters from all over the State, and from them I drew my conclusions. Not a word from this so-called sportsman's association did I receive until the bill was corrected, the expense of which I paid, outside of that contributed by H. H. Fahnestock, $13, and C. Kern, $20. The said bill cost considerable over that. But what surprises me is that at this date those agitators put in their appearance. I would suggest that the above association get up a bill to suit their interest, and not lose any time over mine, as I shall let the intelligence of the General Assembly decide which is best for the people.

I learn your great object is that the hotels, commission men and railroads are detrimental to your so-called association, except when any of your members want a pass to go hunting or fishing; they are in line then. I would like the above association to tell me what objects Illinois law-makers have in protecting game in Canada or Montana, Dakota or other States where game comes from? Is it so that when these so-called sportsmen go there they will find plenty of game to kill because they pay no attention to their own State, or is it to drive a legitimate business from the State of Illinois to some other State? Show me one case which the above association has prosecuted for killing game out of season, or the game wardens under their direction. I say not one. They have always directed their persecutions at innocent parties, such as commission men, hotels or restaurant keepers. Does that protect the game? I say no. You must make laws for Illinois and have your wardens go out in the field and keep the game alive and not shout after it is dead. What interest has Illinois in the game of other States, that it should make laws of that kind? Is it not a discouraging fact that this association only meets once a year, and what do they meet for? My personal experience is, they meet to talk over trap shooting, proper charges of sheils, handicaps, etc., from 8:15 P. M., until 11:20 P. M., forgetting altogether that they were incorporated for the protection of game and fish, and had not the chairman called their attention to the above facts, they would never inquire about game. At your last meeting I was called upon to make my report, which I did, and of which I am not ashamed. They were more than surprised to find I had been out in the State and tried to stop the illegal killing of game at the root, where the evil exists. They encored my methods and passed a resolution to reimburse me for my shortage. Now, did I get it? Yes, I got it from eight or twenty-six or thirty clubs up to this date. The above was ordered June last. Now, this is what this so-called association amounts to. I would respectfully suggest that you call it the Illinois Trap Shooting Association. It would be more fitting, for the support you give the game in comparison to the making up of purses to shoot pigeons, to give it the above title. I believe in enacting laws for the whole people of the State, and not for the few. Yours truly,

C. H. BLOW, Game Warden.

This direct sap in the face of the Illinois State Sportsmen's Association created comment very unfavorable to Warden Blow. It was considered an intentional affront, and will probably be treated as such. President Shephard, in his gentle way, expressed surprise. Unofficialy he said later, that no more club assessments would ever be collected for Mr. Blow. Chairman Organ jocularly referred to the measure as the "Blow-South-Water-street-American-Field-Bill." Mr. Baird said: "I openly call this the 'South Water street bill.'" Mr. Baird was appointed a member of the law committee on the spot by President Shephard in place of Mr. Low, deceased. Mr. Baird declined the honor, and said he would rather fight the bill alone and not as connected with any body of sportsmen. Mr. Bortree and others spoke briefly on the subject of a gun license or gun tax as an amendment. Mr. Blow's remarks on "driving a legitimate business from the State," were not well received, and it seemed the sentiment of the majority of those present that it would be a good thing for the sportsmen if the Chicago market was closed forever, and it was strange the warden did not think so too.

Such are the facts at present, and Forest and Stream is concerned with the facts only and not with any inferences. It is true beyond doubt that a split has been made in the ranks of Chicago sportsmanship at just the wrong time. What the result will be depends on the freaks of legislative action at Springfield. This bill may be pushed forward rapidly and become dangerous. In any event, it is not the sportsmen's bill, no matter whether or not it is called the sportsmen's bill. The sportsmen have repudiated it, and no sincere sportsman can wish to see it passed as it stands now.

An Unlucky Newspaper.

One singular outcome of this dangerous entanglement is the interesting journalistic position in which the Chicago sporting newspaper above referred to now finds itself. It once more learns, or should learn, the danger of partisanship. It has strenuosly supported this Blow bill, and has publicly called it good, possibly for titilative reasons of a dorsal location. Now, if this bill does not pass, this paper must see its measure die at the hands of the sportsmen of the city, and State. If the bill does pass, the unfortunate journal must reflect that it did all it could to abolish the game laws of Illinois, and deliver its sportsmanship over to the hands of the spoiler. This is the same Chicago paper which is the parent of the absurd ten gauge trap rules, and the same paper which did all it could to kill the World's Fair shoot. It now is doing all it can to kill the Illinois State Association and the game laws and the game of Illinois, all this latter through an inadvertence as serious as actual intent. In a time so hazardous as this the Illinois State Sportsmen's Association needs even the small assistances, and behind it and its able lawyers, there should be the support of every sportsmen's journal without reference to personal or partisan motives. The thing to do is to kill this Blow bill, and kill it quick, to hold on to the old law, and offer for it no sweeping amendments, but only such modest ones as may have a chance at Springfield. We do not want to come out of this with no law left at all.

Too much credit can not be given Mr. Baird for bringing these matters to the attention of the association. At his suggestion the adjournment was made till 4 P. M. of Feb. 4, at which time the law committee will report on proposed amendments to the old game law.

More About the Blow Bill.

Feb. 2.—The Illinois State Sportsmen's Association prints the following comment to-day on the Blow-American-Field-Bill, which has been sprung on the Legislature at Springfield:

"We have caused this bill to be carefuly examined by our attorneys, and their report to us shows that it is a document carefully prepared in the interests of the market hunter and the commission merchants of Chicago who deal in game We are informed that the game dealers have raised a fund to aid in its passage, and this alone is sufficient to condemn it. The principal objections to the bill are:

1. It permits the hunter to trespass on the lands of another without his consent. True, the law says that he cannot, but it omits the penalty contained in the present law, and with no penalty imposed the provision is worthless.

2. It gives the game warden power to arrest without warrant at pleasure, and does not provide for immediate trial, nor for any trial.

3. It says when game may be sold, but does not prohibit sale of game at any season of the year.

4 The present law prohibits the sale of game killed in Illinois, except water fowl. The proposed law omits this provision entirely. Shall the quail, prairie chicken, wild turkeys, etc., of this State be potted for the Chicago market?

5. The present law prevents the trapping, netting or snaring of quail, prairie chicken or grouse at any time. This bill allows it in the interest of the market hunter and the game dealer.

6 The proposed law provides for the payment of large salaries to the game warden and eight deputies without making the payment of such salaries conditional upon a sufficient fund being realized from fines, etc. This imposes an additional burden upon our taxpayers.

Our game must not be snared, trapped or netted and permitted to be sold on the Chicago market, nor our open season extended, and this bill must be killed as quickly and surely as its passage would kill all our game.

The situation is desperate. Chicago game dealers and their allies are at Springfield working for the passage of this bill.

Its Gullible Gullet.

The above must be rather hard reading for Mr. Blow, who by it would seem to have been deceived by the South Water street Philistines, a great, large, big, plenteous lot. It must be a trifle hard also for his self-instituted godparent.

A Protest to the Legislature.

If the above is not sufficient to show the opinion of the sportsmen of Chicago about the bill in question, perhaps the following will. It is a protest printed by the Illinois State Sportsmen's Association to-day. It goes to the Governor and Legislature of the State signed by many prominent sportsmen. Still another private protest against this bill, signed by many leading citizens of Chicago who are not sportsmen, will, so I understand, be forwarded to the Governor, though this has nothing to do with the protest of the Association, which reads as follows:

To the Honorable the Governor and the Members of the Legislature of the State of Illinois:

Gentlemen: The undersigned, the Illinois State Sportsmen's Association, composed of the sportsmen's clubs and sportsmen of the State of Illinois, pledged as one of its fundamental principles to the protection of game birds and song birds in this State, do hereby protest against the passage of the bill known as the "Game Warden Bill," recently introduced by Game WardenBlow. This bill, previous to its introduction in the Legislature, was submitted to the Executive Committee of this Association in the absence o the Law Committee, and this committee believing that the bil had been drawn in the interest of game protection and was being advocated by persons interested in game protection, did not give it the close scrutiny which they would otherwise have done, and after a casual perusal of the same approved of it. But about the time it was being introduced into the House the attention of the President of the Association was called to the fact that the bill was a bad one in many respects and ought not to become a law in its present form. Whereupon a copy of the same was submitted to the attorneys of the Association and at a meeting of the Executive Committee of the Association, held at the Sherman House, in Chicago, on February 1, 1895, the opinion of the attorneys was read and other facts were brought before the committee which disclosed to it the fact that the said bill had been revised by the attorneys of the South Water street game dealers and was in the interest of game destruction instead of game protection, and was being vigorously pushed by the game dealers of South Water street, in Chicago, with the avowed purpose of having it become a law. Said bill, if it became a law, would be instrumental in destroying all of the game in this State before the meeting of the next Legislature, when it might be repealed. Said bill does not prohibit the sale of Illinois or other game. In other words, it allows the sale of Illinois and other game every day in the year. It does not prohibit the trapping of game in Illinois at any season of the year, thereby allowing quail, prairie chicken and all other game in Illinois to be trapped at all seasons of and sold at all seasons of the year.

It does away with the penalty for trespassing upon the land of others, thereby allowing the game destroyer free access upon every farm and every piece of ground in Illinois and destroy the game thereon without any penalty for so doing. It also provides that the Game Warden shall have power to arrest persons on sgiht, without a warrant, without making any provision for trial or other means of ascertaining whether the person arrested is guilty or not.

It also provides that out of the State Treasury shallbe paid the Chief Game Warden a salary of $1,500 a year, and to each of his eight deputies a salary of $800 a year, making a total of $7,900 additional burden upon the taxpayers of the State of Illinois, without any just compensation therefor.

The bill attempts to provide for a fund by licensing shooters, but in its present condition it does not state that the Game Warden is to be paid exclusively out of such a fund. It lengthens the season for shooting game by adding sixty days to the open season, in the interest of those interested in the destruction of game for the market. It is a well-known fact that the game animals and birds of Illinois are rapidly disappearing, and unless our present laws are more strictly enforced our game will soon entirely disappear. Our present laws are good in nearly every particular. They have been affirmed by our Supreme Court, and the only changes that may be necessary to more fully protect the game of this State would be to give some few additional powers to the Game Warden, and shorten the season for the sale of game from other States. For, as our Supreme Court said in the Magner case, reported in 97th Illinois, the prohibition of the sale of game from other States in this State has a tendency to protect the game of this State.

Directors: R. B. Organ, Chairman; L. M. Hamline; A.C. Paterson; C. S Wilcox; Adbner Prrce; W. L. Shepard, President. W. J. Edbrooke, 1st Vice-Pres't; N. J. Hindert, 2nd Vice-Pres't; H. B. Meyers, Sec'y-Treas.

ILLINOIS STATE SPORTSMEN'S ASSOCIATION.

It may be seen that the sportsmen are now undeceived, and are in earnest in their effort to kill the Blow bill, and to undo as far as possible the ill-judged work which has been done in its favor. The game laws of this State were never in so critical a condition.

E. HOUGH.

909 Security Building, Chicago, Ill.

Later Chicago, Feb. 3.—In an interview published this morning Warden Blow says:

"I had given the men who have seen fit to criticise the bill every opportunity in the world to suggest changes. I submitted the bill to them, asked them to read it and criticise or approve, saying that I wanted to meet with their approval in every move made for the protection of game. They read the bill and approved it, and now at the last moment they are raising a cry that I am inimical to the interests of the game and of the sportsman. This is untrue. I have been an active game warden. I believe the way to stop the sale of game is to prevent its being killed. You cannot legislate a dead bird back to life. I have traveled all over the State and have faced man after man in the field, arrested them for violations of the law and had them fined. I have made 483 arrests for violations of the law during my short incumbency in the waden's office.

"I see now that the sale clause in the bill which was prepared and introduced was faulty. Its wording should be revised. I go down to Springfield to-morrow night and Monday morning I shall ask to have the change made. The law was passed upon by good lawyers and declared all right. I am not to blame for the weak clause. It would have been changed long ago if any one of those now clamoring had called specific attention to it. I have had changed already the wording of the clause which refers to the trapping of birds. It now reads so that trapping shall be illegal the year through. I will have inserted the 'possession clause' in the song and plumage bird act, so that a guilty man may be punished even though he may not be caught in the act of killing. All insectivorous birds are now covered by the law. The women of the Audubon Society know what I have done to protect the birds. I have spent my own money and have worked hard for the cause for pure love of it. For twenty years we have done nothing for game protection through the markets. The work must be done in the field. Give me the assistant game wardens I ask and I will protect

the game and replenish the well nigh exhausted coveys and flocks.

"I have risked my life often for the birds and will do it again. Many a time I have arrested men for illegal acts who have shown the button of a sportsmen's association. Give me the warden act that I wish and I will wipe illegal killing and snaring out of existence, and there will be no politics nor 'pull' in it."

Jack Light or Hound.

Editor Forest and Stream:

The wide difference of opinion respecting the wisdom of enacting laws which shall altogether prohibit hounding, or jacking, or both, tempts me to express my convictions. Last year an attempt was made to legislate jacking out of existence, but the Committee on Fish and Game decided, very wisely, I think, that this change should not be made. This year both hounding and jacking are to be attacked, and the advocates of stringent laws against these forms of deer hunting are numerous and determined.

I desire to put in my plea for the jack; and in so doing I believe I voice the sentiment of many who answer to the name of sportsmen, and claim the right to be called such. No wise and just game law ever contemplated carrying the protection and preservation of deer to the point of shutting out the hunter from a reasonable amount of sport at the proper season. The greatest good to the graetest number applies to this subject as well as to any other. Now, the majority of those who take an annual outing to the woods, select, from preference or necessity, the late summer (when they are still privileged to fish), or the early autumn, returning before the hounding season begins. To deprive them of jack shooting would, therefore, deprive them of every feature of the sport save still-hunting, which, in certain territories, and under certain conditions, offers little promise of success. Why should this large class of sportsmen be robbed of their opportunities for pleasure? I do not doubt that previous to the enforcement of the law prohibiting the sending out of venison, the permanent residents, who are familiar with all the water and runways, may have killed and shipped to market a great many deer; and, so long as this was a legitimate source of revenue, the jack was a deadly instrument in their hands. But I do maintain that the number of deer killed at night by visiting spotrsmen is somewhat overestimated. There seems to be a popular notion that all a man has to do, who desires to secure a few carcases and heads and horns, is, to get into a boat, put on his jack, and be paddled along a line of deer standing on the shore or river or lake. He is there supposed to select such animals as he wants, and blaze away until he has filled the boat and exhausted his ammunition. The wholesale slaughter of the buffalo in years past is thought to have been as nothing, compared with the terrible carnage in which the jack hunter takes part, and the unsophisticated summer visitor is prepared to find the streams and ponds reeking with the blood of the murdered innocents.

As a matter of fact—at least so far as my limited observation and experience go—the jack hunter works harder for the meat he gets, and gets less for the work he does, than the still hunter or the runway statue. If a man is looking for luxurious comfort and effeminate ease he will, if he is wise, search for it elsewhere than in the bow of a boat, on a chilly night, with a jack boring into his skull. After a few hours of this sort of pleasure, varied by an occasional wading trip through rapids or shallow water and floundering back to camp over a wet trail, or no trail at all, the avearage sportsman begins to realize that jack hunting is no sinecure, and that every deer he gets in this way demonstrates the truth of that old German proverb, "In war, hunting and love, for one pleasure a hundred pains."

I do not wish to be understood as depreciating the charms attendant upon this sport, for it is largely because of them that I approve of it, and defend it. What can be more strangely enchanting than to float noiselessly down a river, surrounded by dusky shadows on every side, the tall firs and spruces outlined like spires against the sky, the air saturated with the pungent fragrance of pine and balsam, and the entire scene

> More beautiful far to the eye,
> Than if day in its pride had arrayed it.

It may be that my fondness for night shooting is in part due to the fact that thus I killed my first deer. Certainly I can never forget the exciting novelty of that experience, and the thrill of exultation which came with the successful shot. I now vastly prefer still hunting; but I would indeed be sorry to feel that I could never again legally indulge in this wierd phase of deer hunting. One of the chief arguments quoted against it is, that many deer are wounded and escape, only to wander off to die. This may be true, but I presume it is also true that very frequently the slightly wounded animals ultimately recover if left to themselves; whereas, if pursued by dogs they are almost invariably run down.

It is astonishing how tender and humane the advocate of hounding suddenly becomes of the thought of the sufferings inflicted by the jack hunter on the innocent denizens of the forests! Men who can see nothing unsportsmanlike in driving a deer in to the water and—having gotten him out of his element—shooting him, at short range, from a boat, nevertheless inveigh against those who, at a considerable disadvantage, shoot at the gleaming lights of a deer standing on his native hearth, ready and able to fly at the least suspicion of danger. A man who is too sensitive to shoot at a deer under these conditions, should never go into the woods with a gun. He might possibly hurt something with it, and should confine himself to firing at starch boxes and tomato cans in his back yard. The chances are, that if the matter were left for the deer to decide, they would all vote to have the dogs kept out of the woods, and to take their chances with the jack hunters.

This is not intended to be a tirade against hounding, but rather as an argument in favor of jacking, if a comparison or a choice between the two is to be made. Don't put out the jack just yet! Let this ignis fatuus light up the fringes of the forest along the shores of lake and stream, startling the musk rat and heron, and drawing from the antlered buck a snort of surprise. Call off the dogs, if need be, but suffer the jack to remain a feature of the camp outfit.

Generally speaking, still hunting is the most artistic method of hunting the deer. You meet him on his own ground, and put your patience and skill against his keen instincts and wariness. It is the most wholesome and beneficial form of the sport, for you are frequently on the move instead of being cramped in a boat or glued to a single spot on the runway. Not one but many pages of the book of nature are turned over in a day's sport. The forest gives up its secrets to the still hunter. The smaller furred and feathered tribes seem to know that you are not out for them this time, and tantalize you with their reckless exposures to your rifle. The cock partridge, with spread tail and erect rufi, struts up and down a log and dares you to fire at him: the sly fox stops long enough to allow you to peep through the sights at him two or three times; the hen hawk preens his feathers before your very face; and the squirrel shakes his bushy tail and snickers derisively at the thought of having you for once at a disadvantage. Then you are constantly coming upon evidences of the proximity and recent presence of big game. Here is where Mrs. John Doe and her freckled daughter took their midday nap: there is a big, compact, and shapely track made by the father of all bucks! You wonder how many times he carried on his noble head, and whether you would be able to "back him out" in case you shot him; and here, fresh, in the soft, black ground beside the swamp, is the great plantigrade impression of old bruin himself, who evidently hasn't cut his finger nails lately. As you see the place where he has wallowed slowly filling with water, and realize that he may be in the tamaracks yonder, you congratulate yourself that modern mechanical skill has given you a rifle with a dozen charges in it instead of one, and so you boldy hunt for the owner of those portentous tracks, forgetting that he is even more timid than yourself, and is probably quater of a mile away by this time.

And then at last comes the supreme moment when the deer breaks cover, and the pump begins to work and the bullets fly. Down he goes! Venison in camp to-night instead of pork! The hard tramp, the exasperating briars, the dagger-like stubs on the fallen trees, are all forgotten now, and you stagger along cheerfully under your heavy load, laughing at the tumbles which made you angry earlier in the day. And when the noble animal is hanging, heels up, on the birch beside the fire, and you stretch your tired body on the balsam boughs inside the camp, trading the day's experiences with your comrades, and getting occasional divine whiffs from the frying pan, you realize in full, the delights of still hunting.

Yes, this is best of all; nevertheless, I say, save the jack! You may want it; and venison pulled out of a boat is almost as good as that brought home on your shoulders, and much better than that which has been chased all day by dogs.

ARTHUR F. RICE.

THE VALUE OF FISH AND GAME.

ADDRESS OF E. C. FARRINGTON, SECRETARY OF THE MAINE SPORTSMEN'S FISH AND GAME ASSOCIATION, BEFORE THE JUDICIARY COMMITTEE, UPON THE VALUE OF THE FISH AND GAME INTERESTS OF THE STATE, AND THE PROPER METHODS OF LEGISLATION FOR IMPROVING AND PRESERVING THE SAME.

What are these interests, gentlemen, about which there is so much discussion, and of what value are they to the State?

We cannot determine them in the same manner that one may other interests upon which it is easy to put a value in dollars and cents, by standards commonly accepted as correct.

We can, however, determine them by different methods, and arrive at a very reasonable conclusion. Taking the valuable report of the Hon. S. W. Mathews, for the year 1893, who acting under and by authority of the Legislature, made an exhaustive examination into the "summer resort," business, placed the number of different persons visiting our State from out of the State, at 200,000. This he said was a conservative estimate, and is based upon actual returns made by hotel and boarding house keepers and transportation companies, an estimate that I have never seen questioned. Fifty dollars per person, covering all outlay of such visitors from the time they entered the State till they left it, cannot be regarded an extravagant estimate of the amount each person pays out. This would make, as the commissioner stated, $10,000,000.

How much of this amount comes to the State, on account of the advantages given for taking fish and game? We believe it fair to assume that one-fourth of the number is attracted here on that account. It must be remembered that Maine has the finest sporting grounds upon the face of the globe, and when you take into account the availibility of reaching them, the best that can be found in any land. Unlike other somewhat noted places, the sportsmen and their families find complete immunity from the myriads of poisonous insects and reptiles that infest most sporting grounds in warmer climates. Hundreds and thousands of men seeking rest and recreation, take their families and locate near or convenient to some waters where, while their family can have all the benefit of pure air and water, and scenery that always gives health, joy and comfort, they can beguile their hours with the pleasure of fishing and hunting. Hardly, if any, town in the State can be found but has its annual summer visitors, and hardly a brook or pond but receives their praises and give to them pleasures that cannot be found elsewhere.

If the estimate mentioned is considered fair, and we conclude that $60 per person is not unreasonable, for money left by such visitors from the time they enter the State till they depart therefrom, we have $3,000,000 which is distributed among our people annually, which would not come to us, were it not for our sporting interests. Again, take the report of our fish and game commissioners, of 1894:

"What is the value to the State of its fish and game interests? Various estimates have been made, ranging from $3,000,000 to $4,000,000 per annum. We think the smaller is a conservative statement as to the amount. We reason from the known to the unknown. We know that each year there go to the Rangeley lake region 5,000 sportsmen and hunters. They remain there on an average of ten days each. Counting the expense of each person from the time he enters the State until he departs from it, including railroad and other traveling expenses, hotel bills at the lakes, cost of guides, canoes, boats, and other incidental expenses, to say nothing of luxuries, is $75; aggregating $375,000.

"We next take the regions east of the Rangeleys, south of the Canadian Pacific Railroad, crossing the northern section of Somerset county; we then take the Moosehead lake region, which is by far the most important section of the State, both as to fish and game, with larger territory, better equipments, and greater attractions; then taking lthe lower lakes on the west branch of the Penobscot, the east branch of said river and Aroostook county north of the European and North American Railroad, including Aroostook and Fish rivers, as the fourth section; and then that territory which lies south of said just mentioned railroad and east of the lower Penobscot river, and we have divided the game section of the State into five parts. Then applying our best knowledge, which in the main is supported by actual calculation, based upon facts furnished from the sources hereinbefore mentioned, we find that the result brings us $2,500,000. Outside of the sections already mentioned are all of the seacoast counties west of the Penobscot river and Kennebec, Androscoggin and Oxford counties.

The influx of sportsmen has caused the erection of many small hotels and cottages along the shores of our lakes and rivers, and there are upon the inland lakes of the State, 138 boats propelled by steam, worth on an average $1,800 each, the aggregate being $248,400. It costs to operate one of those boats for the period of 150 days, including wages of crew, fuel, and supplies, $960, multiplying this by the number of boats, we have $132,440 as a cost of operating this means of travel.

"Another industry of our State which grows out of this interest is the work done by taxidermists. A leading taxidermist, and one who has several branches of his business at different points in the State, informs us that $50,000 per annum is paid to members of his trade, and this is largely paid by non-residents. There is hardly a department of industry or trade that is not touched and benefited by this important resource of our people. Sportsmen come from abroad and from our large cities in the State and spend their money freely. They buy not only the labor of 500 professional guides and as many cooks, servants and helpers, but they also enter our marts of trade and purchase arms, ammunition, fishing tackle and every convenience for a hunting and fishing outfit. They also purchase strong, coarse clothing, underwear, boots and shoes, blankets, and every article of convenience and sometimes of luxury to make their stay in our State pleasant and comfortable and their trip successful.

"If these great interests be maintained and put in condition for the best results of the State, it will be necessary to make much larger appropriations than have ever been allowed to this department. We shall ask for $30,000 for the propagation of fish and the enforcement of law for the protection of fish and game. This would be but 1 per cent. upon the $3,000,000 which comes to the State from these sources."

The foregoing statement of the fish and game commissioners, it seems to me is worthy of your consideration. For one I am satisfied that the estimate is too low. From sources which may be taken as reliable, the numbers frequenting the Rangeley section mentioned, are nearly double that stated by the commissioners. Probably no man is better able to give a fair estimate of those numbers than Mr. F. C. Barker, of Rangeley fame, who thinks that the number given is not much more than fifty per cent. of those coming into that section. Five thousand might be a fair estimate of the non-residents who go there. If we may rely upon the figures given, as to the amount of money left in Maine on account of our sporting interests, what does it demonstrate? Three million dollars is the estimate at six per cent. upon $50,000,000. Therefore this game plant is worth to-day $50,000,000 to the State of Maine; more money than you could sell the whole 9,000,000 acres of wild lands, forests and all, and all the water front of all other lands bordering upon the inland lakes and ponds in the State. In order to get a clearer idea of the value of these interests, a comparison with the benefits of other large interests, may throw some light upon the subject. The report of the State assessors make the value of the wild lands in Maine $17,103,317. The direct benefit received by the State in taxes is $42,758.28. How great an amount of taxes comes from sporting property, which would be reduced in value or cease to exist, if Maine had no fish and game interests.

The commissioners tell us that there are 138 steamboats upon our inland lakes, worth in the aggregate, $248,400. We know that there are scores of cottages and hotels that are exclusively kept and maintained by reason of our sporting facilities; that many large hotels costing from five to many thousands of dollars are maintained from this source alone; that many other hotels, and many other steamboats are partly thus maintained, and if these interests failed, such property would be greatly reduced in value, or be valueless; that the value of land upon the shores of rivers, lakes and ponds is enhanced from really no value at all, to hundreds of thousands of dollars. Considering all this, would an estimate of $3,000,000 be too large to claim as a fair value upon property that exists through and because of these interests? Probably twice that amount would be nearer correct. Suppose, however, it is $3,000,000, and pays taxes averaging one and one-half per cent., which is, I think, the average amount of tax paid, and you have $45,000 in taxes, lightening the burdens in the various municipalities in the State. When you consider that the property of railroads, hotels in cities, and large steamboat lines would be materially affected, were it not for our sporting interests, the direct benefits would be greatly in excess of the amount stated.

Quoting from the interesting report of Hon. Charles E. Oak, land agent, in speaking of the great value of our forests to the State, he says, "that the total cut of the State from these wild lands has equaled at least 500,000,000 feet, upon which, the average stumpage has been about two dollars and one-half per thousand, making an annual income from stumpage about $1,250,000 or approximately seven per cent. of the total value of the wild lands each year." That is to say that all the other value of this vast amount of lumber is swallowed up or absorbed by labor, which shows its importance as an industry to the State. How much in money is absorbed in labor? If we assume that three-fourths of its manufactured value goes for labor, then the labor interests of the State, gets not far from $4,000,000 annually from the lumber interest. This interest has been considered so great, of such importance to the State, and rightly too, that the protection of the same has been made the subject of much consequence in our national halls of legislation, and will claim your attention it is presumed this session. And still gentlemen, the amount that subserves the interests of labor, probably does not exceed the benefits arising from our fish and game interests. The fish and game in our waters and forests are worth more to the State of Maine, if properly cared for, than all the lands which is properly termed "wild lands." and I have not the slightest doubt but that, if the State would purchase every foot of them, and issue its bonds for the same, it would be the best investment that the State could possibly make. Do not infer from this comparison that I do not appreciate the great importance the "wild land" of the State has to the prosperity of our State at large, for I consider them of great value to the State. The State would then have fair value for all that was paid, in the forests and soil, and have such control that the game interests could be made worth ten millions annually in the future. Not only this, as was so clearly stated by Hon. J. Manchester Haynes, who preceded me, that upon the preservation of these vast forests, some six millions of acres which are, nor never can be available for settling purposes, depends not only upon our game, but all the water powers of the State, so marvelous in volume and value. Let the State own these lands and they will, properly cared for, in game and timber, produce revenues that would more than meet all the expenditures of our State.

Take one other great interest of this State, the farming interests. The Governor tells us in his message that there "are sixty-five thousand farms in Maine, containing 552,578 acres, and of an estimated cash value of $102,557,615, producing farm products in 1893 of the value of more than twenty-two million dollars."

That is to say, the total income from the sixty-five thousand farms is about twenty per cent. of the value of the farms. But let us inquire what is a fair estimate of the income. After deducting a fair amount for labor, fertilizers, etc., what would be left to put away or lay out in improvements? From the best information I can get on the subject, four per cent. would be a fair estimate, for net income. That is virtually saying that the farming interests of Maine pay out 18,000,000 of dollars to get four millions net income. We, gentlemen, ask the State to pay out $30,000 only, to get $3,000,000, very nearly this amount returned to the State. Our waters and forests are giving to the people of the State one-seventh as much money as all the farms of the State produce. To not provide liberally for a continuance and increase of this great interest would be a grievous and lamentable mistake.

These millions of dollars that come to our people, are of far greater consequence than the same number of dollars, which come from local industries, like the manufacture of lumber or from operations of other interests by which there is put in circulation large sums of money. The money coming from our fish and game, is so much added to our circulation, money brought from out of the State and put in circulation here. Our local industries keep up the circulation of what we may have in the State. The cry comes up from almost every State, give us more money, we want a larger amount to do business with, and this is the great question to-day before our law-makers at the national capital,—how to get more money into the business and add to the circulation, so that the wheels of industry may be put in motion. Those who spend the $3,000,000 that we get, come from out of the State and do not take away a single dollar's worth of property, as reckoned by the laws of valuation. It is so much revenue for the privilege of enjoying the delights of our good State of Maine. All that the State has to do to receive the large amount of money, which comes from our game interests, is simply to preserve the plant. The State invests a few thousands of dollars and gets $3,000,000 in return. No other business in this State pays any such revenue to the people.

TO BE CONTINUED.

Eastern Markets for Western Game.

Chicago, Ill., Jan. 26.—Editor Forest and Stream: We are endeavoring to curtail the killing, shipping and selling game in all parts of the West. We are, however, meeting with two serious difficulties. One is, that our game dealers here insist that they are not fairly treated, that when our markets are closed here, their shippers forward their game to New York, Boston and other Eastern cities. Also the market hunters in the West continue their depredations in spite of State laws long after the closing season in their respective states, and forward the same to these Eastern markets. Why is it that the States of New York, Pennsylvania and Massachusetts, do not pass laws closing their markets against the receipts and selling of our Western game, birds and animals, the same as they do for the game in their own respective States?

I trust that you may bring this matter to the notice of the legislators, who are now making some amendments to some existing game laws. MAURICE R. BORTREE.

Michigan's New Game Warden.

A matter of considerable importance just at this time, and especially to the sportsmen of Michigan, in connection with proposed legislation this winter in the interests of game and fish protection, is the appointment by Gov. Rich, of Chas. S. Osborn, of Sault Ste Marie, as State Game Warden. The appointment is one which is regarded with general satisfaction, in the belief that he will give the office a vigorous policy.

He has the appointment of ten deputy wardens, and it is pretty certain that they will be selected for their courage, intelligence and sagacity. Mr. Osborn is a true sportsman, one who has no possible sympathy with violators of our game laws, nor with pot hunters of any stripe. Mr. Osborn, like Mr. Hampton, his predecessor, is a newspaper man, being the owner and editor of the News, of Sault Ste Marie, Mich., a bright and able paper. He has had previous experience on the press, five years on the Evening Wisconsin, at Milwaukee, as reporter, and four years as editor of the Mining News, at Florence, Wis. He is now President of the Michigan Republican Newspaper Association. His term begins on February 1.

B.

Connecticut Brook Trout.

A bill has been introduced into the Connecticut Legislature providing that:

1. Everey person who shall take, sell or exchange, or offer or expose for sale or exchange, or have in their possession any dead brook trout less than six inches in length, shall be fined not more than $7 for each fish.

Canoeing.

The Revival of Canoe Racing.

Philadelphia, Jan. 11.—Editor Forest and Stream: We are not all built alike. This is fortunate, for if we were there would not be nearly as much good solid fun in reading the various plans for reviving racing and reforming the A. C. A. in general. The regatta committee would not suffer so much, either. I am sorry for the regatta committee, for they have not brought it on themselves. The following plan may be open to a good many objections, but it cannot be worse than some of the others, and may be a little better. I think the racing programme is too loose and cumbersome. I doubt if it could be shortened to advantage, but it could be made, I think, more interesting and compact.

Last year there were at least four sailing races and two paddling races that might just as well not have been contested for all the good they did. The novice sailing, club sailing, outclassed sailing and sailing maneuvering were to all intents and purposes walk-overs, and the passenger race, if I remember rightly, was not sailed at all. The war canoes were not raced at all, though that was due to an accident, and the club four race was confined to one club, which entered two crews.

I think the division of the racing men into classes similar to those of the oarsmen is about as good an idea as any I have heard of. Let us have a senior class, to be composed of (this year) all the men who have been placed first, second or third in the more important races in any previous years, say the record races, any of the trophy races, the unlimited sailing, tandem paddling and single-blade paddling. After this year, in addition to the men already noted, let all be added to the senior class who compete in that class, whether they win or not.

Then form an intermediate class to be composed (this year) of those who have in the past competed without being placed, but after this year let a man become a senior who wins an intermediate race.

Then have a junior class, to take the place of the novice class, and let a man remain a junior until he wins a junior race or voluntarily forfeits his junior standing by competing in a higher class. Any man may enter a higher class than his own, but he forfeits his right to contest again in the lower class by doing so. Keep the paddling and sailing classes distinct. A man may be entitled to intermediate or senior standing in sailing, but not in paddling, or vice versa. Then let us have a list of races something like the following:

Events 1, 2, 3, record races, as at present (open only to seniors).
Event 4, trophy paddling, as at present (open only to seniors).
Events 5, 6, 7, paddling, open canoes, single blade, with a separate race for each class.
Events 8, 9, 10, unlimited sailing, a separate race for each class.
Event 11, trophy sailing, as at present (open only to seniors).
Event 12, Dolphin trophy, as at present.
Event 13, unclassified sailing, as at present.
Events 14, 15 and 16, tandem paddling, a separate race for each class.
Events 17, 18, 19, club fours, paddling, a separate race for each class.
Event 20, combine the hurry-scurry and paddling upset into one race.
Event 21, sailing upset, as at present.
Event 22, war canoes, as at present, if you can get them.

Let us leave out the novice sailing, club sailing, passenger sailing, and outclassed sailing and gymnastics altogether. A programme as outlined above would draw more entries, and the men would be better distributed; the same set of men would not do all the racing. There would be very little trouble in getting more entries than at present. Especially in the club fours, Ianthe would have no walk-over; Orange might give them a good race, if no one else did.

Now for the boats. Don't do anything such as Lieda suggests. The machines are bad enough already, do not make them any worse.

I think "Mab's" suggestion to limit the length of the sliding seat a good one, but make it a practical limit of not over 4 ft. or 4 ft. 3 in.

Do not limit the sail area, for it will limit itself. Limit the length of cockpit to not less than 4 ft. 6 in. between bulkheads, for any canoe, and the coaming to be not less than 4 ft.x16 in., and have no floor above load waterline.

Some of the Yonkers men have solved that pretty well, as in the canvas-lined cockpits of Chiquita, Foggy-Dew and other boats.

I think "Bassille" goes quite too far in proposing to do away with the sliding seat altogether A canoe can be sailed with a good-sized rig and no slider, but so she can without a centerboard, somehow, or with a folding one, and she can be steered with a paddle and not a rudder. Would "Bassille" do away with these also? He should, to be consistent. The slider is just as much a necessity to a good modern sailing canoe, carrying more sail than a handkerchief, as the other two. There is no reason for any back-breaking, uncomfortable, cut-your-legs-in-half-with-the-coaming business in our endeavor to get back to a reasonable type of sailing canoe.

No. 2263.

CANOE NEWS NOTES.

The parties who recently broke into the house of the Holyoke C. C., and broken open all of the lockers, have been captured. They proved to be the same ones who entered the canoe lodges up the river last fall and took away much plunder, some of which has been recovered. A reward of $75 was offered for their arrest by the club, and this doubtless aided in their capture. At the police court they were bound over for the Superior Court in May.

The Shuh-shuh-gah C. C., of Winchester, held its annual meeting on January 15, and re-elected the following-named officials: Capt., Raymond Apollonio; Lieut., Mr. Moulton; Sec., H. C. Holt; Purser, J. W. Richards. W. W. Holt was elected Member of the Executive Committee at Large, vice J. Murray Marshall.

Yachting.

The Squadron and the Cup.

At last the building of opposing boats is well under way, and the many disputed points relating to challenging and holding have been laid aside. We would be glad to say that they had been permanently and satisfactorily settled on such a basis that international yacht racing would be carried on in the future without further quarrels and disputes, and with such mutual good feeling as befits the dignity of two great nations; but it is quite clear that such is not the case. The present agreement, like that of 1892-3, has no stable foundation, quite the contrary; and, so far from enduring for all time, may not even last through the present match The only point that is absolutely certain is that the New York Y. C. has received and accepted an unqualified challenge from the Royal Yacht Squadron under the new deed of gift.

It is more than likely that the Squadron did not intend to make such a challenge, did not know that it was doing so, and may some day deny that it has; but all this goes for nothing as long as the New York Y. C. has possession of the America's Cup. There is nothing to show just what interpretation the R. Y. S. has put upon its side of the agreement; but the position of the New York Y. C. has been made perfectly clear through the report of the Cup committee and the resolution of the club at its last meeting, under which it accepted a challenge from the R. Y. S. under the new deed of gift. When the question of the terms of the agreement of 1895 again comes up, the New York Y. C. will be prepared to prove its position; but we doubt whether the Squadron will be any better off than in 1893.

We are indebted to the English weekly, Vanity Fair, for the

THE ROYAL YACHT SQUADRON.

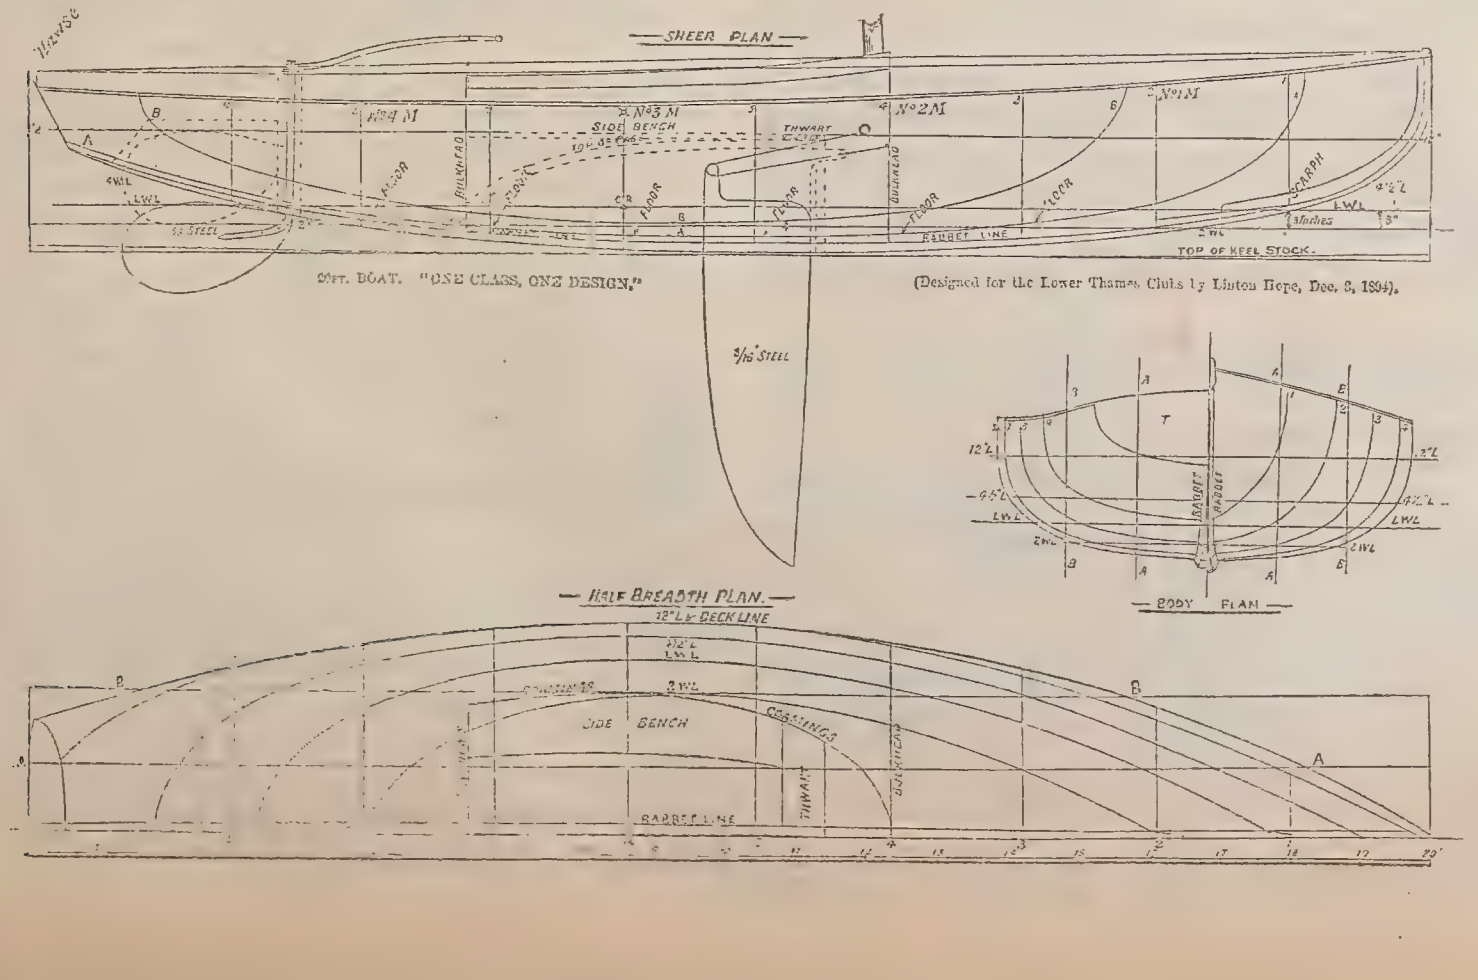
From "Vanity Fair."

opportunity to place before American yachtsmen the portraits of the leading yachtsmen of the Royal Yacht Squadron, whose "diplomacy" has finally resulted in the recognition of the new deed of gift.

The foremost figure of the group, the portly but handsome gentleman holding a cigar in his right hand, is His Royal Highness Albert Edward, Prince of Wales, Commodore of the Royal Yacht Squadron, the Royal Thames Y. C. and the Royal Western Y. C., and President of the Yacht Racing Association. The Prince has been a yacht owner since 1865, owning at different times Dagmar cutter, Hildegarde and Aline, schooners, a couple of steam yachts and later the cutter Britannia. He is a yachtsman and a good sportsman; and the renewed interest in yacht racing which he has displayed in building Britannia has been of material service to British yachting.

Passing now to the extreme left of the picture, we find a gentleman who has risen rapidly in the world of late years, William of Hohenzollern, Emperor of Germany and King of Prussia, and Commodore of the Kaiserlichen Yacht Club, of Germany. Considering his many important interests and the calls on his time, His Imperial Highness is deserving of much credit for his efforts in behalf of yachting in Germany. Since 1891 he has owned and raced Thistle, the Cup challenger of 1887, and though she has hardly realized those expectations of speed which her royal owner evidently cherished when he changed her name to Meteor; she has been raced steadily and heartily, and in addition to some other prizes, has won a Queen's Cup—by virtue of a very queer decision of the R. Y. S. The Emperor has now on the stocks in the Germania shipyard, Kiel, a 20 rater from Mr. Watson's designs. In the case of the recent meeting of the Squadron, His Imperial Highness can establish an alibi.

The next gentleman to claim our attention, though relegated by the artist to the background, is none the less prominent, thanks to his Roman nose, neglige attitude and white ducks. He is the third Marquis of Ormonde, Hereditary Chief Butler of Ireland, Lord Lieutenant of Kilkenny, and Vice-Commodore of the Royal Yacht Squadron, of which he has been a member since 1867. He is not a racing man, but has done plenty of deep water cruising, first under sail and later in steam craft, now owning the steamer Mirage. He is a practical yachtsman, and holds a master's certificate. He has the doubtful honor of proposing the resolution under which the challenge was made.



Now passing to the right hand of His Royal Highness, we find, in the gentleman with flowing whiskers and a single reef in his trousers,a typical sea-dog, Admiral, The Honorable Victor Montague, R. N., second son of the late Earl of Sandwich. Admiral Montague, after a long and honorable record of sea service, has settled down to yacht racing, first in the old Solent length classes, and more recently in the 40 rating class, of which he is the chief supporter. He has built in succession Corsair, Vendetta and Carina, racing them with a spirit such as one would expect from his record as a sailor.

The youthful figure which next engages our attention, as well as that of the Emperor William, is that of Thomas Wyndham Quinn, Esq , the Earl of Dunraven, K. P. His Lordship was born in 1841, in County Limerick, Ireland, and has attained fame and reputation as a war correspondent, writer, sportsman, statesman, and more recently as a yachtsman. His yachting career began in 1888, with the unsuccessful Petronilla, since which he has owned Valkyrie I. a half of Valkyrie II., and will own a fourth of Valkyrie III., now building. Lord Dunraven has labored long and earnestly to secure for the new deed of gift that recognition from British yachtsmen which was at first so justly denied; and his efforts have at last been crowned with success. The last figure of this interesting group, the gentleman on the extreme right of the picture, needs no introduction to Americans, having already achieved more or less fame of a newspaper description in various lines, chiefly as the manager of a variety troupe which met with a well-deserevd failure in New York a few years since. The Honorable Hugh Cecil Lowther, third Earl of Lonsdale, has had a varied and interesting career as a traveler, sportsman, manager and explorer, but he is new to yachting, having begun last year with the purchase of the 20 rater Deirdre from Lord Dunraven, with whom he is now associated as one of the syndicate of four, including Lord Wolverton and Capt. Harry McCalmont, who own the third Valkyrie. Several of the members of this historic group will be seen in America this summer, and it is even rumored that H. R. H. himself may be among them.

The Yachting World has taken a most extraordinary position for an English journal in, so far as we can judge from its rather confusing statements, admitting the complete ownership of the Cup by the New York Y. C. and the right of the club to dispose of the Cup as it pleases. In its issue of Jan. 18, it says editorially:

"The American eagle, voiced by the Forest and Stream, has uttered a piercing shriek. In the last issue of our contemporary to hand it has anticipated the march of events, and its dolorous diapason has sufficient volume to drown a fleet of steam whistles. The noble bird screeches in agony over the moral obliquity of the New York Yacht Club. America's Cup, as the great yachting trophy, has been discredited, and nothing but trouble is in store for the land of the Stars and Stripes. The eagle is now only fit, we presume, to be put into a menagerie, and all this has been occasioned by the New York Yacht Club preferring to have a race to troubling its head about the custody of a mouldy old trophy.

"The Yankee bird has its imitators in England. They are inclined to think that the Royal Yacht Squadron has stultified itself by accepting the deed of 1887. We are glad to find that the foolish counsels which have prevailed in former years have not been heeded on this occasion. The legality of the deed has nothing to do with us. Whether it is valid or invalid is a question solely for the New York Yacht Club, and the members have practically guaranteed the deed to be legal. At the same time it is a matter of indifference to the Royal Yacht Squadron whether it is legal or illegal. Lord Dunraven has stated that he only wants a race, and does not care about the cup, so that if there is any objection to

20FT. BOAT. "ONE CLASS, ONE DESIGN."

(Designed for the Lower Thames Clubs by Linton Hope, Dec. 8, 1894).

hand it over, should it be won, the Royal Yacht Squadron will not bother about it. In any case, it will be the New York Yacht Club that will have to fight the question in a law court, should the affair develop into that stage. Thus, as far as this matter is concerned, we can view any course that events may take with equanimity."

"Enthusiasm still reigns in press circles on both sides of the Atlantic with regard to the forthcoming matches for the America Cup. We limit the enthusiasm to the press advisedly, for in England the majority of yachtsmen feel much regret at the Royal Yacht Squadron's abandonment of its dignity. But, with the exception of this journal, the action of the R. Y. S. was greeted with the approval of the whole British press, and since the club swallowed the bitter pill the America Cup has once more assumed the importance of a topic of the day---sometimes disguised, indeed, as the 'Queen's Cup,' a mistake so long since corrected as to show how little the press generally understands a subject with which it has not hesitated to deal. But one must not take the words of the daily papers as indicating the general opinion of yachtsmen on this subject; they are the conventional press tribute to each and every act of such a distinguished club as the Squadron.

' But the influence of yachting opinion seems in one short week to have completely altered the attitude of our marvellously acrobatic contemporary, the Field. That journal heralded the 'knuckling-down' of the R. Y. S. with a joy that was somewhat inconsistent with its former utterances as to the 'New Deed.' But now we find it becoming dubious as to the palatability of its jubilation, and expressing its displeasure on reading that the N. Y. Y. C. has 'succeeded in obtaining from the R. Y. S. a definite assurance that the Cup would be held according to the deed of gift.' In spite of the Field's denial that such is the case, the statement is by no means wide of the truth. In consenting to sign the receipt clause the R.Y. S. undertakes to hold the cup, if won, under the terms of the New Deed.' It may salve its amour propre by saying that tne conditions of the forthcoming races will govern the Cup when in its possession, but it seems difficult to see how, after honoring the receipt cluase, the club could say that it does not recognize the legality of the 'New Deed' from its inception. The significant persistence with which the N. Y. Y. C. has continued to attach the receipt clause to every communication dealing with the acceptanec of the Squadron's challenge completely estops the latter body from denying its complete recognition of the 'New Deed.'

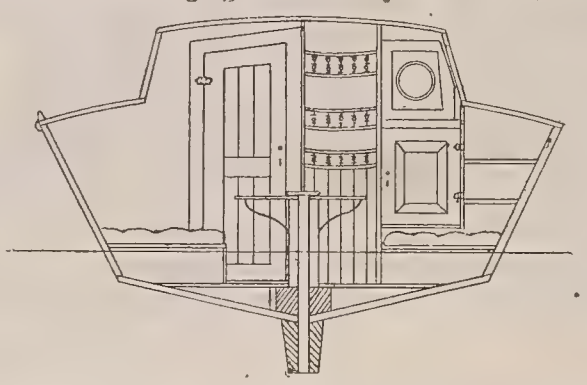
"We have already pointed out the exceedingly falseposition which the Squadron will, and does, hold in relation to foreign yacht clubs with regard to the Cup. Nothing can alter this now that it has done exactly the same thing that has brought so much obloquy upon the New York Y. C.---arrogating to itself the right to hold the Cup in defiance of the terms of the original and valid deed of gift. This is the position inwhich the Squadron is placed, and even from its own point of view its action cannot be easily justified, for after signing an agreement to observe the terms of the New Deed, in accordance with the receipt clause, may the club put any construction on the New Deed save such as it can strictly bear? That it has been induced to sign such an agreement by the concessions of the N. Y. Y. C, and that its intention is to hold the Cup under similar conditions as those agreed upon with Lord Dunraven, does not alter the fact that after signing a formal adoption of the New Deed the club must put a proper construction upon it Deeds cannot be varied at the sweet will of trustees, and therefore, even from the most agreeable point of view, the Squadron's faux pas is fraught witn unpleasant consequences."

After the charges of Anglomania which some of our American contemporaries have made against the Forest and Stream, it is refreshing to be charged by an English journal with spread-eagleism, as it is quite evident that both charges cannot be true; and attempts to prove them so must naturally tend to prove them equally false. We cannot reproduce in full the Yachting World's editorials of Jan. 11 and 18; the above specimen must suffice, but there is nothing in them to suggest that careful and thorough study of the subject which is essential to a fair judgment, on one side or the other. On the contrary, as in the case of some of our opponents nearer home, there is every evidence of a hurried attempt to fill space with something, whether right or wrong, that will attract temporary attention.

We would remind the Yachting World that the whole effect of the latest discussion of the new deed is to prove that British yachtsmen, as well as the yachting world at large, have no rights whatever in challenging for the America's Cup; but must present themselves humbly before the present holders with a polite request that they be obliged to race.

The fact that in this case, as in 1893, a race has been arranged on fair terms, has nothing to do with the principle involved. As soon as the New York Y. C. is tired of Cup racing for the time, it may fall back on the full text of the new deed and put a positive bar to all challenges. That fair conditions are being made to-day is only due to the absolute necessity on the part of the New York Yacht Club to obtain a challenge for the Cup; so far as the rights of British yachtsmen to demand a mutual agreement in which they shall be on the same plane as the holder, they are less to-day than in the days of Mr. Ashbury.

The New Thames "One Design" Class.



We are indebted to the Field for the accompanying design, made by Mr. Linton Hope, for the newly established Thames class, designed for racing and general knockabout work on the Lower Thames. The boats, of which a dozen have already been ordered of Forrest & Sons, will be 20 ft. over all, 15 ft. l. wl., 6 ft. beam and 5 ft. draft with board down. The sail area will be 200 sq. ft., giving a rating of 0.5; the jib, of the roller type used on the Solent, being comparatively large, though coming inside of the stemhead. The centerboard is of 3-16 in steel and the rudder of 1-8 in.; the latter housing in a well in the counter when in very shoal water. The comparatively small well and the bulkheads should make the boats very safe. They will be of ribband carvel build, planked with 3-8 in. stuff, and will cost, with sails of Union silk, oars, rowlocks, boat-hook, anchor and cable, but $215.00. It is hardly necessary to say that the idea of the promoters of the class is not to produce the fastest possible sailing machine on 15 ft. l. w. l., but to promote racing for sometime at least, and in boats of moderate cost and of general utility.

Minocqua—A Shoal Draft Cruiser.

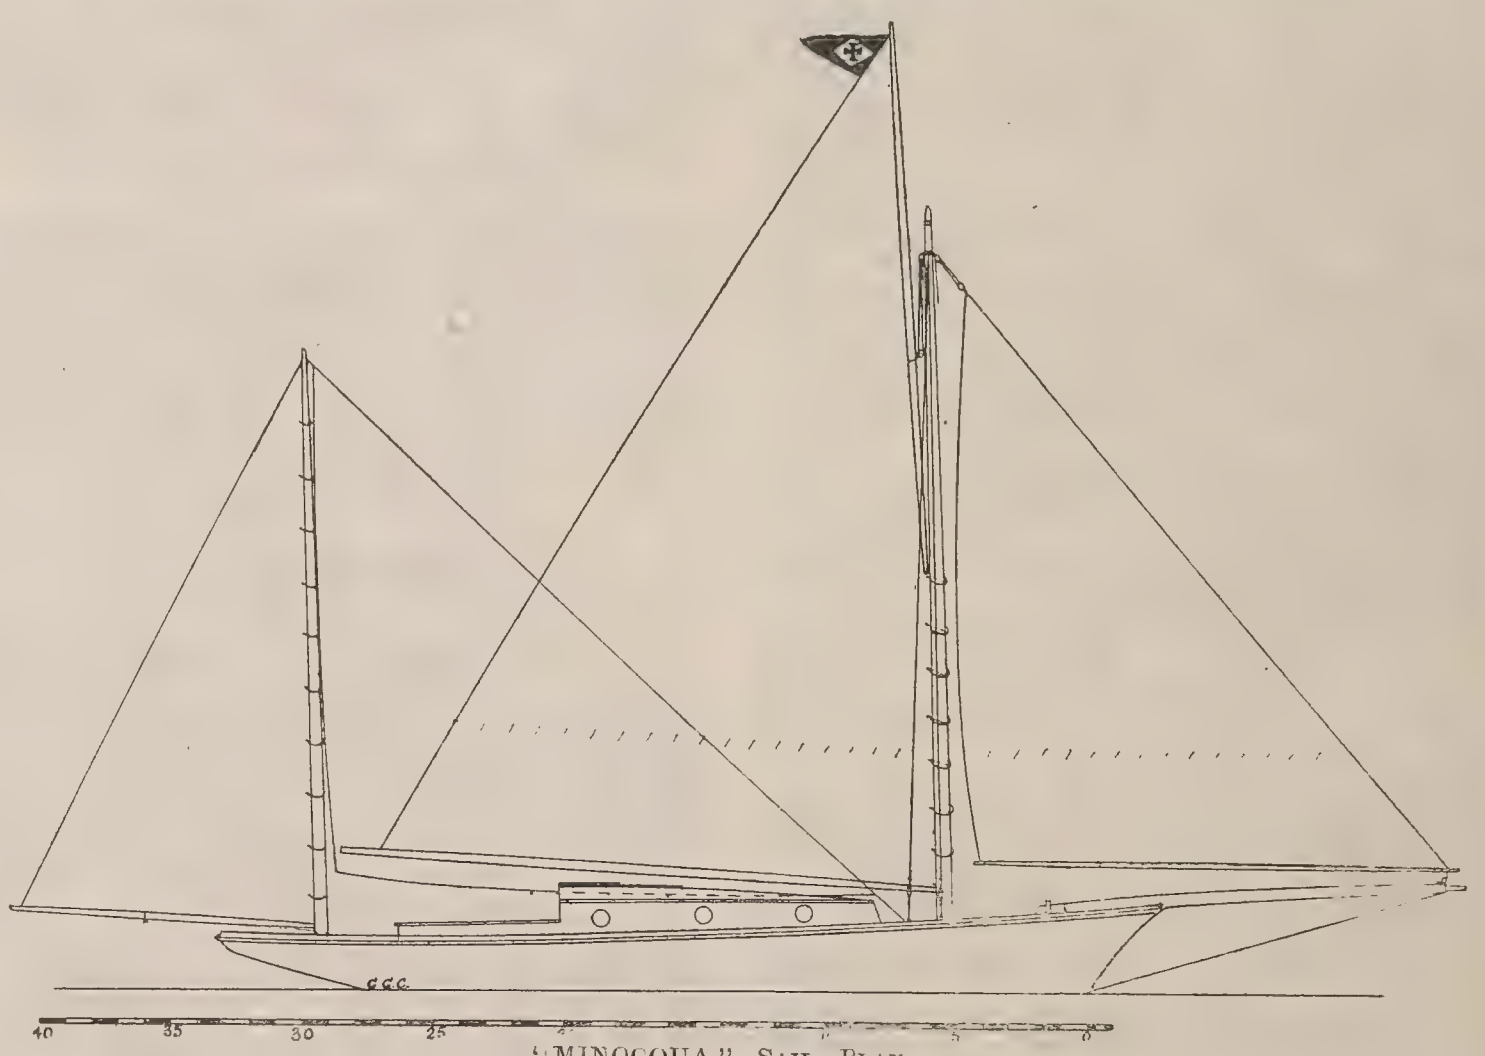
The accompanying drawings, for which we are indebted to Mr. G. Griffith Clapham, illustrate a specially serviceable type of cruiser, designed and built by his father, Mr. Thomas Clapham, of Roslyn, Long Island. The boat is safe, being practically non-capsizeable and unsinkable; she is of very light draft, moderate cost, and offers excellent accommodation. Rigged as shown, she is practically a single-hander; she is weatherly and speedy as a cruiser, and still faster with a racing rig, as has been proved in a sister boat sent out to Buenos Ayres and successfuly raced there. The dimensions of Minocqua are as follows, additional particulars being given in Mr. Clapham's letter:

Length over all	36ft.
l.w.l.	28ft.
Beam, extreme	8ft. 9in.
l.w.l.	7ft.
Freeboard, lowest	1ft. 9in.
Sheer, bow	1ft. 6in.
stern	1in.
Depth, rabbet to plank sheer	3ft.
Draft	2ft. 2in.
with centerboard	5ft.
Mainsail, area	346sq. ft.
Jib	192sq. ft.
Mizen	118sq. ft
Total	656

Editor Forest and Stream: The building of the new 34 ft. class of racing yachts, which has been started by the progressive Larchmont Y. C., is evidently designed to encourage a class of more sensible cruising racers than have been seen in the last few years. While commending their action in a general way, I want to call your attention to the fact of what is really the most sensible class of cruiser being barred out. It strikes me that in the first place the class is a trifle too large and costly, as, after all, it will be mainly in the nature of an experiment. The second mistake is made in encouraging such a heavy draft as is called for in

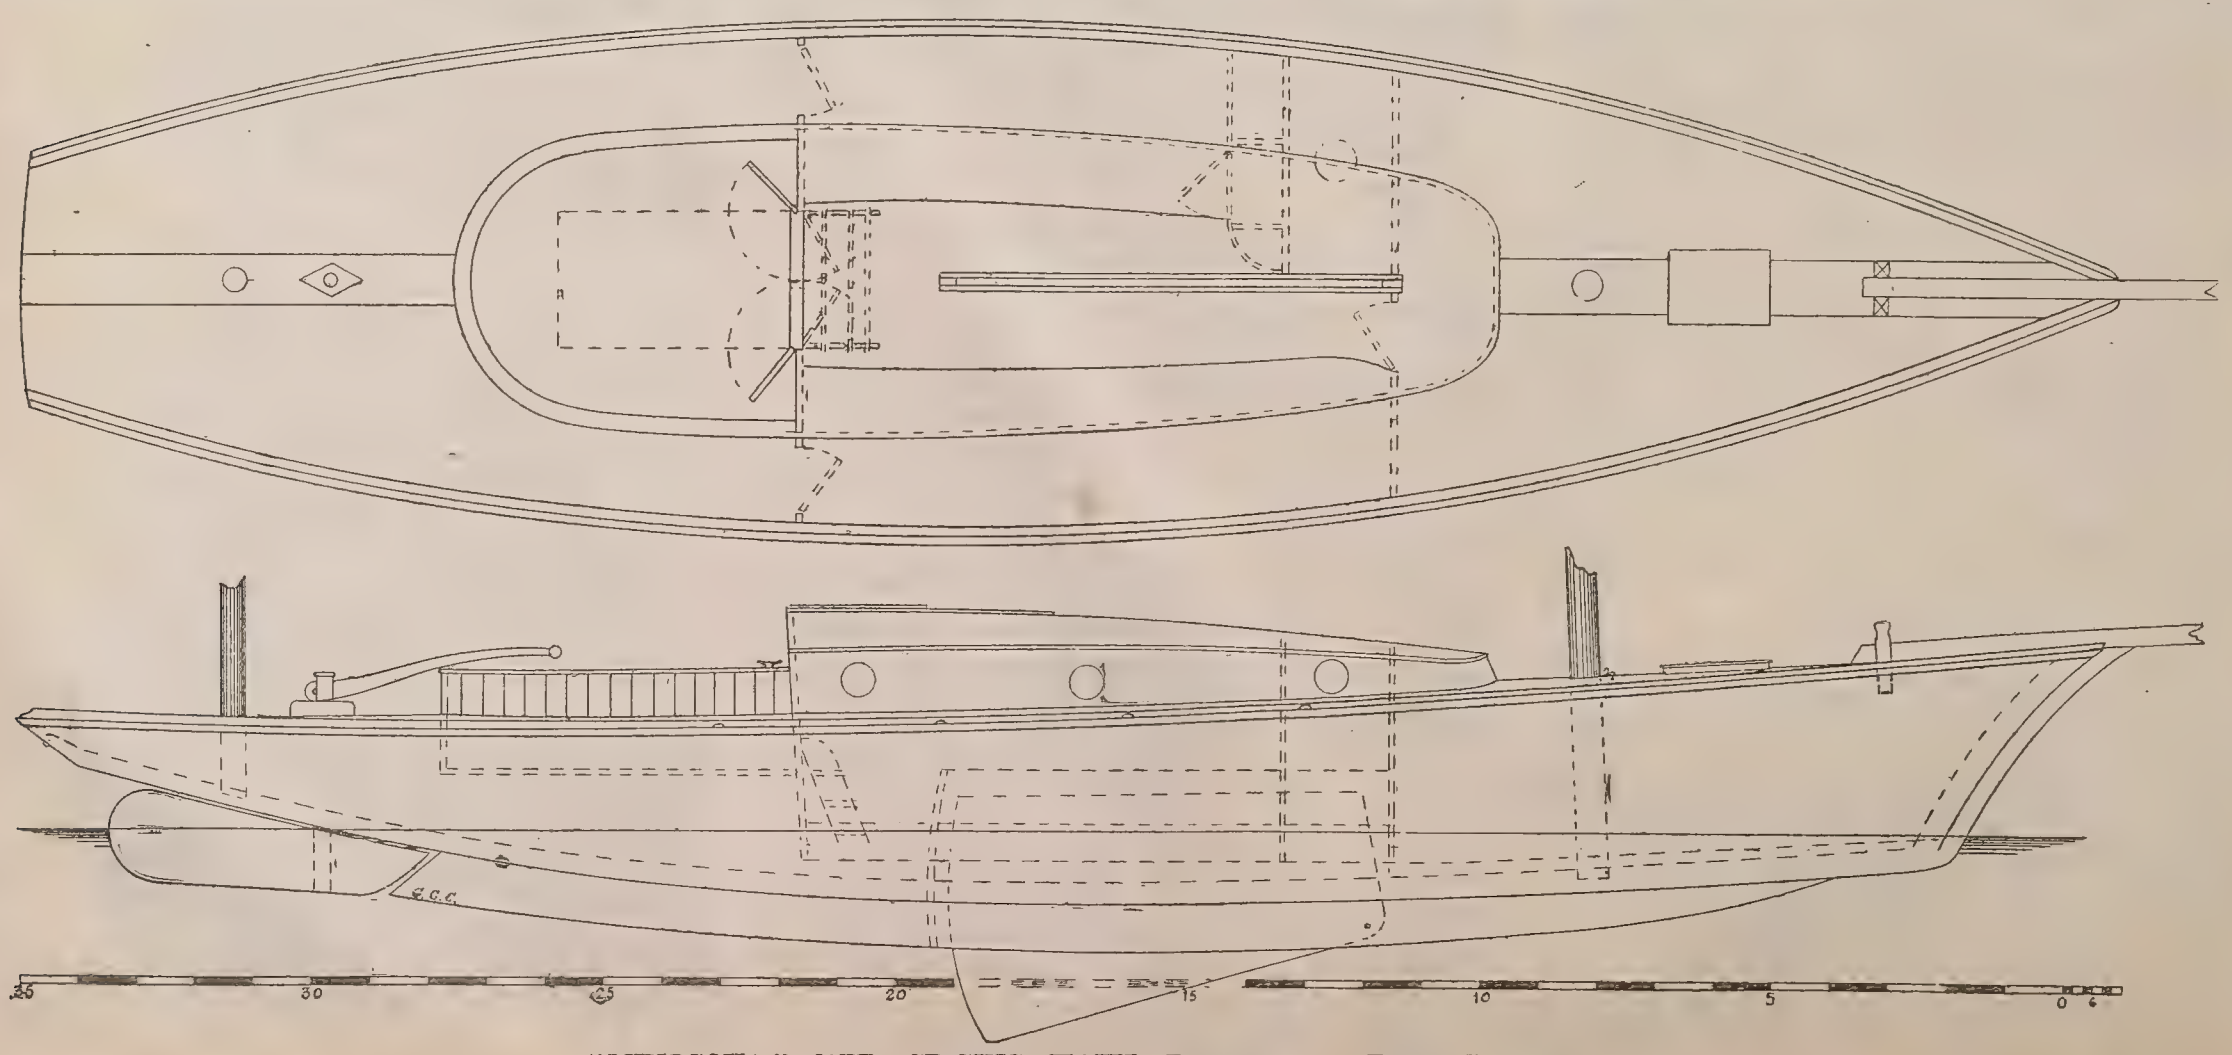
a boat built in accordance with the rules in regard to depth under deck beams and cabin carlins. However, as the men who framed the rules know what they are after much better than I do, I will leave the subject of their rules and give you a description of a little yacht in which I did considerable cruising last summer, and which is, to my mind, the embodiment of all that is essential in a cruiser.

The little yacht Minocqua, owned by William. J. Starr, and designed by Thomas Clapham, was in my hands last season, and a brief description of one of my trips in her will show what she is. The yacht is yawl-rigged—and right here I would like to come out strong in favor of this rig as being the best I have ever used for cruising purposes. About the middle of last July I concluded to take a sail to Milford, Conn., and though my wife is timid on the water, I prevailed upon her to accompany me with my little three-year-old girl. The main reasons she consented were that this yacht was uncapsizeable, unsinkable and comfortable, and so easily handled. All this she had seen proven, as we had been on many a short sail in the little craft, and had found that we could trust her in any weather.



We made a late start from Glen Cove at 9:30 A. M., but there was no wind, and it was merely a drift until nearly 2 P. M. Then we had only gone about four miles, when a breeze came up from S. W., and we flew down the Sound with an ever-increasing wind gathering force in our wake.

When off Bridgeport, it began to be rough, and the wind came in bunches, so I concluded that a reef would make it more comfortable in rounding Stratford Point. Now, on a sloop yacht this would be a mean job, for I was sailing single-handed, so far as male help went, and that is the way to sail if you want to have the most genuine enjoyment; it is on a par with driving a spirited team and handling the ribbons yourself, as compared to sitting on a back seat and having a coachman do it for you. With my yawl rig, reefing was a very simple trick, and leaving the little girl in the cabin, where she was safe, my wife took the tiller, while I lowered the mainsail, a triangular one, light and easily handled. This was just what was needed, and without apparently diminishing our speed (for it was now blowing very hard), we went along in as dry and comfortable a manner as could be wished for. At 6:30 P. M. we had cast anchor way up in Milford Harbor, and all sails were furled.



Though Minocqua only carries some 600 sq. ft. of sail, I would have very much enjoyed having some cutter of her size trying to keep in company with her on that run. The distance was about 38 miles, so you can see she is a smart boat.

On the way back, going out of Milford, another phase of the boat's handiness was shown. The channel is only some 60 ft. wide, with mud flats on each side. With a head wind, and not over-strong, I worked her out of this narrow way with only a little piece of the board down, and in several places the water was less than four feet deep. Minocqua draws 26 inches. Rounding Stratford on the way home, it was a beat to windward, and quite a sea on, with head tide. If I had been forced to go round outside the buoy, in the full sweep of the tide, it would have made a deal of difference in time. Knowing there was over five feet on the shoals, and secure in my light draft, I was able to keep well inside the buoy, and reached Bridgeport and was anchored with everything snug long before dark. Another and deeper craft, much larger and of greater draft, with which I had had it nip-and-tuck off the Point, kept outside, and when I lost sight of her in the darkness, was still bucking the tide and sailing a losing race with the red buoy, as a rule, I am not in favor of going inshore of the buoys; but when you are sure of your ground and have a light draft boat, it will often make a vast deal of difference, an advantage which a deeper craft would lose.

Despite her light draft, I have never sailed on a dryer, more sea-

"MINOCQUA"—SAIL PLAN.

"MINOCQUA"—28FT. CRISING YAWL—DESIGNED BY THOS. CLAPHAM.

worthy, safe and comfortable yacht than this same little Minocqua. Many yachtsmen will remember the northeaster that last Labor Day spoiled the special race of the Indian Harbor Y. C. Out of over 20 entries only 6 yachts in three classes sailed the course. The sea was running very high, but in Minocqua I was able to accompany the yachts over the course and take the time of turning at each buoy and at the finish, this being the only yacht which did this.

Another good feature is that she does not pound; even in this half a gale we were dry and comfortable—two of us, myself and my father. I would very much like to see Minocqua race with the 34-ft. class, if put in racing trim; but unfortunately she has not the requisite amount of standing room called for by the rules. Yet, by looking over plans and dimensions, you will see she is a very comfortable little cruiser. She is a little narrow, but this and her fine lines forward prevent pounding, and probably make her more speedy. She is made uncapsizeable by 1,250 pounds of lead in a shoal keel, through which is cut the centreboard slot. As there is enough wood in hull, etc., to float this weight, she is unsinkable.

Beside the cabin, with two wide locker berths, there is a long forecastle and a toilet-room, the latter, as shown, to starboard, with W. C. On each side of the cockpit under the deck is a long locker, opening into the cabin; and under the cockpit, which is water-tight, is a large drawer running on rollers and holding both water and ice in two compartments. The fore end of the cabin on starboard side is arranged with shelves and lockers. The amount of space is shown by the sectional view. Another thing in her favor is, she can be built for less than $1,500, while one of the new 34-ft class, could not or will not be likely to be built for less than $3,500. As to rig, Minocqua is perfectly balanced. I have tried her often without touching the tiller, and find she can be steered perfectly by sails alone. Altogether she is the finest single-hander I have ever seen or sailed on, and why not a good type to encourage?

G. GRIFFITH CLAPHAM.

The Huguenot Y. C. Races.

The race committee of the Huguenot Y. C. have laid out a series of events which, to say the least, are novel, and ought to prove interesting. The first fixture will be in April, when all classes of boats in commission will be permitted to enter a cruisers' race. The start will be made from an anchor, and the contesting crews will have to make sail, cut anchor, and cross a line as soon as they can. The rules will thoroughly test the seamanship of the different crews. In May a race will be held, and none but ladies will be permitted to take the helm on any contesting boat. The list of features is quite extensive and assures an interesting sailing event in each month.

The Huguenots will have their annual regatta on August 17, and steps are being taken to make this one of the most successful regattas of the season.

The Huguenot courses are laid out from the easterly end of Huckleberry Island. There are three distinct courses; one is square and two are triangles. The small boats will sail a five-mile course, and the larger boats an eight-mile course. The regattas will all be held in the afternoon, and short courses have been adopted in order to insure early finishes. The racing will all be held under Seawanhaka Rules.

The Huguenots now have a good house, but before spring will open their new edifice, which is now being laid out by the architects.

There are now over sixty members in this young club.

YACHT NEWS NOTES.

The prosperous growth of yachting in France has called into existence a new journal specially devoted to yachting, under the title of "Le Yachting," a weekly of good make-up and very attractive appearance, published at No. 5 Rue Scribe, Paris, the subscription being 25 francs, $5 per year for France and Algeria, and 30 francs for foreign countries. The paper is well illustrated, the first two numbers containing supplemental plates very finely executed, portraits of Rear Admiral Baron Lage, of the French Navy, President of the Union des Yachts Francais, and of Eugene A. Perignon, the Vice-President of the Union. The second number contains the lines of a very successful 7-tonner, by the French rule, the Maia, designed and built by M. J. Guedon. The new venture has our best wishes for its success.

The following list of candidates for 1895 has been posted by the nominating committee of the New York L. C. The election takes place on Feb. 7.: Com., Edward M. Brown, steamer Sylvia; Vice Com., Henry C. Ward, sch. Clytie; Rear Com., James C. Bergen, sl. Hildegarde; Sec., J. V. S. Oddie; Treas., F. W. J. Hurst; Meas., John Hyslop; Fleet Surgeon, Morris J. Asch; Regatta Committee, S. Nicholson Kane, Chester Griswold and Irving Grinnell; Committee on Admissions, Frank T. Robinson, Robert Center, Daniel T. Worden, Charles McK. Loeser, and Joseph Stickney; House Committee, Edward E. Chase, C. Alfred Grymes, H. Edwards Ficken and Arthur Ingraham; Library Committee, Fordham Morris, William Gardner and Arthur H. Clark; Committee on Club Stations, William H. Thomas, E. C. Benedict, Clarence McKim, L. Vaughn Clark, Frank L. Anthony, Frederick P. Sands and Lewis Cass Ledyard.

Niagara, the new Gould 20-rater, is well advanced at the Bristol works. Her sails will be made in the new sail-loft lately established by the Hereshoff Mfg. Co., in connection with their building plant.

Britannia, cutter, the Prince of Wales, left Cowes last week for the Mediterranean.

Forest and Stream Publishing Co. Gentlemen: At the January meetiug of the Albany Y. C., the follwiug officers were elected: Com., B. M. Gordenier; Vice-Com., John C. Hughson; Treas., H. A. Grey; Sec., John Vlasblom; Meas., John Apple; Board of Trustees, W. A. Bloomer, C. M. Bacheller, Jas. D. Glenn; Inspectors of Election, T. B. Wilkinson, Louis Van Kamerick, Ed. Du Bois.

At a meeting of the Board of Directors of the Cleveland Y. C., held on Jan. 18, the following officers were elected: Com., Luther Allen; Vice-Com., Geo. H. Worthiugton; Rear Com., Percy W. Rice; Sec.-Treas., John Barth. The Regatta Committee elected includes: Messrs. W. P. Frances, W. H. Kalbe and H. Lyman. The House Committee includes Messrs. G. F. Overbeke, P. P. Wright and John Barth. At a stockholders' meeting, held Jan. 9, the balance of the officers were elected as follows: F. W. Radcliffe, Asst. Meas.; E. H. Junge, Surveyor; H. Richter and Fleet Surgeon, Dr. E. E. Beeman. The Commodore will shortly appoint a building committe, and this committee, with the three flag officers, will also act as a subscription committee, it being the intention to build a club house this summer, the foundation being already in place. Commodore Gardner was elected Honorary Commodore of the C. Y. C., in recognition of his faithful services rendered the club during his long term of office. He retires, at his own request, from active service, owing to his failing health.

JOHN BARTH.

The Corinthian Mosquito Fleet has been especially fortunate in securing a long lease of Harrison Island, in New Rochelle Harbor, where it will in the future be permanently established. The New Rochelle Y. C. was also desirous of securing the same location, its lease of Echo Island expiring this year, and Mr. C. Oliver Iselin declining to renew it. The Mosquitoes, however, as alert as their name implies, were already on the spot, with a lease signed, by the time that the other club had made up its mind that it wanted the island.

The new Huntington Y. C. now incorporated, has leased the Ketchum dock property, and will build a neat club-house, which will be ready, with landing stage by the opening of the season.

A syndicate of yachtsmen, including L. A. Fish, C. P. Brigham and Thos A. Howell, has purchased the Smith and Terry property at Greenport, and will build a complete yacht-building plant. The plot is 460 on the water-front and 110 deep. The channel will be dredged out and a good harbor made.

New York has lost a good yachtsman in the person of Mr. Harold Sanderson, who sailed on the Majestic, on Jan. 30, with his family, to take up a permanent residence in Liverpool. Mr. Sanderson, who has been for some years the New York manager of the Wilson line of steamers, has resided at Larchmont, and been very intimately identified with the Larchmont Y. C., formerly owning the yawl Nonpareil. He has made many friends in yachting and business circles about New York; and for the three weeks preceding his departure he has been busy mainly in attending farewell dinners in his honor. He leaves America to take charge as general manager of the Liverpool offices of the White Star Line of steamers.

Yampa, schr., was reported at the Azores on Jan. 31. All well.

The annual meeting of the Quincy Y. C. was held on Feb. 2, the following officers being elected: Com., Charles F. Pettengill; Vice-Com., William H. Shaw; Sec. and Treas., James S. Whiting Meas., George Crane; Regatta Committee, William P. Barker, John T. Cavanagh, Henry M. Faxon, George E. Pfaffmann; House Committee, Horace R. Drinkwater, William C. Harrison, Gordon M. Keating, C. Eaton Pierce, Fred B. Rice, Arthur J. Shaw, Walter B. Wilson.

The election took place under the Australian system of voting, the first time, we believe, that this has been tried by a yacht club. The following amendment to the sailing rules was adopted: "Sailing measurement shall be length on waterline from point of immersion forward to point of immersion aft, with maximum crew aboard and amidships when yacht is measured."

Tomahawk, cutter, has been sold by the Crowninshield estate to Geo. H. Perry, Mars, S. C.

Murray & Tregurtha, South Boston, Mass., are building a 100 h. p. Tregurtha boiler for Mr. Robert Palmer, Jr, Noauk, Conn. This is the second order from that gentleman, who has had one of these boilers in use for three years past. They have recently finished a 35-in. Tregurtha boiler for Mr. Joseph. Williams, Taunton, Mass., and are building a 32-in. for Mr. H. H. Townsend, of that place. They have also shipped a 29-in. Tregurtha boiler and 4 1-2x5 engine to Mr. D. Knowlton, Washington, D. C., and have an order from Mr. Fort Smith, of Galveston, Texas, for a 44 in. Tregurtha and two 4 1-2x5 engines for a twin screw boat. In their boatbuilding department they have completed 25 ft. and 28 ft. launches, and are building a 28 ft. cruising cabin launch for Boston parties.

The contract for the new steam yacht designed by A. Cary Smith has been awarded to the Crescent Shipyard at Elizabethport, Mr. Lewis F. Nixon.

Mr. G. Griffith Clapham will give a blackboard talk on model yachts before the Philadelphia Model Y. C., on Feb. 28.

U. S. F. T. Club's Trials.

Trials B.—(Continued from Page 99.)

A remarkable interest was shown in the club's Trials B, as evidenced by a good attendance of sportsmen, several of them newcomers.

P. T. Madison, the secretary-treasurer of the club, was on hand bright and early, looking after the business arrangements of the trials, and with him came J. E. Horn, of Bicknell, Ind. From Indianapolis came Messrs. H. A. Comstock and S. H. Socwell. Pennsylvania was represented by Messrs. P. J. Dean and Henry Klee, of New Castle. From Illinois were Messrs. Jno. Wood and C. M. Bowers, of Decatur, Ill.; Dr. Grinstead, Cairo, Ill. There was a good representation from the section south of the Ohio River. There were Mr. S. L. James, Angola, La.; Philip M. Essig, Natchez, Miss.; Whyte Bedford, Memphis; W. R. Holliday, Prairie Station, Miss.; A. M. Young, J. L. Adams, D. G. Rowland, St. Marc M. Mundy, J. N. Seale, Superintendent of the M. & O. R R.; Mr. Harris, traveling passenger agent of the same road; Major J. W. Renfroe, and other well-known sportsmen whose names I do not recall.

Major Val Young and Capt. Billy Young, gentlemen famous in the guild of fox-hunters throughout the land as eminent in the chase and owners of the Waverly pack, were in attendance, and received a most cordial welcome. They gave a few most realistic descriptions of some great fox chases

The judges were: Major J. M. Taylor and Messrs. J. M. Freeman and St. Marc M. Mundy. In the All Age Pointer Stake, Mr. Mundy, on account of some published matter referring to pointer challenges, withdrew. In that stake, Mr. W. W. Titus judged instead.

The grounds are all that could be desired. Of all the field trial grounds so far used, they are much the best. There are in them miles of open fields with hardly a fence to obstruct the course. A continuous course could be taken with good ground from the start to the finish of each heat. There was abundance of room. In respect to the surface, it is mostly open. The percentage of woods is very small. It is not rough, but is gently sloping ridges and shallow valleys. Sedge grass is everywhere between the relatively small fields, under cultivation in cotton and corn, which are the common crops.

There were a few patches of sorghum, the seeds of which are sought for food by the birds. Heavy rains had soaked the grounds so that, on the first two days, they were very heavy and hard to work upon. They steadily improved till Friday, when a heavy rainfall fell from early morning till noonday. No work was attempted on that day.

In respect to the general circumstances which do so much to make a pleasant and successful trial, such as a cordial welcome and goodwill on the part of the residents, nothing more than was extended to the sportsmen at West Point could be asked for. The land-owners in particular were noticeably kind and obliging. A great deal of praise is due to Mr. Titus for his energy and attention in looking after many local details of the trials. His influence greatly assisted. The horses were a superior lot. The hotels were comfortable, and exerted themselves to the best of their resources in making the stay of their guests pleasant. On the whole, the club could not do better than to again select West Point for the location of its trials next year, as it did do.

Some of the stakes did not fill so well as the club had reason to expect, but there is an ebb and flow in all matters. It may be better next time. As will be seen by the report of the club meeting, there is quite a distinct change in the personnel of the club, particularly in the Board of Governors, and it is to be hoped that the change will be a benefit to the club, that they will improve on the good and successful work of the previous Boards, and that its scope will grow more national than it has ever grown heretofore.

The trials were well managed and skillfully conducted. The time limit, with its fallacy and its annoyance, bobbed up betimes. In such instances as a dog is palpably inferior under the rules he must have thirty minutes to show the full measure of his worthlessness. However, the competition was conducted on the true theory, that is, each brace was given full opportunity in the first series, so that the judges thereby established ample data for making estimates of the relative merits of the dogs. There is some precision in making decisions from a competition so conducted.

THE ALL AGE POINTER STAKE.

This stake was for pointers which had never won first in an all age stake in any recognized field trial in America. The prizes are: $150 to first, $125 to second, $100 to third, $75 to fourth, and $50 to fourth. Total value of stake, $500.

Mr. W W. Titus judged in place of St. Marc M. Mundy in this stake, the latter retiring voluntarily as an incident of the challenge literature which has so long regaled the public.

The competition was quite high-class, and would rate well with the best setter work. It established that there is a decided and permanent improvement in the breed of pointers

Delhi, the winner of first, showed an excellent quality of field work in all the details of seeking, finding and pointing. Although closely pressed by two or three others, the uniform excellence of his work pulled him to the front. He is a first-class worker.

Jingo, winner of second, ran one most excellent heat, but his work was not uniformly good throughout the stake, though on the other hand there was none of it which could be called poor. He was quite successful at finding in his second heat.

Tick Boy, third, was a close competitor. His work was quite finished, taken as a whole, and there were but few faulty performances in it. He ranges with excellent judgment, is accurate in his point work, and knows how to find. He takes cover unflinchingly. Strideaway ran much under the best form he has shown at previous trials, and while he did some good work it was mixed with much that was faulty.

Tamarack, Jr., ran a creditable race and showed merit, but was not a dangerous competitor with those placed over him.

The stake was, in merit, superior beyond question.

The dogs were drawn to run as follows:

Major J. R. Purcell's black and white bitch, Lady Margaret (Dick Swiveler—Countess Bang), owner, handler, with N. T. De Pauw's liver and white dog, Jingo (Mainspring— —), N. B. Nesbitt, handler.

Major J. R. Purcell's liver-ticked dog, Cid (Duke of Hessen-Barmaid), owner, handler, with Charlottesville Field Trial Kennels' liver and white dog, Dogwood (Ightfield Dick—Cowslip), C. E. Buckle, handler.

Robert Leslie's liver and white dog, King, of Lynn (Tempest—Nadjy of Naso), J. N. Lewis, handler, with Major J. R. Purcell's liver and white dog, Sam Bang (Dick Swiveler—Countess Bang), owner, handler.

D. P. Ritchey's liver and white dog, Don (Trinkett's Coin—Molton Patti), L. W. Blankenbaker, handler, with H. K. Devereux's liver and white dog, Tamarack, Jr. (Tamarack—Maud Graphic), Geo. E. Gray, handler.

G. R Howse's liver and white bitch, Lulu K. (Ossian— —), owner, handler, with W. N. Kerr's liver and white dog, Little Ned (Ridgeview Dazzle—Kate Claxton), J. M. Avent, handler.

Major J. R. Purcell's liver and white dog, St. Blaise (Guy-Lady Spotswood), owner, handler, with Charlottesville Field Trial Kennels' liver and white dog, Delhi (Rip Rap—Queen II.), C. E. Buckle, handler.

Stoddard & Kidwell's black and white dog, Tick Boy (King of Kent-Bloom), J. B. Stoddard, handler, with E. O. Damon's liver and white dog, Strideaway (King of Kent—Pearl's Dot), Geo. E. Gray, handler.

Charlottesville Field Trial Kennels' liver and white dog, Selah (Rip Rap—Dolly), C. E. Buckle, handler, with Mr. McDowell's liver and white dog, Spot S. (Dick Swiveler—Vixen), Louis McGrew, handler.

C. W. De Pauw's liver and white dog, Verge, a bye. N. B. Nesbitt handler.

SECOND ROUND.

Dogwood—Tamarack, Jr.
Delhi—Tick Boy.
Jingo—Strideaway.
Lulu K.—Selah.
Cid—Verge.

FINAL.

Delhi—Jingo.
1. Delhi.
2. Jingo.
3. Tick Boy.
4. Strideaway.
5. Tamarack, Jr.

FIRST ROUND.

Lady Margaret-Jingo.—They began at 10:52. Jingo began the bird work by nicely pointing a bevy at the edge of sedge, and was backed. Both were steady to shot. Lady made two flushes. At the same time, Jingo pointed, probably foot-scent. Both trifled with a rabbit trail. Lady flushed a bird, and missed several opportunities to point the scattered birds. She also at times tagged after Jingo. Lady pointed a bird in a plum thicket, and at the same time, Jingo having been working in an opposite direction on scent, pointed a single bird. Lady made a good point on a bevy. Each got two points on the scattered birds. Lady made a flush before stopping to one of her points. Jingo had a good range; up at 10:47.

Cid—Dogwood.—They were cast off at 10:55. Cid pointed nicely a bevy in weeds, and was steady to wing. Next, Dogwood made a good point on a bevy at the edge of woods, and was steady to shot. The handlers, being separated, were brought together. The birds were followed. On one Dogwood pointed well and Cid backed. Up at 11:35. Dogwood had an upheaded, dashing style of going, and he beat out his ground with excellent judgment. His point work was quite good. On the whole, he made a good showing. Cid also ranged well and showed very good finding and pointing abilities. Both were independent and industrious workers, though Cid showed a lack of finish in his performance.

King of Lynn—Sam Bang.—They ran a light heat, from 11:38 to 12:07. Sam pointed a bevy, and was steady to shot. King made three flushes in succession, two on singles and the other one on the bevy. Sam pointed a bevy in sedge and was backed; both were steady to shot. Sam, sent on, found and pointed another bevy. Up at 12:07. Sam ranged within narrow limits, and he pottered a bit at times. While he made a good showing in finding birds, he did not do so by covering much ground. King's performance was inferior.

Don—Tamarack, Jr.—They were cast off at 12:10. Don ran with little judgment in beating out his ground, and indulged in a great deal of idle wriggling. Tamarack pointed a bird well. A bevy was marked down in woods. Don pointed one of the birds, but was not staunch. Some work was done on a bevy in woods which I could not see. Next, Don pointed, then roaded to a flush. He next made two flushes and one point. Tamarack was the better in every respect. Up at 1:12. The party went to lunch.

Lulu K—Little Ned.—Off at 2:04. Lulu was in season. She pointed a bevy in sedge, and was steady to shot. On some scattered birds, Ned made a flush and Lulu made two points. Up at 2:48. Their work was of an ordinary grade. They were running in company and heeding each other quite as much as they were their work. Ned ran much under his form of previous competitions. Lulu, being in season, was frivolous.

St. Blaise—Delhi.—The heat began at 2:50. A bevy was soon found. Blaise caught scent of it, but withdrew, and Delhi, going up a moment afterward, pointed it. Delhi next made three points on scattered birds in woods. Up at 3:21. Delhi had the better work in every respect.

Tick Boy—Strideaway—At 3:26 they were started. Strideaway, at a point of woods, made a slack point, then gave it up and moved on. He seemingly disliked to go into the cover. Tick, coming in shortly afterward, caught scent near the same place promptly, drew into the woods a few yards, and pointed the bevy well. It was a good piece of work. Next Strideaway pointed in open sedge. Nothing found. In the meantime, Tick made two points on single birds. Both pointed in sedge, then moved a few yards and Strideaway pointed the bevy. Tick backed well. Working on scattered birds, Strideaway dropped at the same moment a bird flushed close in front of him. Tick pointed; nothing found. Next, he flushed a single bird. Up at 4:28. Tick showed great improvement in his form over that shown in his last trials. He worked prettily to the gun. He took hard cover without flinching, while Strideaway preferred the more open going. Strideaway covered the more ground, but he did not do it with so much judgment, and his point work was far from equal in precision to that of Tick.

Selah—Spot S.—They ran from 4:33 to 5:05. It was a poor heat. Selah pointed a bevy. Spot was a narrow and irregular ranger, pottered much and loafed not a little. Selah was irregular in range and handled hard.

Verge ran a bye while the heat last mentioned was run, Mr. Titus taking charge of it. The work was fairly good, and Verge was retained in the second round.

FRIDAY.

Torrents of rain fell in the forenoon. The afternoon was clear and pleasant, but the grounds were so wet that it was considered inadvisable to start the competition on that day, therefore no work was attempted.

SATURDAY.

Saturday night, the temperature fell below the freezing point. Frozen ground and raw wind. The existing weather conditions were unpleasant for field work, but the pointers faced them bravely. The ones which ran in the morning hours had much the harder work. Gradually the temperature rose, the ground was thawed, and then the conditions for work were fairly good. Birds were found in ample numbers. The start was made a short distance from town. The work on birds was exceedingly difficult, as they ran from the points.

SECOND ROUND.

Ten dogs were retained in the competition.

Dogwood—Tamarack, Jr.—At 8:25, the start was made. Dogwood soon pointed a bevy. Tamarack, coming in nearly across wind, ran into and flushed the bevy. Sent on, Dogwood soon pointed again, but up wind of the bevy. Tamarack, striking in behind, drew to an accurate point on it. The credit of the find was Dogwood's. Both were steady to shot. Dogwood flushed a bevy in open, and did not seem sorry for it. At the same time, Tamarack pointed a bevy in open sedge. Dogwood backed. Up at 8:50. Both showed a middling range. Dogwood ran under the form shown in his first heat. Tamarack required and received a deal of cautioning when on point and when the birds were flushed to his points.

Delhi—Tick Boy.—They began a first-rate good race at 9:04. Both pointed on a side hill in sedge. The birds were running and difficult to locate. A horseman, after the dogs moved on, flushed

a bird near where the dogs pointed. Tick pointed a single, then he roaded on, pointed and roaded quite a distance. Some horsemen flushed a single near where his last point was made. Sent on. Tick pointed a bevy and was steady to shot. Good work. Delhi was not near to back. Moved on Tick pointed sparrows. In a strip of plum bushes, Tick made a point. Delhi pointed close by a moment afterward; Tick moved on and flushed the bird. Delhi made a good point on a bevy in open sedge, and Tick backed, and both were steady to shot. Good work. The bevy lit on a wet corn-field, bare and a bad place for point work. The dogs were worked on it. Tick passed close to a bird, caught scent, and was wheeling to a point when the bird flushed. It was entirely excusable. Each then pegged a good point on separate birds. Up at 10:10. Tick severely injured a toe-nail on the frozen ground during the heat. The heat was excellent, and Delhi had very little margin to spare in it. It was an exceptionally good exhibition of intelligent and workmanlike performance on birds.

Jingo--Strideaway.---They were started at 10:28. Strideaway pointed a bevy in woods, and was backed by Jingo. The birds were followed into a scattered growth of small oaks. Jingo pointed a bevy and afterward pointed a single bird well. The dogs separated in their work for a few moments. Jingo was found pointing a bevy. Sent on. Jingo soon found and pointed another bevy. Strideaway was not near at the time. Jingo outworked Strideaway in every detail of the competition. He ran in high-class form, better than in any other part of his competition. Up at 11:16.

Lulu K.---Selah.---At 11:26 they were cast off. Lulu flushed a single. Worked on a marked bevy, both got a point on it. On scattered birds, Selah flushed a single The heat was ordinary. Selah was much the better ranger. Lulu, being in season, was changed, from the order in which she was first announced to run with Jingo, on account of being in season.

Cid—Verge.—They were cast off at 11:56. Verge flushed a bevy. Next he pointed a bevy, and Cid, coming in, flushed it. Up at 12:28. Their performance was ordinary.

The running was suspended till after lunch.

Delhi---Jingo.---They began at 1:29. Delhi pointed a bevy in a thicket. Jingo, coming in, flushed it. In the same thicket, about fifty yards further on, Jingo pointed a bevy. Both were steady to shot. In the open field, both pointed and nothing was found. Sent on, Jingo pointed and Delhi backed well; nothing was found, but about thirty yards further Delhi pointed some birds. Next he pointed a single bird well. Up at 1:14. Delhi had by far the best of the heat.

The judges then announced the witness. First, Delhi; second, Jingo; third, Tick Boy; fourth, Strideaway; fifth, Tamarack, Jr.

THE ALL AGE SETTER STAKE.

This stake had 18 starters, most of them well known, for at least 12 of the 18 had competed before, and of the 12 several had won something in public competition.

The purse and its subdivisions were the same as in the All Age Pointer Stakes, namely, $500, divided into $150, $125, $75 and $50. The stake was for all setters which had never won first in an All Age Stake in any recognized field trial in America.

The order of running was as follows:

Dudley Schofield's black, white and tan dog, Joe Bowers (De Soto---Ruth Gates), Capt. R. P. McCargo, handler, with J. H. Winslow's black, white and tan dog, Breeze Belton (Breeze Gladstone---Nellie Belton), John . Lewis, handler.

Blue Ridge Kennels' black, white and tan bitch, Bessie houpe Gath's Hope---Countess Rush), D. E. Rose, handler, with Manchester Kennel Co.'s Gleam's Pink (Van Guard---Georgia Belle), A. P. Gilliam, handler.

F. R. Hitchcock's black, white and tan bitch, Tory Topaz (Count Gladstone IV.---Tory Diamond), J. M. Avent, handler, with W. W. Titus' black, white and tan bitch, Minnie T. (Dick Boudhu---Bettie B.), owner, handler.

C. W. De Pauw's black, white and tan dog, Auld Clootie (Dick Boudhu---Sheena Van), N. B. Nesbitt, handler, with Blue Ridge Kennels' black, white and tan bitch, Allene (Gath's Mark---Ruby's Girl), D. E. Rose, handler.

Blue Ridge Kennels' black, white and tan dog, Blue Ridge Mark (Gath's Mark---Ollie T.), D. E. Rose, handler, with Dr. C. W. Duke's black, white and tan dog, Acolyte (Toledo Blade---Sue II.), Thos. Bond, handler.

Jackson and Denmark Kennels' black, white and tan bitch, Lillian Russell (Phillip Gladstone-- Lou G.), T. Bond, handler, with P. T. Madison's black, white and tan dog, Rodfield (Antonio ---Nellie Hope), John T. Mayfield, handler.

Nat. B. Nesbitt's black and white bitch, Flirt C. (Czar---Zoe L.), owner, handler, with D. G. Rowland's black, white and tan bitch, Camille II. (Roderigo---Topsy Avent), Horace Smith, handler.

Nat. B. Nesbitt's black, white and tan bitch, Blue Kate (Blue Mark---Collie B.), owner, handler, with Manchester Kennel Co.'s dog, Gleam's Sport (Van Guard---Georgia Belle), A. P. Gilliam handler.

Theo. Goodman's black, white and tan bitch, Dan's Lady (Dan Gladstone---Lilly Burgess), J. H. Johnson, handler, with Avent and Thayer's black, white and tan dog, Topsy's Rod (Roderigo---Topsy Avent), J. M. Avent, handler.

SECOND ROUND.

Minnie T.---Auld Clootie.
Allene---Gleam's Pink.
Rodfield---Blue Ridge Mark.
Dan's Lady---Lillian Russell.
Joe Bowers---Tory Topaz.

1. Rodfield.
2. Blue Ridge Mark.
3. Minnie T.
4. Gleam's Pink.
5. Dan's Lady.

The judges handled the competition skillfully, and, as in the other stakes, their decisions, as a whole, were well received.

The quality of the competition was inferior to that of the Pointer Stake, and the best of it was no better than that shown by the best pointers.

Rodfield, the winner, needs no lengthy introduction. His win at Bicknell is still fresh in memory. He gathered new honors at West Point, under the disadvantages of having an injured jaw and tongue. How the injury was inflicted, no one knows. Rodfield, as a performer, is in the first flight. He has an easy stride, runs swiftly, carries himself gracefully and points in an animated and stylish manner. He has good judgment in beating out his ground, and is wise in his bird work. He works most pleasingly to the gun.

Blue Ridge Mark is also well known as a successful competitor. He, too, has a stylish action, beats out his ground with judgment, and is successful at finding and pointing. He works well to the gun.

Minnie T., winner of third, is an excellent performer. She shows great skill and diligence in beating out her ground to advantage, and she has a most complete knowledge of the best manner to work on her birds after she has found them. She handles easily, works perfectly to the gun, and has a most sweet and cheerful disposition.

Gleam's Pink, fourth, is an honest worker, and showed skill in locating, pointing and finding. He was lacking somewhat in enthusiasm and cheerful action. He worked nicely to the gun.

Dan's Lady ran one great heat with Topsy's Rod. Had she maintained the same class of work throughout, she would have been well to the front in the winners. It was not entirely a fall down in her work—the chances worked against her somewhat. She is a most diligent worker, beats out her ground with judgment, and works on her birds with skill. She works prettily to the gun.

It seems that the handwriting is on the wall for the heady dog which works to please himself, which does not work to the gun, which requires a lot of furious riding to keep trace of his whereabouts; in short, which does not work as a properly trained and good-intentioned dog should work.

SATURDAY.

First Round.

Joe Bowers---Breeze Belton.---They were cast off about 2 o'clock. Each made a point to which nothing was found. Sent on, Joe pointed a bevy well, and Breeze backed; Joe moved on a few yards to locate, then Breeze moved on and pointed the same bevy. Sent on ranging, Joe pointed a bevy nicely, and was steady up to back. The heat ended at 2:29. Joe worked intelligently and correctly to the gun. His range was medium. Breeze made an indifferent showing.

Bessie Shoupe---Gleam's Pink.---They were cast off at 2:36. Bessie was first to point; Pink backed. A single bird was flushed, but the point apparently was on foot-scent. Next Bessie pointed; nothing found. Sent on. Pink roaded and pointed alternately, Bessie joining. They pointed at the same time about 40 yards apart; Pink had a single bird. He then roaded to a point on the bevy. At the same time, about 30 yards to one side, Bessie pointed. The birds had run about 200 yards, all told. Next, on top of a hill, Bessie made a true point on a bevy, and was steady to shot. She secured a good point on one of the scattered birds, and Pink backed. Pink was the wider and better ranger. Bessie had but irregular middling range. Up at 3:25.

Tory Topaz---Minnie T.---They started at 3:30. Tory dropped to a point in the open, Minnie backed; nothing found. Sent on. Tory pointed and Minnie, coming in, also pointed; then both roaded to a point on the scattered birds, which flushed wild in a cotton-field. Tory pointed on a side hill; nothing found. In woods, Minnie made six single points and one point on a bevy which flushed wild. The dogs separated during the latter part of the heat, working then on different ground. Mr. Avent, to the judges, raised an objection to the manner in which the heat was run. Tory pottered betimes during the latter part of the heat. Up at 4:08. Minnie was the better worker in every way.

Auld Clootie---Allene.---They started at 4:11. Allene roaded nicely to a point on a bevy, from woods to open sedge. Clootie pointed a bevy in woods and was steady to shot. The birds were followed. Clootie pointed; Allene backed; Nesbitt failed to flush the bird; the dogs were sent on, and Allene flushed the bird; Clootie pointed; no bird. Allene pointed a bird. Clootie made two points on single birds. Allene roaded to a point on a single bird; Clootie backed. Neither ranged wide, and their point work was average.

Acolyte---Blue Ridge Mark.---They started at 5 o'clock, rather an unfavorable hour, as the temperature was getting colder and night was approaching. Mark pointed a bevy in sedge. Part of the bevy was a few yards away, and Acolyte pointed it independently. Each pointed a single bird. Sent on. Soon each pointed, about 40 yards apart; nothing found. It might have been where a bevy flushed, as it was about the hour when the birds flew to roost. Acolyte flushed a bevy, and then made two flushes on singles. Mark pointed a single and Acolyte backed. Mark ranged wide, beat out his ground with judgment, and his point work was good. He took a cast, found and pointed another bevy. They ran 30 minutes.

This ended the day's work.

MONDAY.

The forenoon was most disagreeably stormy. Rain mixed with sleet fell from early morning till near midday. The ground was covered with slush. Although the afternoon cleared up, no attempt was made to start. The grounds were totally unfit for work.

TUESDAY.

The morning was dark, slightly foggy, densely cloudy, slushy, raw and uncomfortable. There was a cold dampness, most penetrating and chilling. Heavy wraps were in use. Tiny patches of snow thickly dotted the grounds till near noonday. Soft mud was everywhere. The sun peeped out through rifts in the clouds about midday, but this hopeful sign of pleasanter weather soon disappeared. Though the sky remained darkly and ominously overcast, the temperature grew perceptibly warmer, still not warm enough for comfort. Birds, nevertheless, were found in abundance.

Rodfield---Lillian Russell.---They started at 8:28. Rodfield, notwithstanding that he was suffering from an unaccountable injury to his jaw and tongue, speed over the ground merrily and industriously. Both roaded and Rodfield pointed the bevy. Lillian backing. Both were steady when the gun was fired. The birds were followed, and Rodfield made a stylish point on a single. Lillian backing or pointing, a single bird being flushed close to her by the flush of the dog's bird. Lillian next got a point on one of the birds, and Rodfield backed. Lillian pointed; nothing found. Rodfield at the same time pointed a sparrow. Lillian in open sedge dropped to a point or flush on a bevy; Rodfield, 40 yards away, backed. Sent on, Lill pointed a bevy and Rodfield backed nicely; then Lill moved on down wind and flushed the bevy excusably. In the open, Rodfield pointed, and nothing was found. Lill pointed a single well. Rodfield was quicker and sharper in his point work, and beat out his ground with better judgment than Lillian. His style on point and on gallop was excellent. Up at 9:06.

Flirt C.---Camille II.---They began at 9:08, a poor heat. Flirt made a point on three birds, and was steady to shot. She made two points on singles afterward. Up at 9:39. Flirt had an irregular range, narrower than was desirable. Her pointing was fairly good. Camille was erratic in beating out her ground, pottered occasionally, and was disobedient.

Blue Kate---Gleam's Sport.---They began at 9:48. Sport roaded to a point on a bevy. Kate crossed in ahead and roaded to a point; then both roaded to point, moved on, and a single bird flushed wild close by. Kate dropped instantly to a flush on two birds. A bevy flushed by the judges was followed. Sport pointed the scattered birds and Kate backed. Sent on, Kate dropped to a point on a bird. Sport pointed a rabbit. Next he roaded to a good point on a bevy. Both were steady. Up at 10:41. Sport did not put much enthusiasm in his work, though he was industrious, and his locating and pointing were fairly accurate His action was lacking in dash, and his style on point was poor

Dan's Lady---Topsy's Rod---They began an exceptionally one-sided heat at 10:45, which lasted 55 minutes. Rod pointed in open sedge; nothing found. Rod flushed a bevy. The heat can be easily summed up. Lady found and pointed four bevies, by good work in searching, locating and exercising good judgment. She worked nicely to the gun. She made one point on scattered birds. Rod flushed a single and made a point on one. He was disobedient and refused to work to the gun properly. It required constant whistling and loud orders to handle him at all, and he worked out his ground with little judgment or reference to the success of the gun. The loud whistling balked Lady at first, but toward the latter part of the heat she did not seem to mind it much.

The party then went to luncheon.

SECOND ROUND.

Eight dogs were kept in the second round.

Minnie T.---Auld Clootie.---They were cast off at 1:08. Minnie pointed a bevy in open sedge. She showed excellent skill and judgment in locating, besting out her ground and working to the gun. Clootie pointed three or four times to where nothing was found. They backed each other in woods. Minnie had a decided superiority in every respect Up at 1:41.

Allene---Gleam's Pink.—At 1:45 they were cast off Pink pointed a bevy in sedge. On scattered birds, Allene flushed two single birds. Both pointed in woods; nothing found. Allene pointed a bird and a number of others then flushed wild. Allene pointed a sparrow and Pink backed. Pink pointed in woods; Allene backed; nothing found. Pink pointed in the open; Allene dropped to a back; then Pink moved on to a point on the bevy—a good piece of work. Pink pointed a single and dropped to wing. Allene pointed scattered birds. She next pointed at the same time the bird flushed. Her work was quite faulty. Pink had much the better of the heat. Allene's range and bird work showed poor judgment. Pink's style was poor.

Rodfield---Blue Ridge Mark.---They started at 2:43. Mark pointed larks. A few yards further, Rodfield pointed and Mark backed; nothing found; foot-scent, presumably of larks. Both pointed a bevy in open sedge. Sent on. Rod pointed a single and Mark backed; both were steady to shot. Rodfield found and pointed a bevy. Mark sent on, soon pointed; nothing found. Rodfield was very stylish, running easily with pleasing action, and he showed a different style of point almost every time he pointed. Though ranging well and with graceful action, Mark seemed a bit heavy in his stride. Up at 3:14.

Dan's Lady---Lillian Russell.---Off at 3:21. Lillian pointed; Lady backed; nothing found. Lillian roaded and pointed a rabbit. Lady at the same time roaded along the edge of woods and pointed after a single had flushed. Lillian pointed a rabbit in cotton-field. Lillian in a pasture which was almost bare, pointed a bevy and Lady backed nicely. The bevy flushed wild. Sent on. While searching for the scattered birds, both pointed a bevy. Lillian pointed in a thicket; nothing found; but about 15 yards further on, Bond flushed a single bird. Still when sent on, Lillian should have roaded to it and pointed it. Lady pointed in woods near a cabin; nothing found. On scattered birds of bevy flushe by the handlers, Lillian pointed one just an instant before it flushed. Next she dropped to a point on scattered birds. Lady backed. Sent on. Lillian pointed; Lady backed. Up at 4:10. The heat was a sloppy one. Lillian showed a tendency to false point and was lacking in precision in her point work. She still showed a good deal of field quality. Lady ran far below her performance with Topsy's Rod.

This concluded the second round. But the judges called in two more.

Tory Topaz---Joe Bowers.---They were started at 4:22. Their work was far below the numerous opportunities offered. Topaz pointed a bevy, and next pointed a single in a thicket. Topaz next flushed twice. She next pointed and roaded in woods; nothing found. Joe made a good point on two birds and was steady to shot. Topaz made a point on two outlying birds of a bevy. Both dogs were up in front and a bevy was seen to flush. Next Joe pointed a bevy. Next both pointed; nothing found. Up at 4:39 Birds were in abundance, and many were flushed on ground when the dogs passed over. There was a good deal of scrambling. Neither ranged wide.

This ended the running. The judges announced, in the evening, the winners as follows: First, Rodfield; second, Blue Ridge Mark; Third, Minnie T.; fourth, Gleam's Pink; fifth, Dan's Lady.

Southern Field Trials.

New Albany, Miss., Feb. 4. (Special to Forest and Stream).—Fourteen starters in the Derby, namely: Cynosure, Palerma, Joe Cummings, Tom Beggs, Delhi, Ida B., Tony's Gale, Shad, Clementina, Lady Clare, Tony Boy, Mars, Typhoo and Lady Mildred. Of these Joe Cummings, Delhi, Tony's Gale, Tony Boy, and Lady Mildred ran fairly good heats, though none of the work was noticeably meritorious. The rest of the competition was decidedly poor. Birds were difficult to find, and not plentiful enough to give a thorough test in point work. Judges are Dr. M. F. Rogers, T. M. Brumby and J. King. Grounds wet and heavy from recent rains. There will be about fourteen starters in the All Age. Few visitors present.

New Albany, Miss., Feb. 5.—(Special to Forest and Stream): Eight in second series, namely: Palerma, Joe Cummings, Cynosure, Tony Boy, Delhi, Tony's Gale, Lady Clare, Lady Mildred. All Age stake has seventeen starters: Acolyte and Tremont, Tick Boy and Gleam's Sport, Tory Topaz and Ightfield Rosalie, Lillian Russell and Lady Margaret, Minnie T. and Topsy's Rod. Cid and Allene, Gleam's Pink and Blue Ridge, Cid and Allene, Gleam's Pink and Blue Ridge Mark, St. Blaise and Tony Boy, Joe Bowers a bye. B. WATERS.

Detroit Show.

Editor Forest and Stream:

The outlook for the annual bench show of the City of the Straits Kennel Club, is most encouraging, and unless all signs fail, and many untoward circumstances intervene, it is expected to be the largest and best exhibition yet held. The secretary, Mr. J. Wm. Garrison, reports an unusual interest on the part of breeders and owners of the best kennels in the country, every mail bringing letters of inquiry and requests for entry blanks, from every part of the United States and Canada. The final arrangement for dates for Detroit, Chicago and Denver appears to give general satisfaction, and is really the most natural and logical that could have been fixed upon.

The building in which the show will be held is the same as last year, the Auditorium, which is well adapted to the occasion, large, roomy, well heated and ventilated; easy of access in the heart of the business portion of the city, with convenient offices and other necessary rooms, for the use of the officers and exhibitors. The local interest in the coming event is shown by the application for premium lists, and the great number of special prizes offered for Michigan or Detroit dogs, which will doubtless result in a much larger exhibition than has ever been seen in this city. KENKA.

The Worcester Fur Co.'s Hunt.

Those Worcester fox hunters who had such an exciting time at the B. F. C. hunt at Barre, Mass., must have felt disgusted at the result of their own meet, held Jan. 23-24. The weather conditions were unfavorable. The mild weather melted the snow, and a cold snap setting in on Tuesday, Jan. 22, soon frozo a crust on the snow that would bear a man, in some parts. There was no moisture in the snow and consequently scent lay badly and the hounds could do little with the foxes that were started; added to this the clean misses which some of the veteran hunters made when they did get a chance to pot a fox, while they served for general amusement, did not improve the hunters' temper. No fox was shot during the two days' hunting. Most of the besthunting was in the Merriam district, which lies between Westboro and the Upton road about five miles from Millbury. Foxes were plentiful, signs abundant and the country open and well adapted to this style of fox hunting. Those who were out are as follows: F. E Garvey, Boston; W. N. Walling, Auburndale; E. L. Walling, Auburndale; and L. W. Ballou, of Brown University, Providence; R. D. Perry, Portland, Me.; W. S. Perry, Allie H. Perry, Princeton; E. S. Knowles, George W. Roraback, President of the Massachusetts Fox Club, Westfield; A. B. F. Kinney, J. B. Stuart, of Millbury; A. W. Walls, C. W. Walls, C. A. Barber, Spencer; Bradford S. Turpin, Boston; John R. Thayer, F. Lenoir, Fitchburg; C. H. Steele, L. E. Conant Waltham, and Charles Healey, Lynn. There were a number of dogs in the party. The White and Kinney pack contained Logan, Aggie, Fly, Ben, Ring, Diamond K. Slick and Ned. The Wallings had Hunter and two beagles named Dime and Little Drive. Mr. Stuart had Peter, a dog that knows the country thoroughly and never quits. C. W. Walls had Trip. President Thayer had Duff and Dick. W. R. Dean was out with W. R. Hager, of Southbridge, and was trying a new dog, named Ragen. Dean also had Dime with him, and the old fellow, who is known throughout the State, made a good showing for himself, as he usually does. Dean followed the hunt in his carriage, and he was in all of the drives. Harry W. Smith, Will Smith and H. Winfield Wyman, were on the lookout early for Reynard. They came in two teams, and Mr. Smith drove his high stepper Duster.

DOG CHAT

The American Kennel Club will remove its offices to the Bryant Building, 55 Liberty street, corner of Nassau street, about April 1. The Stud Book for 1894 will be issued about March 1.

In the December issue of the Kennel Gazette, just received, the financial statement for 1894 is anything but a rosy one. There is a nominal balance of two thousand and three dollars and ninety four cents. We say nominal because there are bills payable amounting to $1,896.98 to offset which is a problematical amount of $807.47 of bills receivable, which amount is made up of back advertising accounts, petty accounts, and dues from active members. Against the balance is also to be placed $465 which is included in the balance on hand though it really belongs to the 1895 account as it represents dues of Associates for this year. A little addition and subtraction will show that the A. K. C., far from preserving its balance, will have to sail close hauled for a while until it reaches smooth water again. The anxiety about the A. K. C. balance in regard to specials for the improvement of dogs in general, is evidently unnecessary, on the other hand the dog men must rally to the support of the American Kennel Club.

Mr. George F. Mooney, the secretary, tells us that the Columbus Fanciers' Club Co., have not been able to procure a hall that would bench more than 150 dogs, therefore, they will not be able to hold an A. K. C. show this season, but instead will have a local show for the benefit of the "Humane Soceity."

Exhibitors at the coming shows should bear in mind that something more is due to their dogs than merely to enter them and then throw down an extra meal by way of preparation. Mambrino King was acknowledged to be one of the handsomest trotters that ever stepped into a show ring. But this fact did not prevent his owner from turning him out in the most perfect condition that it was possible for hands to make him. His coat shone like satin. How many of our best dogs are put down, especially long haired dogs, in a manner that they should be. With a conscientious judge this very lack of grooming and preparation is responsible for many hard words and sore feelings between judges and exhibitors. In the field we expect to see dogs in the rough, or as the term goes—working condition—but at a dog show, dogs are supposed, to be placed on the bench for the admiration of the public and how can anyone admire a dog, however good the dog may be in regard to standard points, if to pat him is to carry away an odorous memory that clings to one's hands for hours after. It is not necessary to be continually

washing dogs; clean quarters and regular grooming are the only necessary requisites, if the dog is in good health. Wash the brushes if you itch for the soap suds. In the case of fox terriers, bull terriers, and such dogs, instead of washing just before the show it is better, especially this weather, to make a paste of buttermilk and sulphur lac, rub it on the dog, box up in clean straw, and in an hour or two when dry, brush the powder out and the dog's coat will be whiter and cleaner than soap and water can make him and without the danger of his catching cold. If a St. Bernard has a good solid orange or brindle body color, it is only necessary to wash the white parts on muzzle, neck, chest and legs. To wash the body a day before the show, after you have put plenty of "elbow grease" on his coat, is often to undo the work of weeks, the natural oil and gloss is taken out of the coat and the hair looks stiff and dull. This applies with equal force to spaniels. A dog's coat will be improved by feeding him raw eggs. If dogs must be washed, use the English "crown" soap, which can be procured at most harness stores. This soap produces a good lather, and does not dry up the hair like most of the ordinary soaps.

Everyone in the W. K. C. office looks happy to-day, Saturday, for entries have come in far ahead of the corresponding date last year. We believe it is customary for every secretary to vouchsafe this information to those in quest of news, but we are assured that it is really the case in this instance. The rush, however, will come on Monday and then a more definite idea can be obtained as to whether this year's entries will exceed former years. A batch of fifteen entries of beagles has come in from Mr. C. S. Wiscon, of Covert, N. Y. Mr. Geo. J. Gould, of Vigilant fame, enters eight pointers and wolfhounds. A cable to the effect that Mr. S. Woodiwiss, London, England, has entered ten bull dogs, sheepdogs and greyhounds, is a fact of considerable interest, and our breeders must do their best to bring their dogs to the mark in good condition and keep the laurels, or rather ribbons, at home. Since the entries closed, Mr. Mortimer thinks they will run ahead of last year.

A very useful little volume reached this office some time since through the courtesy of the editor, Mr. Hugh Dalziel. This is vol. V, of the "Fox Terrier Club Stud Book and Show Record," giving winners at English shows from Feb. 1892 to Dec. 1893. The pedigree of each winner is given, and of many noted dogs, traced back to their most remote ancestors. Mr. Dalziel had given up thoughts of publishing this stud book after Vol. IV. han been issued, in February, 1893. Consequently the2e were twelve months in which he did not secure catalogues of shows, and after the Fox-Terrier Club decided in February, 1894, to continue the publication of this useful little stud book under Mr. Dalziel's editorship, the latter had considerable trouble in securing the necessary marked catalogues of shows held in 1893. Some of the show secretaries failed to answer his requests, while others offered to sell their catalogues. As the editor justly remarks, such conduct is contemptible, especially considering the value to fox-terriers and their owners such a publication must be. The man who breeds fox-terriers should possess these stud books. For through such records he is enabled to trace winning strains, and afterward in mating his dogs take advantage of the knowledge so easily gained. L. Upcots Gill is the publisher for the F. T. Club, and the books can be obtained of Forest and Stream Pub. Co. Vol. VI. will include the shows of 1894, and will be published shortly.

The annual meeting of the A. K. C. will be held at Madison Square Garden, New York, on Friday, Feb. 22, at 2.30 P. M. The regular quarterly meeting of the executive committee will be held immediately after. The Associate members' annual meeting will be held at Madison Square Garden, on Thursday, Feb. 21, at 8 P. M.

At the Mascoutah Club show, poodles will be judged by Mr. John Davidson and not by Mr. T. Farrer Rackham.

Additional classses have been made as follows: Class 177 A, challenge bitches, prize, $10. The club's silver medal will be offered for best Skye terrier exhibited. In Irish terriers a class, 162 A, is made for challenge bitches, prize, $10. Class 164 A, for puppies, dogs and bitches, prizes, $5 and $3; class 164 B, is for novice dogs and bitches, prizes, $5 and $3. The best kennel of four cocker spaniels, other than black, will take the club's silver medal. The National Greyhound Club offers its medals for best greyhound dog and best bitch. Two valuable silver cups are offered, one for best English setter, and another for best collie under two years old, but competition is confined to members of the Mascoutah K. C., at least the collie must be bred by a member. $10 is offered for the best black and tan dachshund in open class. Mr. G. D. McLaughlin offers a solid silver cup for the best American bred fox terrier under two years old. The Bull Dog Club offers for competition, confined to members, the club's silver medal, each, for best bull dog and bitch; also its silver medal for best American bred dog or bitch. The best smooth St. Bernard bitch that has never won a prize before will win $10, if exhibited by a resident of Cook County, Ills. We have had several complaints in regard to the Detroit and Chicago show confining so many of their specials to local competition. In a list sent us of extra Detroit specials, numbering twenty-seven we find all but nine, and most of the latter are not at all valuable, have a local string to them. If a show committee desires to have a representative class of dogs they must in great measure depend on dogs from all parts of the country, but in the present unsatisfactory condition of the transportation facilities, when dogs must be shipped by express, a question of a few dollars in the way of specials or a trophy or two to be won will often decide the owner of a prominent dog as to whether the latter leaves his kennel and runs the risk. As one correspondent writes us: "Another thing, the specials for bull terriers at Chicago are all for Cook County dogs, that isn't right. It was at Chicago that Streatham Monarch and Carney met and Harvey Goodman gave them equal first; it was at Chicago that Monarch was beaten by Corova. What took these good dogs so far from home? It was the good cash specials. * * * The 'boys' may be pot hunters, but they bring good dogs." And show committees should remember this.

It is the opinion of handlers and exhibitors in the East that the Detroit and Chicago show committees would be doing a good turn for the men who send and bring good dogs to their shows and also increase their entries if they would make some arrangements toward having a special car leave New York at the close of the W. K. C. show. Few exhibitors will risk sending dogs by express unattended so far as Detroit and Chicago, and if these clubs desire a good Eastern exhibit, they shoud meet the handlers half way –say the handlers pay one way, the clubs the other; or one-half. In this connection we may note that Messrs. Brooks Brothers, O. Ames, H. H. Hunnewell, Jr., J. L. Little, and W. S. Clark, have joined forces and engaged a special car to bring their dogs from Boston to the New York show and return. This is a wise and humane move.

The first annual meeting of the American Terrier Club will be held at 1 P. M. on Wednesday, Feb. 20, at the W. K. C. show. New members are applying for admission and the prospect seems bright for the new club. A description of the Bedlington and information pertaining to its history will be issued in pamphlet form for distribution at the coming shows, and an attendant will be provided, clothed in a distinctive uniform, whose duty it will be to care for members' dogs and answer questions regarding the breed.

The King Don Pointer Kennels, of Attica, Ind., send us a novelty in advertising, pictures of their Naso of Axtel, Naso's Fancy, Pride of King Don, Leach's Bele II., and the old pointer Drake, taken from a cut in "Stonehen," being strung together in handy hanging form, surmounted by a photo of Mr. W. A. Thompson, the secretary, who, judging by the accompanying catalogue, must have a penchant for pedigree research. The dogs in this kennel are well known for their field abilities.

Mr. T. G. Davey, of London, Ont., will shortly remove his Lares and Penates to Toronto. In June he sails to England on a two months' business trip.

We received the Denver show premium list a day after going to press last week. From it we learn that in addition to the scale of prizes already spoken of the Western Kennel Club Company offers kennel prizes of $15 in the large breeds, and $10 for kennels of bloodhounds, wolf hounds, deer hounds, greyhounds, fox hounds, pointers, setters, field and cocker spaniels, (each), collies, beagles, fox terriers, and pugs. As an inducement to handlers the club offers $1 for each dog shown, provided there are thirty or more shown by one handler, and all dogs to be in good show condition; this to be decided by the judge. This prize is not open to local competition. Entries close Feb. 27, and must be forwarded to the secretary, 1724 Lawrence street, Denver, Col. The show is of course under A. K. C. rules. This kennel club is doing good work in the shadow of the Rockies, and the fact that they met with anything but good luck last year, should impel exhibitors to give them a rousing support this time. As the show comes after Chicago, and no other shows are as yet announced between the latter date and the Boston show, there is ample time to take the trip and then afford the dogs a chance to recuperate for the show in the city of culture.

The "greyhounds" that we spoke of coming over in the S. S. Bovic, consigned to Messrs. Baring, Magoun & Co., are fox hounds, and are intended for Austin Corbin's game park in New Hampshire. They will be used to oust the wild boars which are said to have become unpleasantly numerous on this great game preserve.

In keeping with the patrician characteristics of the breed, the Meadowmere Kennels have arranged a very dainty catalogue giving particulars of their poodles. Printed on heavy paper, the seventeen half tones of the principal intimates of this well-known kennel are illustrated in an artistic manner. In addition to the cracks, Champion Milo, Champion Chloe, whose picture is a very clear and faithful likeness, and Champion Dinah, several of the dogs Mr. Trevor's imported last fall are reproduced. No less interesting are groups of prize dogs and bitches, held on chain by his clever kennel manager, T. T. Corrigan, and assistant McGovern. The picture on the cover gives a capital view of the extensive kennels and the manager's house. The whole is a very creditable production.

New Haven, Conn., Feb. 1—Editor Forest and Stream: I saw, in the "Answers to Correspondents," in Jan. issue, an inquiry for the pedigree of Princess Belton. She was by Yale Benton, ex-Polly Blue; by Gun, ex-Pearl Blue. Yale Belton is registered 5,716, I think, and Gun is 1,616. Pearl Blue is A. K. R., 1,542 I know. It was J. T. N., of Philadelphia, who wanted to know, and as I have considerable trouble to find out some pedigrees for myself, I am glad to help others. Perhaps I will want something out of J. T. N. one of these days.

Mr. James Taylor, who is to judge at the coming W. K. C. show, sailed last Saturday on the Umbria for New York. He will probably arrive to-day. Mr. Tayor is sensible. To arrive here on the eve of the show, amid the bustle and hurry of such an importatnt event, is to place one's self at a disadvantage. With ten days to spare Mr. Taylor will have a chance to get his land legs again, and to become acquainted with his cousins in the fancy.

Stockkeeper, in commenting on the diminished glories of Hanley show reminds us of the old days, when it "whispers"—"We remember the specials in those days consisted of beautiful china and all kinds of excellent specimens of the potter's art." Our earliest recollections of fancy are inseparably connected, for reasons that are obvious, with a china service won by pater familias at a Hanley show though if memory serves us right, it was won by the aid of a light Brahma "rooster" and not a dog. The St. Bernard Clifford Marvel, one of Marvel's best sons, died very recently from a tumor, which formed in the neck of the bladder. He had won over forty prizes and was owned by Mr. G. S. W. Harding.

It is a rare occurrence nowadays for a disappointed exhibitor to abuse the judge in the ring and especially to use foul and disgusting language as an exhibitor at Derby, Eng., show held a couple of weeks ago, was guilty of. The judge ordered the man out of the ring, and the case will come before the Kennel Club. Of course the dog suffers from the owner's misconduct and though the best in the show received no mention.

Grim death seems to have been busy among some of England's leading mastiffs. Mr. W. Norman Higgs who lately lost his crack dog Ch County Member is now mourning the loss of Viscount who died suddenly from fits. Mr. Henry Clay's mastiff, Kaiser Frederick, a winner at leading shows, died from blood poisoning, according to our contemporary, Stockkeeper, Eng.

From the same journal we gather an interesting account of a dog's devotion. A man who had been missing since Jan. 12, was found dead on Slanwouro Mountain in South Wales. He is said to have succumbed in a snow-storm prevailing at the time. His dog returned home on the 17th and is supposed to have kept guard over the body for five days.

An important case bearing on the legality of cropping terriers' ears is now before the courts in London. The S. P. C. A. is prosecuting Robert Carling, his wife, and another man, for inflicting cruelty on a terrier by cropping its ears. A number of prominent dog men were summoned to bear witness for the defense. Expert evidence was furnished by vets to show that the practice was cruel, that the skin of the ear is the most sensitive part of a dog and that the inside of the ear was left unprotected. The defense tried to prove that cropping bull terriers' ears was a kindness, advancing the time honored plea of affording the other dog less to chew on. Vero Shaw was called to the stand and gave an interesting lecture on bull terriers, illustrated by one of Mr. Pegg's terriers. Mr. W. H. Sprague was another witness who astonished the audience with his knowledge of the dark side of a "business" bull terrier's life. Mr. J. W. Berrie also testified. A vet from Birkenhead declared that after a certain nerve had once been severed further slicing was painless! A good deal of evidence was given to show that in the present case the burr of the ear had been removed and that this was more sensitive than the flaps of the ears. Stockkeeper, from whom we take these notes, says that an amusing feature of the case was the indefinite idea of the dogman in court as to what was the burr of the ear. The case is not yet concluded. Robert Carling will be known to old timers as kennel manager for Mr. H. Lacy in the days of the black and tans, General, Belcher, Saff II, Queen II., and Collie Ch Mec, etc.

The curly poodle has decidedly ousted the corded variety in public favor in this country through the exertions of the Meadowmere and Hill Hurst Kennels' owners. But the corded poodles seem to claim the prizes at English shows to the exclusion of the smarter type. Mr. Robert Long writes a plea to the Stockkeeper urging recognition on the part of show committees for the curlies. In the course of his remarks he says: Poodles were originally very largely used for sporting purposes and with great success, which, no doubt, they still might be, as they have wonderful powers of scent, are very soft in the mouth and their high degree of intelligence would allow of their being trained to an exceptional standard of excellence." He then goes on to say that the most ardent admirers of the corded would scarcely admit that their type would be suited for such purpose and shows how mud on land would soon impede his movements, and how impossible it would be to use him as a water dog, while as a domestic pet he must be considered only as a fine weather one, for if he accompanied his owner on muddy roads his long cords would soon be in a state entailing endless labor to restore to their normal condition. "Take, on the other hand," he now remarks, "the curly dog. By his natural shape and make he is enabled to do all these things which I have named, and do them well. His coat is not so long as to be a nuisance, and even after a long run over muddy roads and behind a trap he picks up but liitte dirt. His great muscular strength fits him for every considerable exertion, and as a breed I consider him very fond of water." A corded poodle well taken care of is a handsome animal, there is little doubt, few have the time to spare, or the knowledge of how, to keep the cords in good condition, and there is nothing more loathsome and offensive than a matted, dirty corded poodle, so it is little wonder the Canichе has been given the right of way over here.

Many of our principal dog owners were prominent in the list of prize winners at the Poultry Show held in New York last week. Mr. Ed. Brooks took seveal prizes in white cochins; while the Sharp Brothers, good sportsmen both, were unapproachable in buff Cochins and made a good haul in light Brahmas. W. C. Baylies, a prominent member of the N. E. K. C. was also a successful exhibitor and Mr. Waldron, Providence, whose fancy takes a higher flight, scored in Jacobins and pouters. Then Rowland P. Keasbey, the Spaniel Club's secretary, was very busy round the game bantam aisles and won several prizes; John Brett had a stylish red pile game cock that would surely have won but for an accident. The Hempstead Farm was, as usual, at the head of affairs in black and white Langshans. As showing the value of a good specimen, of buff cochins we may say that the Messrs. Sharp sold a cockerel for $250 and won in prizes and cups $150 more, making $400 in all from one bird whelp---hatched we mean, last May.

It is welcome news to hear that a kennel of Clumber spaniels will be shown at New York this month. Lately this handsome breed seems to have dropped out of sight at our shows. If sportsmen in general would acquaint themselves with the good field qualities of the Clumber we are sure the dog would soon be taken up. And then as a companion alone the Clumber is a most intelligent and friendly dog and withal there is a certain aristocratic bearing about the animal that divide him from all other spaniels.

Mr. Geo. R. Preston, Jr., has bred some good ones and has been fortunate enough to secure others, so that he feels confident in putting down a good team. Mr. Preston is also importing a crack field spaniel dog through George Thomas and we understand a large price was paid. As Mr. Thomas brought over Staley Baron, the best in the country at present, it will be interesting to see if his judgment has been equally successful this time. Perhaps this is the dog Dark Despair which Mr. H. Pallard, M. R. C. V. S., has sold to come to America.

At Patchogue, L. I., on Jan. 26, a fox hunt was participated in by a large number of people who had brought with them some of the best foxhounds on the island. A drag was trailed along one of the principal streets and a fox liberated when the drag was stopped. The hounds were put on at the Exchange Hotel, and made a charming sight as they raced up the main street in full cry. The hounds were well bunched until the trail of the real article was reached. Then they separated and trailed off, those of W. Homan, W. O'Berry, C. Smith, J. Raynor, and H. C. Dare, taking the lead Smith and O'Berry's hounds singled themselves out from the others after an hour's run, and took a lead of thirty yards from the rest of the first bunch, which in turn were a long distance ahead of the main pack. After a run of ten miles, the fox was run into by the O'Berry-Smith hounds. Fully twenty-five couple of well-known hounds were out. It was found that the straight bred foxhounds were the fastest on a good trail, but at a loss the cross bred "fox and deerhounds," so the dispatch says, were found to pick out the trail the quickest. The deerhounds here mentioned being probably the hounds used in tracking deer.

Mr. Fred Church has bought a pair of bull terriers from Mr. F. F. Dole. The dog is byGully the Great, and the bitch by Ted Pritchard out of Edgewood Matchless, the marked bitch that won at Providence. They will be shown in the under 30 pouds classes. By the way, Mr. Dole intends exhibiting at the Detroit and Chicago shows, and is willing to take a few other dogs in addition to his own.

The Spaniel Club's annual dinner will be held at Zanghere's, 17 East Twenty-second street, New York, on Wednesday night, Feb. 20, at 8 P. M. This interesting event is expected to excel all previous efforts, as novel features will be introduced.

Tony Gale's Pedigree.

Harrisburg, Pa.—Feb. 2, Editor Forest and Stream: We wish to correct an error as to the breeding of Tony's Gale as it appeared in your report of the U. S. Field Trial, Setter Derby. His breeding should read, by Antonio ex-Nellie G., instead of Antonio ex-Can Can, and his breeder Theodore Goodman, of Terra Haute, Ind., instead of ourselves. Too much credit cannot be given Mr. J. H. Johnson, of Carlisle, Ind., for the manner in which this puppy was developed, as he was not placed in Mr. Johnson's hands until late last August, having had no previous training whatever.

Fox and Seiler.

POINTS AND FLUSHES.

By a Staff Correspondent.

Good fellowship was in evidence at a dinner given on Monday night, Jan. 28, at the Holt House, by the U. S. F. T. Club, in honor of the landowners and others who had shown friendliness and good will toward the success of the trials and toward the visiting sportsmen. The grounds for the trials just ended, were given free of charge. The stormy weather undoubtedly kept many away. Still, the dining-room was filled nearly to its capacity. Of the residents there were Mayor L. C. Jordan, Dr. Brothers, and Messrs. W. Heard, S. E. F. Rose, W. A. White, D. Cottrell, J. J. Williams, J. R. Sinder, Goodwin Crump, James Evans, and Mr. Bailey, editor of the West Point Forum, and of the visitors there were: Dr. R. T. Mead, of Minnesota; Maj. J. R. Purcell, Prof. Edm, H. Osthaus, Maj. J. M. Taylor, Mr. St. M. M. Mundy, and Messrs. Rose, Nesbitt, Buckle, Mayfield, Richards, Gilliam, McCargo, Smith, Bond, Titus, and the writer. Toasts were given, and the kindliest feeling prevailed. The landowners assured the club that there would be no difficulty whatever in securing sufficient grounds for next year's trials, on the most favorable terms. No one could be treated with more kindness than was each one of the visiting sportsmen.

Mr. Madison's Resignation.

Nearly every institution has its rise, progress and decline, some by natural law, some by adverse circumstances. Of the latter is the U. S. F. T. Club, in respect to its decline.

Though the U. S. F. T. Club is a new club when measured by the yardstretch of Time, it is not new in the work it has done, nor is it new in its work, which it has left in its history. It was competent from the beginning. Among its members were men who had had extensive experience in field trials. Among them were men whose energy, enterprise and sagacity were second to none. Among them were men who represented the best type of the gentleman sportsman. They held annually one field trial at first. Next, they held two. This season, the club contemplated holding three, one of which was to be on chickens. The club was ever alert to advance the interest of the dog and of its patrons, from the gentlemanly standard of sportsmanship as a guide to action.

In its work, from first to last, the club relied, for the execution of its plans, upon Mr. P. T. Madison, it's secretary-treasurer. As to his fitness, the record of the clubs successes are an incontrovertible witness. But there is also the testimony of his re-election every year, unanimously carried and with no one in nomination against him. There is the testimony of his popularity with the owners, the handlers, the press and the public. His integrity, ability and energy are beyond question. Through the past years, when hard times oppressed both business and pleasure, the U. S. F. T. C. held its two trials, paid out its large prize list, and had a little balance left in its treasury each time. It weathered the storm of business depression. It had planned greater fields of action. Yet Mr. Madison resigned, with his interest in the club, in field trials, and in his office of secretary-treasurer, unabated.

What were the changes which brought this action about and with it the sudden decline and inevitable decay of the club? They were not natural.

They were purely artificial in their origin. They were purely natural when the disintegrating factors began work.

The readers of Forest and Stream will remember that in its columns from time to time were uttered words of warning against handlers becoming club members. The warnings were founded on the antagonistic position of the handler in his double capacity of handler and club member. The warnings were quite as much in the handler's interest as they were in the interests of the clubs, for both were mutually dependent. It was shown that the handler's affairs could not be mixed up with the club's affairs without bringing on a loss of interest and a loss of membership. It was shown, furthermore, that it was to the handler's interest in every way to encourage the clubs by good behavior and good words; for the field trial club is the life of the dog trainer's business. When the club members quit there is no loss to them; but when they quit there is a certain question concerning bread and butter interesting the handlers.

In its four years of existence, the club has distributed many thousands of dollars (about $20,000) in prizes. And who were the beneficiaries? The handlers.

It has been said, not wisely, however, that the clubs could not run field trials without handlers. If a club could not hold a field trial, who would be the losers? It seems to me it would be the handlers.

As to the personality of the handlers, no objection has ever been made. The whole question hinges on the impropriety of a competitor having a voice in arranging the competition.

But the words of warning were not heeded. The U. S. F. T. C, had two handlers in its membership, namely, Messrs. Stafford and Avent. Avent was on the Board of Governors, an office which he should never have held. He was always distinctly prominent in the club's affairs whether as competitor, high kicker, club member or club officer. It may be in order to say that he should have not been an officer, because there were matters, often coming before the Board, in which he was a competitor. In an evil hour his ambitions grew. It was not enough for him to be a beneficiary as a competitor. It was better to have all the golden eggs at once. It was better to have a cinch on the club itself. It was better to sink sportsmanship and become mercenary and sectional. It was, but it wasn't.

At West Point, at the annual meeting, it was plain to everyone that a preconcerted plan of action had been adopted to get possession of the club. Indeed, several handlers assured me that they had been solicited by Mr. Avent to join the club, and one gentleman had been solicited to join on the ground that it would throw the governing power entirely into the South. Those handlers assured me that they thought that handlers should not be club members. They were frank and honest and intelligent. I have some very good reasons for believing that the handlers who did become members at West Point, joined under a misapprehension, and I know that they regretted their act afterward.

Immediately after the election, it was apparent that the club had changed decidedly in its policy and its personnel. Mr. Avent's wire pulling in behalf of sectional interests and in behalf of the handlers who were competitors, had aroused a feeling of supreme disgust, first, because the club was in no sense sectional, and second, because the hungry commercial spirit exhibited was not in accord with anyone's ideas of sportsmanship. Notwithstanding Mr. Madison's forbearing disposition, and just pride in the club, he resigned his membership and office.

The foregoing imperfect description of circumstances will give the reader an imperfect knowledge of the causes which led to Mr. Madison's resignation, and the decay of the great club.

West Point, Miss. Jan. 30, 1895.

It took Maj. Purcell and Mr. J. M. Avent several weeks to arrange a match, dog against dog, through the columns of a contemporary, with all the collateral information which they desired the public to have In a few minutes at West Point, Miss., they arranged that there would be no match. The bombast, boasts, defiance, and banters, which they inflicted on the public, ended as all of the kind do—in vacuity. In the meantime, the public paid for the space occupied by the so-called challenger, really advertisements.

Dr. R. T. Mead, Manistee, Mich., has bought of Mr. J. M. Freeman the English setter dog Dan Burgess. Dan has won some prizes in field trials.

B. WATERS.

ANSWERS TO CORRESPONDENTS.

H. and A., Windsor, Ont.—The fox-terrier Mischief won third at London and at Toronto, 1890, and was owned by Mr. Geo. Douglas Woodstock, Ont. Probably he could give you the desired information.

F. G. D., Camden, N. J.—The best remedy we know of for curing a dog of this annoying habit, is to tie the chicken securely to the dog's neck, under the jaw, and keep it there as long as it is possible.

J. C. V. E., Elmira, N. Y.—As the dog is two years old the amount of trouble and patience required to cure him of gun shyness would not be worth while assuming. Elaborate directions for the cure of gun shyness have been given by various correspondents in these columns, and they all entail an amount of endurance and patience on the trainer that few individuals care to undertake the task.

C. E. S., Middletown, O.—I have a pointer pup, whose eyes have been affected for about two months. They seem weak. for when he gets out in the light he cannot see, and they water very much. The eyelids are red and inflamed. Ans.—Bathe the eyes three or four times a day with a solution of boracic acid (1 drachm to 8 ounces). Also drop one drop of the following in eyes twice a day.

Atroph. Sulph.	1-4 grs.
Cocaine Hydchlor.	vi. grs
Aq. a.	ii. drachms
Sol.	

ST. BERNARD.—Dew claws on a St. Bernard are not necessary, and certainly their presence would not influence your chance to get the pups registered with A. K. C. You must be able to show a pedigree of three generations back on sire and dam's side before you can register them.

T. F., Pawtucket, R. I.—The dog otter-hound should stand about 26 inches high at shoulder, and the bitch 24 inches.

O. A. M., Albany.—A claims that a 28-inch barrel gun, weighing from 6 to 6 1-2 lbs., will shoot as hard and kill as far as a gun with 30-inch barrels and weighing from 7 1-2 to 8 lbs., everything being equal in the way of bore, choke and load. Will you kindly give your opinion on this question? Ans.—Theoretically there would be no difference between the guns, but as a matter of fact the gun weighing the most would have the advantage when shooting heavy charges.

E. W. C., New Haven, Conn.—In all probability, the English setters will be judged the first day at the New York show.

J. J. B, Chicago.—We can find no traces of the fox-terriers Prince and Daisy in the stud books.

P. F. A., Anniston, Ala.—My pointer dog has had a severe case of mange for six months. Have tried advertised remedies. He is in good health otherwise. His skin is very red, the hair comes out and leaves him ragged and scaly-looking. Ans.—Use the following as directed:

Sublimed sulphur	1-2 lb.
Cocanut oil	1 lb.
Kerosene	1 pint
Sperm oil	4 pints.

Mix together.

To be well rubbed all over the dog every day for two weeks, then wash off and repeat in a few days, if necessary.

Ferri phosph.	
Sig. arsenicalis	ii. drs.
Aq. a.	vi ozs.

Mix.

Give one tablespoonful twice a day after feeding.

Trap-Shooting.

FIXTURES.

All ties divided unless otherwise reported.

Send notice of your shoot like the following:

Feb. 5-7.—UTICA, N. Y.—Two first days, targets; last day, live birds. Open to all. Send for programmes to E. D. Fulford or H. L. Gates.

Feb. 7—MORRISTOWN, N. J.—First match of the Class-Morfy series.

Feb 11, 12.—HOT SPRINGS, Ark.—Winter tournament of the Hot Springs Gun Club; targets. John J. Sumpter, Jr., Sec.

Feb. 12.—WILLARD PARK, N. J.—Second match of the Class-Morfey series.

Feb. 13.—YARDVILLE, N. J.—Live bird handicap at Chas. Zwirlin's; 25 birds, $10 entrance, birds extra.

Feb. 15, 16.—ROME, N. Y.—Tournament of the Rome, N. Y., Gun Club; first day, targets; second day, live birds.

Feb. 19.— .—Third match of the Class-Morfey series.

Feb. 19, 20, 21.—MARION, N. J.—Elliott Fulford Series of three races; 100 birds, $100 a side.

Feb. 22.—PITTSBURG, Pa.—Tournament of the North Side Gun Club; handicap target shoot.

Feb. 22.—ALBANY, N. Y.—First tournament of the Eastern New York Trap-Shooters' League, of the series of 1895, under the auspices of the West End Gun Club, Henry A. Kratz, Sec.

Feb. 22.—MAPLEWOOD, N. J.—All-day shoot of the Maplewood Gun Club; targets. O. L. Yeomans, Sec., Orange, N. J.

Feb. 27-28.—ELIZABETH, N. J.—Second bi-monthly tournament of the Elizabeth Gun Club; first day, targets; second day, live birds. Events open to all.

March 5-7.—RUTHERFORD, N. J.—Three-days' tournament of the Boiling Springs Gun Club; first two days targets, last day live birds. Wm. H. Huck, Sec.

April 3-5.—WILLARD PARK, Paterson, N. J.—Interstate Manufacturers' and Dealers' Association's third annual Grand American Handicap at live birds, at New York; $1,000 guaranteed, all surplus added. All ties in Grand American Handicap must be shot off; three moneys, three high guns.

April 3.—ASTOR HOUSE, New York.—Trapshooters' Convention, adjourned meeting; 8:30 P. M.

April 8-10.—HOT SPRINGS, Ark.—Fifth annual tournament of the Arkansas State Sportsmen's Association; targets. Programmes ready March 1. John J. Sumpter, Jr., Sec.

April 9-11.—WELLINGTON, Mass.—Three days' tournament of the Boston Shooting Association; targets. O. R. Dickey, Manager.

April 17-18.—LYNCHBURG, Va.—Tournament of the Interstate Manufacturers' and Dealers' Association, under the auspices of the Lynchburg Gun Club.

The Elizabeth, N. J., Gun Club claim May 2 as the date on which it will hold its tournament under the auspices of the New Jersey Trap Shooters' League.

May 8-10.—WEIR CITY, Kan.—Ninth annual owl shoot of the Amateur Trap-Shooters' Association of Missouri and Kansas; $300 in cash added. W. W. McIlhany, Sec.

May 9-11.—NEWBURGH, N. Y.—West Newburgh G. and P Association tournament. W. C. Gibb, Sec.

May 14-16.—DAYTON, O.—Ohio Trap-Shooters' League annual meeting and tournament under the auspices of the Buckeye Gun Club, of Dayton, O. Ed. Taylor, Sec., 8 West Third street. Cincinnati.

May 21-23.—KANSAS CITY, Kan.—Annual tournament of the Kansas State Sportsmen's Association. A. W. Peck, Sec., Kansas City.

May 21-24.—KNOXVILLE, Tenn., Gun Club's fourteenth annual tournament; $1,500 added to the purses.

May 29-30.—CANAJOHARIE, N. Y.—Two-days' tournament of the Canajoharie Gun Club; targets. Chas. Weeks, Sec.

May 30-31.—GRAND RAPIDS, Mich.—Valley City Gun Club's annual tournament; targets; added money announced later. C. F. Rood, Sec.

June 3-8.—CHICAGO, Ill.—Illinois State Sportsmen's Association annual tournament Convention at Sherman House June 4.

June 11-14.—MEMPHIS, Tenn.—Memphis Gun Club's annual tournament; $2,000 added money.

June 19-21.—CLEVELAND, O.—Chamberlain Cartridge and Target Company's second annual tournament; $1,200 in cash added.

June 24-28.—SARATOGA, N. Y.—Annual tournament of the New York State Sportsmen's Association, under the auspices of the Saratoga Gun Club. H. M. Levengston, Sec.

June 25-26.—ALTOONA, Pa.—Third annual tournament of the Altoona Rod and Gun Club at Wopsononock; targets. W. G. Clark, Sec.

Aug. 29-31.—HOT SPRINGS, S. D.—Hot Springs Gun Club's second annual tournament.

Oct. 3-6.—FRANKFORD, Pa.—Pennsylvania State Sportsmen's fifth annual tournament, under the auspices of the Keystone Shooting League, of Philadelphia. John C. Shallcross, Sec., Frankford, Pa.

Oct. 9-11.—NEWBURGH, N. Y.—West Newburgh G. and R. Association tournament. W. C. Gibb, Sec.

Rome.

The programme for the Rome, N. Y., Gun Club's two days' tournament, Feb. 15, 16, is to hand. The first day is devoted to targets, the programme events being as follows: Nos. 1, 2 and 4, 10 targets, $1; Nos. 3, 5, 7 and 8, 20 targets' $2; No. 6, 25 targets, $3. All events are rapid firing; birds included in entrance money. Four moneys; 5 per cent. of each purse deducted for average moneys, 60 and 40, to go to the two best averages in all programme events. Feb. 16, live bird day, has but two events on the programme; No. 1, 5 birds $5; No. 2, 10 birds. $10; birds, 25 cents each, included in entrance moneys; handicap rises, 4 moneys. Extra events will be shot if time permits. The following gives all the information required:

American Association Rules will govern all contests which handicaps 10 gauge guns, two yards. Shells for sale on grounds. No matter what the weather may be the shooters will be fully protected and comfortable. Positively no outside shooting will be permitted. We shall spare no pains to make this shoot a grand success. The grounds are about the finest in the world. Sky for a background. Home comforts. Spacious club house Street cars every fifteen minutes right to the grounds which are only ten minutes from depot. For programmes and to secure accommodation rates address; W. P. Rayland, M. R. Bingham, J. S. Wardwell.

Onondaga.

Syracuse, N. Y., Jan. 31.—The Onondaga County Sportsmen's Club held their regular semi-monthly Medal shoot on Thursday, Jan. 31. Although the shooting was not quite up to the standard, there was some excuse for the boys They have only about one hour and forty-five minutes between trains, as they are obliged to go and come on the D. L. & W. R. R., and on account of the increasednumber of shooters they were obliged to rush things along this afternoon. As it was, they did not have time to finish the shoot, as the rules call for fifty birds. There were a number of visitors at the club shoot, Mr. Waldron, a sporting goods dealer from Binghamton; Mr. Kendall, a noted local trap shot. etc. Trap shooting is beginning to boom here again. About twenty shooters turned out to shoot for the medals. but some were unable to shoot on account of lack of time. The event was, as usual, at unknown angles: A. G. Courtney 30, C. F. Arno 29, D. Lefever 27, Ginty 24, A. White 27. Luther 26, W. Morris 23, Livingston 29, Kendall 15, Duguid 14, Waldron 14, D. Walters 20, Boyd 24, Burrows 9, H. Jones 19, F. Lefever 20, J. Dally 21.

A. R. K.

Maplewood.

Maplewood, N. J., Jan. 26.—The first monthly contest for the 1895 silver cup was shot off to-day. The weather was decidedly against trap shooting, but six of the boys turned out to enjoy the sport. Where was Warren Smith? This is the first regular shoot of the club he has ever missed. No one present could account for his absence. A new addition to the fraternity, Mr. Abbot by name, did exceedingly well for the style of shooting and the fact that this was his first attempt at the traps. This cup represents the championship for the year, and is contested for the fourth Saturday in every month. Each shooter is graded according to his ability, and the one making the greatest number of points in the year is champion and receives the cup. The number attached to each name represents his handicaps, viz., Dr. Jackson 16; by breaking 17 he makes a point or a possible 9 in 25; Reeves 10, or a possible 15 out of 25. This rule applies in each case.

No. 1, 10 targets, unknown angles, 50 c.: W. N. Drake 9, Van Idustine 7, Reeves 10, A. Sickley 8, Jackson 7, Abott 4.

No. 2, same: A. Sickley 9, Jackson 8, Drake 8, Reeves 6, Van Idustine 9, Abott 3.

No. 3, 5 pairs, 50 c.: Drake 9, A. Sickley 6, Jackson 5.

No. 4, 10 targets, expert rules, 50 c.: A. Sickley 9, Jackson 9, Drake 9, Reeves 8, Van Idustine 8, Abott 6.

No. 5, Club cup contest, 25 targets, unknown angles:

Jackson, (16)	1111111111101101111111111---23
Drake, (18)	0111111111111111111110111---23

Abott, (0)	1111000110010010000101001---13

W. N. DRAKE.

They Enjoy Life at Newburgh.

Under date of Jan. 25, David Bown, vice-president of the West Newburgh Gun and Rifle Association, writes as follows from Newburgh, N. Y.: "On my return from the convention I had it in my mind that our association had a shoot for a supper on that day, Jan. 24, Capt. Higginson and J. S. Taylor choosing sides. Though too late for the shoot I was in good time for one of Jake Gidney's great suppers; roast turkeys, etc., etc. This same supper was first shot for on Jan. 17, when it resulted in a tie, thus calling for more sport. On the 17th it was decided to have the supper last night whether another tie occurred or not. Capt. Higginson's team won, as you will see by the enclosed scores. We do not get any replies to our challenge to rifle clubs; we wish that they would wake up."

In explanation of the scores given below, it may be stated that the team shoots were decided in conjunction with the regular club handicap shoots for two prizes, value $10 and $5 respectively. These shoots are allowance handicaps; practically so many misses allowed as breaks. The score of the shoot on Jan. 24 shows that 25 targets are shot at in the club shoots; the first 10 everything known, then 3 pairs, the last 9 being at unknown angles. There is nothing to show the style of shooting in the race shot on Jan. 17 but it was probably under the same conditions. On that occasion Mitchell and Higginson tied for first prize, Wood winning second prize. Each of these prizes must be won five times before becoming absolute property. In each race only the totals minus the handicap allowances were counted in the struggle for the suppers.

FIRST MATCH, JAN. 17.

Taylor's Team.

Taylor, 1	1111110101000010011111111—17

Higginson's team won the supper, while Wood won a heat for the first prize; ties for second prize not shot off.

Two Unique Matches.

On Thursday, Jan. 31, George Work and P. H. Morris, shot a couple of 50 bird races on the Westminster Kennel Club grounds at Babylon, L. I. These races were two more of that class of pigeon matches which Messrs. Work and Morris seem to enjoy. The previous day, as told elsewhere, they shot a match at the Carteret Club grounds, Morris using his 12 guage against Work and his 4(guage. On Thursday the conditions of the matches were as follows: First match, Work at 38 yards, with an 8 guage; Morris, at 24 yards, with a 12 guage; Second match, Work 38 yards, with a featherweight Francotte, 12 guage; Morris, 24 yards, with Work's 8 guage gun!

So quiet had these two matches been kept, that outside of the two principals and the representatives of Forest and Stream, and Shooting and Fishing only one other person was, present. That person was W. A. Watrous, of Tuxedo, who was on hand to handle Work. Mr. Morris, having no handler it was arranged that Mr. Pentz should look after his interests, while the scoring was entrussted to Forest and Stream's representative, who also pulled the traps.

The first race was very close indeed, Work winning after 65 birds had been shot at. Morris started in by missing a right quartering incomer from No. 1 trap, a bird that he is very

weak on. Work let his third bird get away hard hit, tieing the score. Morris next slipped up on a direct incomer, in the fifth round, and steadily lost ground until at the end of the 13th round the score stood 11-8 in favor of Work. Then Morris settled down and killed the next 19 birds straight, tieing the score on the 29th round, when Work had a right quartering driver drop dead out of bounds. The 30th and 31st birds both got away from Work, leaving Morris two ahead; he quickly reduced this lead to one by missing his 33d bird, a precisely similar bird to his first one. When he let his 39th bird get away with the loss of only a few feathers, the score was again a tie. Work drew ahead in the 42d round, when a corking twister from No. 5 trap got away from his opponent; it looked like Work's match then. The 43 round was notable for the fact that when Morris called "pull," he discharged his first barrel before the trap went over; the bird, however, sat long enough for the shooter to kill it with the second, thus obtaining a decision of no bird." His next one, above mentioned, was a corker, with nothing slow about him. Work's 43d fell dead out of bounds and the score was again a tie, Morris being one to the good when Work missed his 45th. Both men then let their 47th birds get away from them, the score showing Morris one in the lead with only three more to shoot at. An extra fast bird from No. 5 trap beat Morris on the 48th round, the score being again tied with 38 kills each. The 50th round found them still a tie with 40 kills to their credit.

It was decided to shoot off the tie at 5 birds. Morris' first fell dead out of bounds, and it again looked as if Work had the race. His 55th bird, an easy right quartering incomer, tied the score by dropping dead not more than two or three inches over the back boundary. Five more birds were then shot at, Work losing his 58th (third in the series of five). Morris having killed his four birds, he had but to kill to win. He drew a dark blue driver from No. 1 trap that hardly appeared to be damaged at all. Morris never forgot that bird for the rest of the day! His misfortune appeared to rattle him, as he dropped his first two birds on the next series of five birds; that lost him the match, as Work missed but one out of his five, four of which were perfect screamers. The total score showed Work 52, Morris 51. It is only fair to add that Morris having run out of shells, had to use strange ammunition on his last 8 or 9 birds.

An adjournment was made for lunch, after which the second race was started. Both men commenced poorly, Morris in particular being unable to do anything with the big gun, missing seven out of his first nine. He then steadied down, killing 31 out of the remaining 41, beating Work by two birds. It was almost a sure thing for an incomer to escape from Morris if it was at all fast; he was unable to swing the big gun quickly enough; ten out of his 17 misses were on fast incomers. George Work's handling of his little Francotte was a capital advertisement of the capabilities of that weapon. His score of 31 was a great performance, but still it ought to have been increased to 36 as he had five birds scored lost which ordinarily were sure things for him, birds, too, on which his handicap was actually an advantage: his 4th and 20th birds, a direct incomer, and a right quartering incomer respectively, dropping dead just over the dead line. Work's score is all the more remarkable when it is considered that the right barrelof this "feather-weight" is a pure cylinder; the gun is in fact his quail gun!

The scores are as follows!

First Match.

EDWARD BANKS.

A Good Attendance at Carteret.

Wednesday, Jan. 30, was only an ordinary club day at Carteret, but no less than 14 members put in an appearance before the traps. It was a lovely day for the shooters and spectators, but a poor one for the birds, who found not a breath of air to aid them in their flight; as a result kills were numerous and cyphers correspondingly scarce. The main event was a $10 sweep, club handicap. This handicap is undoubtedly very severe on the scratch men, so long as the birds are only ordinary ones. It runs as follows: 30 yards men and over, miss and out; 28 and 29 yards men two misses as kills; 27 yards men, 3 misses as kills; 26 yards men, 4 misses as kills; 25 yards men and under, 5 misses as kills. With such men as Mr. P. H. Morris at 24 yards, Messrs. Sullivan Mead, and Stafford, at 26, and Mr. O. T. Mackey at 27, it can readily be seen that the scratch men have no picnic. As it was, all of the latter except J. Seaver Page were out of it before the 9th round commenced. While the 11th round was in progress it was agreed that the nine men still in the race should divide the purse in order to let some minor sweepstakes be shot. At the close of the round, Page and Godchalk had eleven straight to their credit, while Du Bray, with 10 straights, took his one-ninth without shooting at his eleventh bird.

Prior to the commencement of the big event, George Work and P. H. Morris shot one of their specialties. This match was at ten birds under the following extraordinary conditions: Morris stood at 24 yards, using a 12 guage, while Work stood on the 21 yards mark using a double 41 guage built by Greener; this gun is generally styled a "collector's" or "taxidermist's gun." With this toy weapon Work outshot his man on the 9th round, killing 7 out of the 9 shot at! Work afterward gave proofs of the killing powers of the little gun, making some astonishing shots at pigeons that were flying around the club house.

Handicap Sweepstakes, with allowances; $10 entrance:

J. S. Page, 30	21212222212—11	P. Morris, 24	*1222112110— 9
E. Godchalk, 29	22222222112—11	W. Stafford, 26	*212212*212— 9
*A. DuBray, 28	1221212222 —10	Capt. Money, 31	21221210 — 7
O. Mackey, 27	2122*221222—10	R. Welch, 32	2221220 — 6
W. Meade, 26	02212111112—10	Geo. Work, 32	122220 — 5
H. "Butler," 28	10102121221—10	T. "Mott," 30	22* — 2
A. Sullivan, 26	21121*10111— 9	J. Knapp, 30	0 — 0

*DuBray only shot at 10 birds.

Sweepstakes, 5 birds, $5 entrance, were shot after the above event had been called off as stated above. Each man shot at the same mark as in the main event, but there was no bird allowances. No. 1 was divided between Mott, Stafford, Knapp and Du Bray at the close of the third round of the ties. No. 2 resulted in a division between Welch, Page, Knapp and Post without the fifth round being shot. A third sweepstake similar to the others was started and at the end of the third round six of the nine competitors, Welch, Page, Mott, Work, Knapp, and Post, had each killed three straight:

	No. 1.	No. 2.
Welch, 32	12211220—7	1212—4
Seaver Page, 30	200 —1	220 —4
Money, 31	0* —0	220 —2

Post, 27	—	2222—4

Little Rock's Winter Tournament.

Little Rock, Ark., Jan. 29.—The winter tournament of the Little Rock Shooting Association gave every promise of being a very successful affair. Shooters were in attendance from the neighboring cities, and considerable interest was manifested by the local shooters. The horrible weather that prevailed, however, during the two days of the shoot, came very near causing it to be a failure and but for the enthusiasm of our visitors such would have been the case.

The day preceding the shoot was as fine a day as one could wish. The sun was shining brightly and it was so warm and pleasant that wraps and overcoats were unnecessary. The opening day of the shoot dawned bright and clear, and every one expected that we were going to have a fine day, but in this they were all doomed to disappointment. By 10 o'clock the sky became overcast with a haze that gradually grew darker, the breeze that was blowing from the northwest was soon converted into an awful gale, while the thermometer rapidly ran down to the freezing point.

The club grounds are located right on the bank of the river, and there is not a tree or a house of any size within several hundred yards of the club house to break the force of the wind. There is no stove in the club house, as previous to this season very little trap shooting had been done here in the winter. A large fire was kept roaring in the open air, but very little comfort could be had from this, as the wind was so cold that while one was warming his back his face would be freezing. This made the shooting much more difficult, as the high wind caused the targets to skip about in a very erratic manner. The cold, too, had a very depressing effect on the pigeons, making them slow to start, but screamers when once on the wing, as the wind which was blowing directly away from the shooter soon carried them out of bounds. The shooters were also very much hampered by the cold, as it was impossible to shoot without a coat on, consequently the scores are not as good as they would have been under more favorable circumstances.

Notwithstanding these difficulties, the programme and several extras were run off on the first day. By night the wind had abated, but the clouds had become darker, and at 10 o'clock it was raining hard. This caused some of the visitors to return home, and also kept others away, as the prospects for favorable weather on the morrow was not very flattering. It rained steadily until 11 o'clock the next morning, by which time about three inches of rain had fallen, and the water was standing in large pools on the grounds. At noon it had cleared off and the sun was shining again, but the wind was blowing even worse than on the previous day, and directly from the West. The air grew steadily colder and ice seemed formed on the water. Nevertheless there were some of the boys who were willing to brave the elements and attempt to shoot out the programme, which was done in a few hours, as only a few shooters participated.

Among the visitors in attendance were: Irby Bennett, of Memphis, Tenn., southern representative of the Winchester Arms Repeating Co., Capt. A. R. Smith, and John J. Sumpter, Jr., of Hot Springs, Ark. Bennett was under the weather, having contracted a severe cold on the train the previous night, but despite this handicap he succeeded in winning first money alone in the first event, second money in the pigeon match, and later in the day he shot out all of the boys in a miss and out. Bennett did not forget to tell the boys that they were going to have a shoot in Memphis next June. Sumpter did not shoot up to his usual form, as he was using a new gun, an L. C. Smith ejector, that he had only shot once or twice previous to this shoot, and to which he had not yet become accustomed.

Dickinson did the best shooting during the tournament, winning the $3 for the best average both days, and the $5 for the best average in the two days. Alexander won the $2 for the second best average on the first day, and Dickey won the $2 on the second day. Droppers were conspicuous by their absence, and it is safe to say that at no time during the shoot was this contemptible trick resorted to. All events were known traps, unknown angles. Three moneys when less than ten entries, and four moneys when ten or more entries. American Shooting Association rules governed. Appended are the scores made on the first day:

Baise	110011111011101—11		

As there were never more than six, and most of the time only four, entries on the second day, it is deemed best not to publish the scores made on this day, although the shooting was considerably better.

The next gathering of the cranks will be at Hot Springs, February 11 and 12. On these days the Hot Springs Club will hold a two days' tournament. On the afternoon of the 12th, Dr. W. F. Carver and Hon. Tom A. Marshall, of Kiethsburg, Ill., will shoot a match; conditions, 100 live birds per man.

PAUL R. LITZKE.

The Committee at Work.

The drafting of a constitution and by-laws for presentation at the adjourned meeting of the trap shooters convention on April 3, at the Astor House, New York city, is no simple matter. As a rule a committee appointed to draw up such articles have something similar to pattern after. A constitution and by-laws for such an organization as the one which it is proposed to form will necessarily include many articles peculiar to itself.

The publication of the draft of the constitution and by-laws in the different sporting papers will greatly facilitate discussion on the same at the above mentioned meeting. It will also enable gun clubs and other kindred organizations to correctly guage the purpose of an association such as it is proposed shall be organized on the above date, and to decide whether or no they are in accord with the principles of which such an organization will be the exponent. Another important item, the natural result of the publication of the proposed constitution and by-laws, will be the receipt by the committee, appointed at the meeting of January 24, of questions in regard to the composition of the constitution and by-laws.

The committee appointed by temporary Chairman Breintnall met on Friday afternoon, Feb. 1, and commenced their undertaking of drafting a constitution and by-laws. Those present were: Messrs. J. A. H. Dressel, chairman of the committee, B. C. Everingham, L. H. Schortemeier and Edward Banks, temporary secratary of the present organization. Mr. W. H. Wolstencroft was prevented from being present owing to sickness, a telegram having been received by Mr. Dressel during the morning to that effect. After drawing up a rough draft of the proposed constitution, the meeting adjourned until Friday afternoon, Feb. 8, when it is hoped the main portion of the committee's work may be gotten through.

It is expected that the drafts both of constitution and by-laws will be ready for publication in the columns of the sporting papers by the end of the present month. This should allow ample time for the consideration of details.

DRIVERS AND TWISTERS.

The Arkansas State Sportsmen's Association announces that it will hold its fifth annual tournament at Hot Springs on April 8 10 P ogramme: will be ready after March 1, and may be obtained from John J. Sumpter, Jr., secretary of the association.

Dr. W. F. Carver, and Hon. Tom A. Marshall, Mayor of Keithsburg, Ills., have arranged to shoot a live bird race, 100 birds per man, at Hot Springs, Ark., on Feb. 12. On the preceding day, Feb. 11, Carver and Marshall will shoot a race at targets against George W. Hughes, and John J. Sumpter, Jr., the consideration will be $25 a corner. In connection with these two races, the Hot Springs Gun Club will give a two day's tournament on the above dates.

A cup has been presented to the Larchmont Yacht Club, by J. P. Knapp, for competition among members of the club at the club's shooting grounds. The cup will be shot for under the following conditions, providing there are eight or more entries: 25 birds, optional sweepstake $25 or $12.50 entrance, handicap rise and allowances; 28 yard men allowed one miss as a no bird; 27 yard men allowed two misses as no birds; 26 yard men allowed three misses as no birds. Purses divided as follows: 10 per cent. to the club, 40 per cent. and cup to winner, 30 per cent. to second gun, 20 per cent. to the third high gun. The competition will take place on Feb. 9, on the arrival of the 1 o'clock train from New York.

The Blairsville, Pa., Rifle and Gun Club was organized on Aug. 11, 1894. It has a roll of 28 members and is in a decidedly healthy condition. Its preparations for 1895 show that the club does not mean to go to sleep.

The Wollaston, Mass., Trap Club has elected the following officers for 1895: President, H. T. Whitman; Secretary, H. W. Marsden; Treasurer, A. G. Olney. At its annual meeting it was agreed to increase the membership limit to 30 and the initiation fee to $5.

The Hartsville, Pa., Gun Club, has decided to apply for membership in the Pennsylvania State Sportsmen's Association. It is also said that the members of the club are contemplating the erection of a club house on its grounds.

W. G. Clark, secretary of the Altoona Rod and Gun Club, conclusively proved on Wednesday, Jan. 30, that Pittsburg's choice, "Alphabetical" Jones, is no match for him at live birds. Since his series of matches with T. W. Morphey, Clark has had the stock of his gun considerably altered by J. P. Dannefelser, 9 Chambers street, this city. When Clark shot the series in question, the drop of his stock was about 3 1-4 inches; it is now 2 5-8 or thereabouts. His improved scores are unquestionably to be traced to the straightening of the stock; 95 out of 100 one day and 49 out of 50 on the day following is pretty warm work. The Utica shoot, Feb. 5-7, was the chief event in trap shooting circles this week.

Saturday, Feb. 2, with its heavy snowfall, spoiled many a weekly reunion in the vicinity of New York city.

A. W. Du Bray, the Southern representative of the Park

Gun Company, has started on his Southern trip, and will now be in evidence whenever the boys do any shooting. Mr. DuBray's work on live birds while in this city has shown that the man, the gun, and the ammunition are all right.

Fred Hoey has been showing the foreigners that he can kill their blue rocks. When he has had more practice on the Monte Carlo birds, he will, without a doubt, make a better showing, as he is a quick shot and a good man in sweepstake shooting.

W. P. Mussey, of Chicago, Ills., has been in New York for the past week. During his stay East Mr. Mussey found time to shoot a few live birds. On Friday, Feb. 1, he shot a 100 bird race with W. S. Edey on the Carteret Club's grounds. The match resulted in a tie, both men killing 86 birds; Edey missed his last bird when he had but to kill to win.

A match will shortly be shot between teams of the West Newburgh Gun and Rifle Association, of Newburgh, N. Y., and the Cob Web Gun Club, of New York. A supper at Jack Gedney's in the evening is not the least attraction on the programme for the day.

The 50 bird handicap of the Heron Hill Gun Club, Pittsburg, Pa., $50 entrance, was marked by some good shooting. Clark's 49 straight after missing his first bird, was worth about $150 to him. It is said that the Altoona contingent backed him freely against the field (even after he had missed his first bird), thereby taking several hundred of the Smoky City dollars back to the heart of the Alleghenies.

The programme arranged for the winter tournament of the Hot Springs, Ark., Gun Club on Feb. 11 and 12, shows that the boys are alive to the best interests of the sport down there. The following sentence, which brings the programme to a close, needs no further comment: "Dropping for place will not be tolerated at this shoot."

The Essex Gun Club, of Newark, N. J., held its annual meeting on Jan. 24 The following officers for 1895 were elected: President, R. H. Beintnall; Vice President and Treasurer, Wm. Hayes; Secretary, Asa Whitehead; Executive Committee, R. H. Breintnall, Wm. Hayes, Asa Whitehead, Lemuel Thomas, and Fletcher Walters.

The note that went the rounds of the city press to the effect that George Work had challenged Edgar Murphy to shoot a series of three 100 bird races, for large sums of money, was without foundation.

To secretaries of Gun Clubs: Send in scores made at your club shoots to Forest and Stream. It costs you nothing more than a little time, and a stamp or two. By attending to this matter you let other clubs know that you are alive, and that fact alone is of some interest to many readers of Forest and Stream. In sending in your scores be sure and give date, style of shooting (whether known or unknown angles), amount of entrance, conditions of prize contests, in fact, anything you would want to know if the scores were made by another club. Address all such matter to Forest and Stream and mail it promptly.

Charlie Zwirlein, of Yardville, N. J., announces another 25 bird handicap sweepstake, $10 entrance, birds extra, for Wednesday next, Feb. 13. Zwirlein's handicaps are always popular and this one should be no exception to the general rule.

EDWARD BANKS.

Clark Owned Pittsburgh.

The second match in the Clark-Jones series was shot at Exposition Park, Pittsburg, Pa., on Wednesday, Jan. 30. It resulted like the first of the series, in a ridiculously easy victory for Clark, who upheld the honor of Altoona by making the great score of 95 out of 100, beating his opponent by 14 birds. The first match was won by the score of 84-73; thus Clark beat his man by 25 birds out of the 200. Jones was clearly outclassed and probably shot below his form.

Clark's shooting on any kind of birds is good work; in this match the birds are said to have been a mixed lot affected somewhat by the cold weather. Still the fact that Jones could not score more than 81 shows that they were not entirely dead easy. A glance at the detailed score given below, shows that after missing his third and sixth birds, Clark went on and killed 51 straight, finishing his hundred with another run of 26; Jones' longest runs were two eighteens. C. M. Hostetter ("Old Hoss") was referee, and Elmer E. Shaner, official scorer.

There was very little betting on the result, Clark being too hot a favorite among the spectators. The Pittsburgers were apparently satisfied that their man had no chance, the only gleam of hope they experienced being when Clark missed his third and sixth birds. Even that was very quickly dispelled, as Jones dropped his sixth, seventh and ninth, and rapidly fell behind, never again getting within hailing distance.

Match, 100 live birds, $100 a side, 30 yards rise, 50 yards boundary:

W. G. Clark	1102202221222212221222222	—23
	2122121122122222122222211122	—25

	2222222220222222200222222200	—21—81

On Feb. 1, the Heron Hill Gun Club, of Pittsburg, Pa., held a big shoot at Exposition Park, all the cracks of Pittsburg and vicinity being present. W. G. Clark followed up his good work of the previous day by making the great score of 49 after missing his first bird. The following, from the Pittsburg Commercial Gazette, tells the story:

"Mr. William G. Clark, hailing from Altoona, Pa., is a very smooth article, much too clever for any of the wing shots in or around Pittsburg at present. He spent two days in the city, and when he wanted to go home last night he was forced to hire a boy to carry his money to the train. He took all kinds of coin out of town last evening, having won the big sweepstakes at Exposition Park in a canter.

"If an amateur can shoot like this man, the fates protect us from the professionals; was the burden of song last night warbled by the unfortunates who had each put up $50 to see how bad Clark could beat them. The bare fact that Clark killed 49 out of 50 birds at the mark tells the tale. Many of the Clark followers, seeing their man's remarkable work in the contest with Jones on Wednesday, were prepared to back him against the field, but when time came to start the game yesterday morning, not a cent was up. The Altoona man came up in his turn, got an easy bird, whaled away and missed by a mile or so.

"Ah! ha! We have the villain, shouted the anti-Clark element as they dove into their clothing for their coin to bet against his winning out. They figured that the blonde mustached gentleman having beaten Jones on Wednesday, had gotten swelled up until he couldn't see straight. They are now sorry they thought. The field against Clark looked like a double rivetted good thing and many of the boys took a chance. Clark's friends had money and put it up with apparent recklessness on his chances. By the time Clark came up to shoot his second round there was quite a roll of coin up. Then it was that Mr. Clark took an extra hitch in his trousers, and went to work. But why dwell on this painful scene? Suffice to say that the visitor didn't miss again. He took them every way and it looked as if he wouldn't in 30 years, by the way he was shooting. Mohler and W. S. King had a pretty race for second money, resulting in a dead heat, stakes divided. Bessemer, Jones and A. H. King divided third money, each having killed 45. The money was divided as follows: Clark, $157.50; H. B. Mahler and W. S. King, $94.50, divided; A. H. King, Bessemer and Jones divided $63."

Sweepstake, 50 live birds, $50 entrance, 30 yards rise:

Rifle Range and Gallery.

Constitution and By-Laws.

We have frequent calls for Constitutions and By-laws of rifle and gun clubs. Here are those of the Blairsville, Pa., Rifle and Gun Club, which will serve for a model:

CONSTITUTION.

Article I.—Name—The name of this Club shall be The Blairsville Rifle and Gun Club.

Article II.—Objects—This Club shall be for the benefit and pleasure, as well as the advancement, of its members in the art of Rifle and Wing Shooting, and to encourage a genuine sportsmanlike spirit among its members.

Article III.—Officers—The officers of this Club shall consist of a President, Vice-President, Secretary, Treasurer, Captain and two Directors, who together shall constitute and form the Board of Directors.

Article IV.—Management of the Club—The entire management of the business concerns of the Club shall be entrusted to the Board of Directors, who shall have entire charge of the property of the Club, with full power to make all repairs or additions thereto. They shall make all arrangements for matches and shoots, subject to the approval of the Club. Four shall constitute a quorum for the transaction of business.

Article V.—Election of Officers—At the first regular meeting, in January of each year, the Club shall elect by ballot a President, Vice-President, Secretary, Treasurer, Captain and two members of the Board of Directors. A majority vote of the members present shall be necessary for an election.

Article VI.—President—Sec. 1. It shall be the duty of the President to preside at all meetings of the Club, to maintain order, to enforce the rules and regulations of the Club, and to inspect all ballots of candidates for membership. At the regular monthly meeting in December he shall appoint an Auditing Committee, consisting of three members, to inspect the books of the Secretary and Treasurer for the past year. He shall call special meetings as he shall deem advisable, or at the request of five members of the Club.

Vice-President—Sec. 2. It shall be the duty of the Vice-President to perform the duties of the President in his absence. In the absence of the President and Vice-President, a temporary chairman shall be chosen to preside.

Secretary—Sec. 3. The Secretary shall keep a record of the proceedings of the Club, a record of the name of each member, his residence and place of business, issue notices of all meetings or shoots of the Club, when so directed by the President, and attend to all its correspondence.

Treasurer—Sec. 4. It shall be the duty of the Treasurer to collect all money due the Club and keep an accurate account of the same, keep a just and true account between the Club and its members, and act as purchaser for the Club, subject to the approval of the Board of Directors. He shall report to them quarterly the business transacted.

Captain—Sec. 5. The Captain shall have the entire management of the Club at all shoots, and enforce the rules and regulations on the Club grounds, and with two members, selected by the President, shall decide selection of teams in all matches. In case of the absence of the Captain at any shoot, there shall be a temporary Captain appointed by the members of the Club present. He shall also collect all moneys for targets and ammunition used by the members, and pay the same to the Treasurer, he being held responsible for all targets and ammunition used on the grounds.

Article VII.—Fees—Sec. 1. The membership fee shall be one dollar, to accompany each application.

Sec. 2. The yearly dues shall be three dollars, payable quarterly in advance, at the regular meetings in January, April, July and October.

Sec. 3. The Club shall have the power to levy an assessment on each member, the same not to exceed one dollar, to meet any extra expenses of the Club. Members refusing or neglecting to pay their quarterly dues, and assessments properly levied, within thirty days after due notice, shall forfeit their membership in the Club.

Sec. 4. New members shall not pay any dues until the first regular collection of dues in the months of January, April, July and October next following their admission.

New Members.—Sec. 5. Each applicant for membership must be proposed in writing by a member of the Club. Honorary members may be elected by a unanimous vote of the members present at a Club meeting. The application of every candidate, unless by the unanimous consent of the members present, shall lie over until the next meeting of the Club, and a committee of three be appointed to investigate the same. If the report be favorable, he shall be balloted for. Three negative votes shall constitute a rejection of the application.

Article VIII.—Withdrawals—All withdrawals from the Club shall be made in writing, to the President, and all interest in the property of the Club of members withdrawing, or in any manner ceasing to be members of the same, shall be vested in the Club. No member in arrears shall be permitted to withdraw. Members are considered to be in arrears when in any way indebted to the Club.

Article IX.—Liquor and Betting—No intoxicated person, nor intoxicating liquors of any description, shall be allowed upon the Club grounds, nor will betting be permitted, under a penalty of one dollar for the first offense, and expulsion from the Club for the second offense, at the option of the Club.

Amending Constitution.—A two-thirds vote of the members present shall be necessary to change any of the Articles or provisions of this Constitution. Any member desiring to have any Article or provision of this Constitution changed, amended or stricken out, must give notice of the proposed change, in writing, to the Club, at a regular meeting, to be acted upon at the next regular meeting.

BY-LAWS.

Article I.—Meetings—Sec. 1. The regular meetings of the Club shall be held on the second Monday evening of each month at 8:30 o'clock. Eight members shall constitute a quorum.

Sec. 2. The order of business at meetings shall be: 1. Roll call; 2. Reading of minutes; 3. Reports of committees; 4. Proposal and election of members; 5. Collection of dues; 6. Unfinished business; 7. New business.

Article II.—Any person not a member of the Club may be admitted to the Club grounds, not to exceed six times a year, when introduced by a member of the Club in good standing. Said member shall be responsible for the behavior of the visitor so introduced.

Article III.—Regular Shoots—Sec. 1. The regular shoots of the Rifle department shall be held on the first and third Wednesdays of each month, except when otherwise ordered by the Board of Directors.

Sec. 2. The regular shoots of the Gun department shall be held on the second and fourth Wednesdays of each month, except when otherwise ordered by the Board of Directors.

Sec. 3. Any member shooting outside of the score at a shoot of the Club, may be fined, reprimanded or expelled by a vote of a majority of the members present.

Any member of the Club taking advantage of a shooter, by talking or otherwise, will be subject to a fine of not less than one dollar, and for a second offense, expulsion.

The American Shooting Association Rules shall govern all trap shooting.

Shooting Rules of Rifle Department.—Rule 1. Any rifle may be used having a weight not exceeding ten pounds and a minimum pull of trigger of three pounds, with any sights, except telescope and such other front aperture sights as solid disks, pierced in the center and covering the target and danger signal. Rifles with hair or set trigger will be allowed, subject to a handicap of two points in ten shots.

Rule 2. The position in matches up to and including 200 yards, shall be standing; at 300 yards, standing or kneeling; beyond 300 yards, any position may be taken; in all cases, without artificial rest for rifle or body.

Rule 3. Any regular target may be used, according to the choice of the Board of Directors.

Rule 4. Any shot which actually touches the dividing line shall have the benefit of the touch. Any objection to the scoring of a shot must be made before another shot is fired.

Rule 5. Sighting shots may be allowed at the discretion of the Captain. A tie shall be decided by inverse order of shots, counting from the last backwards.

Rule 6. Whenever the danger signal shall be displayed, the person about to fire must open the breech lock of his rifle. If he leaves the firing point, he must draw the cartridge, or, if a muzzle loader, remove the cap.

Rule 7. The foregoing rules shall govern in all rifle shoots; and for further rules not contained herein we adopt the rules of the National Rifle Association of America.

Any alterations, additions or amendments to these By-Laws must be made at a regular meeting, to be acted upon at the next regular meeting, when they may be adopted by a two-thirds vote of the members present.

New York Rifle Club.

Jan. 30.—This club held its regular shoot to-day at Zettler's. The following scores were made by the members present. Offhand, German ring target. Distance 75 feet. Any rifle, sights and trigger-pull. Two best scores counted: A. H Isbell (69) 247, 248; M. Herrington (66) 245, 246; C. E. Gensch (58) 242, 247; C. C. King (57) 244,245; D. Crocker (62) 238, 242; R. J. Young (63) 240, 241; F. Walters (56) 237, 240; G. L. Mason (63) 228, 232.

R. J. YOUNG, Sec.

Missouri Rifle and Pistol Club.

St. Louis, Feb. 1— At the regular weekly medal shoot of the Missouri Rifle and Pistol Club, the following scores were made on the German ring target reduced to 75 feet: R. Herold, 237; R W. Staley, 237; E. L. Zukoski, 235 Capt. W. P. Schaaf, 233; G. F. Knapp, 232; H. Kephart, 230; Col. R. Buchanan, 228; G. T. Dunn, 228; E. Kaiser, 226 C. Vogt, Jr., 226; G. C. Farley, 225; M. Summerfield, 223; A. Gfeller, 222; E. Wright, 217. All of the men shot the same gun, a new Stevens Ideal, 22 short, which Capt. Schaaf recently added to his armory.

HORACE KEPHART, Sec.

More Scores from Cincinnati.

Cincinnati, Jan. 27.—The following scores were made by the Cincinnati Rifle Association, at its range to-day, at the Four Mile House, Reading Road. Conditions: 200 yds., off hand, at the Standard Target. At the next regular shoot (Feb. 10), 12 members of this association will shoot a telegraph match with the St. Louis Rifle and Pistol Club. Conditions: 200 yds., off hand. Standard Target, 25 shots per man, all shots outside a three counted a miss.

Rifle Shooting at Syracuse.

Syracuse, N. Y., Jan. 30.—The Syracuse Indoor Shooting Club has just concluded a very successful tournament which has been in progress since Jan. 1, every Tuesday and Friday. The club was organized in 1892 with a membership of fifteen, and through the able management of its officers has now 37 active members and is rapidly on the increase, containing some of the best shots in the State. The members are nearly all representative business and professional men. Great interest has been manifested during the prize shoot. The officers of the club are: President, F. C. Ainslie; Vice-President, J. F. Helm; Secretary and Treasurer, R. Robotham, or as the boys call him, "Old Ro," who will make it very pleasant for any one who may see fit to call on the club. The shoot has been for merchandize prizes donated to the club to the value of nearly $100. The shooting was done on a twenty-five and a half inch German target, and as the scores will show, were of a rather warm character. The best three scores of five each to count; highest possible score would be 375: Stillman, 371; M. Grossman, 367; Seeley, 366; Ainslie, 364; Leighton, 364; Cooke, 361; Smith, 361; S. S. Spire, 360; A. J. Spire, 360; Zischang, 358; Robotham, 355; Ball, 355; Thurwacher, 355; Becker, 354; Joslyn, 353; Helm, 351; Rowlands, 346; Barnes, 349; Nearing, 349; Beng, 348; Reed, 343. Pistol.—Possible 150 at 60 feet. Stillman, 133; Helm, 132; Thurwacher, 120. There were 25 prizes in all, 23 for rifle and three for pistol, and the men won in order named. There was a great deal of interest and enthusiasm during the shooting off of the ties, especially between Ainslie and Leighton, who are rival shots; they tied the score the second time on 70 out of 75 on three shots. On the third score Ainslie won amid geat exciement.

THE MARKETS AND THE GAME.

Whatever may have been the motive of Game Warden Blow, of Illinois, in preparing a bill to open the Chicago market for traffic in venison and grouse and quail and ducks, the year around, it is certain that the measure flies in the face of the growing conviction, held by all who are interested in preserving game, that legislation worth striving for must be in the direction of limiting the sale in market.

The markets are consuming the game of the land. To that consumption must be credited the destruction which has made barren of fur and feather most of the depleted wild game districts of this Continent.

Inordinate slaughter by sportsmen—or by butchers so miscalled—is without excuse; no right-minded person would think of presuming to defend it. Wanton killing is wicked and inhuman. But when the score has been made up, when "sport" has been charged with the utmost tittle that belongs to it, the sum is so inconsiderable as to count for nothing, when compared with the steady, consuming, and tremendous machinery of market hunting.

This is a principle perfectly well understood by all of us who have known the conditions and studied the facts; and because we are familiar with these conditions of the game supply, we are also, most of us, agreed that successful achievement in protection lies in the direction of shutting off the markets.

It is the province, the duty, the right, and the privilege of representative journalism, to be ahead of and not behind public opinion. The Forest and Stream's "Platform Plank"—The sale of game should be forbidden at all seasons—is perhaps far in advance of the unanimous public conviction of the day. But if so, then rightly so. That is as it should be. The platform is not ahead of the convictions of the leaders in game protection. It is not in advance of sound common sense and good public policy. It is, no doubt, beyond present practicability of attainment as to many sections of the country. But it is not beyond what we must come to—and some day will come to—if the game destructive agencies now working shall go on unchecked.

Meanwhile, here and there, advances are making toward the absolute prohibition of market killing. We suspect that an analysis of what has already been accomplished in this direction by one State, and another would excite astonishment. We shall give such an analysis in an early issue.

As was suggested on this page last week, the prompters and promoters of game laws in this country are now and always have been the sportsmen. If they had not provided protection, there would have been none. But if any one shall assume from this fact that game protective laws are devised in the interest of a class, or that they operate to the advantage of one class, and not of all classes, he falls into grave error. For sportsmen are not a class, set off from the rest of the community. They are made up of all classes, and of every class, high and low, rich and poor, breadwinners and spendthrifts, the horny-handed wage-earner and the dude who never earned an honest dollar in his life. It is worthy of note as a curious fact that some people seem determined to discuss this question of game protection with the dude ever in the foreground; they refuse to consider the wage-earner. Good game laws are for the advantage of sportsmen; but that is only another way of saying that they are for the benefit of the community at large.

Individuals who seek to secure game legislation opposed to the sportsman's interest may possibly be sincere in believing that they are working for the public good; but they are not. They are on the wrong track. Game laws can benefit the community only as, and in such degree as, they are in the interest of sportsmen. It follows, then, that any advocate of a game bill, who should sneer at sportsman's interests, as, for example, Game Warden Blow has sneered at the Illinois Association, should be closely watched, not only by sportsmen, but by the public at large; for it would almost certainly be found that his measure was opposed to the interests it purported to defend. In this particular case the Springfield bill, whose sponsor has such a fine scorn for sportsmen, turns out to have the backing of the Chicago game dealers; and the main end to be attained by it is disclosed to be the unrestricted sale of game. However efficient Warden Blow may be in detecting and punishing offenders in the rural districts, he is an unsafe counsellor at Springfield, and his attitude toward the Chicago market is such as to demonstrate that to some one else should be entrusted the duty of enforcing the law in South Water street.

TWENTY YEARS FROM NOW.

Twenty years from now a student of international yachting history might repair to the Mercantile Library of St. Louis, and by courtesy of Librarian Horace Kephart be permitted to consult the files of the New York Sun and of the Forest and Stream for the year 1895.

In the Sun of Feb. 8 he would find a cartoon from the English Vanity Fair, and in connection with it some very interesting paragraphs of personal gossip of the members of the Royal Yacht Squadron. Then, turning to the Forest and Stream of Feb. 9, he would find there the cartoon and the same biographical notes word for word. Comparing the dates of the two papers, Feb. 8 and Feb. 9, he would naturally conclude that the Forest and Stream of Feb. 9 must have stolen the material from the Sun of Feb. 8.

He would be mistaken. The article was stolen, but it was the Sun that stole. The Forest and Stream of Feb. 9 was issued on Feb. 6; its yachting article was stolen by the Sun on the 7th, and printed on the 8th.

We explain this for the instruction of the St. Louis Mercantile Library reader of 1915; and to show him that figures may sometimes lie, and date lines be unreliable when one is fixing responsibility for literary theft. He will find frequent and extensive identity of articles in the Sun and the Forest and Stream; we ask him to believe that whatever the date lines may appear to show, the original publication was with the Forest and Stream.

CONCERNING CHINESE WALLS.

Hon. J. M. Rose, of Little Rock, resents our having said in a recent issue that he ever drew a non-resident game law for Arkansas. He repudiates the notion in toto, and appeals to us to say that as for himself individually, and as for the sportsmen of Arkansas, they welcome their fellows from other States to shoot and to fish, and to make test of Southwestern hospitality. The quail in the 'old fields," the bears in the canebrake, the shovel-nosed catfish in the muddy rivers—all these and more too are free to the stranger from other parts; and Heaven forbid that the country blazed by the axe of Davy Crockett should now prove churlish and play the dog-in-the-manger. So much for Arkansas and the hands of her sportsmen outstretched to grasp in welcome the hands of those from other States.

Another story comes from Michigan, Nebraska, the Dakotas, and other States in the West, and from Maine in the East, where they are proposing to adopt the Chinese wall system of forbidding non-residents to hunt without first having paid a fee and taken out a license. We have said so much in an endeavor to point out the un-American and unpatriotic character of legislation of this brand, that it is gratifying to receive from another such an incisive and well put presentation of the case as that which is printed on another page, from the ever pithy and pointed pen of George Kennedy. Mr. Kennedy writes from Missouri. As a Missourian he claims brotherhood with the Nebraskan in a common country. He makes a lofty and patriotic plea for a recognition of that brotherhood. He describes such non-resident discriminations as "un-American, Chinese, selfish, brutally discourteous," and calculated to check the growth of co-operative game legislation. All of which is true, every word of it. And no whit the less true because the prophet who proclaims it lifts up his voice in the good old State of Missouri.

But "come now, you Nebraska, we mean Omaha, fellers," we will whisper to you, confidentially, just what retort you shall make to this Missouri man, and you shall constrain him forever after to hold his peace, and never again to use the Forest and Stream as a telephone to shout into your ears his reproaches and exhortations concerning your non-resident discriminations. Just you say to him: "Come now, you Missourians, we mean you St. Louis feller, you have slapped all outsiders in the face, and we have come back at you. For read your own non-resident discrimination as contained in Sec. 3905 of your law, given in the Game Laws in Brief:

"If any person, being a non-resident of this State, shall kill any deer, fawn, wild turkey, pinnated grouse, ruffed grouse, quail, woodcock, goose, brant, duck or snipe, coon, mink, otter, beaver, bear, muskrat, or other furred animals, he shall be deemed guilty of a misdemeanor."

"If any of our game laws deserve to be written in Chinese characters, how would it do, Mr. Kennedy, to make a beginning right down where you live?"

May it, perhaps, be said in explanation of this Missouri man's crying from behind his own Chinese wall to builders of other walls, that the Missouri structure has so fallen into decay and crumbled to dust, that its very existence has been forgotten? Certainly, no vision so clear, no sentiments so broad and so patrotic could have been his who was consciously walled in by this section of the Missouri Revised Statutes of 1889.

Or, to employ another figure, shall we regard these non-resident shooting laws as Chinese torpedoes of the variety described in the New York Times last Monday as planted for the defense of Taku. The steamship Tie-Ching in crossing the bar ran into one of the torpedoes, and damaged it so severely that complaint was made by the authorities against the steamship company for having injured their torpedo defenses.

FIELD ANDROMANIACS.

Dr. Parkhurst has written for a woman's journal a paper about "Andromaniacs," by which term he designates women who aspire to be mannish.

A woman who joins in the field sports of the rod and the gun is not by reason of that participation inevitably an andromaniac. She may make her part in such pursuits so distinctively feminine, and in them so show forth her womanly qualities, that as a sportswoman she shall be more than ever attractive and lovable—witness the husbands, and fathers, and brothers, who have from time to time set forth in these columns the satisfaction they have found in feminine comradeship in the field.

But if we are to have multiplying hosts of sports women and fisherwomen, it is not to be expected that there will be no andromaniacs among them—women moved by an unworthy aspiration to outdo the braggart feats of masculine but unmanly killers for count. Indeed, the field andromaniacs are already with us. The Florida newspapers have of late busied themselves with the story of a Philadelphia woman and her husband who in the western part of that State recently scored 629 quail and other birds in four days, and a total of more than a thousand in nineteen days. The item has been copied extensively, and in some instances clearly at paid rates as an advertisement of the hotel where the bags were scored; and the hotel people and the parties immediately concerned appear to think that this feat of outdoing all previous records is one which should be heralded to the entire civilized world. So it should, and to the uncivilized world as well.

DUCK EGGS.

During the consideration recently of the Sundry Civil Service appropriation bill in the Senate, Mr. Mitchell, of Oregon, introduced an amendment appropriating the sum of $5,000 to investigate the supposed destruction of wild fowl eggs in Alaska for commercial purposes, about which much has been written. In his speech, however, Senator Mitchell indulged in glittering generalities only and gave no hint that he had definite information on this subject. Five thousand dollars would certainly be ample to pay the expenses of a special agent to Alaska, and would enable him to spend a delightful summer studying the fauna of that region, but before such a junketing trip is set on foot, it would seem that some evidence ought to be presented to show that there is a basis of fact for Mr. Mitchell's statements. No one questions that our wild fowl are each year less numerous than they were the year before, but it is not necessary to go to Alaska nesting grounds to discover the cause of this decrease. It is to be found between the parallel of 49 degrees and the Gulf of Mexico at any time between September and May in any year. Our shooting season for wild fowl is too long and too many birds are shot, and until some reform in this respect takes place the fowl will continue to decrease.

The Sportsman Tourist.

IN MINNESOTA WILDS.

I.—A Race With a Prairie Fire.

"Game of all kinds abounds here. Moose, elk, caribou, deer, black and brown bear, chickens, partridges, pintail grouse, rabbits, wolves, fox, skunk, martin, fisher, lynx, otter, mink, musk rats, wolverines, geese, ducks, crane, snipe and fish, bear, and elk come into my garden." Thus wrote the guide who was to take me into the wilderness of Northern Minnesota. Dear reader you have probably been written to just the same way, and you have probably been preyed upon just the same way. We are all wiser the next time.

However, the lure proved too much for me, and on Oct. 6 I started for this "game paradise" over the B. & O. R. R. to Chicago, thence to St. Paul via the W. C. R. R. and over the G. N. R. R. to my destination. In mentioning these railroads, I desire to extend my hearty thanks for the many courtesies shown me and my dogs, neither road making any charge for transporting my dogs and outfit from Philadelphia to Stephen, Minn. I found the train hands most kind and obliging, and especially were they good to my dogs. After leaving the train we had to stage it forty miles across the prairie in the face of a biting wind, the remains of a blizzard which had struck there the day before. It was a long, tedious ride, and I was only too glad when it ended. After leaving the railroad the country is level prairie for thirty miles, but as you go east it becomes broken into ridges and muskeags, and to one never having been in such a country it is a novelty in its way. One can almost lose himself by closing his eyes and turning around. The ridges all look alike, and all appear to run north-east and south-west, with a muskeag sandwiched in between. These muskeags are covered with tall grass and reeds with a bunch of willows thrown in here and there. In many places the reeds are so tall and thick that one can scarcely find his way through them. In the fall of the year the ground is soft and boggy, in places covered with water; in the spring-time they are veritable lakes. There seems to be only a crust of turf in some places and to break through that is to get into quicksands. The country is one massive spring bed to supply the lakes and rivers which abound there. You can dig in almost any place, and strike water at a depth of three feet, and in many places less than one foot. The ground is covered with tiny shells wherever you go, and from the formation of the country one would suppose it had been made during the glacial period. It is one of the most desolate-looking places it was ever my good fortune to visit. Game of all kinds was very scarce there, as the forest and prairie fires had preceded me and done its work most effectually. Apropos of prairie fires, were you ever caught in one? No? then your adventures have not been complete. Tongue or pen cannot describe it. We were camped two days' drive from the ranch, and about eighty-five miles from the railroad on a branch of the Roseau River, in a big muskeag after ducks and geese. We had noticed the smoke in the distance for a day, and that night retired with some little misgivings that we might be compelled to fight fire before morning; however, we were not disturbed. The next day by noon the fires seemed to be starting in all directions, and we came to the conclusion that it would be safer to break camp and get off the muskeag; in the meantime the smoke from the fire we had noticed the past two days had become dense and black, and was approaching us rapidly. We had expected two gentlemen from Nebraska to join us in this camp, and so became anxious about them, as this particular muskeag is a most treacherous one.

It did not require long to get camp and outfit ready to pull out, and we started in earnest. The wind had freshened and was blowing a gale, and toward us. We had scarcely gone a mile when we noticed what we thought was a camp flying a signal from a pole. Thinking this was the signal of our friends to attract attention, we started for it. The fires were rapidly closing in on us from every quarter. We were completely hemmed in by fire and water. In driving from one was to drive into another. Imagine, if you can, a fire covering an area of twenty miles in semi-circular form on your right, and an impassable river on your left. We drove as rapidly as our horses could go through the thick jungle of grass reeds and willows. When we had gotten within a mile of the supposed camp, we found it to be a log shanty, and the signal was a tattered and torn Stars and Stripes. I don't think I ever revered the nation's flag so much as I did then. It proved a blessing to us, for had we gone in the direction we had first intended we would never have gotten out. About a mile and a half from this shanty to the right was another similar house situated in a small grove of poplars; this we concluded would be the safer of the two places should we be compelled to do battle with the flames.

It was a most fortunate thing for us that we went there, as we found later. Some plowing had been done on one side of the house, but the other three sides were almost unprotected. Going up to the shanty we found one poor, helpless old woman, crippled with the rheumatism so badly that she could scarcely stand; on inquiry we found that she and her daughter and little granddaughter lived there; the daughter and child were away at the river two miles distant fishing, but were expected home at six o'clock. She gladly welcomed our arrival, and invited us to pitch camp there. Promptly at six the daughter returned with her child, and an old man whom she introduced as her father-in-law, Mr. Ripenback, who lived in the shanty from whose roof floated the American flag. He insisted on us all going over to his place as "it was the best place to fight fire." "He had done some mowing and a little plowing during the summer, and it was safe," he said. We hitched the horses to the wagon, which was still partly loaded, and made up our minds that if the fire broke through the thicket about a mile back of the house we would pull out for the Ripenback ranch, thinking of course that would give us ample time to make it.

In the meantime I climbed on top of the shanty to watch the progress of the fire. I shall never forget it As far as the eye could see was one seething mass of flames, now running along the ground like an enormous serpent, then suddenly leaping fifty feet in the air into all sorts of shapes and roaring like forty locomotives. I did not realize how fast it was traveling until a few minutes later. Almost before I had time to think it had broken through the thicket and was coming down on us like the wind. Jumping from the roof I gave the alarm, hurried the old man and his daughter-in-law and child off in advance, so that, if necessary, we could pick them up on the road, and rushed in to carry the old lady out and place her in the wagon. This required some little time, for the woman weighed about two hundred and twenty-five pounds and, as we were all light weights, it was a case of tug. By the time we had got her in and had started, the flames were within five hundred yards of us. Then began a race for life with all the odds in favor of the fire should the slightest mishap occur to us. We ran those horses as fast as they could go, yet the fire gained on us slowly, but perceptibly. When we had gone two-thirds of the distance we overhauled those we had sent on ahead and it was only a moment's delay to stop and toss in baby and mother; but when we tried to get the old man in that was different, he wouldn't budge, but insisted that we should go on, that he could take care of himself. He was carrying a grubbing hoe in each hand and a bandbox on one arm, a more stubborn old fellow I never met. By the time we had argued with him a minute the fire was within fifty feet of us, and it began to look as though it might be all night with us. There was no alternative but to pull him out, which was done by grasping his right hand and throwing the hoe away and putting spurs to the horse. He was about played out when he reached the shanty, but had he remained on the prairie two minutes longer he never would have gotten out, as the fire was within twenty-five feet of us.

From that time until morning we fought fire with wet carpet and sacking, oftentimes having to stop and put out the fire on each other. One of the most remarkable things about it was that it burned entirely around the camp that we had vacated and did not touch it; and had we remained there we would have been perfectly safe.

Strange to say the natives in that country use more precaution to save their haystacks than their homes and families. It is a common occurrence to see the haystacks completely plowed around, with no plowing at all around the house. They will actually leave women and children in such houses to go to the fields to endeavor to save the hay. Racing with such a fire as this one was is not at all amusing. It was my first, and I trust my last one. It was the most sublime, yet most fiendish sight I ever witnessed. And after it, what a dismal, blackened, dreary waste of country. What there is in that country to attract a man from civilization I cannot see. For these two families I have spoken of had left comfortable homes and were well educated people, and had evidently moved in very good society in one of the largest cities in Wisconsin. This fire burned over an area of seventy miles. We could have back-burned, of course, and moved on to it, but in such a country that is a last resort. One hesitates to start a fire there as you never know where it will end, or how many helpless people it may destroy. A man who has once had such an experience will never forget it, and certainly it should remind him to never throw lighted matches around, or leave camp-fires to burn out. Even fire knocked from a pipe in the dry grass in that country will more than likely start a fire that might burn for days, and destroy much life and property.

Last summer a certain lawyer living not many miles from Argyle was hunting big game on a muskeag near the main road running to Jadis. He became tired waiting for the game to come to him, so thought he would drive it out by firing the muskeag, which he proceeded to do. He succeeded in escaping with his life, but had to fight for it. Many of the settlers lost everything they possessed, and barely saved themselves. That one fire must have burned over an area of seventy-five to one hundred miles.

It will not be healthy for this same attorney to hunt again in that locality, as among those who lost everything, are many low-caste Bohemians who swear they will kill him, if he is caught there. And can you blame them? It seems to me the only thing to deplore is that he escaped the fire he started.

We didn't waste any more time in the burned country, so early in the morning pulled out for the Manitoba line, where we camped on a branch of the Rouseau River, which I will endeavor to describe to you together with the sport to be had there. WABASH.

[TO BE CONTINUED.]

THE RHINO'S PROMENADE.

ARUSA, GALLAS, Africa, Dec. 14, 1894.—Since my letter to the Forest and Stream on elephant shooting a year ago, I have spent most of my time in the best game country in Africa, where previous to my expedition the sound of a rifle had not been heard.

We camped one day by a sandy river-bed, where there were pools of water about a mile apart. Tracks of elephants, rhinos, zebras, and lions were to be seen at every step. I determined to have a try for the beasts over a water-hole, so I had a little zariba built on a high rock above the water. I took my boys, Karsha and Hersi, to keep watch during the night, while I made myself a comfortable bed with rugs. But there was not to be any sleep that night. The sun had scarcely set when we were on the alert. Yes; there were distinctly the sounds of a heavy beast approaching. Was it an elephant or a rhino?

Steadily the footsteps drew nearer, and then suddenly a huge animal ran down the bank on to the broad stretch of sand in front of the pool It was a rhino, and I could distinctly make out whether he had good horns or not as the night was so bright and starry. He did not come to drink, but walked up and down within twenty yards of where I was, as though he had made a rendezvous there. Four zebras were the next to appear and several hyenas. The zebras tried to approach, but the rhino repeatedly drove them away.

Now, I thought, surely elephants were approaching, as I heard several heavy footsteps; but no, it was a family groupe of rhinos. On they came, now halting, now going forward a few steps, apparently without any object. Three were full grown, while the fourth appeared as small as a young donkey. It was amusing to see the little one's perfect behavior. It kept close to its mother's heels the entire time, never looking to the right or to the left, but stopping when she stopped and advancing just as many paces as she did. The scene was most interesting. This spot, which in the daytime was one of the loneliest places in the world, now presented a most gay appearance. Rhinos, zebras, and hyenas were scattered all over the sand. The country about was very bushy, and I believe this large open space answered the purpose of one of our parks. The animals were there, not only to drink, but to see their friends. This sort of thing kept up all night. As soon as one lot of beasts had disappeared another came to take its place. I was so absorbed watching the love-making and fights of the animalsthat I did little shooting.

Only two drank from the pool, which I considered rather strange. My boys were constantly urging me to shoot, but I would not do so for a long time, knowing I had plenty of shooting before me. About midnight a rhino appeared that seemed to have better horns than usual. He stood for some time directly in front of me, and I succumbed to that desire for killing that does take possession of one at times. I put up my 577 express rifle and fired. Up went the sand in all directions, and there was such a snorting and puffing as only a rhino can make. The huge beast was as active as a thin pig, and after turning in many circles made his way up the opposite bank into the bushes. Here there was a crash, a few snorts, and we could hear that all was over with him. I went out with my boys, and found my rhino as dead as a stone. He had, as I had judged, a fine pair of horns.

The next animal I shot was a zebra. He had had a rendezvous here with his mate. The female first appeared, trotting straight up to the pool. She stopped, put up her ears, and waited like a statue for some minutes. Then there was a sound like a mule's bray, only more shrill, and out galloped a splendid stallion from the opposite direction. There was much crowded into the space of a couple of minutes for that fond husband, as he was to meet his doom almost before the sound of the wedding bells had died away. His mate trotted away, pleased as Punch, while he stooped to take a long drink. I needed meat, and here was the beast to take. I put a ball into his vertebrae that settled his career on the spot.

I did not shoot for some time after this, but toward morning there was such a spendid pair of rhino horns in front of my zariba that I let the owner have it in the neck. Off he dashed up the opposite hill, turned, ran amuck among the bushes, and finally fell down a bank twenty feet high. This tremendous shock was not enough, however. He disappeared around a curve on a run, and I was afraid I had lost him. The day broke, and I had not had a wink of sleep. Except for a short time after my shots there had not been an instant but what some beast could be seen from my zariba. I went out with my boys to track the rhino I had wounded. We found him half a mile off, dead. His front horn measured twenty-four inches around the curve.

My experience was not yet finished. On our way back to camp we started a rhino out of the bushes close to us. I fired quickly, and hit him too far back. Without a second's hesitation he charged us like a steam engine. We had just time to dodge behind bushes. He kept on a straight line for fifty yards, and stopped. He let me get quite close to him before I fired, and put an end to his sufferings. A. DONALDSON SMITH.

PIONEER LIFE IN MAINE.—II.

BY GEORGE SMITH,

In accordance with the suggestion of those who had listened many times to these stories of the dangers and privations of the pioneer settlers, the following account of the early settlement of the town of Freedom, Me., and pioneer life in that region, accompanied with a brief record of the years spent in the West, was written by the author at the age of eighty-one.—D. C. SMITH.

Departure for the West.

Before proceeding further, it is important that I should give a more detailed account of myself and my brothers connected with me; especially as my brother Joshua was the first, who entertained an idea of going to Ohio.

After contemplating the undertaking for a long time, he at last started on the enterprise in Sept. 1808. Having heard of mechanics being in good demand in the new State, and as all business was at a stand-still, an embargo having been laid on all commerce between England and the United States, as war was expected to take place between the two countries, he thought he should be more out of its reach; and, besides, he would be able to see more of the country, and give us all an early account of its facilities for a future residence of young men. With these impressions, he started on horse-back, at the time stated, and arrived in Ohio in twenty-five days. He went to work at his trade, in Zanesville, at $1.00 a day. As he wrote us that business was good, we determined to follow him, as soon as possible; but times were so hard, and money so scarce, we must wait till we had the means to undertake the journey.

Then followe three years of harder times than ever. War being declared in June, 1812, many young men enlisted to go to Canada to fight the British. At last, a company was called for to go "Down East" to stop the smuggling on the line, and as there was nothing else to be done to get a dollar in money, I enlisted for one year, and was all the time on the frontier, from Eastport to Calais, where at last I was discharged, having served out my year fully. In the year 1813, my brother John, having married and settled in the town of Readfield, wanted me to work with him at the carpenter's trade; said he was going to Ohio in the fall, and as I had read Joshua's letters, I felt quite anxious to go on with him to see the new country, So I went to Readfield that summer, and made all preparations to start in September, at an early day, which we accomplished.

A Ghost Story.

My brother Stephen, a mate to me, was determined to go on to Ohio with us, so I went down one Sunday afternoon, from Readfield to Augusta, where he was at work, to inform him of the time of our intended start. As he was about ready, he concluded to go back with me that night. Some little business detained him, and I walked on, intending to wait for him at the Davis Hill Cemetery. The sun was down and the weather fine, and as I was soon to leave this part of the country, the thought

struck me that I would go into the cemetery and take a last look at the graves of my old uncle and aunt, who had lately been laid there; and though the gate was high and picketed, I made out to climb it and get in. As the grass was very high, I had some trouble to find the graves. Besides keeping watch for my brother, I had to make all the haste I could, as it was fast growing dark. I travelled from one grave to another, pulling the tall grass aside from the tomb-stones to see whose they were, and having found them, I had to kneel down, bending the grass with one hand, to enable me to read the inscription, still watching the gate, lest my brother should go by unobserved. I began to feel a little nervous at the thought of being in the congregation of the dead.

I remembered seeing some lines at the bottom of my aunt's tombstone, and knelt down again to read them.

Just at this moment I heard something step behind me —I began to tremble, but in a moment more I determined to turn my head, and take one look, though it prove my last—and I did take that look; but I cannot describe the scene to you. There stood an object about three feet from me, drawn back in an attitude of defense, having on his head a pair of the largest horns I ever beheld, with a pair of large twinkling eyes that glowed in the twilight like two fire balls. At the sight I screamed aloud, and fell prostrate upon the ground. In a short time I became conscious again, and my strength having returned, I hurled a good sized stone at the monster, as he leaped through the tall grass up the hillside.

I was at a loss to know whether my brother had gone by, however. I went to the gate, and gazed through the slats, till I got restored a little. It seemed as though I should never be able to climb over the gate again; but stay there, I could not, and I must try again. I did try —but never experienced such a weakness before, as in the attempt to climb that gate. At last I succeeded, and sat down on a stone by the side of the gate, covered with such a prespiration as I never enjoyed before. Hearing some men coming down the hill, I inquired if they had met a man on the road. All said no; so I concluded he had been detained longer than he expected, which I soon found to be the case, on his arrival. I merely said, "I feared you had gone by"—and started with him up the hill, which seemed so long. I feared I should never be able to reach the top. Sitting down, the first chance I found, he said to me, "You look tired, is anything the matter?" "I feel faint," I said. He sat down also, but as I knew we had six miles to travel that evening, I dare not say a word to him of what I had seen. We had often heard our parents and others tell of such sights being seen in such places—the recital of which I was not able to endure at the time. I therefore said, "Let us be going, we shall be late home." As most of the way was rising ground, and we had to sit down so often, I thought we should never get there; but at last we came in sight of my boarding house, and there was a light in the window.

As soon as I entered the door, old Mrs Allen, who was up waiting for me, exclaimed "Why Mr. Smith! What is the matter? How pale you look!" I said, "I had an ill-turn this evening." My brother said, "He merely gave out on the road; he had to stop to rest several times." "Shall I get you something to take?" said Mrs. Allen. I assented, and she brought me some cordial, which, she said, was good for anything. I took some of this, and felt better. My brother said, "He was well enough when I left him. I had some business with a man who was owing me, and he told me he would wait for me at the graveyard, at the foot of Davis' Hill, where I found him sitting by the side of the gate. I thought then he did not look as well as usual. Mrs. Allen exclaimed, "Why, Mr. Smith, that was the worst place you could stop at, there are such sights seen there by many folks; I would not have sat there for anything in the world. Did you see anything to-night?"

By this time I was more troubled than ever, with those horns and eyes before me; and, as I did not immediately answer her, she raised her hands, saying emphatically, "I know he has!" At last my brother said, "George, did you see anything there to-night?" I then related to them the story, as I have here. Mrs. Allen again raised her hands, exclaiming, "It must have been the devil. What color was he?" "As black as tar," said I." "Then it was certainly the devil, I'll go and call up Mr. Allen; he thought he saw something there the other night as he was passing by the graveyard." "No, no, Mrs. Allen," said I. We must all go to bed. I cannot sit up any longer." She said she should not sleep a wink that night. I slept but little, for that monster was magnified to me ten fold every time I closed my eyes, by her stories.

This was the first time I had heard of that place being haunted, but, though I had always been hearing of such places being haunted from my childhood, and it had a dreadful effect upon me—as most people believed such things to be true, and in this way, it was magnified a hundred fold to me.

Mrs. Allen, being one of the greatest workers ever seen in those days, was up betimes the next morning and had her breakfast ready by sunrise. As we went down to breakfast her first salutation was "Have you slept any?" She said that Jotham, her husband, and she hadn't slept at all since he heard about what dreadful sights I had seen in the graveyard.

I said, "Possibly some creature might have got into the yard." "No," said Mr. Allen, "that is not possible, for a dog could not have entered through the pickets—besides, no creature is ever allowed to be kept there." "Well, now," said Mrs. Allen, "You get your horse and wagon ready, Jotham, as I have a tub of butter to sell; and go right down to Augusta, and there you can know all about it, and if there is any creature kept in the graveyard; then Mr. Smith can be satisfied." When Mr. Allen asked what it looked most like—I said, "A great black ram; but a black ram I never saw." "No," said he, "nor did anyone else ever see such a thing."

Off went Jotham, with the tub of butter, and strict charges from all, "to find out about the graveyard." So, after selling his butter, he inquired if any creature was kept in the graveyard. "It is not allowed," said the man, "but old Spectacle Davis, on the hill, bought a pair of merino sheep in England that cost him $500; after shearing them, he was so afraid of losing them, he tarred them all over with tar, and got leave to put them into the graveyard this summer."

When Jotham returned, all were anxious to know the result of his investigations; and when it was told, as above related, I was relieved of one of the greatest trials of my life. The old lady declared she didn't care, she knew something was seen there after all.

The Start for Ohio.

Everything being ready, Monday, Sept. 6, 1814, was fixed as the day for our departure. Father and mother came up from Freedom to take their leave of four children, whom they had reared under the most trying circumstances imaginable. This was a day of no ordinary occasion to us all. Breakfast being over, and our horses in the wagons, we all sat a few minutes; while the tears fell from every eye, not a word was spoken. This was indeed a house of mourning, though no one was dead. At last, I broke the silence with this stanza:

"Why do we mourn departing friends,
Or shake at death's alarms?
'Tis but the voice that Jesus sends
To call them to His arms."

After singing this, we rose, and taking each by the hand, with an embrace for each, we left the house, mounted our wagons, and swung our hats as a last adieu to the many who had collected by the wayside to see us depart, father and mother following us, as mourners. In this way they followed us about four miles to the fork of the roads, where we all rose from our seats and bowed them a last adieu. A most trying scene was this, you may believe.

We directed our course to Monmouth, and here we had our first sight of a cotton factory—the first built in Maine. From here we went to Portland, and spent the first night of our journey in Gorham. Our next stoppings were as follows: South Berwick, Maine; Haverhill, Mass.; and Concord, Mass., till we arrived in Chelsea, a little way from Boston, which city we did not care to enter, as the British fleet was all in sight, and the militia were going into Boston, expecting to have a fight. Here we saw a woman clinging to her husband, in the greatest distress, crying, "You shan't go. You shan't go to Boston!" as he left the house to join the company going to Boston; but he went with them.

Proceeding on our way, we came to Lexington, where we tarried to visit the common, and see the monument erected in memory of those who fell in that eventful battle, where was shed the first blood in the cause of liberty. Our next place was Worcester, the handsomest place we had yet seen.

We Meet the Tithing Man.

Saturday night found us at Tolland, Connecticut. The following morning, Sunday, we harnessed and proceeded on our journey. We had gone but a few miles, when we came in sight of a church, and people going to church. Just as we were passing, a man came out with a long pole in his hand, and demanded where we were going on the Sabbath. Brother John, who was in advance, had stopped till we came up; "This man," said he, "says we have got to stop and go to meeting this forenoon at least." I explained to the man that we were on a long journey to the West, and could not stop without a great damage to ourselves, as we had three horses and five persons, and it would cost us too much; besides, no one, thus far, had said we must stop on Sunday. "There is the tavern yonder," said he, "you can go there and stop till meeting is over, then you can go on." "We will agree to stop at your expense," I said, "but not on our own." "I will not pay the expense," said he. "Move on, boys," said I. He threatened to "take notice" of me immediately. "What is that painted post, and horizontal beam for in front of the church?" I asked. "To put Sabbath breakers in, like you," he replied. "Boys, let us move," I said. He shook his pole at us, and said, "Don't you pass that tavern without stopping,"—to which we made no reply, but kept right on, and have not heard anything from him since.

We next arrived at Hartford, where we went to visit the State House. The lower story was of red sandstone. In one room was a museum of many curiosities. But in the Senate Chamber we were most edified by seeing the figure of General Washington in full uniform, as natural as life. This was the more interesting to us, as we had heard our father tell so much about him, and what a fine appearance he made in uniform. We went on to New Haven, one of the most beautiful places we had ever seen, where we imagined most people would like to live. On arriving at Fishkill, N. Y., we were much interested in visiting an old armory, of which we had heard our father speak many times, where General Washington always kept a guard, and of his being stationed there many times during his service.

We crossed the Hudson River in a great scow, to Newburg, on the western side of the river; from here to Morristown, N. J., passing through Newton, N. J., Reading, Penn., to Harrisburg, the capital of Pennsylvania. This place also was very interesting to us, being in a beautiful farming district. The State House was a lofty building of two stories, built of the bluest limestone, broken in every shape and form, with a white cement encircling each piece.

Carlisle, we found a beautiful city, built of freestone. James Madison, President of the United States, was here with seventy-four wagons, containing the Public Documents from the city of Washington, the British fleet having entered the city and blown up the President's house and many other buildings, and destroyed the Navy Yard. This was reported to have been accomplished through the treachery of the Governor of Maryland. Chambersburg, and New Bedford, our next stopping places, were both beautiful cities.

Crossing the Alleghanies.

From thence, we came to the town of Somerset, rightly named, situated on the top of the Alleghany Mountains. In those days this was considered the highest range of mountains in the United States. As the road was then travelled, they began to rise on the easterly side at the town of Strasburg, and continued to Pittsburg. The only travel to the Western States was right over these mountains in wagons carrying five or six tons each, drawn by six horses; one would often see eight or ten of these wagons in company, bound to the Western States. The time allowed was thirty days to Cincinnatti, Ohio; and so dangerous was the journey, that wagons loaded with goods were often cast away on these mountains. As no two wagons could pass each other, except at turn-out places, a mile or two apart, they had to wait many hours either in ascending or descending; to do otherwise was certain destruction. In going up, they had to beat, as vessels do against the wind. The mountains are vast bodies of conglomerate limestone, and wheel-ruts were often cut down a foot deep on either side; therefore single wagons were often wrecked by their wheels falling into thees ditches, and to go safe between the great tracks made by the large wagons was all important, for if you slid off into one of these ruts your case was hopeless. We used the greatest caution, sending one ahead to keep a look-out; two others walked, one on each side of the horses, to keep them on the track. It took us about a week to go eighty miles.

As we were going down the last dangerous mountain we met a man, his wife and two small children, one of whom he was drawing in a hand cart; his wife and the other child walking. On our making inquiries as to how he came to be in this situation, he said he had started to go to Ohio, with his family; in passing down the mountain, his horse ran off the track, and was killed, and his wagon was stove to pieces. His wife received a broken arm, for which reason he had been "lying by." He had spent all his money for a doctor's bill, and having fixed up the wagon, was trying to return to New Hampshire. People had been very kind to him so far. We each gave him half a dollar, glad that we were able to do it.

We were now past the dangers of the road and on coming to a more level tract of land, we stopped at a place called Blood Run, a small brook running across the road —so called because Washington was attacked here by Indians who fought till the brook ran red with blood, which event is still on record by historians. Our travels brought us to Washington, a smart place in this rough region. A day's journey of a gradual descent, and we found ourselves in Brownsville.

From thence we went to Wheeling, Virginia, here we crossed the Ohio River in a great flat boat propelled by the current of the river, coming to the town of Belmont, Ohio; this was a place of considerable trade though most of the buildings were log cabins. Cambridge was a smart looking place, having many handsome wooden buildings, well painted in New England style, yet the country looked new, as it used to in Freedom. We next reached Zanesville, the place of our destination, after a long, tedious journey of twenty-eight days, including our delays on the way. Here we found our brother Joshua, who had rented a house for our reception, where we drove up and unloaded for the first time since we started.

This place is situated on the east bank of the Muskingum River. It then contained a population of 3,000, and was a place of great importance to the surrounding country, as it was the only place of any trade on the river, except Marietta, about fifty miles below.

WHY WE WENT.

We are now preparing for a week or two in the open for the coming summer. We always do this about this time, always, and we have such vivid imaginations that we camp once a week regularly on Saturday nights.

Up to last summer this was as far as we got, and until the arrival of our annual disappointment, we extracted unlimited satisfaction from the solemn contemplation and arrangement of details as they were spread out on paper before us once in seven days from Jan. 1 to the last of September. Then the question being put, it was always decided that for "good and sufficient reasons" it would be impossible for the Manglers to take their annual outing.

We have now on the minutes that phrase, "for good and sufficient reasons," in four different places.

Each writing of it stands for the shattered hopes of nine months of preparation and careful forethought, minute calculations in regard to rations, argument, and heated debate; discussions tending to show the value of the lowly bean as an article of nutriment; grave deliberation as to the relative value of about thirty-five different styles of tents, which with voluminous correspondence from their respective advocates, furnished a subject for several months of ghostly powwow about the fire-place, and ended in a generous and feeling exchange of personalities. During this latter proceeding, it was beautiful (for a neutral person) to note the degree of accuracy which several years of association had enabled the Manglers to estimate the character of one another, and to put their final decision in forceful language, calculated to carry home to the complimented party, the meaning and magnitude of his exceeding insignificance.

Matters culminated in a manner which threatened the dissolution of the Manglers.

One Mangler was pushing the canvas monstrosity of an ingenious and practical friend. By a simple arrangement of hinges, springs, sticks, poles, ropes, boards, and a collection of some forty-five or fifty guys, it was made, as he clearly demonstrated, to serve such an astounding variety of purposes, that by its use we would have to take nothing but that and our tobacco. The tent furnished everything else.

As an unnatural curiosity, it couldn't be beat. You read about some aboriginal beings of the untamed, hairy West, buying a saddle and getting a horse to torture with it, gratis. This tent sold on a similar, but much more extended plan. When you bought one, you filled an order with a lot of printed questions like the "Symptoms" in a patent medicine ad. They filled the prescription according to your answers. For instance, these were some of the questions which you might answer to suit yourself:

"Are you herbivorously or carnivorously inclined?"
"Do you take cream in your coffee?"
"Do you prefer feathers or springs in your mattresses?"
"My favorite wines are——"
"Do you prefer bay rum or Florida water for shaving?"
"Shall we equip your billiard table for pool?" etc.

There were anywhere from fifty to five hundred of these questions. They made a record of every order they filled, and numbered your tent. Then when the trip was over, you just calmly packed her up and took her home. When you were ready for the next camp, you sent in your tent like a doctor's prescription; they filled it, and there you were. No trouble to yourself, no worrying, no agonizing dread that you had forgotten your slippers, or your lamb's wool fleece-lined triple thickness change of

underwear. Look at the relief! Look at the simplicity of the thing!

Such was the line of argument that benighted Mangler hurled at us.

He attempted to lure us on by promising reduced rates to introduce the thing, and even went so far as to offer stock in the company which was to keep this aggravated case of general country depository and pill works; for this was a combination scheme, they furnished your medicines, quinine, magnesia, Jamaica ginger, rheumatism remedy, and anything else your doctor ordered, or they would send their own physician to examine and prescribe for you.

We argued gently with him at first, and tried by kindness and mild treatment to bring him round. But he would have none of it, and injudiciously got his back up.

That Mangler is a wonder at ingenious epithet, the curious part of his performance being that he keeps his condemning discourse entirely free of profanity.

In four minutes by the watch, four years of dissatisfaction and disappointment were seen flying through the air in all directions.

It was impossible to be on the field, even as an innocent reporter, and not be hit by from one to a dozen sarcastic charges of duck loads.

In the midst of the fracas the door opened. The door, through which none less hardy than a Mangler ever passed, and the absent member entered.

He asked what the trouble was in the pleasant voice of an expectant peacemaker. In his hand he had a book. It was a small book. It didn't appear to be a particularly remarkable book. It was sort of light mud colored. Some gilt lettering was stamped on the outside. To the casual observance of the Manglers it resembled an elaborate tent catalogue.

The temporarily insane member said he needn't bring in any more of his infernal tent lies, the tent was decided on.

Thereupon the struggle, which had lulled for a moment began afresh. The new-comer made an unsuccessful attempt to escape, was cornered by above member and instinctively put up the book to shield himself from the wrath of the irate Mangler. He gave it one glance, and backed off. We had gathered for the rescue. Now we wanted to know what had forestalled us. We looked! No! We could not doubt it. In a drove of ten thousand moose, we could not mistake the remarkable features of the Forest and Stream representative fossil! Shades of Arabian Nights! That talisman would shield any holder. Then, the Manglers coming to their senses, also came to order, and the new-comer told a tale of a mighty combat with an advertisement, and described how he had captured what we had been pleased to call a tent catalogue, from the same. He proceeded to tell us that the book was the one we had been looking for, and we believed him, although we had not previously known that we had been looking for any book, and told us it was "Woodcraft," by Nessmuk.

The Manglers called seven extra sessions, discussed "Woodcraft," also digested it, and as a natural sequence to this, when the time came they went, had a royal time, and will positively appear next season with the original cast.

TOREN THURSTENSON, Secretary.

THE SUNNY SOUTH.—I.

Ibn Hankal's Geography.

CHICAGO, Ill., Jan. 21.—There are many kinds of philosophers, each of whom has his own brand of philosophy, and personally I take pleasure in sampling a little of one or other sort, along about the middle of the night, before the hour for splitting kindling wood has arrived. The trouble about most folks is that they think they have to accept all the philosophy they read as true, or else they have to get violently angry with it. Now, that ain't right. The way to do is to let every fellow have his own philosophy to suit himself. If you do this, you will find it more fun to read philosophy. Personally, I don't always agree that Ralph Waldo Emerson was a great man, because he lived in New England and ate oatmeal and wrote almighty bad poetry, and a pretty tough class of prose, but I let it go at that, and take pleasure in finding his egotisms, of which all men have a plenty, the most pretentiously modest man usually having more than anybody else. As I have said before, Ralph Waldo Emerson was named after me, and I like him pretty well on that account. Anyhow, proceeding on the above basis, I sometimes read Ralph Waldo, and once in a good while find something of what an editor would call good stuff. He was a great fellow to like things a thousand years old, and anything Greek, or Egyptian, or Arabian was nuts to him. This is how he happened to know about Ibn Hankal, whom most of us have never met. I was interested in reading what he said about Ibn, which was as follows:

"Ibn Hankal, the Arabian geographer, describes a heroic extreme in the hospitality of Sogd, in Bukharia. When I was in Sogd I saw a great building like a palace, the gates of which were open and fixed back to the wall with large nails. I asked the reason, and was told that the house had not been shut, night or day, for a hundred years. Strangers may present themselves at any hour and in whatever number; the master has amply provided for the reception of the men and their animals and is never happier than when they tarry for some time. Nothing of the kind have I seen in any other country."

KNOWS THE COUNTRY.

Now, what I was trying to get at is, that though I never met Ibn, he has got none the best of me, for I have been in that same country and know it well. But Ralph Waldo is wrong about the locality. It isn't in Arabia. It's in the sunny south of the United States of America, a country not yet known to old Americans. For three winters I have visited the country, and have written of it, and now I shall please at least myself by writing more of it.

HOW IT HAPPENED.

One day last summer, as I have earlier stated in these columns, I was sitting in my office grappling with large questions, when there appeared a nice looking gentleman, accompanied by a slim lad. At first I distrusted an agent of some sort, as a great many nice looking people come in city office buildings who are disguised agents for insurance, books, and that sort of thing. I have had a nice-looking young woman come into my office and sell me a "Life of the Patriarchs" before I knew what had happened. Yet I do not need a "Life of the Patriarchs" in my business. This, you see, is why I have come to distrust all nice-looking people, and why I looked with suspicion on this gentleman, though I could not understand the boy, who I supposed was going to turn out after a while as the only survivor of a horrible railroad wreck, or something of that sort.

My visitors, as I had said, turned out to be Dr. W. D. Taylor and son, of Brownsville, Tenn. Dr. Taylor had never met me, but had read the last year's articles in Forest and Stream on "Dixie Land." All he wanted to do was to get me to sign a contract to come down and visit him at his home when the quail season was on. And after he was gone I began to get ashamed of myself, reflecting that probably he was alone in the city on a visit and unacquainted. This is the North of it—for which the necessities of city business life have much to say in explanation. But the South of it I am going to tell later.

Not long after this Mr. T. A. Divine, of Memphis, whom also I had never met, wrote up, and said he thought I must be a nice man, and would I join him as his guest on a camping trip in the fall, down at the mouth of the Mississippi River? And about the same time Mr. W. W. Peabody, Jr., of Cincinnati, who also had never met me, wrote and said he thought I must be a nice man, or I couldn't stay on Forest and Stream, and how would I like to travel in a private car with vassals and serfs at my side, away down in Texas once more? Things were evidently coming my way. In a great spirit of self-denial I accepted all three of the invitations.

OPENING DAY.

It was just on the evening of opening day on quail in Tennessee when I stepped off the Illinois Central train at Memphis, feeling the keen zest which comes with the prospect of a long rest and a good shooting trip combined. I had worried Toby Bennett, the Winchester man, whom I knew, to meet me at the train, not wishing to trouble Mr. Divine, whom I did not know. But Toby was in New York, and his telegram was read by Mr. Divine in some way or other. Down in Memphis the boys all read each other's telegrams and letters, and often get on to good things that way. Anyhow, as I got off the train I heard some one calling my name, and at once Mr. Divine, whom I had never met before, introduced himself, also his friends, Mr. Lee J. Lockwood, of Memphis, and Mr. R. W. Foster, of New Orleans, both of whom, it seemed, were to be of the camping party at the mouth of the river. These all thought a dinner up at the club would be about right, and long before that was over we were all very well acquainted, in the swift fashion of men who love the same pastimes.

It now was made plain that the Louisiana party was all to meet at New Orleans on Nov. 8. Meantime, as I had promised to visit Dr. Taylor at Brownsville, and as Tom Divine wanted me to stop off for a day in Mississippi, "just long enough to kill a bear," as he expressed it, it was evident I would have to hurry, much to everybody's regret. Brownsville is about fifty miles east of Memphis, on the L. and N. Road, and I found I could make the eleven o'clock train that night after dinner, so pretty soon I bade my Memphis friends a temporary farewell, and was rolling out toward the hill country. I did not see Mr. Lockwood again at all, and Mr. Foster I did not see until, after a great many adventures, we met away down at the mouth of the Mississippi.

THE SOUTH OF IT.

In the north I had, of course, left winter, but at Brownsville I found it mild and pleasant when I stepped out from the hotel in the morning. I made an early morning call on Dr. Taylor, whom I found living in a great big southern house, which straightway I envied of him. Mrs. Taylor with all the easy friendliness of the true Southern lady put the stranger at home at once, and I was soon acquainted with all the youngsters of the family, including the lad I had seen in Chicago. Next we saw all the horses and dogs which are part of every Southerner's establishment, and by this time my baggage had been brought over from the hotel, and I was one of the family.

This was the south of it.

I had only two days to spend with my friends at Brownsville, though I sincerely regretted it was not a week. We had two days of quail shooting, such as one can have nowhere in the country north of Mason and Dixon's line. Dr. Taylor had two fine young dogs of his own, one impressed Mr. Moore's old setter Joe, one of the best meat dogs I ever shot over. I always fall in with a meat dog wherever I go, and this suits me to a nicety, for if there is anything I do detest it is a field trial winenr, and if there is anything I love it is a regular meat dog, that knows his business and knows what he is out to do. Our dogs left us nothing to ask, and surely pleasanter shooting companions than Dr. Taylor and his friend, Dr. T. D. Cooper, no one ever did have, having a habit of too great courtesy on their part, which wanted me to do all the shooting.

On our first day with the quail we rode on horseback—all the hunting in that section is done on horseback—until we were two or three miles from town, and then worked around over the open fields. It came on to rain, and the birds did not move—or as the keeper at whose cabin we stopped to get water for our luncheon, said: "They wuzn't very free jumped up," so we did not have much shooting. At this Dr. Taylor was disgusted beyond measure, and tried to make me promise to stay a week, till he could show me what his country could do by way of quail.

A CHARMING DAY.

We needed only one day more to learn about that. The morrow dawned bright and fair, an ideal day for sport. We took another road out of town, and by ten o'clock were busy with our first bevy, Dr. Taylor's son holding our horses for us while we shot. I never saw better sport than we had. We shot all day on a little strip of ground, not over three-fourths of a mile square, and the birds just seemed to bubble up out of the ground. The dogs did their part nobly, and, all in all, we had a charming day. We bagged forty-seven birds to the three guns, by which it may be seen we did not want the last bird there was. Both my friends proved to be excellent field shots, as indeed nearly all Southern shooters are. Dr. Taylor used a 16-gauge, a Lefever, and he is the only man I ever knew to shoot wood powder in brass shells. He uses the American Wood, and if his load was not effective none of us could discover the fact, for he killed his birds as far and as clean as any of us.

When we returned from our shooting that evening we found that Mrs. Taylor had arranged a surprise for us, in the form of a dinner party, in preparation for which we were urged to hurry out of our shooting clothes. I spent no evening in the South more pleasantly than this. Beside the ladies, we had with us Dr. Cooper, Dr. Sevier, Mr. Mann, Mr. Kiethley, Mr. Chapman, Mr. Moses, and Mr. Dan Miles. It was just cool enough to make the fire in the fire-place of the big drawing-room seem pleasant, and around this—the only kind of a fire on earth to have—we sat in a ring and told stories in a symposium, which I wish I could reproduce. Mr. Miles especially proved to be a raconteur of natural talent, and often kept us either attentive or convulsed. Mr. Miles is a snake-story artist, and I could wish he were known to the circle of Forest and Stream readers in this capacity.

THE HORN SNAKE ESTABLISHED.

Once more I found occasion to disagree with our friends the naturalists, who seek to deprive us of some of our most cherished beliefs. Thus Forest and Stream, some years ago I believe, took great delight in proving that beyond a peradventure there never was nor could be such a thing as a horn snake (a snake with a horn in the end of its tail), because naturalists had not seen this sort of snake. Yet at our fireside council that evening there were three men—Dr. Taylor, Mr. Miles, and Mr. Kiethley—each of whom had personally seen and examined a specimen of this same horn snake. All agreed that the horn in the end of the tail closely resembled the spur of a rooster, being between one and two inches in length, and running down to a point. Legally, three affirmative witnesses outweigh a great many witnesses who are merely negative by reason of not having seen the thing testified to. Therefore, while I respect Forest and Stream very much, I really must insist on the revival of the cherished popular belief in the horn snake. We should not be robbed of all our ideals in this materialistic age.

THE EVER-OPEN DOOR.

And then we talked of many things; of the negro problem, which no Northern man is fitted to discuss who has not lived or been much in the South; of the distinction of Northern from Southern customs in life and business pursuits. In Mr. Miles it was not hard to recognize a man of strong original thought. "I mean no offense to the North," said he, "when I say that we of the South do not need its 'progress.' God prevent that the South shall ever have that spirit of progress! What is it but the chrysalis of anarchy?" And as I reflected on the coldness and emptiness of the life in the toiling, troubled city, where so recently the poor were arrayed in arms against the rich in that struggle whose beginning only is now and whose end no man can tell, except that the rich can never prevent the progress of the struggle—as I thought of the wide difference of life in such a center of progress and that in the pleasant and sincere social system here about me, I could well add echo to the words I heard, and in my own breast say: God forbid the South shall ever change, its woods be felled, its birds be killed, its social system overthrown, its beautiful Americanism be destroyed! Progress! Is it not enough that the South has progressed to be the only American part of America?

And so I shall not say anything more about this part of my visit in the South, except that when I left Brownsville I felt actually cut up over the heartiness and sincerity of my reception there, and fairly ashamed for myself and for my country. In the North we have not the art of entertaining, and there is no use in making the claim. All the glory I claim of this is my right to ask the question, even before going further on in the story I shall tell whether I have not, equally with Ibn Hankal, found the land of the ever-open door? God bless the land, and may it never change!

CHANGE.

909 SECURITY BUILDING, Chicago.

FLORIDA FUN.—II.

A half-mile from the camp lived a hunter and woodsman named Bolton, who volunteered to be a guide for the party, not for pay, but because he was glad to have company. He would have been insulted at an offer of pay in money for his services. Every morning he appeared at camp, ready to pilot the party anywhere they wished to go, and then they started for long tramps down one bay and up another, two men and the hounds keeping close to the bay, to drive out the deer, and one man on each side, a hundred yards out on the ridge on each side, and somewhat in advance of the men near the bay. For five days they hunted in this way, but the dogs were unmanageable, and generally made so much noise that the deer kept out of the way. Occasionally one was seen, and then the Winchesters awoke the echoes, but they failed to stop any of the swift-footed runners. By this time they were acquainted with the woods, and there being little danger of getting lost, they got to going out alone, and wandering all day in the beautiful woods, but failed to bring in any game, except some squirrels.

H—— got tired of camp life with no game, and began to long for the flesh pots of a hotel, so one day he strolled down to old Jordan's, to study a Florida "cracker," and see whether the old man could be induced to take his baggage to the railroad. At the end of a five mile stroll through the woods there appeared an old log-cabin, at one side of a fifteen-acre clearing. A man with a gun on his shoulder was approaching it from an opposite direction, and an old woman sat on the porch. H—— introduced himself, whereupon they shook hands with him, said they were very glad to see him, asked if he kept well, and said Mr. Jordan was down in the swamp killing some hog meat, but they reckoned he would be back 'fore long. Presently there came out of the cabin a woman of thirty-five or thereabouts, with perfectly formed head and face, and of good form, but the snuff stick was in her mouth, and the face wore a dull, ignorant, and hopeless expression, or rather lack of expression. The idea conveyed to H—— by her looks and movements was, that nature had laid the foundation for a woman of intellect and great personal beauty, but she had been hopelessly dwarfed by the poverty-stricken soil in which she had

been planted. It needed but one look to see that in her there had once been hope, which had long ago been choked out by grim despair that will never leave her. She could not read, and probably had never eaten a meal from a table covered with a white cloth.

Presently there came two men from the adjoining swamp, each carrying half of a dressed hog. One of them, an old man, bent with age, was introduced as Mr. Jordan. He shook hands cordially and "reckoned" H—— kept well, and then began admiring the dog, Joe, and asked if he would "ketch," meaning, would he pull down a wounded deer or hold a savage wild hog. On being told he would not, he said it was a pity that "sich a big, strong dog should be no account. And he is the purtiest dog I ever seen, too." H—— then explained Joe's uses, and how he pointed birds, and then asked Joe if he sucked eggs, which Joe answered by a sharp bark, whereupon the whole family took him right into their affections, and Mr. Jordan said: "If he was my dog I wouldn't take a big cow for him, but it's a pity he don't ketch."

After Joe had been fully discussed, the old man turned to the daughter mentioned above, and in tones tremulous with age and affection, asked: "Is dinner ready, honey?" The dinner consisted of boiled "hog meat," corn bread made by mixing corn meal, salt, and water, and baking in a Dutch oven, and coffee made probably of dried and parched sweet potatoes, there was certainly no coffee in it. This food was just what they have had, and what they will continue to have, except when an occasional deer or turey is brought in. Sometimes they have a little "flour bread," and they "make" a few sweet potatoes, and some cane syrup and sugar.

After dinner H—— drew the old man into talking about himself. He said: "I've been livin' right yere for thirty-seven years, an' I've allers made a good livin'. It's a mighty easy country to find support. The cattle an' hogs an' sheep run in the woods, an' don't have to be fed, an' all we have to do is for a lot of us to git together an' go out an' ketch 'em. How much is a good cow worth? 'Bout six dollars, I reckon; I don't sell any. Then they's deer an' turkeys, too, though they hain't so plenty as they used to be. Could you gimme a chaw of your tobacker?" Mr. H—— proffered his plug, and the old man said: "I reckon I'll get you to cut me off a chaw." H—— cut off a liberal chunk, and returned the plug and knife to his pocket, but the old man still held the "chaw" in his trembling fingers, turning it over and looking at it in a meditative sort of way, finally saying: "I reckon Mr. H—— I'll have to git you to cut off a leetle more. This yere piece ain't quite enough for a chaw. It'd be enough for my wife, an' my daughter don't take quite as big a chaw as this, but I chaw a leetle more.

"I wish a lot of people like you could get interested in this country enough to come yere an' settle. I ain't never had a neighbor nearer than four miles, an' we can't have any school, an' it's seven miles to church, and seven miles to the doctor's, an' twenty-five miles to the springs, where we have to buy supplies. It's a pity that dog don't ketch."

"He catches tramps at home," said H——, "but probably you are not bothered with them here."

"Well, we are," said the old man. "There's lots of 'em."

H—— said he supposed houses were so far apart, the tramps would have a hard time of it. "Well, you see" said the old man, "this yere is one of the mainest traveled roads in the whole country. If anybody goes from yere to the springs, or to Mossy Head, or Pensacola, or Mobile, or New Orleans, or anywhere else, they have to go along this road. I reckon it goes to nearer every place than any other road in the world."

I have described the old man and his family because they are an average family of the "piney woods" residents. They are, to some extent, passing away, but because of the worthless character of the lands they live in they will not become extinct for many years yet.

In these vast stretches of forest and swamp, affording unlimited food, abundant cover and so genial a climate, it seems strange that there is not more game; but it's scarcity is due to that most ugly, vicious, and altogethe depraved brute—the Florida dog. He ranks next to the deer in fleetness, and his sense of smell is as acute as that of the best setter. Every foot of the ground is explored by him at frequent intervals, and the turkey's nest of eggs is one of his luxuries. If the egg is hatched before he finds it, he will most likely get the young turkey before it can fly, for he follows their trail and scents out their hiding-places as surely as any dog could do it, and he even catches the old hen turkey, while she tries to defend her brood. Many fawns are his victims as soon as they come into the world. The hogs follow the herds of sheep for days, and get every new born lamb that is dropped; and sometimes they pull down and devour the full grown sheep. New-born calves are another favorite game, and the cow must be far away from any of these beasts, if she saves her offspring. If the turkey or the fawn has escaped the hogs, great eagles are soaring overhead, on the alert for something to devour, and at night the wild cat is hunting for anything he is not afraid to attack. But, after all, the hog has come to stay. It would hardly be possible to exterminate him, and, as an article of food, he ranks superior to any other animal of this region. In spite of the repulsive ugliness, and ugliер disposition of the Florida woods hog, its flesh has a tender juiciness and a delicate gamey flavor that are altogether lacking in his corn fed relative of the North, and which captures the taste of every one who partakes of it. These hogs are of domestic origin, but there are many of them that are veritable wild boars, with tusks six inches long; and when brought to bay by the dogs they charge at everything that moves, and often a dog is killed at a single stroke. A lot of specially-trained curs are used in hunting them. They bay the boar, but are careful to keep out of his reach. When the hunter comes up and shoots the boar, the dogs close at once, and woe be unto them if the shot has not been a stunning one, for some of them will be killed. These old fellows are not used for human food, but are killed as nuisances; and the flesh is sprinkled with strychnine and hung up for the eagles and wild cats to eat.

On the 18th H—— said good-by to his companions of the camp, and departed for De Funak Springs. If the stories told about quail by the residents of this place were true, H—— was going to have some great sport. He hunted two days and found one little bunch of quail. Then his host, Mr. Tom King, planned a trip to his big plantation twelve miles north from town. Mr. King said there were three miles of old fields, and two dogs could find fifty to one hundred coveys in a day. The party was to be made up of Mr. King, Mr. Cawthon, and Mr. Hall, of Mobile. Mr. Hall came on the evening trani, and at supper talked quail just like everybody else, and declared the party would get one hundred birds to-morrow.

H—— said: "Mr. Hall, did you know that Solomon had just returned from a Florida quail shooting trip, when he said in his heart that all men are liars?"

"Well," said Hall, "I'll bet you $100 to $50 that we get one hundred shots out there."

The importance of an early start was urged by Mr. King, and the cook was ordered: "Have breakfast ready at five o'clock sharp, do you hear?" But all the same H—— lay in bed still, and then dressed leisurely, and waited twenty minutes for breakfast. Their road lay nearly all the way through the beautiful piney woods, the weather was very pleasant, and the only drawback was the sandy roads which everywhere in this region make travel slow and wearisome to horseflesh. Arrived at the plantation, they found the old fields grown up with sedge and briars, while along the numerous rivulets there was a dense tangle of trees and bushes. A good deal of the old field ground had been worn out and abandoned ten years before, and these portions were grown up with a thick forest of pines seventy-five feet high. By noon three coveys had been found, all of which plunged at once into the thick brush, and were seen no more, although they could be heard when they flushed. Five birds had been bagged, and the clothing, hands and faces of the party showed evidence of conflicts with briars.

It was voted too tough a country to hunt in, so after lunch the party drove toward home, stopping at another plantation that looked very inviting. More than one hundred acres of promising looking ground was hunted over, resulting in finding one small covey, from which six birds were secured. Just at dark, while still six miles from town the party were overtaken by a terrific thunderstorm. The rain came down in sheets, and the wind threatened to uproot the tall pines, while the blinding flashes of lightning and the crashing and reverberating thunder were sublime beyond description. To him who has no fear of lightning, there is no grander or more enjoyable phenomenon in nature than a thunderstorm, and H—— enjoyed this one more than he did the quail hunting, although getting somewhat wet.

The next day H—— and Joe rested until noon, and spent the afternoon in a stroll to Lake Stanley, a pretty sheet of water three miles out in the woods; they brought in one mallard. The forenoon of the following day was spent in rest, and the afternoon in hunting quail near town. While hunting in a weed grown orchard, a man some distance away said: "Say, mister, I'm a little afraid your dog will get poisoned if you hunt in there. I've put out poison to kill the rabbits and coons that bother me so, and I'd hate it if your dog got some of it." H—— wandered over to him, and talked awhile, during which the man said he had walked up two bunches of quail the day before, about three-quarters of a mile south in an old field, and gave minute directions how to find it. H—— started to hunt them up. Before getting across the orchard, Joe found a small covey, but they went off safely, though two charges of shot were fired at them. They went into the swamp, of course, and H—— and Joe went in after them, and with a good deal of floundering through the mud and water and sundry conflicts with black briar vines, they managed to rouse out five or six birds, and bagged three of them. Then they started for the old field, where the two covies were, but mistook the directions and sundown overtook them before they found it, so they walked back to town, some two and a half miles.

That night, Mr. Wolfe and H—— went to Caryville, eighteen miles east, getting there at eleven P. M., and found the landlord of the hotel gone to bed, but the doors were not locked, and Mr. Wolfe being acquainted with the landlord and his ways, looked around until he found a room with three beds in it, two of which were unoccupied, and then they turned in. Mr. Wolfe said the old man's custom was to go to bed when he felt like it, and guests arriving after that time were expected to hunt their own beds, then in the morning the old man went around to see who had come in during the night. This morning just at daylight he knocked at the door, then opened it, and was confronted by Joe, sitting on the foot of H——'s bed and growling at the intrusion, whereupon he hastily retired. H—— told Joe to be quiet, and called to the man to come in. When he came in, he said: "My gracious, I thought he was a bear sitting on the bed, and he does look like one, he's as big and as black, and got the white spot in his breast, an' say: Ain't he the purtiest dog I ever see? Now, you all git up, and wash your faces, for breakfast is most ready."

After breakfast the hunters started to some old fields, which they worked faithfully till noon, but failed to start a single feather. H—— was disgusted with the long continued bad luck, and wanted to go back on the afternoon train, but Wolfe said he was so disgusted he wasn't going to go home till the night train, so they struck out for some fields two and a half miles out east from town. A mile out along the railroad track, Mr. Wolfe shot a hawk, a short distance out in the woods. The hawk fell fluttering into the grass, and near it a quail arose but dropped into the grass again a rod away, evidently afraid to risk a flight through the open woods. Then Wolfe and H—— stepped out there and flushed a covey, most of which flew right over their heads, and went to the swamp. It was such an unexpected sort of flight that they did not get a bird. One was marked down in the open woods, and was soon secured. Several more were flushed in the swamp, and two shots fired at them, but they got safely away. A further walk of a mile and a half brought them to the fields, and there they hunted an hour before Joe pointed along a little branch fringed with bushes. As Wolfe was up in the woods, and H—— thought the birds would go there, he flushed them and got one, but instead of flying to the woods they came down further up the branch. Wolfe came over, and they flushed again, every bird getting up at once, and only one killed, the others going away into a swamp. It was evident that it was not one of the shooting days for either Wolfe or H——. Half an hour later Joe located another covey in open pine woods. This time two fell, the rest as usual going into a swamp. Here a couple of hounds joined the hunters, and going into the swamp did good work driving the birds out. Two shots and two birds resulted. Further search after some scattered ones failed to find them. Men and dog were very tired by this time, and it was near sundown, so they took up the long walk to town, had some quail cooked for supper, and arrived home at 8.20 P. M. Here, H—— learned that the rest of his party had returned, evidently pretty tired, as they had gone to bed at eight o'clock.

Next morning Billy said: "We hunted every day after you left us, and had the usual luck. I got a 250-yard shot at a turkey and made him jump, and Bolton got one deer, but Mr. T—— and Gus did not get a shot at anything. Day before yesterday we broke camp, and started the baggage to the railroad, and we stayed all night at Bolton's, and walked to the railroad next day. You missed an experience by not staying over night at Bolton's. All three of us had to sleep in one bed. The bed was narrow, but the room was only two feet wider than the bed. The mattress had been made of a mixture of cotton and tow, but there had been a war between the tow and cotton, and they had separated into hard lumps of cotton here and lumps of tow there, with large areas of neutral ground between them. We had to use some of our comforters for covering, and everything about that bed was so dirty that we just came away and left the comforters on the bed. Truly, it was a long and miserable night, and could have been passed by a pine knot fire in the woods with much less misery. The breakfast was so abominable, we just went back on it, and started on our fifteen mile tramp to the railroad on empty stomachs, and a hungry lot we were long before we got there. We made the fifteen miles in five hours, and by rushing the last mile got there ten minutes before train time. I forgot to tell you that Ben Cockroft came to the camp, and hunted with us three days and one night undertook to show us how to kill deer by torchlight, but a heavy fog came up from the gulf, and Ben got to traveling in a circle, and coming in sight of some live coals that had dropped from the torch, mistook them for deer's eyes, and took a shot at them. We can't vote the expedition a success, if we reckon it by the amount of game killed, but we have had a big time all the same, and feel benefited generally."

"What will you do next?" said H——. "Going to start home to-day," said Billy. "Are you going with us?"

"Not much," said H——. "I've sent for my wife, and will meet her at Pensacola. From there we will go sailing along the coast, picking up shells, ducks, and fish till we get tired of it. If we are not satisfied, then, we will go to Havana. Won't you go along, boys?"

They all declined, and H—— told them if they preferred snow and ice to summer and green leaves it was all right, but for himself he proposed to stay with the summer.

O. H. HAMPTON.

Natural History.

CONFIDING CHICKADEES.

I have a friend—not unknown to the world of art and literature—who is a keen observer and lover of nature withal. He has the migratory instinct so firmly implanted in him that he always comes back to pass the summer months on the old homestead, which he has watched over and guarded, that no vandal hand might destroy or cut any of the wild things that have beauty, rarity or oddity to recommend them to a foothold. He has improved on nature by making a woodland path here, another there; a fine tennis court beneath the shade of giant pines which the "wood hawk," with his eye may look at but must not touch. In quiet and shady nooks are inviting seats, where one may listen to the flute-like evening song of the hermit thrush, and hear the whistle of the woodcock and the whirr of the ruffled grouse. He has set out in congenial situations very many of the rarer wild flowering plants and ferns, trees and shrubs, so that it has come to be a veritable arboretum, and a list of the faunal, floral and scenic attractions would occupy more space than I feel at liberty to ask.

East of the house, and on the easterly edge of the garden, stands a pear tree, which at about three feet from the ground divides into two trunks or virtual branches. One of these trunks was several years ago sawn off, leaving the other to become the trunk and bear the fruit. Of course, that portion of the main trunk below the scar became somewhat decayed, and six or seven years ago a pair of chicadees excavated for themselves a home a few inches below the edge of the scar, and on the west side, facing the garden and the house, and commenced housekeeping there, evidently with complete success, for they returned year after year and sent out into the cold world their annual quota of fine black-capped destroyers of bark infesting pupæ. They were always very tame and confiding, permitting the closest examination of their domestic affairs. And so everything was harmonious and to the complete satisfaction for landlord and tenant, until two years ago, when my friend found in the spring that a portion of the bark about six inches square—the part through which the hole had been cut—had been torn away, exposing the interior.

Now, besides being an artist and a scholar, my friend is a very skillful wood carver, and he went to work to repair the little home and thus keep the tenant, with the result that he very nicely fitted a piece of pine bark into the place where the natural bark had been removed; cut a hole in the proper place and awaited developments with some degree of doubt I imagine.

To his delight, however, when the right time came, one morning he saw a chicadee fly out of the artificially constructed doorway. Watching a few moments he saw it return with its mate, who had building material in his bill. Then he knew that they had accepted the situation and his kind intentions as well. The interesting story of the chicadee's life was continued through another summer of contented prosperity until the young arrived at months of discretion, when the whole family became hopelessly mixed with the rest of the race in their vacation rambles

and their identity was lost in the tide of Bohemian bird life as it ebbed and flowed through the fall and winter—another winter of discontent—for when the spring days prompted the parent birds to come back to the old pear tree they found that decay had been at work, assisted perhaps, by fungoid growths, and perhaps by an inquisite, thieving crow, for there was a large hole in the roof—the scar of the sawn off limb—through which came the sunshine and the rain, conditions not at all favorable to the development of hole nesting birds. But the same skillful hand that had repaired so acceptably the damages of the year before came to the rescue, and this time fitted a tin roof over the whole scar, making a habitation as obscure from the inclemency of the weather as any chicadee ever possessed.

In the light of former experience, it is perhaps needless for me to add that the hole was occupied as before, and in just sixteen days from the day they commenced to sit, five more little titmice burst their shells and commenced to tax the industry of their brave little parents to supply the cravings of their very prominent appetites, and finally to go out as many others had gone before, perhaps to tell of one man at least who is a friend of the birds.

MASSACHUSETTS. CHAS. E. INGALLS.

Winter Robins in North Latitude.

Lake Champlain, N. Y.—In Forest and Stream of Jan. 12 I noted the appearance of a bunch of robins at Chestnut Hill, Philadelphia. On Jan. 12 I saw two robins on the lake shore road, and one on the 13th. The mercury has been here 20 degrees below zero this month, but on the 12th and 13th rose to from 30 degrees to 38 degrees. These birds must be winter residents, perhaps from the deep woods of the Adirondacks, venturing out during the thaw. GUY FERGUSON.

A Winter Red Bird.

CARTHAGE, Ohio, Feb. 1.—After several weeks of sharply defined winter weather, with snow and ice accompaniments, and the promise by the weather bureau of another cold wave coming, you may imagine my surprise at hearing a red-bird giving out his choicest strains from his perch on the upper limb of a larch on the morning of Feb. 1. Is it a harbinger of an early spring, or has he "lost his reckoning" and appeared too soon? Time will tell. E. S. WHITAKER.

Camp-Fire Flickerings.

"That reminds me."

The "boys," young and old, were collected around the stove in the tavern one winter evening, when the talk turned upon fishing in general, and catching bullheads in particular. "Say, Uncle Jess, didn't you catch an all-fired big pout down in Massapoag a few years ago," said Cy Smith, addressing one of the elders of the party.

"Wal, yes; I did, fer a fact; the biggest pout I ever see, or any one else, I guess," replied the veteran. "Haow much did he weigh?" cried several voices. "Wal, fact is I never weighed him, but he was a whopper, an' I believe he was old enough to be the gran'ther 'f all the bullheads raound here. Mighty curis thing abaout that pout, tew," said the old man, gazing at the upward curling smoke of his pipe in reminiscent mood. "Tell us abaout it," said Cy. The old man hitched uneasily in his chair, knocked the ashes from his pipe on the stove-hearth, and taking his jack-knife and a plug of tobacco from his pocket, began to prepare a fresh charge.

"Wal," said he, after a few moments of silence, "yer see, durin' the winter, Ivory Damon had be'n cuttin' ice on the pond fer Joe Goodrich. Naow yer know Ivory was a kin' o' queer critter, allus studyin' over mathematics or phrenology or some sech stuff, didn't know what he was doin' half the time. Wal, he was cuttin' ice there all alone with a cross-cut saw—that was 'fore those ice-plows had been got up—an' the first thing he knew, he sawed off the very cake he was standin' on, and down he went. 'By Cracky,' said he, 'I thought I was a goner, but I c'd just reach the ice ladder and pull myself out; but the saw went to the bottom.' Wal, 'long next May, I went daown there one evenin' with one of the Walker boys—Art, I b'lieve 'twas—thought we'd get a mess o' pouts We had pretty good luck for a while, then they stopped bitin', 'Guess thee's an eel araoun',' said Art. 'Wal,' said I, 'I'll have him if thers' one here.' So I put on an all-fired big bunch o' worms, and flung her over. In abaout tew minutes I felt somethin' take hold an' bear daown hard. 'By George,' says I, 'I've got him.' Wal, I tell yer we had a tussle, but we hawled in the biggest pout I ever see. We had to hit him with the oar 'fore we could keep him in the boat. I thought ther' was suthin mighty curis 'baout his maouth, but I didn't pay much 'tention tew it till I come ter dress him nex' mornin', an' as trew as I live, that ole feller had got Ivory's saw crossways in his maouth an' was a-wearin' it fer a set o' false teeth." CATACOONAMUG.

A Feline Catastrophic Coincidence.

Nearly thirty years ago when I was stationed in Canada with a battery of royal artillery, the building in which the officers lived was greatly infested by cats, which frequently awoke us at night by their hideous squallings. We used to get out of bed, and fling our boots in the direction of the sounds, down the dark passages into which our doors opened, and on two occasions I even fired a pistol loaded with small shot at where I guessed the cats to be. The other officers objected to that, because they feared being hit by a stray bullet, if they happened to be in the act of throwing a boot, but we all agreed that the cats must be reduced in numbers.

I borrowed a rifled air-cane which carried 120 round balls to the pound and kept it, ready pumped, in a corner of my room. A few days afterward, seeing a cat walking across the ground at the back of the building, I snatched up the air-cane, rammed home a bullet, and, aiming at the back of the cat's head, pressed the trigger. The bullet struck between the ears, and went out at the chin—so the animal rolled on his back dead without a kick. I thought he had strayed from some house at a distance but discovered shortly afterward that he belonged to a major, who had retired from the army and was living near us.

By a remarkable coincidence, at the exact instant that I shot the cat, the owner and an officer were standing at the window of another room, and engaged in conversation. The major remarked: "That is my old Tom cat walking there. I have had him since the Crimean War, and he has become such a nuisance in the house that I am going to borrow a gun and shoot him. By Jove, he's dead! But what on earth can be the cause!"

The noise made by the air-cane was so slight that they had not heard it, and could not account for the sudden death.

On hearing afterward to whom the cat belonged, I wrote to the major apologizing and explaining how the mistake occurred. He replied that he was very glad I had saved him the trouble of killing the old wretch.

J. J. MEYRICK.

Game Bag and Gun.

IN WILD PIGEON DAYS.

Your recent notes on the wild pigeon of America were interesting and recalled some of my own experiences with this noble bird some years ago, before the murderous netters had quite succeeded in exterminating them.

In the fall of 1875 we had in this section of mountain country the heaviest beech mast within the recollection of the oldest inhabitant; it could be scooped up in double handfuls anywhere under the beech timber and as that kind of timber prevails here to a considerable extent, some idea of the quantity of mast can be conceived, in a year that it "hits," as we say. The wild pigeons came in countless numbers, and by good fortune, this being a somewhat out of the way locality, the enterprising netters did not get word in time to get in their work.

I was using at that time as my "all around gun" a ten-bore double muzzle loader. A windfall in the game line does not come often and this one was by no means to be despised. Providing myself with a bountiful supply of ammunition, I would get out in a favorable spot in the evening, as the hosts would be flying to their roosting ground. Many a time I have fired until the old gun became so hot I could scarce bear my hand on the barrels and was forced to cease for awhile to allow them to cool before I dared reload again. The flocks was so dense that I literally made it rain pigeons. Fat! Did you say? Well! The wild pigeon is generally poor in flesh, and blue looking as to meat—the old ones pretty tough. But all the birds that year were a squab of fat. When dressed they looked as yellow as gold and were very juicy and tender. Upon striking the ground, many of them would burst open, the crop being gorged with the beech nuts. My wife and oldest child, a girl of eight, would generally go out with me, as this shooting was convenient to the house, gathering the dead in a large basket we took for the purpose. We had pigeons for dinner all the winter, and did not waste a single bird; for besides supplying some of my less fortunate neighbors, we salted down over four bushels of nicely dressed birds. We had pigeon pie and pigeon served in every style we could think of, galore.

In feeding, which pigeons do in flocks quite dense and numerous, they form long lines along the ground, almost like soldiers in line; feet and wings are in constant motion turning the dried leaves, and they seem to roll over one another as they advance in line gathering the mast. Frequently, immense masses of them, as if actuated by a simultaneous impulse, move a short distance to a more favored spot, the flutter of this countless number of wings making a noise like rolling thunder. After gorging themselves with mast, sometimes they will settle upon the adjacent timber, forming lines on the branches as close as they can well sit; thus perched they will emit a call or cry to passing flocks, which generally has the effect of calling these down to join their fellow brethren. The call does not at all resemble the cooing or call of our tame pigeon, but on the contrary, is more like the quack of some of our small ducks in tone, not prolonged like the duck, rather more harsh and very quickly repeated; once heard by the sportsman, never forgotten.

In the pursuit of this bird, on this glorious hunt, ever to be remembered, I would often secure raking shots at them when perched in close masses on the timber. The wild pigeons, at least when they existed in these numbers, do not appear to be at all shy and wary like most game; but will permit, generally with an apathy most astonishing, approach to close quarters, affording a most destructive fire. The slaughter on such occasion was prodigious. One evening I took a station in a low gap in the mountain, about a mile from home, and in direct line of the flight of the pigeons to their roost. On they came! More numerous than the fabled hosts of Xerxes—"Like the sands of the sea."

I did not move a dozen steps from the spot I had selected, stood, loaded and fired with tremendous energy; utilizing the few minutes required ever and anon to allow of the cooling of the gun, by hastily gathering the game and piling it at my feet. The flight lasted till in the gloom and darkness of the approaching night; most of the heavy masses flew quite low, you could hear their wings strike in the branches of the surrounding timber. My last shots that evening were simply directed at the roar of wings overheard, as it was not sufficiently light to take any aim in particular. I strung my birds on pieces of twine provided for the purpose, and was literally so hampered and loaded down with the game that I scarce made my way home in the gloom. Early next morning I returned to the spot and gathered quite a goodly number of cripples and dead that had escaped my belated search the evening before.

Like most of the feathered tribe, the process of digestion is quite rapid in the pigeon. Birds shot in the morning as they leave the roost for their feeding grounds have empty crops; those killed later in the day, and especially upon their return in the evening, are literally gorged, and as the myriads fly over you, the sound of their droppings is like a shower of rain upon the surrounding foliage.

After the pigeons left that season, I visited their roosting ground, some two miles from where I lived. It was a sight to behold! Great trees had been utterly denuded of their branches, some of the timber entirely broken down from the weight of the mass of bird life. Feathers, frames and debris of all kinds littered the ground. The manure from this host was actually two feet in depth. This is not one whit exaggerated, as the entire surroundings came under my personal observation.

Four years after, the fall of 1879, we had a pretty fair mast crop, but it was not so general, nor in as great quantity as the above. Numerous pigeons put in an appearance, but not nearly one-fourth the quantity of the season spoken of above. From some cause they seemed restless, continually on the move, from no apparent reason. In some spots the mast was plentiful enough to satisfy the demands of even a pigeon, yet you could scarcely ever catch a flock feeding. I secured very few that season.

Beech mast of late years is an uncertain crop. Some seasons it makes a fair start, but blasts before filling. Old-timers tell me that when they were young men, beech nuts nearly every year was the rule rather than the exception. Two years ago there was a sprinkling of this mast, but no pigeons; beyond hearing of a few stragglers, and the reports not very well authenticated at that, I have known of none for several years.

Six years ago this coming spring, early in the season, a bunch of several hundred of them put in an appearance quite early. They nested here, on what is known as the Sugar Ridge, on the headwaters of Greenbrier. I noticed on that occasion, they were sadly decimated in number to what I had formerly seen. I shot a few of them in their passages to and fro; most of them squabs fully grown, in good order and making quite a toothsome dish. These were the last I ever killed; so few in number were they that I was content to secure shots at single birds when no better offered, as stragglers sometimes get behind their fellows of the main flock. Fly rapidly? I should think so! Given a wild pigeon a little behind his relatives, feeling quite well and having a determination within himself to catch up or die in the attempt, and the way he pulls out would startle even a Dr. Carver or any one of those big match champions. It requires a quick eye, steady hand, and a liberal allowance of "holding ahead" to grass him. You don't do it, then, every time.

It is deeply interesting to watch wild pigeons in their flight. They have a habit of suddenly swerving from a direct course, as if each individual bird at the same identical instant of time was moved by the self-same impulse. Surprising, indeed, is the rushing noise of their wings when performing one of these curious gyrations. Frequently when stationed on their line of flight, have I succeeded in catching them as they bunch up in a dense mass with an impetuous rush; the havoc I have wrought in their ranks by a well-directed charge of shot, gratifies the pride as well as replenishes the game bag.

"You don't catch any enemy twice in a scrape like this," was the remark of Napoleon, after a noted battle resulting disastrously to his adversaries. I cannot hope to see the wild pigeon in such numbers again.

BACKWOODS.

COMBINATION ARMS.

Editor Forest and Stream:—As requested by "Cayuga" in Forest and Stream of Jan. 5 I have again read his letter respecting combination guns, and find that I did, to some extent, mistake his meaning.

The chief sentences which caused me to do so, were: "I have looked for the all-round rod, boat, and gun, and express my belief that such a factor among the impediments of sportsmen has not been produced."

"The advocates of the three-barrel have hit the mark nearly, . . . but it is also an undesirable combination when you are in pursuit of any one species of game."

If Cayuga means by "an all-round gun," one which is as perfectly adapted for every kind of game as a gun made for only one kind can be adapted to it, I admit, without hesitation, that no such weapon ever has been, or ever can be, made. If, however, we reflect, we shall see that almost every gun is the result of a compromise between various desirable qualities, in order that it may be adapted to the pursuit of more than one kind of game.

A perfect gun for ruffed grouse or woodcock is by no means perfect for duck shooting, but a 12-bore of medium weight and choked in one barrel is very good for both kinds of game.

Similarly, a perfect rifle for killing grizzly bears would be very undesirable for small deer or antelope, yet a .45-90 repeater, with various modifications of powder and lead, is well adapted for killing either of these animals.

Cayuga seems to differ from me only in degree. He says that the three-barrel gun is good for certain purposes, and my object in writing was to show that, if made of the right weight and gauge, it can be adapted to act well for many purposes; its chief use being to kill both large and small game effectively, in places where it is impossible to know beforehand which kind of game will be met with.

Without doubt, if feathered game alone is to be pursued, a plain shot-gun is a better weapon, and for large game alone, a double rifle or repeater is, on the whole, preferable.

In the same number of your paper, Aztec writes of an unsuccessful trial of a 192 grains bullet in his .45-90 rifle loaded with 40 grains of powder. There would be about an inch space between bullet and powder, and I imagine some slight risk of straining the breech. If this space were filled with hard wood sawdust I think the results would be satisfactory. Two gunmakers in England have a special preparation for such purposes made, apparently, of sawdust soaked with a hard lubricant. I have not tried it, but a professional rifle and pistol-shot, who uses it, spoke highly of it, and told me that it keeps the grooves of a rifle perfectly clean after any number of shots; also that it acts well as a substitute for felt wards in shot cartridges.

A sportsman would have no difficulty in preparing sufficient sawdust for his own use.

While the 192 grain bullet ought to act well for the longer ranges at small game with, perhaps, 30 grains of powder, I doubt if it be so satisfactory as the round bullet for filling the pot when looking for large game. The chief advantages of the round ball are that it can be fired with hardly any noise, and that, loaded as formerly described, the trajectory is flatter than that of the shortest core, at the ranges within which grouse and rabbits are usually killed in the bush.

A round bullet fitting a .45 caliber weighs about 140 grains, and, with 7 grains of quick-burning shot-gun

powder, would probably act as well as the 102 grain ball of a .40 gauge with 5 grains.

Much of the accuracy with these small charges seems to depend upon distributing the lubricant very evenly round the mouth of the shell. The lubricant which I prefer is the purest vaseline melted with sufficient parafine to give it the consistency of butter. This prevents fouling quite as well as tallow, and possesses an advantage over any preparation of a fatty nature, in having no chemical action upon either the bullet or the brass shell. For some years past the lubricated bullets of my rifles, which remained at the end of the shooting season, have been put aside and have been found quite free from any corrosion six months afterward. J. J. MEYRICK.

ENGLAND.

THE BOSTON MARKET.

Editor Forest and Stream:—I inclose herewith clipping from Boston Globe of Feb. 6, which will explain itself. When I went to my door for the morning paper, the mercury registered 8 degrees below zero; in a very few moments after reading the inclosed my temperature was up to boiling point, and hasn't materially cooled yet. The story is of a schooner laden with 9,000 pounds of Maine venison bound for Boston. One cargo only of 9,000 pounds, 4 1-2 tons of venison saddles, and beyond question every ounce of it killed on the crust with a club or an ax, smuggled into the national dumping ground for illegally murdered game—Boston. And all this time the Game Commissioners of Massachusetts, instead of using their efforts and power to detect the entrance of such, notifying the Maine commissioners where to look after the poaching scoundrels that are killing and shipping, and in procuring the passage of a law absolutely preventing the having in possession any game whatever during close season, are working day and night for an appropriation for junketing trips or to introduce a modified barn-yard fowl dignified by the name of pheasant.

If those who seem to be so interested in trying to upset nature's laws in making new homes for the cuperculzic pinnated grouse, etc., in Maine, would devote some of their money and energy in making it impossible for schooner loads of venison to be killed, to say nothing of its being shipped from their shores, they would accomplish something, and with commissioners in Massachusetts who have game protection at heart, and a purpose to protect the game everywhere, this murderous work could be stopped.

Every sportsman knows what the buyers of illegally killed game will do to make the work difficult, and they also know the position they occupy in the commercial world. They are simply the "fences" of the game thieves, and like every one of their kidney stand in with the thief. It is preposterous for them to pose, as they do annually at the State House, as reputable merchants with large interests at stake. Every one knows they will buy anything that they think there is a dollar in, trapped bob-whites or bob veal, grouse or grass seed, venison or vinegar, it makes no difference; they are commission merchants, and so long as they are permitted to have in possession they will manage to get it somehow, lawfully or otherwise. Keep that "plank" in sight, and make the fight on the line of no game in possession in close season uncompromisingly. The antagonism will only be found in the guerillas, who would barter their birthright for a mess of pottage. The thieves' fence has as much logic in asking for protection on account of the vast moneyed interest involved. Venison won't be shipped to Boston, if there is no sale for it, and this is by no means the first cargo of the winter, nor will it be the last. North Market street has been clogged with Minnesota (?) venison this winter, and there will be more from that State or the Indian Territory (?).

Keep hammering away. I may not see it, but I firmly believe that the time is not distant when honest men will become convinced that the only course that will preserve what game is left is to legislate the game thief and his fence out of business unless he does it beyond the bars and the State bears the expense. ELTSAC.

BOSTON AND MAINE.

BOSTON, Feb. 9.—The extremely cold weather has kept the Massachusetts pickerel fishermen in doors for a couple of weeks. One or two Boston parties for Lake Winnepisogee are planned, as soon as the weather will permit. At the club dinners the matter of fishing is being discussed, and plans are being laid for the spring campaign. In Maine the season for fishing through the ice opened on Feb. 1. The peculiar feature of the fish protective law in that State is that inhabitants of the State may "fish for and take landlocked salmon and trout for their own use," after Feb. 1. In some cases, however, certain lakes and ponds are exempt from the provisions of this law. Such is the case with the Rangeley waters generally, but Moosehead is open to ice fishing after Feb. 1. The same is true of the waters in Monson and many other sections of the State. These waters were early visited by the ice fishermen, if we may believe the Maine papers. In the case of one pond in Piscataquis County, the holes were cut the day beforehand, and the hooks and lines were in the holes by daylight on Feb. 1. Nearly one hundred trout and landlocked salmon were taken in one day on the ponds in Monson. One of the fishermen froze his toes, and another his ears. The man with frozen toes had sixteen trout weighing nineteen pounds. One trout of eight pounds is reported to have been taken. Mr. Loring Farr, of Manchester, has presented a petition to the Maine Legislature for a law prohibiting the shooting of loons in that State. He sets forth in his prayer that if the shooting of loons is continued, that the last one will be destroyed or driven from the State in a few years. By "loon," it is presumed, that the great northern diver is meant, and it is a great pity that this bird has been shot and destroyed in the manner that it has. One of the charms of fishing and camping at the Maine waters is the presence of this bird. To-day their numbers are greatly decreased; the effect of continuous shooting at them.

There is danger that the bill asked for in that State, putting special and sectional laws into the hands of the fish and game commission will not succeed. The committees on fisheries and game has put the measure into the hands of a sub-committee, and it is believed that this sub-committee is likely to report adversely. A sort of "free to all" hearing on the game laws was granted by the committee on Feb. 5, but the committee has not yet reported in full, though it has reported "ought to pass" on the proposed measure to prohibit shooting deer by jack lights. Said a Boston gentleman, who annually goes into Maine each year after big game: "Maine has law enough already to prevent jack shooting, if the law was only enforced. The present game law prohibits the killing of deer during the months of May, June, July, August, and September, and I will defy the smartest hunter living, with the smartest guide in Maine, to get more than one or two deer, if any at all, in the open months in the night time by the aid of a jack. I have tried faithfully every October for the past three or four years to get a deer by jack hunting, and I have not obtained one yet. I am perfectly well satisfied that the deer do not come down to the water after the cool nights of October and late September begin. I have generally been on the ground and ready to commence jacking, if the weather permitted, on the hour of twelve midnight after Sept. 30. Others tell me the same story of their experience with the jack light after the hot months are over. Let Maine enforce the game laws she has already, and not lumber her statute books with a lot more of rubbish that she does not intend to enforce."

Mr. Young, of Springfield, Mass., has introduced a bill in the Massachusetts Legislature to permit of the sale of artificially raised trout during the months of February and March. This is the same old trout bill again. It has been twice vetoed by Governor Russell and once by Governor Greenhalge, I believe, and it is more than probable that Governor Greenhalge may be relied upon to veto it again. Verily the idea of selling trout in close time dies hard. The sportsmen believe that the legal permission to sell artificially raised trout in close time would open the entire markets to wild trout.

SPECIAL.

SPRING SHOOTING.

Editor Forest and Stream:—I have been reading your paper for several years, and have been greatly interested lately in your articles on the discontinuance of spring shooting of ducks. I started the ball rolling in the Locust Point Shooting Club, of which I am secretary, by having a resolution passed prohibiting all duck shooting on the club grounds from Jan. 1 to Sept. 1 of each year. This club owns about twelve hundred acres of marsh lands on the shore of Lake Erie, eighty miles west of Cleveland, Ohio.

At the annual meeting of the Ottawa Shooting Club, of which I am a member, I also advocated the abolishment of spring shooting of ducks and this was also carried. This club owns about eight thousand acres of marsh land on the Sandusky River and Bay. The Winous Point Shooting Club have also passed resolutions to prohibit spring shooting. This club adjoins the Ottawa Club, and owns about eight thousand acres. I have had a talk with the secretary of the Toussaint Club, that has twelve hundred acres east of the Locust Point Shooting Club, and he said that he would present the matter before his club at their annual meeting, which takes place in a few days, and he said he thought they would take favorable action on it.

I intend to bring this matter before every shooting club in Northwestern Ohio, and expect before spring to have resolutions passed in every one of them prohibiting the spring shooting of ducks.

There used to be thousands of canvasback and red-head ducks killed on our marshes every year, but in the past five years very few have been killed.

They stop on our marshes on their way North in the spring, but as they are shot at so much they select a different route to return South in the fall. I find in my hunting trips to the Northwest, to North Dakota with the "Saginaw Crowd" in October that we find more canvasbacks than they used to find in former years. This shows that these ducks are returning south in the fall by the routesleast frequented by hunters.

I am agitating this matter in the local newspapers here as you will see from inclosed clippings from Cleveland Press. I am trying to help your good work along.

FRANK B. MANY.

CLEVELAND, O.

Boone and Crockett Club's Annual Meeting.

At the annual meeting of the Boone and Crockett Club, held at the Union Club, New York city, President Roosevelt in the chair, there were present Messrs. W. A. Wadwsworth, Winthrop Chanler, J. L. Seward, T. H. Barber, J. Walter Wood, Elihu Root, Madison Grant, De Forest Grant, H. Casimir De Rahm, A. P. Proctor, John S. Gittings, and W. B. Devereux. In the absence of the secretary, Mr. Madison Grant was appointed temporary secretary.

The following resolutions were passed:

Resolved, That Captain Anderson be reimbursed in a sum not to exceed $125 for his expenses in the matter of the poacher Howell, and that the chair be authorized to give a testimonial from the club, in cash or otherwise, to the scout Burgess for his services in the matter of Howell.

That the club urgently recommend that four additional scouts be secured for service in the Yellowstone National Park;

That the club condemns the killing of deer in the water or by jacking, the use of hounds in New York State, the killing of does and fawns;

That the chair appoint a committee of three to take such action—by securing legislation or otherwise—as may tend to carry into effect the last resolution, to inquire into the condition of the New York game laws, and proposed legislation, proposed game preserve and parks, to promote such legislation as shall best serve such interests and to report to the club at the next annual meeting.

The chair, who is also one of the editorial committee, reported progress on the club's second volume. The election of officers resulted in the choice of the old officers throughout—namely: Hon. Theodore Roosevelt, President; George Bird Grinnell, Secretary and Treasurer; Archibald Rogers, W. A. Wadsworth, Winthrop Chanler, Owen Wister, and Charles Deering, Executive Committee.

Aroostook County Game.

From all accounts there were never so many sportsmen in the Maine woods as during the past season. Some were successful. A good many were not. From Township N. 7, in Aroostook, I heard quite early in the season that three moose and one caribou had been killed, the latter having an exceptionally fine head. C. R. Peavey writes me from Oxbow, saying: "I have guided twenty-eight sportsmen in all. They took out ten moose and eight caribou heads. A man came here in October who has been trying for a number of years to kill a moose. I could give him but three days of my time. The first night I called up a fine bull, and he got him. Game has been plenty, but it has been the worst time for still hunting I ever knew. Shall open some new camps in the spring on good moose ground. I hope you will come up next fall, I will give you a chance to kill a big bull."

Early last summer I wrote for Forest and Stream an account of moose hunting and spoke of Peavey's success. I had a great many letters from sportsmen in different parts of the country, asking about Peavey as a moose hunter and guide. My advice to one and all was to try him. Under favorable conditions for hunting a trip with Peavey would be quite sure to be successful. If, however, the conditions should be unfavorable, such as rough windy weather in calling season, or noisy crusty snow in still hunting time it is quite likely to be a failure. Uncertainty makes some things attractive, and uncertainty and hunting are closely connected.

C. M. STARK.

DUNBARTON, N. H.

Look Out for the Quail, Boys.

This is the critical time of the year for them, and this is a hard season particularly. Turn out early in the morning, or even take a Sunday (after church), and with a bag of wheat and cracked corn over your shoulder, and a bundle of straw or hay tied to the end of a rope, stroll through and along the edge of the coverts. Their bright eyes will detect the straggling pieces of straw and hay you will leave in your trail, and a handful of grain now and again will help them more than you think. Next fall you will get your reward in the large well-grown covies you will find. This is the kind of planting that pays, is successful and worth dollars where any other is worth dimes. If you have real interest get some buckwheat and hemp seed, and mix with the grain. Don't wait until it is warmer. Do it now. Remember, no sport or gain is made without some trouble, and, after all, this is but little. You may possibly learn something as you travel around, also if you keep your eyes open.

ELTSAC.

A Florida Preserve.

PENSACOLA, Fla.—A few weeks ago Dr. F. A. Hodson, a well-known amateur sportsman of Chicago, spent some time with Colonel S. S. Harvey at his beautiful home and pear orchard sixteen miles north of Pensacola. Dr. Hodson was so well pleased with the country that on his return to Chicago he organized a party of sportsmen to come down here and establish a game preserve and winter club in this county. The territory upon which they propose to locate the preserve embraces an area of eighteen square miles, with the beautiful Escambia River (noted for its fine fish) running through the center. The site that will probably be selected for a club-house is a beautiful location, one hundred and eighty feet above the level of the gulf, and with a plentiful supply of pure spring water.

This region abounds in game, and no better selection for a game preserve could be made, as it is so near to the bay and gulf, where the sportsman can enjoy the finest fishing in the world.—Florida Citizen.

North Carolina Game.

NEWBERN, N. C.—Wild turkeys were never so abundant in this vicinity. They feed in the fields right up to the edge of town limits. The small boys have got on to them. On Friday, Eddie Hancock and Willie Blackledge brought in the biggest gobbler of the season, weighing 21 1-2 pounds. The day before Ed Clark and Dan Roberts brought back forty quail from Tuscarora. Messrs. Rapleigh, Ireland, and Gillespie, of New York, have been spending some days at their lodge on New River, a few miles below Jacksonville. Thus far they have succeeded in killing six fine deer and large numbers of turkeys, ducks, etc.

Down at Bogue Sound, just below, Mr. John Lewis killed 14 large raccoons, and 24 red-head ducks last week in three days' hunting; he sold the hides for 40 cents each, and the ducks for 60 cents per pair, and sold the coons for 25 cents each, what he didn't eat himself. C. H.

St. Augustine Barren Grounds.

ST. AUGUSTINE, Fla., Feb. 7.—We are in a doleful plight here in Florida. Not a green leaf to be seen, and hardly a quail within ten miles. Mr. Greatorex took Mr. Edgar out about ten or fifteen miles the other day, and only found a small covey of eight or ten birds. He took me out to Coulsen's prairie (ten miles) twice in November and we bagged over thirty snipe each time. There are more market shooters than birds about St. Augustine now. DIDYMUS.

Minnesota Wolves.

In the statement of receipts and disbursements of Kittoor County, Minnesota, for the fiscal year ending Feb. 1, 1895, is the startling item of $1,305 for wolf counties. Hog culture must be a precarious industry in that region.

CHARLES HALLOCK.

Fishing Reels.

The Andrew B. Hendryx Company, of New Haven, issue a very handsome trade catalogue printed in gold, black and silver and bound in stiff book covers, embossed with Hendryx specialties. Of the 230 pages which the book contains, 100 are devoted to fishing reels and fittings.

The following announcement is made:

"We specially call attention to our patented Adjustable Globe Bearing. This improvement is the most important addition to Fishing Reels ever made, as no ordinary accidents will unfit a Reel, with those bearings, from use. The pivots are large and straight, perfectly fitted into a spherical box or bearing, and the box is fitted into the disks of the Reel. Should the disks from any cause be out of alignment, it does not prevent the Reel from working well, as the spherical boxes adjust to a perfect alignment regardless of the exact relative positions of the disks of the Reel Any fisherman will understand a Reel so constructed is a new departure, and has no competitor, and is the long wanted Fishing Reel.—Adv.

Death of E. P. Rogers.

Editor of Forest and Stream: On the 11th inst., at the house of his son, Archibald Rogers, Esq., passed away Edmund Pendleton Rogers. By all his friends and shooting companions Mr. Rogers was known as the "Governor," and a more genial, pleasant companion never went afield. For many seasons he has been my shooting companion and tried and trusted friend. Whether we were camping in the heart of the Rockies or shooting quail in the South, he took all the trials and disappointments with the pleasures in the same pleasant, genial manner, never losing his temper and always bright and cheerful, while his hearty, infectious laugh has made many a man forget hardships that had to be endured. For many years he fished the Restigouche in the summer and in the early autumn he was either off for the West for large game, or up North in pursuit of moose and caribou, while each winter we hunted South together. Mr. Rogers passed in most of last December with me at Blacksburg, South Carolina, quail shooting, and although very feeble, he stuck to the birds with the perseverance and persistency of a youth. A large gap has been made in my life, and the place he filled as a companion can never be taken by another. H. N. MUNN.

Sea and River Fishing.

CHATS OF ATLANTIC SALMON.—II.

The nest or ridd is altogether made by the female. If a male is with her he lies off a short distance, rushing at a trout, a grilse, or a smaller salmon, than himself; from a much larger male he will retreat. I never have seen an actual combat, the smaller fish always retreating. In any case he is quite unable to injure owing to the hook growth on the lower jaw, no doubt one of its principal uses preventing the fish from tearing and lacerating each other. It is simply a gristly growth, soft as the forefinger on the human hand, nearly the same shape and size, without the nail. It grows directly upward, forming a socket as it grows in the upper jaw, and is anywhere from two to three and one-half inches long. This new appendage begins to grow just as soon as the fish enters the river, and keeps growing until the graviod stage is reached, gradually disappearing during the winter, and when on his way to sea, the following spring, you can only determine the sex by the length of the head; the hook has disappeared, it would only prevent his feeding at sea. On his way there (when the bright, clean salmon are running in) he will take the fly, and sometimes take a trout bait, but I never have found signs of food in salmon (in the river) at any stage. Both the locality and material of this abnormal growth render it impossible to be of any assistance in forming the ridd or nest. All pisciculturalists are aware a fish can often be assisted in the ejection or expulsion of the eggs, perhaps more so in the salmon family than in many others, and I believe the hook of the male is used in this connection also, if needed.

Returning to the female and her nest. In such a river as the Restigouche, she selects a spot where the water runs smooth and strong, mostly on the brink or heads of rapids, with gravel not too fine, if it were it would not only destroy the eggs by its close packing, but the young fry could not emerge when the sac was absorbed. It is opened parallel with the current, and is done with the strong muscles of the tail, the fish turning herself party on her side, apparently grasping the stones and gravel, throwing them up to the action of the strong current, piling them up at the lower end of the ridd or furrow, and where the larger portion of both eggs and milt find a lodgment among the interstices of the loosened material. A large fish will make a nest three or four feet long, and one or more deep. When the nest has been completed she proceeds to lay, independently of the male. If he is there, he attends to the exuding period, emitting the milt at the same time side by side. On a favorite spawning bar fifty or one hundred fish may be congregated with probably a scarcity of males, perhaps a half dozen of the large ones will go carreering round chasing the grilse, and smaller males continually leaving probably one-half the eggs unimpregnated. The eggs once laid in contact with the water absorb it by the orifice, open for the reception of the male fluid, which very soon closes against any further reception of the milt. I never experimented with the eggs, as to how long they would retain their susceptibility to impregnation after extrusion from the fish. If allowed to remain in their own fluid, without contact in water, they might be retained for a short period. I have retained the male fluid for five days, and found it answered the purpose fairly well.

After the first or second deposit by the female she proceeds to turn down the sides of the ridd, enlarging it, and again depositing. After she has finished, which may be in twelve or twenty-four hours, she goes above the ridd, and works down on the nest a number of large stones often the size of a hat, so it is easy telling a finished salmon ridd. No doubt instinct teaches her that the nest if a freshet came would stand a chance of being destroyed. Still she is foolish enough in high water to nest on a bar, which gets dry in winter and her hatch is frozen. Salmon, as a rule, do not commonly nest in deeper water than three feet? Why, is yet a conundrum to me?

I see a Columbia River gentleman says the female fish there guards the nest until hatched. Well, it may be so. I am not in position to refute the assertion; but imagine it would be somewhat difficult to see this in its dark water; and if, as reported, the great majority die of emaciation after spawning (some say all), such an assertion won't hold water. Our salmon on this side could not stem the current on the ridds for the six months required. They drop into the large, deep, quiet pools, leaving for sea fine bright fish from May 20 to June 20, and very few dead salmon are ever seen on the Restigouche. JNO. MOWAT.

ANGLING NOTES.

Transplanting May-Flies.

Dr. A. T. Sanden, of New York City, writes: "In your interesting article in this week's Forest and Stream, I find this: 'But it is an easy matter to plant May flies, and they are an excellent food.' I spend most of my summer on a lake in Maine, which has a beautiful inlet, but I have never seen a fly of any kind rise from it. If you can instruct me how to plant May flies in this stream—the bottom is rock and sand—you will greatly oblige me. There are plenty of brook trout in the lake, but for the reason that the inlet has no food to offer, they are generally in the lake and very hard to get to rise to a fly." I have another letter on this subject from a prominent angler and well-known salmon fisherman in Tremont, who says: "I have just laid down Forest and Stream of yesterday, and am impelled to write you. The subect of fish food has interested me a good deal, especially self reproducing food, and such as does not itself destroy other natural food for say, (and especially) trout. I have written many eminent fish culturists, and they all say minnows. New minnows live largely on the crustaceans, which are the principal food of the trout itself, and so diminish the material resources of the water; but, worse than that, they are destructive of spawn and fry; therefore it is not economical, if scientific, to depend on them. Some kinds, like the so-called white fish of Lake Bomoseen, which are, I believe, simply a fresh water herring, are said to be grass feeders exclusively; if so, they would, perhaps, be free from both objections; but during ten months of the year, or more, they are in very deep water where the trout do not seek or find them.

You speak of the May fly, and the ease with which it may be planted. Have you had practical experience with it? Does it afford food during all the open (free from ice) months?"

An ideal trout pond is one that contains absolutely no other fish life, and I know of but two that have answered to this description. One still answers to it, and the other has been practically ruined and reduced from its ideal condition by the thoughtless introduction of minnows. New York contains trout that subsist entirely on insect and crustacean food, and Mr. Blackford said on one occasion that they were the finest flavored trout that he had ever tasted. Bowen Pond, on the top of a mountain, in Vermont (situated much as Wilmarth Lake is) and almost inaccessible, was once without other fish life than brook trout. Then the fish were all red meated, rich flavored, and surface feeders in the spring months. Some men went there in winter to fish through the ice with minnows, and when they were leaving, turned into the pond such minnows as were alive in their bait baskets, and they propagated and swarmed in the water. When I visited the pond the minnows were very much in evidence, but the bottom of the pond was fairly covered in places with the creeper (larvae) cases of insects—caddis.

My friend and companion who knew and fished the pond in the halcyon days was of the opinion that the trout did not rise to the fly as freely as before the minnows had taught them to look down, in a measure, instead of up, for their food. Not more than half of the trout we caught had the rich, red flesh which comes with a diet of insects and crustacean food, the others having pink or white flesh.

As to transplanting May flies. In the summer of 1891 it occurred to me that it might be possible to transfer the flies from waters where they swarmed in clouds to waters where they were not known, for the purpose of stocking them. I knew that the May fly had a short life; that it rose from the water, burst its skin, tried its wings, mated, laid its eggs, and died, all in a short time, but the actual length of its life I knew nothing about.

At the lake where I was spending the summer there is a hotel with a frontage of 350 feet, and it is five stories high. One year when the rise of the May fly (and I refer to the green drake) was at its heighth, the wind was just right to blow the flies against the hotel, and they fairly plastered the front of the whole house. Windows, doors and every opening was closed in consequence of the flight, and the people were forced to take refuge inside the building.

When I arrived at the lake the main flight of flies for that season was ever, and I found the cases in windrows on the shore when the wind was right, but the flies were still rising so that I could gather hundreds of them in an hour or so in the morning. I fixed a tin biscuit box with wooden perches for the flies and punctured it to give air, and then filled it with the flies. I also filled the inner part of a bait bucket, putting in some twigs for perches. At that time I had not heard of any attempt to transport the flies, and my sole object was to determine how long they would live, and thus find out how far they could be carried. In gathering the flies I gathered everything in sight. The gray drake is the metamorphosis of the female green drake, and the purple or blackish drake is the metamorphosis of the male green drake. Naturally, I gathered flies that had been out of their cases various lengths of time, from those just flying, up to those which were spent.

I have described in this column how the seemingly perfect May fly rises from the water, flies to a perch, where it hangs body downward and sheds its entire skin from tip of wing to end of antennæ.

Every spring a number of species of the smaller May flies go through the operation on the screens at my library windows.

Twenty-four hours after collecting the May flies in the biscuit tin and bait bucket, I found that a few were dead, but the larger part of them were alive and as active as they ever were. I was then called away temporarily, and in my haste I forgot to leave word to have the flies watched.

I know positively, however, that they will bear a journey of twenty-four hours, and more than likely a journey of double that time.

A year after I gathered the May flies, Major W. G. Turle made known in the London Fishing Gazette the result of his experiments in this line.

He says the May fly is very eccentric in its choice of a habitation, being thick on the waters of a river at one place and perhaps only a few hundred yards further up stream not a trace of them is to be seen.

For transferring the flies to stock waters where they were unknown, he prepared several bandboxes and baskets which he estimated would hold 5,000 flies. Inside the boxes and baskets horizontal lines of worsted threads were placed at intervals, to serve as perches, and the boxes were ventilated with holes in the sides. A hole two inches square was cut in the pasteboard cover to drop the flies through. Usually they dropped to the bottom of the box, and then they climbed up on the worsted threads until they "looked like rows of swallows on a telegraph wire." The flies were taken to the place where it was decided to establish them, and were shaken out of the boxes where the water was fringed with alders and sedges. He says: "I watched then for a time till I was quite certain that they had taken to their new abode. Next evening I went down to see how they were getting on, and rejoiced to find them dancing about in the air, as is their wont, before they drop their eggs in the water; therefore in a couple of years (the time generally supposed requisite for the maturing of the eggs) I might reasonably hope to see a rise of fly on that part of the river. In due course my hopes were realized. I congratulated myself that my care and trouble had not been wasted, for the May fly was firmly established."

Later, Major Lurle discovered that by transplanting the larvæ of the May fly, the same result might be obtained as in the case of the transplanted flies, and that if the larvæ is planted in the spring there will be a rise of flies the same year. Furthermore, that the May season may be lengthened by planting flies from water in which they rise late, in a stream or lake where they rise early, and vice versa, as tranpslanting does not change the time of their rising.

The ordinary season of the May fly is three or four weeks.

In a paper that I prepared for the American Fishermen's Society I referred to the subject of transplanting May flies and quoted from a personal letter by the late Mr. Thomas Andrews, I said: "Major Turle was of the opinion that it required two years for the eggs of the May fly to mature, but, as will be seen from Mr. Andrews letter it requires but a year." Later Mr. Andrews wrote me again, saying: "You should make a small correction in your remarks on my experience with the May fly. I said we found larvæ of the fly (which hatched out the same year) not the mature insect, as I am quite sure it takes more than one year to mature, and am not sure that it does not take three years for the fly to mature from the egg." I never have made this correction, but am glad of the opportunity to do so now.

Mr. Andrews had told me that he cultivated largely the Alder fly as food for the young trout in his ponds, and in this letter, from which I have quoted, he says: "Larvæ of the Alder fly does not live in a case. It is found on the mud and weeds and gravel, and is somewhat similar to the May fly larvæ, and might be mistaken for it at first, but on closer examination a great difference will be found. The eggs of the Alder fly are to be found on the rushes and grass hanging over the streams and ponds in May and June. I collect these eggs and hatch them out, turning the larvæ into the water. They are almost microscopic, and just the thing for the young fish.

Then there is the grannom fly which I cultivate by bringing home the eggs which are found in bunches attached to rushes, bits of sticks, grass and woodwork in the rivers. The eggs are placed in my ponds where they hatch out in due time. We also cultivate snails, and the young of these make capital food for my fish of all ages.

How largely trout feed upon the larvæ of the caddis fly is illustrated by the report made by Dr. Barfuth, of the University of Bonn, who examined the stomachs of some brown trout and found in five trout the creeper cases of the caddis worm as follows: respectively, 136, 585, 116, 115, and 186. If insect food is introduced as trout food, crustacean food should be added also, and fresh water shrimp and daphnids serve the purpose admirably, and about them I shall have something to say at another time. Both are very prolific; I might say wonderfully so in the case of the daphnids. Two species of daphnids that I have in spirits on my desk are so small that it requires sharp eyes to see them, and under a strong glass it will be perceived that they are burdened with eggs.

Game and Fish Protection.

THE VALUE OF FISH AND GAME.

ADDRESS OF E. C. FARRINGTON, SECRETARY OF THE MAINE SPORTSMEN'S FISH AND GAME ASSOCIATION.

WHERE DOES ALL THE MONEY GO TO?

Sometimes it is urged that but few get the benefit of this money brought into the State. This is a mistaken idea, as any thinking man who, for a moment, will give it consideration, will see.

A considerable amount, says one, goes to the railroad corporations. True, the smaller amount does. But what becomes of the money they receive? It goes to pay help, to give better train service, to swell their transportation earnings, increasing their taxes, improving their securities, nearly five millions of dollars of which are held by the savings banks of Maine, and nearly two hundred thousand dollars of its earnings finds its way into the treasury of the State. The Maine Central Railroad alone pays more than $80,000 taxes into the State treasury. Not only this, but those lines of railroad, like the Sandy River, Phillips & Rangeley, Franklin & Megantic, Bangor & Aroostook Railroads, as well as others, receive transportation earnings from sportsmen alone which aid in making it possible to sustain roads reaching the interior of our State. Hotels get a part of this money, only to pay it out in wages to Maine help, and largely for products of Maine farmers. Guides and all classes get a portion, and all these people pay it in turn to merchants, etc., for the necessities of life. Sections remote from centres of business find a market better than Boston or New York for farm products. The lumber manufacturer sells lumber for hotels, cottages, camps, etc., and our mechanics build them. The net profits that any or all these corporations or persons receive is very small, and the greater amount of money finds its way into every avenue of business. Right here in Kennebec county in the town of Belgrade, I am informed on good authority that five thousand different persons spend part of the season, coming here for the pleasure of fishing. The rainfall is not distributed for the good of all more evenly than these millions of dollars which come to Maine of our fish and game interests.

I desire to read a letter from our honored Senator, Hon. Wm. P. Frye.

"United States Senate, Washington, D. C., Jan. 8, 1895.

"Hon. E. C. Farrington, Augusta, Me. My Dear Sir: It would of course afford me great pleasure to address the Maine State Fish and Game Association at their next meeting, but it is impossible for me to leave here at present. You are not at all mistaken in supposing that I feel a profound interest in the preservation of our game and fish. For forty years I have been visiting the Lake Region and may be considered as one of the pioneers. I took an interest in the starting of the first club, the Oquossoc, and I have no hesitation in saying that that association has brought into the State of Maine thousands of sportsmen and left there millions of dollars. I proposed this last October to spend at least half the

month in the woods hunting for deer, caribou and moose. I hoped to find a place where I might be reasonably safe, but there was no spot not already pre-empted by sportsmen. In two days forty-two passed through Rangely en route to the woods. In my judgment the estimate that several millions of dollars were spent last season in our State by residents of other States seeking health and game, is not excessive. And if in the future, by wise legislation, careful guardianship and reasonable appropriations, our magnificent forests shall be kept replenished, that expenditure will be increased.

"Maine has been for the last two years more prosperous, less injured by the business depression, than any other State. I think that the enormous expenditure of money made there by sportsmen and by summer visitors may partially account for this.

"Private corporations owning streams in the Provinces do not hesitate to make large expenditures for the preservation of salmon. I think on the Restigouche a New York club appropriates every year from five to ten thousand dollars for guarding the stream. A gentleman told me a while ago that on the Tobique, which is a small river, they were paying four thousand dollars annually. Now these gentlemen do not mean to waste money. If to guard properly small streams entails so much expense and is a judicious appropriation of money, what can the State of Maine well afford to pay annually for the protection of the fish in twenty-five hundred rivers and lakes and for the game in forests into the center of which you might place the State of Massachusetts and then require a guide to find your way out over the borders?

"I do believe in economy; but my definition of the word is a wise and judicious expenditure of money, not a niggardly withholding of that which, if properly invested, would bring large returns. I trust that you will ask of the Legislature only what is reasonable, and that they, recognizing the soundness of your judgment, will make favorable respones. I am, very truly,

WM. P. FRYE."

So much for the value of our fish and game interests. A word now in relation to the manner of caring for the same.

The bill before you, which is the outcome of the excellent recommendation of Governor Cleaves in his message of 1893, in which he stated, "This special and private legislation is accumulating so rapidly that I deem it proper to suggest to the Legislature, for consideration, the propriety of providing by general laws for the regulation of matters of this character."

If this bill shall become a law, I feel sure that not only the Governor, but the commission who framed it, "have builded better than they knew." So far as relates to private and special laws affecting the fish and game interests of the State are concerned, the lumbering of the statutes, while a grievance, no doubt, and costs time and money of members, and the State, is of comparatively small importance, compared with the injury that comes to the fish and game interests by attempting to control and regulate this matter by special legislation. That the time taken to give attention to the demands for special legislation by the Legislature, and the increase in the numbers of acts that find their way upon our statutes, is of itself sufficient cause for a change in the manner of regulating the interests pertaining to our fish and game laws, no one familiar with the matter can well deny. If all the vexing questions could be determined better that way, it would not be wise to put this responsibility upon any other tribunal.

But they cannot. There is great confusion now regarding the restrictions placed upon our waters governing fishing, and no sportsman, whether in or from out of the State, is or can be, informed as to their general scope. He is not only in doubt where to fish, but is liable to be complained of for violations which he has no intention of committing. The interests are so varied and so extensive, and of such importance, that to longer continue the methods of the past must prove harmful to the State. The attempt to meet the requirements from session to session has proved a failure. I mean by this that while the commissioners have worked hard to carry out the policy of the State, every session brings more and more demands for regulating the fish and game interests. This proves two things, one that the interests are not properly cared for, and the other that they are regarded of more especial value each year. This manner of dealing is not only inadequate, but absolutely harmful. However desirous the Legislature may be to treat these questions for the good of the State, it is at the same time impossible for them to fully understand the merits of each case, and we find that while the wishes of petitioners have been respected, and laws passed to protect some interest, future developments prove that behind the demand has been motives not consistent with good legislation. Private interests, instead of public, are too often promoted by special legislation. Very many of these special laws which are supposed to be made for the better protection of fish and game, upon examination are found to be only anti-trespass laws, by which many of our citizens are prohibited from fishing in certain waters while others receive the sole benefit of such privileges. The reason given was to protect the fish, the object was to keep persons off from land adjoining such waters.

A large number of petitions are now before the Legislature asking for special legislation by which fishing shall be prohibited for a term of years in different waters in the State. Large numbers of special laws are now in force forbidding fishing upon certain waters for a term of years and in all these cases where the numbers of fish have been so reduced that these demands became necessary, it was the natural home of the best fish that live, fish which will, if properly dealt with, propagate their own species for all time. The history of special legislation in this line, and the hundreds of "Acts," now upon our statute books, are the landmarks that show what waters have been ruined for want of proper care on the part of the State. And they will continue to be, until a different policy is adopted. It is only a question of time, when in all parts of our State, there will be generally found special laws forbidding fishing for a term of years. If we could have had such a law as is now contemplated, ten or fifteen years ago, there would not be the slightest necessity of special legislation for the protection of trout and salmon, in many waters where they naturally propagate their own species, outside their spawning grounds. The supply, on account of illegal destruction, is slowly but surely giving out in many sections, sections which promised a few years ago to become the summer homes of tourists, which would add thrift to these localities, but must now await, we do not know how long, for a reproduction of these fish, once so abundant. To the lack of State supervision, and a resort to special legislation, we must attribute this loss to the State.

The result is precisely what it is with a provident farmer, who robs his rich lands by over cropping, only to find that he must wait and be content with crops that will not pay, till he can again restore the elements of fruitfulness. How much better to have pursued a policy which would have maintained the integrity of the soil and made it a constant source of revenue. The same may be said of valuable water power, the owner of which would neglect to repair the structure until decay or neglected water waste destroyed the privilege. How much better, in fact the only safe course, is to put this matter of such immense importance in the hands of a discreet and able commission, who will see to it that no loss comes from neglect, and that all our waters are made a constant and increasing revenue to our people.

A manufacturer will keep his mills in condition to run every day if possible. A railroad corporation worthy of managing an enterprise of that kind, will not only keep their road and rolling stock up so as to do a safe and prosperous business, but will each year make all its property more permanent and better fitted for doing business. From this day out, Maine ought to adopt a policy that each year will add an increase of fish and game to her forests and waters, equal to all the demand by fair angling and hunting. As I said, it cannot be done by special law. Authority must be placed in the hands of some board to look after these great interests and to provide for their continuance. Being familiar with all waters it will not be difficult to adopt such rules governing the taking of fish at certain times, in certain places, as will protect the breeding grounds, and keep up the supply of desired localities. In this way absolute prohibition of fishing in ponds, and in streams, outside of the spawning grounds would be doubtful, if ever, be needed. There is no danger of unduly reducing our fish in lakes and ponds if only fair angling be done in open season. The destruction comes from illegal methods, and brook market fishing. It has been remarked that it is of doubtful policy for the people to surrender their rights to a board of three men. The rights of the people are not surrendered. They are simply delegated to have done, that which cannot be properly done otherwise. This is the rule in all the departments of the State and government, and it is no more a surrender of rights, than to permit a trial justice, the court, board of health, care of schools, management of railroads, and other similar boards to do the bidding of the State under general laws which you adopt. It is the only feasible way to my mind that the State can wisely deal with this important question.

Every two years the State looks over the doings of its servants, and can increase, lessen, or take away the authority delegated, as the good of the State seems to require.

One word touching the worst features existing touching the enforcement of our game laws. A number of wardens, either without pay, with small pay, or hired for a little time to give special attention to enforcing the laws have received commissions as wardens. The smallness of the appropriation, for fish culture and enforcement of laws, has compelled this course. It has proved ineffective, and very obnoxious to almost all classes. In order to get some fair remuneration for services, many of these wardens have converted themselves into spies for the purpose of securing convictions and part of the fines. In fact if common statements can be relied upon, many have induced violations, that prosecution and fines might follow. The law has lost the good will of many good men on this account, and has become distasteful. The commission, I am informed, have no power, nor the State even, to terminate a commission of an unlawful warden, and this class of officers must remain with power for harm, till their commissions expire. A bill is already before the Legislature, which, if it becomes a law, will compel wardens to give bonds for the proper discharge of their duties. In view of this fact, and that a new departure may be adopted for the protection of fish and game, I submit if it would not be wise to pass a law, or amend the bill before you, terminating the commissions of all wardens.

In view of all these facts, and also in veiw of the fact that petitioners from nearly three hundred towns and cities, representing largely the business interests, and identified with the prosperity of the State, have petitioned this Legislature that these interests be placed in the hands of a commission who will be able to deal intelligently with all questions at issue, would it not be wisdom on the part of this committee and the Legislature, to place upon the statute a general law which will better meet the requirements of the State?

Chinese Methods of Game Protection.

Editor Forest and Stream:

Some weeks ago it was announced in the Forest and Stream that an Association of Nebraska Sportsmen at Omaha had prepared a game law for introduction to the present State Legislature, and later, that a committee had been appointed to urge its passage. The one feature in the proposed measure which contradistinguishes it from good game legislation is the Chinese Wall which it is thereby intended to build around the State of Nebraska, by means of a prohibitory shooting license for all non-residents of $50 per annum. A gun license or shooting license for non-residents never bars out the market shooter. He just moves into the State and takes up his residence there and never pays that license or any other license. It will never be collected from any non-resident sportsman because as it is such a pointed insult to the non-resident of Nebraska from the residents of Nebraska, that no gentleman will ever go there to hunt. No matter how well able he may be to pay fifty dollars for the privilege of a season's shooting, he will be too much of a man to submit to robbery and imposture combined with insult. At such a time, too, for such a law to be proposed in Nebraska of all other States in this Union! Ye gods! Why, there is a very considerable portion of that afflicted commonwealth that is just now on the very verge of starvation, that is being fed and clothed and warmed, to such a degree as the poor wretches can be, to a very large extent, by the gentlemen of her sister States. Corn and meal by the car load. Sewing societies in every community sewing and sending it there in boxes and barrels. Love by the ton, and sympathy without measure, from—not the Eastern part of Nebraska, where that law originates—at least not wholly or even in small proportion from there—but from this whole beloved and indissoluble country. Chicago, at the time of the fire; Charleston, at the time of the earthquake; Johnstown, at the time of the flood; Nebraska, at the time of the famine, all tell us that we are one country. Indeed, our whole system of law tells us this, and is constanttly trending this way and all judges of our courts of law and all wise legislators and law makers are so inclined. The judge who figures in that association is not in line with American jurisprudence. It is a travesty on the judicial ethics. Shame on the whole of them, and may their shadows grow lean and small in the land! If they want to hog the hunting in Nebraska, let them stand up in the courage of their conviction, and ask the Legislature to prohibit outsiders from hunting in the State at any price. That is what they are after, and I must say they are the first body of sportsmen I ever heard of who did not go after what they wanted as if they were sportsmen instead of sportsmen. I wonder, will the few individual members of the Legislature from the famine district vote for this measure.

This plan of game legislation is un-American, it is Chinese, it is selfish, it is brutally discourteous; but it is more than that. The time has come when the States in the Mississippi must unite in their game legislation to protect the ducks, the geese, the snipe and the chickens all along the line, and the introduction of the game warden system all along the line for the enforcement of the spring and fall seasons. If this is not soon accomplished, good-by to the duck shooting, the goose shooting and the chicken shooting. If it is done, it will all come back in all its old time glory and it will never leave. And just at this juncture, if the States begin to pass such laws as the one under discussion, this great scheme for the preservation of game in the great Valley of the Mississippi will never be perfected. What is wanted in all the States is for those sportsmen who come under the penultimate accentuation to have a hand in the passage of game laws, to the end that one system of laws shall prevail in one great stretch of country that happens, thank the Lord! to be inhabited by one common brotherhood of men. Nobody cares much about Nebraska. There are plenty of good places elsewhere to hunt in. But the devil of it is that if they pass such a law, every contiguous State, out of mere deference to its sense of outraged friendliness, ought to pass laws against the citizens of Nebraska being allowed to hunt there, and the law, when passed, ought to be simple and manly and to the point and read: "Nebraska men not allowed to hunt in this State, especially judges."

Come, now, you Nebraska—I mean Omaha fellers—you have slapped all outsiders in the face and we have come back at you. Let's declare an armistice and pull together on this great game law measure. It is deep in the heart of every sportsman in this great section of the country, and is of more moment than your shooting or my shooting. Don't pass the law. For if you do, there is not a State Legislature from here to kingdom come that will ever pass a law in comity with you, and the spirit will grow, and the first thing we know, our ducks will have followed the buffalo, the great auk, the Plymouth Rock bird and last year's corn crop in north western Nebraska.

St. Louis, Mo. GEORGE KENNEDY.

Michigan State League Game Bill.

The Tribune dispatches report from Lansing that the State Fish and Game League game bill as finally agreed upon makes the uniform deer season from Oct. 15 to Nov. 10, no person to kill more than two deer. Rabbit killing is permitted at all times, but squirrels can be killed only from Sep. 1 to Nov. 30. Spring shooting of migratory ducks is permitted. The open season for snipe and woodcock is from Aug. 1 to Nov. 30, and for quail and partridge from Oct. 15 to Oct. 30. The sale of quail, partridge and woodcock is prohibited. The league recommends that non-resident hunters be charged a license fee of $25. The fish bill makes the open season for trout from May 1 to Sep. 1, and prohibits the use of nets in all inland waters, including St. Mary's River, Lake St. Clair, and St. Clair and Detroit Rivers. Fishing through the ice is prohibited, as is spearing in inland waters at any time. The closed season for bass is from Nov. 15 to June 1. No trout less than six inches long nor bass less than ten inches long are to be taken, and under this size are to be handled as carefully as possible and put back into the water. No fishing is to be done within 100 feet of a fish chute, and fish in inland waters are to be taken only with hook and line.

CHICAGO AND THE WEST.

NEW FACTS.—THE ILLINOIS GAME LAW IMBROGLIO.

Chicago, Ill., Feb. 7.—There is still trouble in Illinois, serious trouble. The game laws of the State are in more danger than ever. Warden Blow is out with another bill. Still further attempts have been made, either in ignorance or in craft, against the welfare of the sportsmanship of the State. It has been sought to divide that sportsmanship against itself. The eyes of the sportsmen of Chicago and of Illinois are now opened. They have formally thrown off a friendship worse than useless, and they are now out for war. Issue has been joined between the Illinois State Sportsmen's Association and the State Game Warden, Chas. H. Blow. It has been joined also with the game dealers of South Water street, and incidentally also with the so-called sportsmen's paper of Chicago which has been the champion of that warden and those dealers, and which has done its best, and still is doing it, to foist upon the people of this State a law which will open the market to sell Illinois game four months in the year, and the game of all other States, every day in the year—an equivalent to a wide-open Chicago market the year round.

That this preposterous doctrine could for a moment be favore by any warden or by any sportsman's paper seems at first blush absurd and impossible. But I will show that this is absolutely true, and moreover show that the attempt is still stubbornly and idiotically kept up. It is a spectacle for gods and men in the world of sport, and by all means the most sensational and singular piece of sporting news that ever came out of Chicago.

To make the entire situation clear will take some time and space, but it is worth it, and it is due the sportsmen of Illinois that they have some place where their views and the views of honest sportsmanship may get a full and careful showing.

I would not have it said that I am framing an attack upon the journal which is supporting the Blow bill. That singular and almost incredible situation is that the fight for protection and the saving of this State and all the warden states from the game markets of Chicago includes and implies of necessity an attack upon that paper. When it goes over to the enemy it must be assailed with the enemy. Never, in all the history of journalistic blunders, did any newspaper ever make such a fatal blunder as this one.

COMRADES.

Much of all this was brought forward in Forest and Stream last week. The Forest and Stream story was brought up to last Sunday, and we will continue it from that date.

The gentleman who purports to be the main moulder of public opinion on the journal above referred to during the present interregnum purports to be Mr. George Washington Strell, also Vice-President for the State of Illinois of the National Game, Bird and Fowl Protective Association. When this gentleman found that his proteges, Warden Blow and Warden Blow's bill, were getting a bad knocking about, he, or rather they, sought the daily press as a means of bolstering up the bill. The Tribune of Chicago was already on record against this infamous Blow bill, and so the Herald, whose editor was very likely never informed of the true state of affairs, was chosen as the meduim. Warden Blow reprinted in last Sunday's Herald his impudent letter of challenge and rebuke to the Illinois State Sportsmen's Association. This letter was very possibly composed in the American Field office. If it was not, a copy of it was taken there or elsewhere before it was delivered to the executive committee of the Illinois State Association. It was the property of that body, and that body never authorized its publication in any daily paper. Yet, as if purposely to wound and injure that body, it was printed and Warden Blow added to it the following words in the interview he had with the Herald:

"Game Warden Blow, author of the proposed new law which was handled so roughly by the executive committee of the Illinois Sportsmen's Association at its meeting Friday, said yesterday the bill would pass, and that it had received the indorsement of 95 per cent. of all persons interested in the protection and propagation of game. It had even received the approval, the warden said, of the Illinois Sportsmen's Association.

"The objection offered to the bill by a very few," continued Mr. Blow, "is that it does not prohibit the shipping of game to Illinois from outside States during the closed seasons. Under the law now in force there is some such provision. We may confiscate slaughtered game out of season, no matter where found. It may have been killed outside of Illinois and may have been in a cold storage warehouse two years—that makes no difference. How is such a law to protect Illinois game, I'd like to know? There isn't enough game in this State to furnish a day's supply for Chicago. Hotels and other establishments should be permitted to stock their larders from other States. It makes trade for Chicago. So long as birds beyond our jurisdiction are to be killed why should they not be brought here instead of being sent to other cities? With wardens enough and a good law we will be able to protect the game in Illinois."

The statement of the first paragraph about "95 per cent." is, of curse, untrue and absurd. The statement of the second paragraph I submit with no comment whatever, except to call attention to the fact that it was made by Chas. H. Blow, present Warden of Illinois.

Yet, to the defense of such statements and of such insult to the Illinois association in the same column of the Sunday Herald comes Mr. Strell. He supports Warden Blow.

They were comrades!

I beg all to read the following extracts from this letter of defense from Comrade Strell:

"Editor Chicago Herald: I notice in a Friday paper an item entitled 'Sportsmen want a better law—They are considerably worked up over deficiencies in a proposed act.' Now, Mr. Editor, I ask only a fair hearing and a chance to combat the statements therein contained. Firstly, the proposed bill was published in circular form and distributed four months ago and suggestions for improvement invited; responses to the number of over 500 came from sportsmen all over the State of Illinois approving said bill with a few alterations, which Charles H. Blow, our State Game Warden, and the best one Illinois ever had, and the framer of this bill, adopted. Only on Jan. 17 the directors of the Illinois State Sportsmen's Association met in Chicago and indorsed and recommended for passage, with a few alterations, Game Warden Blow's game bill. How could this State organization indorse and recommend for passage this bill and within two weeks decide consistently to frame another? Who has worked this sleight of hand trick without informing Game Warden Blow? This same article states the bill is in favor of South Water street, and the pothunters. Now, as a matter of fact, it is nothing of the kind, for it allows the sale of game birds killed in Illinois only five days after the legal open season commences and ends five days before the legal open season closes, thus shortening the selling season of game killed in Illinois, whereas the present law allows the selling to commence the first day of the open season (where does the stock come from the first hour of the first day?), and five days after the ending of the close season.

"The penalties for selling or killing game at any other time are very severe, and full power is given the game warden and his deputies to arrest on the spot any violator. Is this in favor of South Water street and the pot-hunter? I have been all through South Water street and every commision man interview, said he was in favor of and would support a law just to all citizens alike, but not one would support a law which opened ways and means for blackmail. They all say they want to see game protected, otherwise their occupation, like Othello's, would soon be gone. Probably because they favor Game Warden Blow's bill instead of the present unintelligible bill is the reason for the statement that it favors South Water street. The item also states lawyers have

declared the new bill fatally weak. Then why was Warden Blow not informed of it during the past four months, during which time 5,000 copies have been distributed throughout the State for suggestions—a most fair and impartial way of dealing with a vast constituency—and not wait until the bill is introduced?

"The item also states the markets are free to sell birds the year round. How can they sell Illinois game, the killing of which is specifically prohibited except between certain dates, when it may be lawfully sold? As Illinois deer are protected till 1900, why should the bill prohibit the sale of these animals when none may be killed? Prairie chickens are ripe for killing Sept. 1, and because the present date is Sept. 15, through a clerical error in the existing law, is no reason why the expressed wish of sportsmen throughout the State, who prefer to go afield Sept. 1, should be ignored. In conclusion, Mr. Editor, I will state, from personal knowledge, that over 20,000 shooters in Illinois are ready to make affidavit that State Game Warden Charles H. Blow is the only game warden who has traversed every part of Illinois and tried to stop the killing of game, instead of searching commission houses to prevent the sale of game. As our State Warden says: 'It is no use shouting after the game is killed—it is then beyond resuscitation. What we must do is to prevent the illegal killing, and the game will increase naturally.' GEORGE W. STRELL,

"Vice-President for Illinois N. G. B. and F. P. Association."

COMRADES AGAIN.

Of course, the above statement of Comrade Strell is full of absurd and untrue assertions about the actual features of the law, but this I will let the lawyers take up for us later on in the story. I want to call attention to only three points: The first statement that Comrade Blow has received 500 burning letters throbbing with approval needs a lot of salt. Mr. Baird later wiggled his finger in the face of Comrade Strell, and said:

"I will bet you the biggest dinner you ever saw that you and Blow can't produce 100 such letters of indorsement, let alone 500."

And Comrade Strell allowed maybe he couldn't.

Equally, or rather far more absurd, is the assertion of Comrade Strell that of his personal knowledge 20,000 shooters in Illinois are going to do anything one way or the other. A personal acquaintance of 20,000 shooters is a trifle large.

The last point of interest here is the reference to the blackmailing of the South Water street game dealers. Comrade Strell had discovered the species of tree-nesting mare! South Water street had been blackmailed under the old law. It was too bad. These South Water street men were friends of Comrade Strell! He had been all through the street.

They were comrades!

The above communications from Comrades Blow and Strell, specious and inaccurate and unfair as they were, were easily capable of doing a great deal of damage to the cause of sportsmanship when published in a daily like the Herald—which never would have published them had it known the facts. It will be noticed that seeming weight might be added by the signing of Comrade Strell's title as Vice-President, etc.

Comrade Blow and Comrade Strell published the above of their own motion. Comrade Strell added his title of his own motion. They thus conveyed an entirely wrong impression through the columns of the Herald.

THE COMRADES REPUDIATED.

Just to show how much weight there should really be attached to the letter of Comrade Strell, I beg to offer the three following letters, without comment:

"Chicago, Ill., Feb. 6. Mr. E. Hough. Dear Sir: I wish to state, replying to your inquiry, that the statements made in the Chicago Herald of Feb. 3 by Warden Blow and by Geo. W. Strell were not made on the motion or by the sanction of the Executive Committee of the Illinois State Sportsmen's Association, and do not represent the opinions of the committee in any way. I consider them detrimental in a high degree to the best interests of sportsmanship. R. B. ORGAN,

"Chairman Executive Committee."

"Mr. E. Hough.—Dear Sir: As President of the Illinois State Sportsmen's Association, I fully indorse the above communication of Mr. R. B. Organ, and concur in the sentiment contained therein.

"W. L. SHEPARD,

"President Illinois State Sportsmen's Association."

Chicago, Feb. 8. -Mr. E. Hough. Dear Sir: In an article which appeared in the Chicago Sunday Herald of Feb. 3 Mr. George W. Strell, Vice-President of the N. G. B. & F. P. Association, makes some statements which are directly and by inference antagonistic to the avowed purposes of our National Association. These statements made by him should be taken as his personal views only, and they were not authorized and cannot be indorsed by the association. M. R. BORTREE."

(Mr. Bortr,ee is the President of the National Game Bird and Fish Protective Association.)

THE COMRADES ALLEGE BLACKMAIL.

But about the tree-nesting mare. The Illinois Association committee did not like the word "blackmail." They proposed to find out about that charge. They took the matter up at a meeting Monday, Feb. 4.

At that meeting the Blow bill came up for further scoring by Attorney R. S. Mott, who showed it honeycombed with flaws and fatal to sportsmen's interests. The committee decided again to stand on the present law, and a few amendments improving that law were approved. A committee was chosen to go to Springfield. Mr. Baird was working to get a joint meeting of the Senate and House Committees on Game and Fish (such joint meeting will be held Feb. 13. It was decided to wire these committees that the sportsmen would be with them.

Then the subject of blackmail came up. Comrade Strell said he would bring seven dealers from South Water street who would testify to blackmail under the old law. He was instructed to bring them in, being well fitted to do this through his friendship with the game dealers.

They were comrades!

It was decided to hold a meeting Feb. 6, and to have present the South Water street men, and to have a conference over the subject of proposed legislation.

COMRADES TAKE IT BACK.

At the meeting Wednesday afternoon the executive committee was out in full membership. With their journalistic friend came also two other representatives of South Water street, Mr. G. W. Barnett and Mr. Geo. Sloan.

They were comrades. But when they were, time and again, asked by Mr. Mott, Mr. Baird, President Shepard and Chairman Organ to name one case of blackmail, they declined to do so. They had heard that a warden in years past had accepted a salary to stay away from South Water street, but they knew nothing of it, etc. The committee had heard the same thing, and would have liked to get the names of the South Water street firms who gave him the bribe. But they couldn't. However, Comrade Strell was forced to admit that he had written his Herald letter of his own motion. Comrade Barnett said that letter suited South Water street, and so did the Blow bill.

It transpired that Warden Blow had now abandoned his old bill (House Bill No. 56), and had amended it so much that he had made a new bill of it. A copy of this new Blow bill, newly printed, was handed about.

THE COMRADES AID EACH OTHER.

Comrade Barnett admitted that South Water street had raised $110 and given it to Warden Blow to get his first bill printed. Mr. Baird said: "Didn't South Water street pay to have this Blow bill No. 2 printed also?"

"I decline to answer—I don't know about that," said Comrade Barnett.

"Well, what if we did?" blurted out Comrade Sloan.

A DECISIVE MEETING.

I wish I could take space to report in full this meeting, which was the sharpest, cleanest, most business-like and most decisive thing of the kind I ever saw. The animus of South Water street was shown up completely, and it was brought out unmistakably that there could be no union of interest between the sportsmen and South Water street. The meeting was courteous and diplomatic in every respect. Mr. Barnett showed himself full of tact and resource; but he was no match for the material brought against him. Mr. Mott's speech and his cross-questioning of Mr. Barnett as to the growing scarcity of game all over the country I consider to have been the finest and most decisive thing of the kind I ever heard at a meeting of sportsmen. Mr. Barnett naively admitted that the game no longer came from Illinois. "Illinois game amounts to nothing now," he said; but that it formerly came much from Illinois. Then it came from Missouri, but not now; once from Iowa, but not now. "Oh, Iowa has no game!" he said. Once, for a brief time, it came from the Indian nations, but not so much now. Mr. Barnett thought the game was getting less and less. "We get a few deer from Wisconsin now, but no chickens any more," he said. Then he was forced to admit that he knew it was illegal to ship venison from Wisconsin. Indeed, he was forced to admit a great many things. He exposed unwittingly the whole workings of the outrageous game trade of South Water street.

Mr. Sloan insisted that game was growing scarcer because the Illinois law was causing it to be shipped East instead of to Chicago. That sort of statement is nonsense, and needs no comment. Those who study the question all over the country know the game is becoming extinct, exterminated, all over the shooting country, and that it is only found in the markets because the last of the new covers are now being shot out and swiped up.

THE TWO BLOW BILLS ARE ALIKE.

The new Blow bill was discussed at the meeting, and shown to open the Illinois markets to sell Illinois game four months in the year. The present law forbids its sale at any season. It was further shown that it made Chicago a wide open market the year round for all foreign game. And now the true animus of the dealers began to crop out. They offered this resolution, signed by many dealers:

"We, the undersigned game dealers of Chicago, do solemnly declare, on our word of honor, that we are unalterably opposed to the traffic in game illegally killed in this or any other State, and will do all in our power to uphold a law just to all the people, and we further pledge ourselves to do all in our power to prohibit the buying, selling, handling or killing of any game during the season when such killing is by law prohibited; but when such game is killed and shipped legally, from any State, we claim the right, as American citizens, to buy, sell and handle it for the American people at large, who have rights in game as well as the sportsman class. Give us a law which will allow us to sell game during the legal open seasons, when all people want it, and you will not have any stanchre supporters of game protection anywhere. We indorse Game Warden Charles H. Blow's bill because it is just to all people alike, and is not class legislation like the existing law."

This might at first seem a fair proposition, but it is not fair; and unfair as it is is, South Water street means anything but the best part of that. That statement is the same as the Blow bill, and it insists that once South Water street has a bird in hand, it can sell it as it likes. "Shipped legally," forsooth! Where does South Water street get its game? From Wisconsin, Minnesota, Michigan, Dakota, Nebraska. Look at the laws of those States and see how many allow the shipping of game at any season. The game business of South Water street lives and thrives on the violation of laws of the other States, and none know this better than the most prosperous dealers of that street. Yet, by means of this precious warden and his precious bill, by means also, as much as possible, of a buncoed and unfortunate representative of a so-called sportsman's journal, South Water street comes boldly out and says to the sportsmen of Illinois: "You tend to Illinois and protect your Illinois game (which we don't want, because we have already sold the most of it long ago), and keep your hands off of our business. Don't you dare go outside of this State, and don't you ask us how or where we got our game. All you have to do is to leave us alone and let us sell it after we do get it.',

That is pretty doctrine to ask the sportsmen of Illinois to accept, isn't it?

THE COMRADES INSIST ON THE BLOW BILL.

They will not accept it. The lawyers of the committee showed what the Blow bill would do, and showed the two Blow bills to be alike and of equal viciousness. They offered to agree on a statement of facts and to go before the joint committee of the Legislature at Springfield with the South Water street men. "We want to shorten your selling season by thirty days," said Mr. Baird. "The old law was agreed upon as an armistice between the sportsmen and the dealers. Now we want to cut off January from your selling season. According to your own statement, you want to protect our Illinois game, and you don't want to sell illegal game. Then there is nothing between us except this thirty days. This comes up in Section 6 of the old law. Let us agree on all other points and join issue before the committee at Springfield on that one point."

"No!" cried Mr. Sloan; and Mr. Barnett in his smoother manner once more insisted that South Water street stood on the Blow bill and would fight for it. "That suits us," said he. "Mr. Strell's letter in the Herald is our position, identically."

They were comrades!

Thus one by one the masks were stripped off from every South Water street protestation. The dealers came out flatly, and said, "We want the right to sell game at any time that it can be sold in any other city." That is, they want to rival the iniquities of Boston and New York markets. Time and again Mr. Barnett reiterated the favorite doctrine of Warden Blow.

"Stop the killing of the game. Catch the killer before he kills (when you can't convict him), but don't try to control the bird after it is dead, nor punish any man for handling it after it is dead."

That is a fine war cry! And to what does it lead on? To coverts bare of game, from the Atlantic to the Pacific. The lesson of the buffalo and the wild pigeon reads one way to the man who is intelligent and sincere.

Mr. Mott and Mr. Baird handled the sportsmen's case with ability and discretion, but they could get no more than the above out of the representatives of the game dealers. Mr. Sloan admitted that the street was going to fight now. They stood on this Blow bill. All they asked for was only everything!

Mr. Mott said that personally he would prefer to see no game at all sold at any time, but did not think a measure stopping the sale of game could be passed, and would not advocate it. But he feared a law like the Blow bill, which would be bad for Illinois game. In England they considered the non-importation of game laws to be one of the strongest preservers of English game. He asked the Chicago market to give up the month of January and to be content with three months.

But the discussion came to nothing. It was seen there could be no compromise, but that South Water street insisted on an open market. Mr. Mott said: "Then all we have found is that this Blow bill represents South Water street?" Mr. Barnett smiled deprecatingly.

NEW BLOW BILL UTTERLY VICIOUS.

The new Blow bill, on which South Water street and the American Field pin their faith, is utterly and absolutely vicious. It is no wonder that South Water street approves it, for a better bill for the game dealers could not be devised. All the way through the careful reader can see one trend. The law makes it mighty rough for the farmer boy who breaks the statute, but nowhere, in no clause in no one single particular, can anyone find a solitary provision adverse to the interests of South Water street. The bird may be killed illegally, but if once South Water street gets it you can't follow it. The warden is to be well paid. He and his men draw $7,900 a year of the farmers' taxes out of the treasury, whether or not the conditional fund covers it. The warden draws this pay, for what? For doing nothing. He cannot search South Water street. His wardens do the work outside, and the dealers have seen to it that all warden work must be done outside Chicago. It all rests on the activity of those deputies and the individual activity of their chief, whether game is to be protected. These farmers must be over the State of Illinois all at once. They must arrest the gun before it is fired at the bird—all over the State, and if they get there after it is killed is their theory of protection not exploded? Is not the bird dead in the country as dead as it is on South Water street? Ah, but listen! This bird now has a value If the deputy arrives too late, and if the bird is killed, he cannot follow it to South Water street. Once there it is safe, under Mr. Blow's theory and Mr. Blow's bill.

Under this new Blow bill the warden can "arrest on sight." Very well. But can he seize illegal game on sight? Bless you, no! That's against his theory and against his bill.

Under this bill the South Water street dealer can get his market hunter a license and send him down in the country to shoot. He is protected. But if my farmer boy chases a wounded quail over on to his neighbor's farm, he can be fined $10 to $25.

If the warden finds a man who has killed a dozen illegal birds, he can't fine him for each bird, as under the old law. In the new Blow bill the "separate offense" provision is left out. This leaves less latitude and discretion possible.

The new Blow bill does not make possession of illegal game prima facie evidence of guilt, as the old law did.

The new Blow bill permits the selling of Illinois game from Sept. 1 to Jan. 1. The old law does not permit the sale at all.

The new Blow bill opens the market for the sale of foreign game the year round. This infamous measure was never before offered this community.

The new Blow bill wipes out the old search warrant clause, by which the warden could search for illegal game on South Water street, or elsewhere. He won't need to search any more, perhaps. That isn't his theory."

The new Blow bill repeals all former laws. It is new. It is untried. It is vicious. Yet it wipes out the old law, proved sound by the Supreme Court of Illinois.

LEGAL OPINIONS ON THE BLOW BILL.

The following legal opinions on this last product of Mr. Blow are from two lawyers, who probably know more about the game laws of this State than any two in the city. Mr. R. S. Mott writes of it the following opinion as an attorney:

"Chicago, Feb. 7. Mr. E. Hough, Forest and Stream.—Dear Sir: The new bill for the protection of game, prepared by Game Warden Blow and introduced in the Senate, and which is currently reported to be designed by the parties interested, to supersede House Bill No. 56, which has been severely criticized, is practically the same old vicious measure. It still permits the sale of Illinois game during the open season; the sale of game from other States at all seasons of the year; the trapping, netting and snaring of quail and prairie chickens during the open season, and in all probability the shipment of game from this State; it permits the sale and traffic in the eggs of game birds, which is now prohibited.

Section 6, in reference to hunting upon the lands of another without consent, contains the penalty which was omitted in House Bill No. 56, but has an additional clause which would require the farmer to post his farm as a game preserve, otherwise it is not necessary to obtain consent to hunt thereon. This practically nullifies the present law, and is clearly drafted in the interest of the market hunter and game dealer.

"From the two bills as drafted by Mr. Blow after defects therein were pointed out, and from his communications to the Illinois State Sportsmen's Association in reference to the sale of game, I am clearly convinced that any bill for the protection of game emanating from that source will be detrimental rather than beneficial and should be closely scrutinized by every sportsman in this State. ROBIN S. MOTT,

"Law Commiteet I. S. S. A."

Mr. F. S. Baird writes the following opinion as an attorney:

"Chicago, Feb. 8.—E. Hough, Esq., Forest and Stream. My Dear Sir: The so-called amended game warden bill recently introduced in our Legislature has been handed me, and upon an inspection of the same, I am of the opinion that it is equally as vicious as the original. It is not properly entitled. It should be entitled, "A Bill to Destroy Illinois and other Game, for the benefit of the game dealers."

"This bill is in nearly every respect similar to the original one, in that it is drawn up entirely in the interest of the game dealers and against the farmers and those upon whose land the game is raised and fed. It omits all penalties against the game dealer, and has stringent and exorbitant penalties against the farmer and the farmer's boy, and all others who have really an interest in the game.

"Sec. 1 extends the open season for killing game fully 60 days; it also allows the trapping of game during the entire open season. Sec. 3 makes it a penalty to rob the nests and destroy the eggs of game and other birds, but has no penalty for selling the eggs. Sec. 4 allows sale of Illinois game during the open season, viz., from September 1 to January 1. Secs. 7 and 8 attempt to make a license to persons hunting, and makes a penalty for any person to hunt without a license, of $10 for the first offense, and $25 for the second offense. But it does not make any license or penalty necessary for the game dealer who sells game. Persons owning farms are not required to procure a license to hunt upon their own farms, but if a farmer hunting upon his own farm should follow game onto another person's farm or land, without a license, he is liable to be fined $10 for the first offense, and $25 for the second offense. Sec. 9 is a sop thrown out to the game warden by the game dealers of South Water street, who had the revision of this bill. It gives the chief warden a salary of $1,500 per year, and each of 8 deputy wardens a salary of $800 per year, making a total cost to the State of $7,900 per year, without compelling or requiring the game warden or any of his deputies to perform any particular duties.

"Sec. 10 gives the game warden power to arrest without warrant on sight any person violating any of the provisions of this act, and does not provide for any time or place, or before what court the person shall be tried; in fact, does not provide for any trial. Sec. 13 prohibits the use of a rifle upon any of the waters of the State, and provides a penalty of $25 and costs, and makes no provision for the collection or enforcement of the same.

"This bill is vicious in a great many other respects, and if it becomes a law, will repeal all of our present very efficient laws which have been affirmed by our Supreme Court, thereby wiping out our present game warden act, which allows the game warden to swear out a search warrant and search the premises of the game dealers for illegal game, both in and out of season.

"This bill, if it becomes a law, will be the means of destroying all of the Illinois game before the next meeting of our Legislature, when the same might be repealed. It has in it some provisions for propagating game, all of which are very crude and incomplete, and were evidently put in for the purpose of diverting the attention of the reader from the glaring iniquities and deficiencies of the bill. I am of the opinion that our present game laws are of the very best, and should remain upon our statute books, except where it might be possibly better to amend the game warden acts so as to allow the game warden to seize illegal game on sight, and also give the game warden all of the fines. F. S. BAIRD.

MISTAKES OF A SPORTING MOSES.

And this is the bill which is sought to be foisted on the sportsmen of Illinois by the Illinois warden—a bill for the game dealer in every respect, and not for the protection of the birds. This is the bill, or its successor, on which "over 500 letters of approval" have been received by a warden, indorsed by a personal acquaintance of "over 20,000 shooters of Illinois."

This is the bill supported by the American Field, the biggest blunder even it has ever made.

Moreover, Mr. Strell in his Herald letter is committing his paper to a doctrine absolutely and diametrically opposed to the principles of the National Game, Bird and Fish Protective Association, whose prime purpose is one of uniform and stringent game legislation, not in one State, but in all States kindred. Yet that writer is a vice-president of the National Association, and the paper he represents has sought to be the uncle, the godfather, the grandmother and everything else to the National Association. Now he slaps that association in the face just as he does the Illinois State Sportsmen's Association.

THE PROPER DOCTRINES.

Readers of Forest and Stream will find no inconsistencies in its position on this or any other question of game protection. Its word has always been, and always will be, for the loftiest principles of sportsmanship, and from its position thereon it has never been, nor will it ever be, bought, persuaded, threatened, cajoled or deceived.

FOREST AND STREAM "PLATFORM PLANK."

"Stop the sale of game" may be something ahead of the times, a measure yet hard to enforce, but it is the loftiest and wisest word possible on the question of game protection. Forest and Stream is the malicious enemy of no man, and of no class of men, but it can conceive of no union of interests between it and the dealers in game. This fact it will not, I imagine, seek to conceal. It will be, if gentlemen please, the enemy of those interests with which its contemporary is making friends. It will, if gentlemen wish to put it so, fight those men, the game dealers, and their policy and their bills. Forest and Stream prefers to stand with the sportsmen, and for the interests of these it will fight as best it can. For this it will claim no reward. In this it will ask no monopoly. Forest and Stream will get the news and it will print the news. It will kill the Blow bill, if it can. E. HOUGH,

909 Security Building, Chicago.

Later—Feb. 8.—The fight against the Blow bill is on at Springfield. This morning I saw Senator Campbell, who is up from Springfield. He says that several petitions have come in from the lower counties against the Blow bill. A long one from the town of Lincoln was filed against the Blow bill to-day. Senator Campbell thinks the bill will be defeated, and that we will come out with the old law, as it was before. This will be matter of rejoicing if it proves true.

Mr. H. H. Fahnestock, a prominent member of the Illinois association, whose residence is at Peoria, Ill., writes the committee that he sees the mistake made in the first Blow bill, and that the sportsmen must stand for a law to protect the birds.

The Illinois State Association, by its executive Committee, has requested the following gentlemen to be present at the joint committee meeting next Wednesday, Feb. 13, at Springfield, to assist in the argument against the Blow bill: Frank A. Johnson, W. L. Shepard, R. B. Organ, L. M. Hamline, A. C. Paterson, C. S. Wilcxo' Abner Price, H. B. Meyers, R. S. Mott, Charles Kern.

Our new department of Game and Fish Protection has proved itself a Minerva, sprung full-armed from the brain of Jove. It is and will be interesting, and practically useful. Clubs and associations are invited to send us notes of their meetings, and reports of the work undertaken by them. The interchange of experience and information given in this department in a year will be so invaluable that no one interested in these fields can well afford to neglect the Forest and Stream for 1895.

Yachting.

Apropos of the editorial on our first page, the Sun of Feb. 8 reprinted entire, without a word of acknowledgment, the interesting biographical sketch of the members of the Royal Yacht Squadron, which first appeared in the Forest and Stream of last week.

The Ratseys & Lapthorne Sail.

Messrs. Ratseys & Lapthorne, of Cowes and Gosport, England, have obtained, under date of March 27, 1894, an American patent for the peculiar cut of sail seen here in Valkyrie's topsails and headsails two years since, and shown in the accompanying illustration. In all sails the cloths are so run as to bring the heaviest strains in the line of the length or the breadth of the canvas, and as little as possible on a diagonal line, where the stretch would naturally be greatest. The makers claim that sails thus cut will stand much better during rainy or damp weather than those of the usual cut; and also that they will fit the spars when new, and never stretch through use. The method has been tried with success for two seasons on a large number of British yachts, the remarkably fine topsails and headsails of Valkyrie and Britannia being cut in this way. The importance of perfect sails was never more thoroughly realized in America than at the present time; and the new method is well worth trying by American yachtsmen.

Model Making in Plaster, Paper and Papier Mache

Editor of Forest and Stream: It may appear strange to you that I should address you on the subject of model yacht building, as my confessed hobby is a love of dogs; but I have been greatly interested in the articles on this subject appearing in your valuable paper, and they have served to reawaken an old love for the little boats. I therefore beg a small space in quest of some information respecting the following method of construction.

I did at one time attempt to build some of these yachts on the "block" and "bread-and-butter" plans, but thorugh a lack in the skillful use of and the proper kind of tools, it did not result in the brilliant success, of course, anticipated. The idea occurred to me that some simpler method must be possible, and one in which the novice's mistakes would not necessitate his beginning all over again. This is my idea in the rough, and for the completion of which Isolicit suggestions from some of your readers who are more familiar with the materials and methods used:

Make first an exact solid model of the hull in sculptor's clay. This should be simple, as the clay is very easy to shape. Then take a plaster of Paris mould from it, and allow it to dry thoroughly for several days at a moderate temperature. When the plaster mould is made, make an accurate cover for it of the same material, on the inner side of which would be a curved surface equal to the air space of the inter or of the hull. When both parts are completed and thoroughly dry, putting them together we should have a mould of the yacht's hull, interior and exterior, which, of course, would require smoothing and finishing to enable us to take a perfect cast from it.

Now, having gone thus far, it remains for us to select some suitable material with which to mould our yacht, and which will be of similar weight and appearance to wood. This, I think, could be done with paper pulp as many useful articles, such as basins, buckets, etc., are now manufactured from this substance. This is the idea as I have it at the present moment, and to perfect or better it is what I wish to ask advice and suggestions about from your readers.

As paper pulp is somewhat lighter than wood, bulk for bulk, we might make the thickness of the sides slightly greater. When I mention paper pulp, I mean a composition of that material with glue and resin, usually known as papier-mache. I have also read of wood fiber being used for articles previously mentioned, but know little of the method of preparation. The paper pulp would, of course, be used in a moist condition, and a method adopted to make the plaster mould unaffected by the action of the water expelled by the pressure. That can be applied by the aid of an old letter-press or other similar screw contrivance; and also it would probably be necessary to box and metal-strap the parts of the mould to avoid any fracture during the operation of moulding. Should it prove difficult to take a plaster mould from the clay model, owing to the affinity existing between the two substances, the model could at a small cost be sent to a potter and fired, thus giving it a polished surface which could, as an additional precaution, be dusted with talcom or plumbago powder.

Once we have a paper hull, thoroughly dried and smoothed off, it could be treated with a waterproof enamel paint externally and thus made impervious to moisture. Within the hull a number of coats of some similar paint or varnish could be applied, and then the usual method of stiffening the hull might be also gone through; i. e., gluing in strips of linen, cut bias; the whole finished with more waterproof paint. Some suggestion respecting a method for this finishing which would obviate any tendency to warp or crack from the usual exposure the yacht would sustain, would be thankfully received. The decking and usual metal keel, attached to which is the lead fin or false keel, could, with a little care, be fastened on in the usual manner. A gelatine composition might also be used to mould the hull, provided a simple method could be found which would render this material unaffected by heat.

I hope that my crude ideas will meet with some small attention from other of your readers who would gladly avail themselves of the pleasures derived from miniature yacht racing, if a simple plan could be presented whereby the construction would be rendered easier and more exact for one inexperienced in the present method of building. Should my rough plan be sufficiently and properly improved upon, one could readily make two or three exactly similar hulls, and thus be able to test the advantage of one style of rigging over another; and thus also test his own ideas and be able to compare them with others, choosing the one best adapted to his model. A. M. YOUNG.

Our correspondent's plan would call for some method of producing two sides precisely similar for the clay mould; there would also be some difiiculty, after the first plaster mould was cast, of making the inner mould, or core, not an exact counterpart, but smaller all over by the thickness of the pulp or paper. We have had no experience in working pulp or papier mache, and while such materials can be made to give a strong and light hull, we doubt whether the method of working is within the reach of the amateur, very strong moulds and heavy presses being required. From what we have seen of linenoid, made by Crane Bros., of Westfield, Mass., it would be an admirable material for a model yacht hull, but we do not know whether it is used as a pulp or in sheets in applying to the moulds. We copy the following, bearing on the same subject, from the Yachtsman, of Jan. 17-24. As nearly all models are built from designs, the method of reproducing by the wooden sections and plaster has advantages over moulding in clay.

The following may interest some of our readers who are fond of designing, and may enable them to turn out a highly finished model for some of the exhibitions which have become so numerous of late. Lay the sections off on thin strips of wood, cut them out, and mount them by gluing, as in making an ordinary skeleton model. Be careful to space them without allowance for the thickness of the wood; namely, if the sections are 1 1-2 ins. apart, see that the space between each piece is 1 1-2 ins. Then get some plaster of Paris and mix it with water, fill up the spaces with this, and smooth it over roughly with a knife before the plaster is quite dry. It will cut easily for about twenty minutes, and by this time you will have faired it off to reach the wood of each section, the edges of which should be cut square and not bevelled.

Let the plaster harden, and then smooth it fair with sandpaper, taking care not to injure the edges of the wood sections. After this, insert an ordinary table-knife between the plaster and the board, and each piece of the plaster will come off clean from between the sections. Fasten these pieces together with thin plaster and again smooth the whole with sandpaper; the model will then, be completed. To give it a perfectly smooth surface, as smooth as china, coat it with a mixture of size and whiting, finishing off with fine sandpaper. This is a very speedy and accurate way of making a model, and if the knife or chisel goes too deep at any place, all that is necessary is to mix a little plaster and fill up the defect.

To "manifold" a model, or make fac-similes from one, unmount the model and put it on a plain board, giving the whole a coat of linseed oil. Get a box large enough to take the model and fill it with dissolved gelatine; place the model in the gelatine and leave it to harden to a thick jelly;; lift the model out, it will come away easily, and pour thin plaster of Paris into the mould left. Then, when this has hardened, take it out and smooth as before, with fine sandpaper and size and whiting. The plaster sets very rapidly, and care must be taken not to mix too much at a time, else it may harden in the can before the operator has time to use the half of it Once wet, it will not work up again.

The following appeared a week later in the same paper:

"In page 224 of last week's issue, directions were given for modelling yachts in plaster of Paris. As it may be desirable to make an exact copy for sailing from this model, it can be done by the following method: Having perfected your plaster model as directed, saturate it thoroughly with boiled oil, allowing time for it to dry in. Now provide a solution, half glue and half flour paste; keep hot in an ordinary glue kettle while using. Proceed to paste coarse porous brown paper in pieces about four inches square over your plaster model, beginning at the starboard bow and working regularly round to the port Rub the glue solution well on the surface of the paper. Upon this again put layer upon layer of the paper, working regularly round from bow to bow until you have a 1-4-in. thickness; rubbing well down all the time.

"Let it stand on the mould three or four days, until thoroughly hard. It will now easily leave the plaster-model, which is not in the least damaged, and you will then find a strong paper boat, very light, and harder than wood When thoroughly dry and hard, put it on the mould again, and with coarse sandpaper rub it well down, until you have a perfectly smooth surface. To make it impervious to moisture, saturate well inside and out with boiled oil. Two coats are enough to make it perfectly water-tight. When this is quite dry, varnish inside with shellac varnish. The lead ballast can now be put inside the keel, which is hollow to receive it, but, if preferable, fit a piece of wood into the hollow keel, fixing the lead on the outside by driving screws through into the wood. At this stage a socket had better be made for the foot of the mast.

"If the boat is about 40 in. long, you may put four beams across, screwing them to the sides by short, large-headed screws. Between each beam screw on the inside short pieces of wood.

"Having cut your wooden deck roughly, and made the mast hole, put it on the top of the boat, and put screws through into the beams and the intermediate pieces of wood. The joining between the deck and the sides is next to be filled with marine glue. Warm the marine glue before the fire until you can pull it out into long strings. Lay these on the joining, and run in with a hot iron. Trim the edges of the deck, and paint. Give the deck a coat of shellac varnish. When finished, it is impossible for anyone to tell, either by feeling or appearance, what material it is made of, and with comparatively little labor the result is a strong, water-tight model yacht."

It will suggest itself to the reader that after making the half model of, say, the starboard side from the wooden moulds and plaster filling, the same moulds may be set up reversed, on the other side of the mould board, to give the port side, both sides when completed, being joined by thin plaster to make a complete model. The matrix could be cast from this model; after which the model could be reduced all over to allow for the proposed thickness of the pulp. This could be done by making a simple cutter, a block of wood with a steel blade projecting the required distance, say, 1-4 in. With this, grooves of uniform depth could be cut on the model in various directions, the material between the grooves being then removed with a rasp, and the whole surface refinished with sandpaper. As we understand the second method given above, the finished model of paper must be larger than the plaster model from which it is made. We shall be glad to hear from any of our readers who may have had experience with either plaster, paper or pulp.

The Skipjack Myra.

Mr. W. F. Nason, the designer and builder of the modern skipjack illustrated in the Forest and Stream of Nov. 3, 1894, writes as follows, in answer to many inquiries received from our readers. From the additional inquiries which we have received, it is evident that the little boat has attracted much attention and she certainly has much to recommend her both in actual merit and low cost.

"The cost of material was about seventy-five dollars; this includes rigging and cloth for sailing, my brother and myself doing all the work, including making the sails.

"The sails are made of heavy drill, and have three battens of hard pine 7-8 in. in diameter, running through pockets at the rows of reef points. Without the battens, perhaps heavier cloth would be needed, say, 6 oz. duck.

"The centerboard is of wood. A metal board would be better, perhaps, but would add to the cost.

"The cabin gives good room for two persons to sleep in, one on each side of centerboard trunk. Four have slept there, and seven took refuge there during a thunder-shower. How they stowed themselves, I do not know, for I was not there. The height is scant, hardly enough to sit upright on the floor under the companion slide. I think the house could be made 6 in. higher at after end without hurting the sailing qualities much.

"I had the top of the house arranged so that by unscrewing the bolts with which it was fastened it could be lifted up to give as much height as needed; but I never raised it, as with the tent over the cockpit I had room enough, and found no occasion to take the extra trouble. The cockpit is covered with canvas on sides and bottom, and painted, and is drained by holes into centerboard trunk. Some persons object to the bottom being planked athwartships, saying that it increases the resistance, and doubting the strength of such a construction; but I think the difference in resistance is but little, and as for strength I have sailed her in a strong wind with seven persons aboard and sailed with all the cloth she could lug with four men to windward, and I cannot see that she has been strained in the least. In sailing with other boats to windward I find that she can lay about half a point closer than most of them, and not forget to foot also; this I attribute to having rather more lateral surface for her size than most boats, and to the sails, which on account of the battens are very flat. The jib has a sprit from stay to clew like a Cape cat."

The table offsets for the original boat is as follows:

Stations.	Heights Above L.W.L.			Half-Breadths.	
	Keel.	Chine.	Deck.	Chine.	Deck.
Stem	1 8[1]	1 8[1]	1 11[4]	....	....
1	11[4]	1 5	1 1)	6[4]	6[7]
2	*3[5]	9[6]	1 5[6]	1 7[6]	1 1[3]

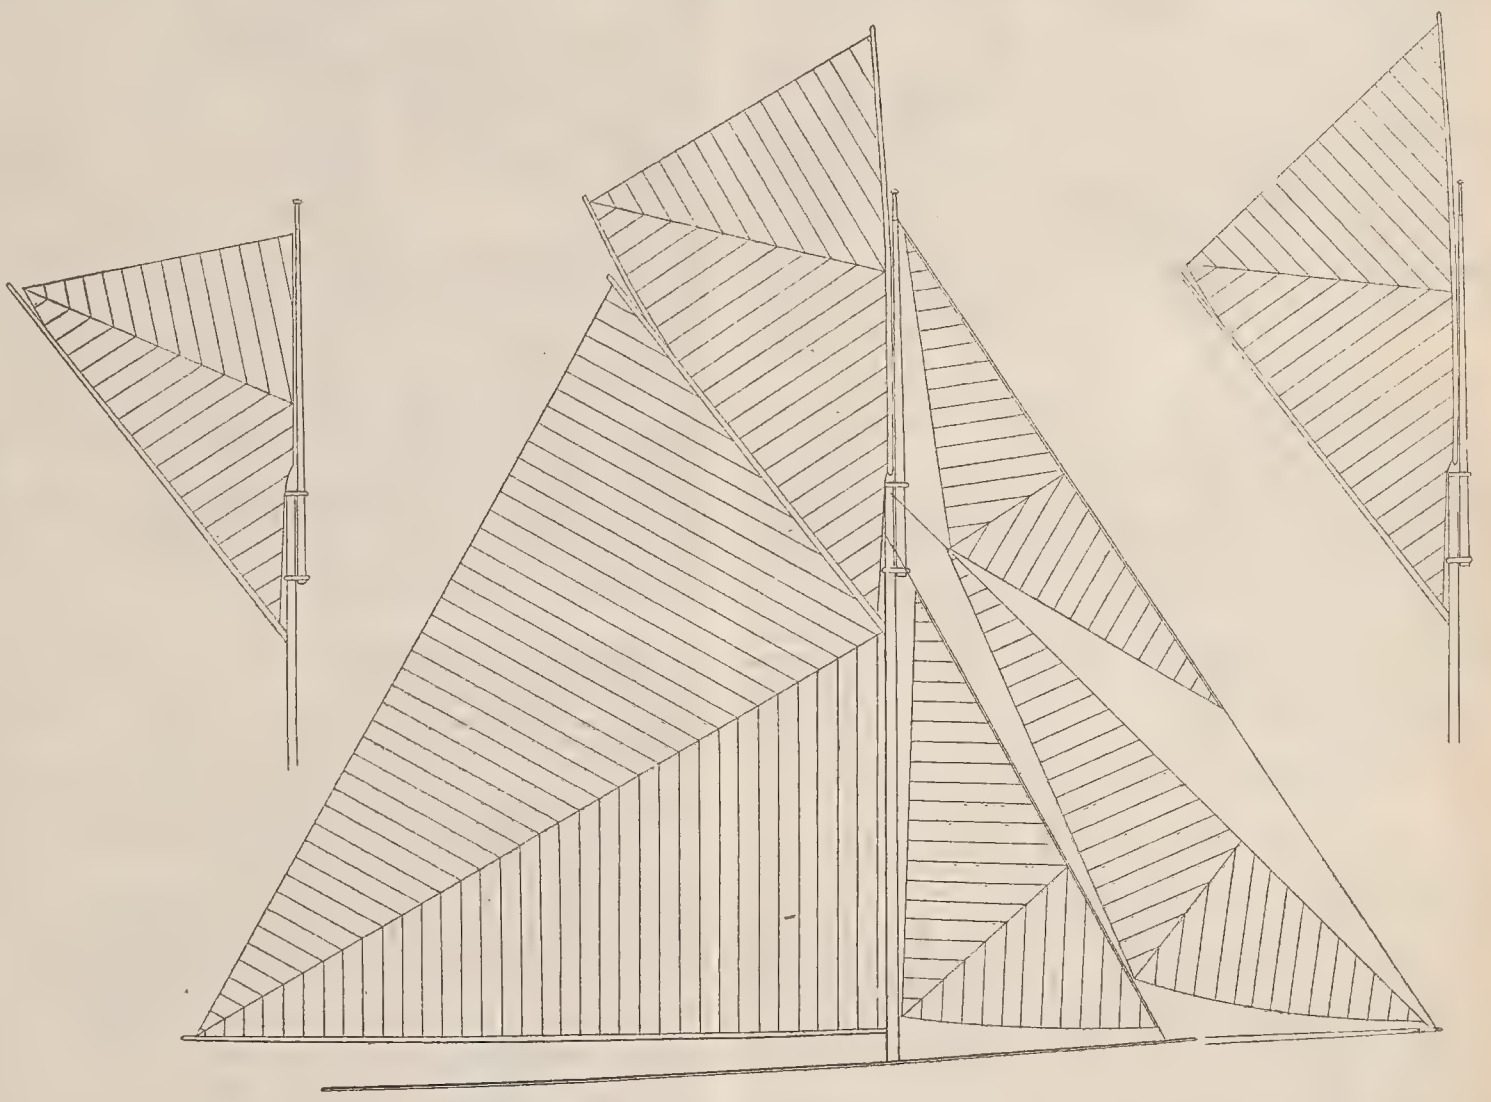
The stations are 3 ft. apart, No. 5, amidship being 9 ft. 11 in. from fore end of l. w. l. The transom takes 6 in. The forward end of the centerboard slot is 2 ft. 11 1-2 in. from forward end of l. w. l. The length of slot is 7 ft. 1 1-4 in.

Tarpon Springs Y. C.

Tarpon Springs, Fla., Feb. 3.—We do not have any 89ft. Cup defenders on the Gulf Coast, but after all of your readers get through discussing the "new deed of gift," they may find time to read about how we enjoy yacht racing during the winter months in "the Land of Flowers." On Saturday, Jan. 19, five of the boats of the Tarpon Spring Y. C. sailed around the Spring Bayou, with a light westerly breeze, ready to start the first weekly regatta when the two o'clock whistle sounded. We start at two o'clock sharp, and allow five minutes to cross the line. Dr. Reed, of Atlantic City, N. J., was out for his first race in his new boat, Micanopy; this boat was modeled by the Reed family and built at Atlantic City, to show that they could compete successfully with South Boston in building racers, and also have them able to stand the rough storms of the Gulf around Trouble Creek. Dr. Reed showed his usual good judgment in sending to Wilson & Silsby for his sail, for the firm do know how to make a handsome sail and one that will fit.

Capt. Noblits was out for the first time in the Lucie B, since he had a new and larger suit of sails. Noblits had his coat off, which is a sure sign he was "out for blood." Capt. Clemson is sailing his old favorite, Topsy; his first race since he bent his new sail, also made by Wilson & Silsby. It is a perfect sail, and will push the Topsy to the front every time there is a good smart sailing breeze.

Mr. Disston is sailing his boat, built in Philadelphia last year, and means to warm the boys before the winter is over.



Topsy was the first to cross the starting line, closely followed by Silver King—a boat designed and built by the celebrated firm of Geo. F. Lawley & Father, of South Boston, and the old salts say the lines was taken from the well-known "Boston Bean Pot." It was whispered around the yard that George and Ad. put up a job on the owner, and gave him one reef more sail than they thought he could stagger under; but those two boys often get left with their jokes, for the Silver King wins every time, blow high or blow low, and stands ready to sail any boat in the Gulf of Mexico for money or marbles, first down, next come on.

The water was very low in the Bayou, which made it very difficult to beat out the narrow channel. We heard many a prayer, which went to prove that some boat had touched bottom, and the owner didn't like it. Horace stopped a second to kill some of his favorite sand-flies, and let Topsy's centerboard touch bottom, which put her into second place.

Slowly the fleet sailed around the course, the Silver King in the lead and Topsy a good second, the balance of the fleet having a close fight in the rear. Noblits strained every nerve and did his level best, but his favorite favorable puff never came, so he had to be contented to tie Dennis in time. Dr. Reed brought up the rear, but will do much better when he gets a longer mast and sails his new boat a bit.

A large number of ladies and gentlemen witnessed the race from the plank walk, and the Lovers' Retreat. After the race was over the old salts clustered around the spring, talked over the race, and proved to their satisfaction that it was no trick worth doing to win on the club's inside course, and told with a merry twinkle in their eyes how they would do up the Commodore's Silver King when they cotched him out on the Gulf.

This racing of small yachts may seem boy's play to some, but

THE RATSEYS & LAPTHORNE SAIL.

there is more in it than many think. First of all, it takes us out into the warm sun and balmy air, it puts a good thick coat of tar onto our homely mugs and strength into our muscle. Come down here and show us how to sail a boat, and we will give you a warm welcome and a jolly good time. PAYSON.

Regatta of the Tarpon Springs Y. C., Jan. 19, 1895:

	Start.	Finish.	Elapsed.
Topsy, Capt. Clemson	2 02 20	2 55 07	52 47
Lucie B, Capt. Noblits	2 02 50	3 02 25	59 35
Silver King, Com. Phiuney	2 02 30	2 53 05	50 35
Dennis, Capt. Disston	2 03 25	3 03 00	59 35
Micanopy, Capt. Reed	2 03 00	3 03 15	1 00 15

The R. Y. S. Challenge.

Since the magnates of the Royal Yacht Squadron have come over to Com. Smith's opinions in Cup matters, the warmth of the Field's criticism has declined almost as rapidly as the temperature outdoors, and in the last issue to hand, Feb. 2, it deals thus mildly with the new challenge:

"Some of the American papers are still regretting that the Royal Yacht Squadron at last withdrew (as the Americans now state) all opposition to the new deed of gift, and agreed to hold the cup under it. Undoubtedly the Royal Yacht Squadron was in a very strong position, and, had the general meeting on Jan. 7 thought more of the deed and less of bringing about an international match, no doubt the New York Yacht Club would have had to actually destroy the new deed, as they have now done inferentially by declaring that every clause in it can be altered or abandoned, just as the holder of the cup and the challenger may agree upon. However, an international yacht match was what Lord Dunraven required, and that is also what most of the people interested in the nautical pastime also desired to see brought about. The acceptance of the interpretation put upon the mutual agreement clause was made, it is true, in rather grim silence by the general meeting of the Royal Yacht Squadron, but it is folly to say that any resolution was passed endorsing or agreeing to hold the cup under the terms of the deed. A difficulty may arise eventually, should Valkyrie defeat the American defending yacht; but the worst that can happen will be that the club will decline to hand over the cup unless the Royal Yacht Squadron makes a full concession of faith that the mutual agreement clause in the new deed of gift is all that the members of the New York Yacht Club declare it will be. In such an event the situation, as far as the holding and challenging for the cup are concerned, will be a little more absurd than it is at present—but nothing more."

After its sturdy and outspoken fight for eight years against the new deed, we are surprised that the Field has come to a quiet acquiescence in the views expressed by The Yachting World, and by a large part of the general yachting public; that the necessity for a race on any terms outweighs all questions of principle or fair play.

If it is so essential that international racing must continue, why has the Field opposed the new deed for so long; and again, if the Field has been right in the past, why this sudden conversion?

There seems to be some uncertainty as to just what resolutions were passed at the R. Y. S. meeting; but this very uncertainty makes it the easier for the New York Y. C. to defend its position; that it has received an unqualified challenge under the new deed. The telegram of Secretary Grant, making a specific offer to receipt for the cup if won, is now in the possession of the club, beyond recall by the Squadron; and on the other hand, the Squadron can show nothing from the club in the form of a written interpretation of the new deed or the mutual agreement clause.

In 1893, the R. Y. S., in the event of a victory by Valkyrie II., would have been able to present a very good brief in declining to receipt for the cup under clause 12; but the circumstances are now entirely different, and should Valkyrie III. succeed in winning three races, the Squadron can have no excuse for declining to sign any receipt drawn up in accordance with that clause.

Dredging the Delaware River.

At the annual meeting of the Philadelphia Y. C., held on Feb. 6 the following resolution was adopted:

Resolved, That the Philadelphia Y. C. condemn the plan of the proposed bridge of the Pennsylvania and New Jersey Railroad Co. across the Delaware River, from Bridesburg, Pa., to Fisher's Point, above the water. There are few yachts owned in this city that could pass thereunder without striking their topmasts, but many which could not, at a height of 50 feet, and the use of the draw for yachts would be almost wholly impracticable. All yachtsmen and owners of vessels know that the draw of a railroad bridge is of litttle value, as sail tenders of draws of railroad bridges, either in obedience to orders of their superior officers, (who generally act in that respect as if they own the river or think they do, or have the same opinion themselves) suit their own sweet will in the opening of the draws, and no time is in their opinion too long for vessels, and especially for yachts, to wait. This has been the experience of yachtsmen and vessel owners everywhere, and we have no reason to believe that the present proposed structure across the Delaware will be managed differently.

The officials of the Pennsylvania and New Jersey Railroad Company, and the U. S. Engineers, with little or no consideration for the interests of vessel owners, or even for the welfare of the city, have approved the plan herein condemned.

This fact should have little weight with the authorities at Washington or with the people, for some of these same U. S. Engineers have approved the dumping of earth, etc., (taken from the islands opposite the city) into the harbors of the leading Philadelphia yacht clubs, between little Tinicum Island and the main land, without the consent of the riparian owners, when they knew, or if they were competent, should have known, that the same earth, etc., would soon wash (as a large portion if, not the most of it, has washed) into the Ship Channel below.

It is not true that the location of the bridge will not interfere with the class of craft that navigate this part of the river. Hundreds of freight vessels and yachts pass this point annually.

We believe that the only proper way to do justice to all interests in the location and construction of this bridge is to submit it to a commission of competent persons to take testimony and to fully consider all of the interests that will probably be affected.

The Philadelphia Y. C., believing that the location of the proposed bridge at a height of 50 feet would be an irreparable injury to the rights of owners of vessels and yachts, earnestly request our Congress to do all in its power to secure the appointment of the commission referred to, so that the interests of the city and vessel owners generally shall be protected.

Resolved, That a copy of these resolutions be sent to Secretary of War, General Thomas L. Casey, and to each of our Senators and city Congressmen.

New York Y. R. A.

The annual meeting of the New York Y. R. Association was held at O'Neill's on Feb. 6. The meeting was called to order by President Benjamin F. Sutton. Twelve out of the twenty-two allied clubs of the association present. The annual reports of the Secretary and Treasurer were read, the latter showing the association to be out of debt and with a balance of $51.33 to its credit.

The Executive Committee reported that they had received the application of the Ossining Y. C., of Sing Sing, New York.

The Regatta Committee finally submitted a full report of the last Labor Day Regatta. The report showed a deficit of something like $137. This deficit is, in part, accounted for from the small attendance on the steamer on that day, due no doubt to the threatening weather and easterly winds.

Com. Prime was appointed a committee of one to procure prizes to be presented to the fifteen winners; a sum being appropriated to purchase them. The prizes will consist of a solid gold scarfpin with the association's flag and a small diamond in the center.

A resolution was passed thanking Mr. John O'Neill for the dinner tendered to the Commodores, and Mr. E. Langerfeld was appointed a committee to obtain a suitable souvenir to present to him.

The resignations of the Sing Sing, Canarsie and Harlem Yacht Clubs were now tendered and accepted. The matter of fixing the annual regatta for Labor Day now came up for consideration, and in view of the deficit at the recent regattas it created considerable discussion, and the question arose as to whether it would be advisable to hold it unless it would be supported by the members of the association. It is a well-known fact that this association for the several years since its organization, in 1889, has held the largest regattas ever sailed in New York Bay, and it is unreasonable to expect that a regatta of this magnitude can be held without expense. These regattas cost much less, although held on such a large scale, than those of the various individual clubs hereabouts. Monday, Sept. 2, 1895, was fixed, however, as the date of the seventh annual regatta. The Executive Committee was requested to take the matter of providing ways and means into consideration, and it will undoubtedly confer with the various clubs' members, and if the support of the latter cannot be obtained it will recommend, at a meeting to be called for the purpose, the abandonment of the regatta.

After some other business had been transacted, an election for officers was held, resulting as follows: Prest., Com. Alanson J. Prime, Yonkers C. Y. C.; Vice-Prest., ex-Com. Norman C. Rowe, Pavonia Y. C.; Secretary, George Parkhill, Columbia Y. C.; Treas., Robert K. McMurray, Staten Island A. C.; Executive Committee, Dr. E. N. Brandt, Tower Ridge Y. C.; Alexander F. Rowe, Jersey City Y. C.; Capt. Joseph Elsworth, Bayonne City Y. C.; A. C. Longyear, Newark Bay Boat Club; E. Pangerfeld, Hudson River Y. C.

In vacating the office of president, Com. Sutton made some appropriate remarks, and called the recently elected president, A. J. Prime, to the chair. Com. Prime spoke for some minutes, and during his remarks called attention to the new association about forming on Long Island Sound, and hoped that it would be formed and be a success. He said that in his opinion Hell Gate was the dividing line between the New York and Sound clubs, and that he was always unable to see how the latter could derive any benefit from this association. In conclusion, he hoped that the members would give him every assistance in the management of the association, and help him to lead it to a new era of prosperity.

Yacht Building at Bristol.

We are indebted to the Boston Globe for the following report, through its Bristol correspondent, of work at Bristol:

The most important matter of the week in connection with the new cup defender, in course of construction here, has been the visit to the Herreshoffs of the representative of the Ansonia Brass and Copper Company, of 19 Cliff street, New York. This is the only company that furnishes Tobin bronze, and the representative's visit here is supposed to have been for the purpose of arranging for the delivery of the Tobin bronze plates that must be delivered within a few weeks, and which must come from the factory at Ansonia, Conn.

This would confirm The Globe's exclusive story soon after the contract was signed, that Tobin bronze would be the material. That story was based on the knowledge that the Herreshoffs had secured an option on sufficient Tobin bronze plating for the boat, and was deemed to settle the matter of construction.

There are, however, indications, to those who know Herreshoff methods of work, that the plans have been changed, and that composite construction of wood on steel frames has been decided upon.

It is pointed out that it will be difficult to deliver a Tobin bronze boat by June 1, where a composite boat can easily be built before that time. To those familiar with steel construction it is also plain that it would be much easier to mold the lead keel in place after the boat was plated, as was done in Vigilant and Colonia, than to run the lead keel first, as is being prepared for now.

If the original plans have been changed, and a composite boat decided upon, the Herreshoffs are to be congratulated in securing a build undoubtedly lighter than Tobin bronze plating, and more desirable in several ways.

A composite boat could be so thoroughly strapped as to depend not nearly so much upon the strength of planking as might be thought. Double planking, with mahogany for the outer skin, would give all the needed strength and would give a bottom which could be made the equal if not the superior, of Tobin bronze for smoothness.

The announcement that the Herreshoff's have entered into an agreement, or signed a contract not to build another boat to defend the America's cup in 1895 is not given much credit here. But it is said that the firm will not build another for personal reasons, and for matters that arise when two or more boats are built.

When two or more boats are built the owners of the boat that is the slowest of the two, or more, feel that the designer did not bring his best talents to bear on the construction and designing of their boat, and naturally, though without apparent cause, feel slighted. This matter will be overcome when only one boat is built, and this is given as one of the reasons why the Herreshoff's will not build another in 1895.

During the past week copies of a newly printed set of rules and regulations for the employees of the Herreshoff shops have been posted in conspicuous places. They differ but little from the old ones, and do not state that the workmen must keep the goings-on in the shop a secret, although they are expected not to talk too much of the plans and other matters in connection with the new boat.

In the new machine shop the work of laying down the new boat and getting matters arranged for the bending of the angle irons has progressed slowly.

In the construction shop the workmen are busy on the mold for the enormous lead keel for the new boat. This keel, it is said, will weigh about 70 tons. The firm have now on hand about 125 tons of pig lead.

Judging from the height of a man standing beside the mold for the lead keel, it will be about five feet and a half in height.

The men have begun the work of lining up the mold and when it is finished, which will be in about a week, the mold will be placed where it is intended the new boat shall stand, on the new stone foundation in the south shop.

The severe storm of Friday created havoc in the shops of the Herreshoff's. The heavy southwest wind caused the sea and ice from the harbor to roll into the shops with considerable force and the very high tide floated everything movable. The steam yacht Eugenie, which is in the south shop, was afloat and lines were put out to save her from damage. The small boats were washed up to the east end of the works and N. G. Herreshoff, while engaged in securing the boats stepped into a scuttlehole from which the cover had been removed and had a cold bath.

The Eugenie will be launched as soon as the new engine is placed at the marine railway at Walker's cove. It is intended to haul out the steam yacht there as soon as she is put overboard. A trial was given the engine this week, and as soon as the weather permits it will be set in the building recently erected near the cove.

Many of the workmen in the construction shops were obliged to leave work Friday on account of the high tide. During the gale the big doors on the west end of the building were blown off. Workmen were engaged in removing the ice from the shops yesterday.

Mr. C. Oliver Iselin made a flying trip to the works this week for the purpose of looking over plans in regard to the new boat. There is some talk here about the sails for the new boat being made at the works, but this talk has been brought about by the engagement of new sailmakers within a short time. These men are at work on the sails for the raters for Howard Gould, the German baron, and George Owen, Jr.

Good authority states that the sails will be made by Wilson & Silsby of Boston, which firm made those of the Navahoe and Colonia. The sails of those boats were of Sea Island cotton, but those of the new boat will be very close in material to those used on the British boat, but of American made duck.

Work on the 20-rater for Howard Gould in the south shop has progressed slowly during the week. The men are at work on the fin for this boat. She is nearly ready to be lanched, and could be completed in a few days should the occasion of starting the new boat require it. Below the water line she has been painted a dark green.

In the north shop the deck of the 130-foot yacht for Theodore R. Hostetter is nearly laid. Workmen are also engaged on her large mahogany deck-house. The 30-rater for the German baron in the north shop, and the 30-footer for George Owen, Jr., of Boston, in the same shop are both nearly completed.

The work of carting the lead from the railroad yards has been finished, and yesterday a quantity of angle iron and mahogany planking, which arrived a few days ago, was carted to the works. It is expected that the work of laying down the new cup defender will be completed before the end of the coming week, when the work of shaping the frames of the yacht will begin in the boiler shop.

So far as can be judged from the shape of the mold for the lead keel, the keel itself will have a lateral plane of somewhat triangular shape, the deepest portion being considerably abaft the center, and the line of the bottom curving up at each end to meet the deadwood. The length of the keel will be much less than those of Vigilant and Colonia, and shows by this shortening and by its triangular form that attention has been paid in the design to making the boat quicker in stays.

The mold for the keel shows no sign as yet of a core for a centerboard slot, so that the original impression of a keel boat still seems to be a good one.

It is believed that the interior fittings of the boat will be as few and as light as possible, and that the crew will all be quartered on an attendant steamer. The cup defender will, therefore, be more of a racing machine than any of her predecessors.

The saving in weight by not having any quarters for the crew on board will be considerable, and the boat should gain speed correspondingly.

She is to be delivered June 1, and, therefore, must be launched by the middle of May in order to be fitted out, rigged and have a trial trip.

At the Saunders yards, that builder has the frames of the big catboat for J. P. White, of Warwick, R. I., up. She will be an able boat, being 10 feet beam, with a length of 28 feet. He also has the oak stem and keel of the big cat yawl for Dr. W. Wharton Hollingsworth, of Philadelphia, out, and is all ready to set up that boat.

The high wind and tide did considerable damage at the Saunders yard Friday, the water coming up half the length of the shop. Many of the yachts in the yard that are hauled up for the winter were thrown against each other, and more or less injured.

The well-known cat yawl Alice, which is acknowledged to be one of the fastest boats on Narragansett Bay, has been very much changed this winter. She is owned by Charles F. Herreshoff, a brother of the designer, and was formerly a centerboard boat Mr. Herreshoff has made her a keel boat, and it is the opinion that it will greatly add to her speed.

Such news as there is of late is mainly included in the interesting story from Bristol, for which we are indebted to the Boston Globe. Nothing is known yet of the new Valkyrie building at Glasgow, and the same foolish policy of secrecy is maintaained on this side. The indications are, however, as stated by the Globe, that the Bristol boat will be a keel craft, and of composite build, similar to Queen Mab, Genesta and the three Valkyries. The name of the new boat has not been decided on, but names by the thousand are being received by the New York Herald, in competition for the prize of $100 offered by a New York Yachtsman.

The owners of the various 30-knot steam yachts about New York and Philadelphia are once more bandying challenges, but with as little prospect as of old of a genuine race in which one boat shall win and the others lose. As long as the papers are content to print such challenges and letters as news, this cheap and exciting contest is likely to flourish.

It is encouraging to note of late a marked improvement in yachting methods that promises a return of yacht racing. The special committee of the New York Y. C. has recommended the adoption of such a classification by corrected length as was first advocated by the Forest and Stream over seven years since, and there is every probability that the measure will be carried at the annual meeting

The Larchmont Y. C., as mentioned in our columns some weeks since, has been at work remodeling its courses, and has now under consideration, for probable adoption this month, a series of entirely new courses, of triangles of short sides, to be sailed several times to give the required distance.

Such steps as these, long opposed by American yachtsmen, but at length recognized as desirable, augur well for an entire reconstruction of the existing haphazard and slovenly methods of racing with awkward courses, long intervals to start in, and faulty rules of classification, and the substitution of a uniform system of measurement and classification combined; of short triangular courses to be sailed over two or three times; of the one-gun start the measurement with crew aboard, and other desirable reforms The more nearly the conditions of yacht racing can be made to give accurate and fair tests of the boats, the greater the interest in the sport.

YACHTING NEWS NOTES.

The twentieth annual meeting of the Philadelphia Y. C. was held on Feb. 6, the following officers being elected: Com., Francis Shunk Brown; Vice-Com., M. R. Muckle, Jr.; Rear-Com., J. G. Ramsdell; Treas., Samuel B. S. Barth; Sec., George T. Gwilliam; Meas., P. H. Johnson; Harbor Master, E. Y. McCurdy; Fleet Surgeon, Thomas C. Stellwagen, M. D.; Trustees, Samuel F. Givin, Frank Bement, Wm. S. Stockton, Robt. P. Thompson; Regatta Committee, P. H. Johnson, Chas. S. Warfield, S. W. Bookhammer.

The date of June 15 was fixed for the annual regatta. As will be seen from the resolution printed eslewhere, which was passed at this meeting, the club is taking active steps in opposition to a measure which must do serious damage to the Delaware River and to the yachting interests represented by the Riverton, Trenton, Philadelphia and other clubs.

At 9:30 A. M., on Jan. 23, the works of the Racine Boat Manufeaturing Co. caught fire while workmen were engaged in thawing out frozen steam pipes, and considerable damage was done, to the extent of some $3,000, before the fire was extinguished. Work will be continued as usual in the uninjured portion of the works but many valuable moulds and patterns were lost.

The sloop Nepenthe, C. P. Richardson, and the schooner Adrienne, Messrs. Gordon & Lawrence, both of the Southern Y. C., of New Orleans, are now cruising in the West Indies, the former bound for Havana and Jamacia, and the latter for Nassau. The two will meet later off the northern coast of Cuba, to return home in company. The Nepenthe was at Havana on Feb 7

The Rochester Machine Tool Works has received notice from its solicitor that its claim with reference to the Buckley water-tube boiler for yachts has been allowed by the Patent Office in Washington, and that the patent will be issued at once. This boiler is adapted for either oil or coal, and furnishes very cheap power in proportion to horse power. One of these boilers, which was sold to a party in Poughkeepsie in April last, has been supplying a 4x5 marine engine with all the steam it could use at 150 lbs. pressure. This boiler only occupied a space 22 in. wide by 23 in. long, and its shipping weight crated, was less than 350 lbs. Under a pressure of 125 lbs. this boiler developed 6 h. p. The company is also in receipt of a communication from its agent in Paris with regard to the practicability of using the boilers in a light road wagon to be propelled by steam, being fired by hydrocarbon fuel. The company recently constructed for Mr. J. B. West, of Rochester, a small reversing engine and boiler which he will apply to the same purpose, propelling a carriage on ordinary country roads.

Namouna, steam yacht, James Gordon Bennett, will fit out at once for the Mediterranean, and Capt. Martin J. Lyons, the New York pilot, who sailed on Valkyrie II., will command her, having sailed from New York last week to join her. Capt. Lyons was with Mr. Bennett at one time in the old Henrietta.

The annual meeting of the Riverside Y. C. was held on Feb. 7, the following officers being elected: Com., G. I. Tyson; Vice-Com., C. E. Diefenthaler; Rear Com., Daniel Prentice; Rec. and Cor. Sec., J. G. Porter; Treas., J. E. Peck; Meas., E. F. Lockwood Trustees—A. M. Brush, C. E. Wilson, C. E. Diefenthaler, C. T. Pierce, W. A. Hamilton, G. G. Tyson, William L. Marks and H. W. Tyler. Membership Committee—F. Beltz, S. D. Pierce and J. A. Oatwell. Regatta Committee—W. J. Selleck, S. D. Pierce and Edwin Binney.

The annual regatta was fixed for July 6, and two special races for the new Larchmont 34-footers and 21-footers were arranged. The annual cruise is to come off on July 15.

The Stamford Y. C. has elected the following officers: Com., James D. Smith; Vice-Com., Howard C. Smith; Rear Com., Frederick M. Hoyt; Treas., Charles H. Leeds; Sec., Malcolm R. Pitt; Fleet Surgeon, Henry P. Gelb; Meas., Frank Wardwell; Chaplain, Richard P. H. Vail, D. D.; Directors—Henry K. McHarg, Schuyler Merritt, Albert C. Hall, Edward C. Hoyt, Walter M. Smith, Walto Ferguson, Archibald H. Smith, E. E. Bruggerhof, Sherman Dewey and Alfred S. Pitt; Nominating Committee for 1895-6—Franklin M. Jones, Austin H. Watson, Clark Dewing, William D. Phillips and Melville P. Hall.

George W. Hall, the New York representative of the Harlen & Hollingsworth Co., died in New York on Feb. 5, of pneumonia. Mr. Hall was at one time an engineer of the U. S. Navy. He was a member of the American Y. C., serving as treasurer for some years.

Canoeing.

CANOE NEWS NOTES.

We learn on good authority that Mrs. William Willard Howard has challenged Miss Constance Bennett, the winner, in Spruce, Ill., of the ladies' race at the B. C. A. meet, at Lalcombe last summer, in which Mrs. Howard was second, to a race on the Solent next summer. Mrs. Howard will sail the new half-rater, to be built for Mr. William Willard Howard, and Miss Bennett, who has accepted the challenge, will probably have a new boat, Spruce IV., which Mr. J. Arthur Brand will build to succeed his present Spruce III.

The annual election of the Buffalo C. C. was held on Jan. 26, the following officers being elected: Com., E. W. Dunston; Vice-Com., H. D. Pulsifer; Sec.-Treas., F. D. Wood; Directors—E. W. Dunston, H. D. Pulsifer, F. D. Wood, C. P. Forbush, F. R. Rossel, G. L. Kelley.

A. C. A. Membership.

Atlantic Division.—E. M. Underhill, Yonkers, N. Y.; J. Richard Taylor, M. D., Sag Harbor. Central Division.—Percy Nisbet, G. Umfreyville Laws, W. V. Brewer, J. Arthur Brand, London; Ernest Kipling, L. McPherson, Newcastle-on-Tyne; A. C. Alderman, Worcester; Dr. John D. Haywood, Liverpool.

The first annual dinner of the Wawbewawa Wai Canoe Association was held at the Winter Palace Hotel, Boston, on Saturday evening, Feb. 2, and proved to be as fine a gathering of local canoeists as has been held in this vicinity for many a day. Twenty-four covers were set, and the following well-known A. C. A. men were among the members of this jolly crew. Capt. Louis S. Drake, Secretary Walter L. Perry and Purser Francis J. Burrage were in charge of the arrangements and held the seats of honor with President Hyde, of the Waltham C. C., and Louis F. Cutter, Purser E. D. A. C. A., as guests. Raymond Appolonio, Vice-Com. D. A. C. A.; Chas. F. Dodge, Secretary, and Howard L. Rogers, Rear Com. of the Puritan C. C.; J. Winn Brown, T. Bugham and W. W. Crosby, of the Innitous, Roger D. Smith, Geo. B. Smith and Edwin Esterbrook, of the Dedham Boat Club; Wm. V. Forsaith, John F. Linder, Jos. L. Clapp, R. A. Ballou, C. B. Mather, Clarence B. Ashenden and Wellington Wells. The association is in a very flourishing condition, with a membership of forty active canoeists living in the vicinity of the Hub. Strong crews will be entered in all the important races during the coming season, and the Wawbewawas hope to add more victories to their already long list, which includes two New England championships. Ex-Commodore Chas. V. Winn's jolly company was anticipated, but a disappointing telegram appeared at the last moment.

The A. C. A. Regatta Programme.

The regatta committee has prepared the following provisional programme for the races of the 1895 meet or the A. C. A., and will be glad to hear any criticisms or suggestions. In the absence of any better scheme of handicapping, the committee has decided on classing the men in the unlimited race, as seniors, juniors and novices. In starting, the latter will be started first, their signal being the preparatory for the juniors, whose starting signal will be the preparatory for the seniors. The cruising race offers the opportunity demanded by so many in the winter season, and which so few avail themselves of when the time comes. We hope this year that at least enough cruisers will present themselves to make a race and to avoid further discredit to an association which is nominally devoted to canoe cruising. The conditions of this race may be varied as circumstances suggest when the course and camp ground are finally selected.

The committee will call off every event for which, after due notice, at least three bona-fide contestants are not at the line at the specified time, and no prizes will be given for sail-overs.

If there are any suggestions or objections to be made, now is the time; and not after the programme has been finally published, beyond possibility of alteration.

A. C. A. REGATTA 1895.

Event 1. Paddling and sailing combined, 1-2 mile alternately, total 13 miles; time limit, 1 1-2 hours.

2. Paddling, 1-2 mile straightaway.

3. Sailing, 4 1-2 miles; time limit, 2 hours.

Nos. 1, 2 and 3 are record races under rule 5 of Sailing Regulations.

4. Trophy paddling, 1 mile straightaway.

5. Trophy sailing, 9 miles; time limit, 3 1-2 hours. See rule 5.

6. Unlimited sailing, 3 classes, 6 miles. Class A to include all who have won an A. C. A. sailing prize; Class B, all others except novices; Class C, Novices. Class C shall have an allowance equal to one minute per mile over Class A, and Class B an allowance equal to 1-2 minute per mile over Class A. Time limit, 2 1-2 hours. Starters in the trophy sailing race to be selected from this race, according to elapsed time.

7. Club sailing, 3 classes as in event; 6, 4 1-2 miles: time limit, 2 hours. First three members of any one club to count. A club to be represented must enter at least three men; all men entered must have become members of the club they represent before the first day of the 1895 meet.

8. Limited sailing, 3 miles; time limit, 1 1-2 hours. Sail area limited to 100 square feet, and sliding seat prohibited.

9. Cruising-go-as-you-please. Contestants to start at any time during the day (date to be posted) for a point not over 10 miles from headquarters, carrying a necessary camp outfit, which shall include at least one tent, one camp bed, or cot, one pair heavy blankets, change of clothing, cooking utensils, supplies, etc. They shall make camp and prepare a substantial supper and breakfast with at least one hot dish, beside liquids, in each. The start for return shall be by signal to be given at half-past eight the following morning. Everything used must be properly stowed, and carried both ways. Sail or paddle or both may be used. The committee must disqualify any contestant who shall violate the spirit of the regulations.

10. Novice sailing, 3 miles; time limit, 1 1-2 hours. Open only to members who have not sailed a canoe prior to Sep. 1, 1894.

11. Unclassified sailing, 4 1-2 miles; time limit, 2 hours.

12. Novice combined, 1-4 mile alternately, total, 1 1-2 miles; time limit, 50 minutes.

13. Paddling. Open canoes not under 50 lbs. weight, 1-2 mile straightaway; single blade.

14. Tandem paddling, 1-2 mile straightaway; decked canoes, double blades.

15. Tandem paddling, 1-2 mile straightaway; open canoes, single blades.

16. Club four paddling, 1-2 mile straightaway.

17. Paddling upset, 1-8 mile, usual conditions.

18. Sailing upset and maneuvering. At signal throw paddle over stern and recover; second signal, canoe to be heeled over until top of mast touches the water; canoes to be righted and cross the finish line under sail.

19. Hurry scurry Run, swim, paddle.

20. Gymnastics.

21. War canoe, 1 mile.

M. V. BROKAW,
A. C. NICKERSON, } Regatta Committee.
H. R. TILLEY,

In reporting upon the Gut Crop of 1894-5, I have to announce materially reduced production, which in the ordinary course would involve an advance in prices, but the excessively bad season last year left more than an average quantity in stock, and therefore prices will remain for the present either stationary or (in some cases) reduced.

The quality this year is fully maintained, and if buyers take the requisite pretautions to secure the present season's crop there is no reason to anticipate dissatisfaction.

For the information of purchasers, I have in this year's list given more detailed explanations of the technical terms used for Gut, which will enable intending buyers more perfectly to suit their requirements.

The two extremes of finest Trout and heaviest Salmon Gut are both scarce and expensive, as the quantity produced is under the average.—Adv.

R. RAMSBOTTOM,
81 Market Street,
Manchester.

Volume twenty-one of "Our Animal Friends," containing the twelve numbers for 1894, reflects credit upon the New York S. P. C. A., of which John P. Haines is president. The magazine is admirably edited and illustrated, and contains matter of great general interest. Its high standard should be emulated by other publications of this class, which are too often narrow and fanatic.—Adv.

The Kennel.

FIXTURES.

BENCH SHOWS.

Feb. 19 to 22—New York—W. K. C., Jas. Mortimer, Supt.
Feb. 26 to March 1—Detroit—City of the Straits K. C., J. W. Garrison, Sec'y.
March 5 to 8—Chicago.—Mascoutah K. C., J. L. Lincoln, Sec'y.
March 12 to 15—Denver.—Western K. C. Co., E. T. Weiant, Sec'y
April 16 to 19—Boston.—New England Kennel Club. D. E. Loveand, Sec'y.
April 17 to 20. Los Angeles—Southern Cal. Kennel Club.
May 8 to 11—San Francisco, Cal.—Pacific Kennel Club.

FIELD TRIALS.

Sept. 10—Morris, Man.—Manitoba F. T. C., John Woolton, Manitou, Sec'y.

Don't forget that entries for Chicago close to-day. Feb. 16, with Geo. H. Hill, 95 Monadnock Building, Chicago, Ill. Fee, $3.

Shall It Be Speed Or Nose?

Oshkosh, Wis., Jan. 11. Editor Forest and Stream: When I wrote you in regard to speed and nose in beagles, it was after reading ther eports of the National trials in two great sporting journals and several lesser ones, and I gathered the data for my letter from them. It now looks as though the saying of an old lady I once knew is true, that "the newspapers is a passel of lies." We gullible, simple-minded Westerners believe all we see in the papers, and I had begun to think it was a mere oversight that Royal Rover did not get a better place at the National trials. But it seems now as though it was the decision of deliberate, cool, judicial minds working under the "spotting" system, which system I take for granted is responsible for Rover being dropped after his heat with Buckshot. But as I said in my letter, the judges might put new light on the matter if they chose to answer my question; so my object has been accomplished, and I have learned how judges decide at a field trial. But I am in nowise convinced that the system is right. "Out of the mouths of judges ye shall hear wisdom." Let us hear some of Mr. Turpin's remarks: "Buckshot showed fully as good nose, fully as good hunting sense, as Rover, and far greater speed. * * * In the race he led most of the time, and picked out a great majority of the turns." What business had Rover to be in the lead at any time of a dog with "far greater speed and fully as good a nose"? What was Buckshot doing when this dog Rover, with fully as good a nose as Buckshot, but so lacking in speed that he was dropped out after that heat, was leading him?

Picking up the turns I understand is the turn on the track where the rabbit turns or picks up the trail, if the dog runs by the turn. Now, what business had Rover to pick up even a small part of these turns? Was Buckshot so far behind that Rover picked up the turn before Buckshot arrived, or was Buckshot ahead, and Rover came up and picked up the turns before Buckshot could. It's all a mystery how Rover could at any time, be either in the lead or pick up losses first. Now I don't mean to insinuate or intimate that judges did not decide these races as fairly as they possibly could for I have seen several heats between very fast dogs and dogs somewhat slower and know how hard it is to suit all views of the case. If it were ever my misfortune to be a judge at a trial I should have the "wind-splitter" run alone for awhile, and see what kind of a show he would make. I think many of our beagle men and some of the judges would be surprised at the difference he would show in work done that way as compared with work done in a race with a slower dog. Before the game is afoot he has not the time or ability to take an old trail and work the rabbit up. He has got to go bird dog fashion and jump his rabbit and when he overruns he has not the help of the slower dog to aid him pick it up. He becomes "foxey," when hunting with a slower dog, takes one trail away from him by speed, and watches him on the turns.

I have just such a hound, and I know from experience that any beagle judge that I know of would give him the decision over Rover. If nothing happens, I shall send him to the Eastern trials, next year, and hope this description of him will not prejudice the judges against him.

I don't blame Mr. Kreuder for buying Buckshot and all the fast dogs he can find, if he never had a beagle worthy the man that could not keep within fifteen or twenty minutes of the best beagle living on a rabbit trail. I never had the misfortune to see such a dog myself. We don't breed such beagles in the West. I have one regret in regard to the National trials that Buckshot and Frank Forest did not run a heat together. It would have been interesting to have witnessed the result. Another word, and I will close. Mr. Clark judged the Northwestern trials on the same lines that the National trials were judged, I should think, and I now have no doubt more Western men are of my opinion that the system is wrong. In conclusion, please allow me to withdraw the offensive word "easily" from my version of the way in which Royal Rover beat Nell R. If he beat her at all, that is enough. But the excuse made that she was tired from a heat run the day before is rather hard on the bitch. Yet Mr. Reid says he breeds for staying qualities and bottom. Send a bitch West, Mr. Reid, and I will breed her to a dog that won't get tired out in a day or a week either, and won't charge you a cent.

G. A. BUCKSTAFF.

Work for Terriers.

Boston, Mass., Jan. 9.—Editor Forest and Stream: I am glad to note that my letter which appeared in your paper of Dec. 22, 1894, seems to have attracted some attention among terrier men and I hope and believe, that with the aid of your valuable paper the feasibility of having good sport with terriers on muskrats will soon be established. It would open a new field to the lovers of these game little dogs, and as H. W. L. states, "would bring one nearer to one's dogs." Many sportsmen, especially in this country, are prevented by business from enjoying outdoor sports with setters, pointers or hounds, as this often requires considerable time, and comparatively few have facilities to keep these larger breeds. But almost everybody—whether he lives in town or country—could keep a terrier or two. As companions, watch dogs, and for general good disposition, etc., they are not surpassed by any other breed, and if owners would see their way toward enjoying good, healthy sport with their favorites, the real merit and general character of the different breeds of terriers would soon be better understood and more generally appreciated.

It would be a welcome feature to sportsmen in general and to terrier men in particular, and last but not least, to the terriers themselves.

Since writing my last letter, I had an opportunity of seeing a number of "professional" trappers and hunters, men that are thoroughly familiar with the habits of such game, as would be suitable for the purpose, and they all seem to think, that the muskrats offer the greatest possibilities. Although these men have never made muskrat hunting with dogs a specialty, their suggestions may, nevertheless, be valuable, and may lead to the desired results. As pointed out by your correspondent, H. W. L., the principal difficulty consists in the fact that the entrance of muskrat holes are generally under water (although this is not always the case) and the animals escape through them and give the dogs but little chance to catch them. In many localities, and at certain seasons, muskrats can be found in large numbers along slow running brooks, where they live in burrows in the banks, and I have myself seen places that were actually undermined with them. The place suggested is, to select a narrow part of such brook or stream (where the rats are plentiful) and build a dam across it. Of course the water at the place would soon accumulate, and a spot must be selected, where by ditching, the overflow could be given another outlet, say into some swamp or into some other part of the brook, some distance below. In this manner any desired portion of such brook or stream could be more or less drained in a very short time, and many of the inlets to the burrows could be laid bare. It would now become a question of digging, and here a good terrier would be in his element. Beside, there will be plenty of pools left to give the dogs a chance to show their ability in the water.

All this may at first appear to necessitate a great deal of preparatory work, but where suitable localities can be found, this plan seems to be perfectly feasible. Although ferrets are unfit to work in the wet, they may be used to advantage after the place has been drained. Whether or not ferrets would bolt muskrats at all, is a question that some of your readers may be able to answer.

The above plan is more or less based on theory, but as it has been suggested to me by practical men, it may be of interest.

I have tried ferrets on woodchucks and found that, although they will not bolt them, they can be used to ascertain whether the woodchuck is at home or not, for after the ferret has entered, the grumbling and growling of the chuck can be distinctly heard. I have several times succeeded in digging out woodchucks, but as a rule, this work ends in disappointment, as the animal, when pressed, digs away from the dog, and while doing so fills up the passage behind him. The best way is to catch them above ground, and during the past three or four years I have had good sport with them and killed quite a number.

It is a pleaure to see experienced terriers take a hot trail where the chucks have been feeding, and after much eager work locate them under some stone wall, tree stump, etc., then dig their way to them and tackle them. I found that during the summer the early morning or late afternoon are the best time for such work, as the animals are then often found at some distance from their holes, and cannot make their escape that way.

Last year, one afternoon, my terriers succeedeed in killing four of them, and wherever they are plentiful, one is (with the aid of experienced terriers) almost certain to enjoy some good sport.

TERRIER.

Brighton Tobe's Pedigree.

Chatham, Ont., Jan. 17.—Editor Forrest and Stream: The en closed letter is the pedigree of the well-known field trial winner Brighton Tobe, and will no doubt be of interest to English setbreeders. I was led to breed to him as an experiment, thinking that he was a straight bred English setter.

Leddersdale, Il., the dam of Tobe, is by Knight of Snowden, his dam is Swan, she out of Lady Cypress, out of Hall's Lucy. In searching for the breeding of Hall's Lucy I wrote to Mr. John Hall, a well-known sportsman and setter breeder, of Hamilton, Ont., who replied that he had never owned such a bitch, but that it was very likely a man of that name living in Walsingham, Ont., who bred his dogs to some of Mr. Bailey Harrison's, of Tilsonburg, Ont. I wrote to Mr. Hall, of Walsingham, Ont., some time ago, and to-day got the following letter from Mr. E. Tinsley, a well-known sportsman of Hamilton.

Hamilton, Jan. 15. Dear Sir:—Hall's Lucy, a lemon and white bitch, was sired by an imported English setter, the property of Capt. Massie, who was stationed in Toronto some twenty years ago. Her dam was an imported Irish setter, the property of Mr. John Maughan, of Toronto. Lucy was stolen from Hamilton by an employee of a racing stable then located at Windsor; she was sold to a Frenchman in Detroit. Lucy was bred to Carlowitz, Lady Cypress being part of that union. You will find Lucy recorded in pedigree of Knight's Belle. At Mr. Hall's request I send you this, he having forgotten the particulars until reminded of them by me. Hoping they may be of service to you, E. TINSLEY.

Another Fox that Played 'Possum.

Editor Forest and Stream:

An account in your paper of Dec. 29, of a fox "paying possum," reminded me of a curious instance of the same kind, which occurred to myself and two others. We had started a gray fox with four hounds of mine soon after day, and had driven him into a gopher hole after a merry spin. I sent for a small grubbing hoe and cut a small sapling down, which I put in the hole to guide us in digging. As it eventually turned out the hole was short and straight, and I accidentally pinned the fox against the end of it. The grubbing hoe was then used to dig into the hole, where we judged the end of the sapling to be, and sure enough, as soon as the hole was reached, out popped the fox's head. I was not prepared for his appearance so soon, or I would have made the hounds stand back. However, as soon as they saw him they dashed in and fastened on, trying all they knew to pull him out. I soon made them let go, and there lay our fox, head and neck clear of the hole, and apparently the deadliest I ever saw. One of my companions then took hold of him, and by exerting all his strength he pulled him out—as limp as a dish rag. He held him by the scruff of the neck, and asked, "What will I do with him?" I replied, "Throw him to the hounds." No sooner, however, had the fox left his hands, than he came to life like a flash, and absolutely, "hit the ground running"! The hounds were as much taken by surprise as ourselves, and he got quite a good start, but after a desperate struggle of about 250 or 300 yards they dragged him down

Not the least amusing feature of the affair was the expression on the face of the man who had been holding him when he realized the truth.

R. F. B.

Fort Meade, Fla.

The Board of Governors of the U. S. F. T. C., may hold several more meetings to arrange definitely its business affairs, so says Mr. Stafford. It would seem to be a needless expense for the club to incur by sending the secretary on a long trip from his home in Tennessee to Indianapolis, Ind., for the sole purpose of securing possession of the club's books and papers on the 15th inst., the date on which Mr. Madison's term of office expires. The express agencies could perform the work quite as well and much cheaper. But the secretary was instructed to secure such information and suggestions as Mr. Madison would be pleased to give, rather a humiliating admisson, for why should the leaders of a great club ask anyone for information as to the best manner of conduucting it. For the secretary, under instruction of the club, to take a long trip from Tennessee to Indianapoilis, for the club's books, and to solicit information on club matters from Mr. Madison, is a tribute to that gentleman's value given in the most forcible manner. Inferentially his guiding hand will be missed for some time to come.

The action of the Board of Governors, at the New Albany meeting, in instructing the secretary to advertise that the club reserved the right to declare the chicken trials off immediately after the entries closed, if it thought best to do, was most unwise. Entries do not come in well when a culb is timorous in its own affairs. Never before did the club take such action. It may reconsider its action.

United States Club.

The Board of Governors of the U. S. F. T. Club held their special meeting in Dr. Rogers' house, on Tuesday evening, Feb. 5. Mr. W. B. Stafford presided.

Messrs. C. Cooledge, Boston, T. T. Ashford, Birmingham, Bayard Thayer, Boston, and J. D. King, Jackson, Tenn., were elected to membership.

Mr. Madison's resignation was not accepted. Prof. Edm. H. Osthaus was appointed a committee to communicate with Mr. Madison and request him to withdraw his resignation.

On Wednesday evening the adjourned meeting of the previous evening was called to order by Mr. Stafford. There were present as follows: Messrs. Buckle, Mundy, King, Avent, Stafford; and Prof. Osthaus and Mr. J. B. King were invited to join in the proceedings of the Board.

THE TRACY PAINTINGS—"WOODCOCK SHOOTING," No. 131.

Copyrighted by Mrs. J. M. Tracy.

Prof. Osthaus reported that Mr. Madison refused to reconsider his resignation. He had been communicating with him by telegraph. Prof. Osthaus offered the following remarks, which brought matters to an issue. He said: "As there has been, by members of the club, some talk of disbanding the club, with other matters in that connection, I wish to state that I believe that it is not in the power of the Board of Governors, to take any such action, and I believe the following resolution is the best thing to consider. I hereby offer it:

"Resolved, that when this meeting adjourns it adjourns to meet in Chicago, on Thursday evening of the Mascoutah Kennel Club's Dog Show, and that the Secratary, Mr. Madisno, be directed to notify each member of the club to send a written expression of opinion and instruction as to the future conduct of the club, in respect to continuing or disbanding the club, and that Mr. Madison be requested to act as Secretary until that time."

After some discussion it was agreed that proxies would be recognized. Mr. Avent opposed the resolution, and in substance stated that Mr. Madison had repeatedly declined to continue in office or in the membership of the club; that if the resolution was passed and Mr. Madison thereby conntinued in office till the Chicago show, it would put the club at his mercy. He had received several letters, he said, informing him that Mr. Madison was inimical to the club's interests.

Prof. Osthaus held that it would give all the members a fair chance to express their opinions and thus the wishes of the majority could be ascertained.

Mr. Stafford explained that 13 out of the 15 Board of Governors were represented at the meeting in person or by proxy, and that the Board comprised nearly all the club members.

Mr. King said action should be taken at the present meeting, and that if the club was to stay together, it was an oversight to leave it without a permanent secretary.

Mr. Stafford explained that there was money coming into the club's treasury, and there should be a proper officer to care for it.

A canvas showed the voting force as follows:

Mr. C. E. Buckle held the proxies of Messrs. Rowland, Adams, Madison, Freeman and Hulman.

Mr. J. M. Avent held the proxies of Messrs. Harris, James and Essig. Mr. W. B. Stafford held the proxy of Mr. Seale.

On Prof. Osthaus' resolution, Mr. Buckle voted his own and his proxies for it. With Prof. Osthaus' vote there were seven for it. Against it were Messrs. Mundy, King, Avent, and his three proxies. Mr. Stafford voted his proxy against it, which made seven against it. The chair announced a tie vote and recorded his vote against it and declared the resolution lost.

Mr. Madison's resignation was next considered. Mr. Avent moved that it be accepted with regrets. Carried.

The election of a new secretary was announced as next in order. Mr. Avent nominated M. Stafford. Prof. Osthaus and Mr. Buckle announced that they would refrain from voting in this election. Mr. Stafford resigned the chair to Mr. Avent. Mr. King moved that the secretary pro tem. cast a ballot for Mr. Stafford. It was so done. The vote was Messrs. King, Mundy, Avent, and by proxy, Messrs. Harris, Seale, James, and Essig, seven in all.

Mr. Stafford then resumed the chair. He asked if there were any other withdrawals. He said that there was a rumor that several members would withdraw. Mr. Buckle said that if any resigations had been sent in, they were probably in the former secretary's hands, and would be turned in in proper time, with the books, and would be acted on in proper order.

The chair then suggested that a motion was in order that Mr. Madison be notified to turn over the books and papers to the new secretary. Prof. Osthaus held that such motion would be needlessly offensive and that he felt sure that Mr. Madison would turn over the books, etc., in good time. It was explained that Mr. Madison delayed his resignation to Feb. 15, so that he would have time to close up the club's books before turning them over to his successor.

It was moved by Prof. Osthaus, seconded by Mr. Avent, that a vote of thanks be extended by the club to Mr. Madison for the many services rendered since the organization of the club, and to express the sincere regret of every member at Mr. Madison's withdrawal from the club. Carried.

Mr. Avent made a motion that Mr. H. Hulman, Jr., be appinted on the committee on selecting judges, etc., vice Mr. Madison. Carried.

Mr. Avent made a motion that Mr. Richard Merrill, of Milwaukee, be appointed a member of the committee on grounds for chicken trials, vice Madison, carried.

On motion of Mr. King, Mr. Stafford was appointed on the committee on grounds of trials A.

The following list of members, proposed by Mr. Avent, were elected. It was proposed to elect them in a lump. Mr. Stafford suggested that some one might wish to cast a black ball, and that it was better to ballot on them one at a time. Prof. Osthaus explained that he did not desire to blackball anyone, and would refrain from voting. Mr. Stafford then asked if he desired to black ball anyone. Mr. Buckle said he did not and would not vote, but asked Mr. Stafford why he did not ask the others the same question. They were then elected as follows: Frank P. Johnson, F. W. Denison, J. J. Odum, Geo. Ubanks, and G. Chisholm, all of Birmingham, Ala.

Mr. Avent, as one of the committee on grounds of trials B, announced that the arrangements with the land owners, represented by Dr. Crump, of West Point, Miss., had been made and the contract signed, at a nominal rental of $75, which was to be used for protecting the grounds.

It was carried, on motion of Mr. Avent, that Mr. Stafford call on Mr. Madison on Feb. 15, to get the club's books, etc., and to obtain from him such suggestion and information as he would give the club.

On motion of Mr. Avent it was carried "that the secratary be instructed to advertise the stables of the chicken trials and state that the club reserves the right to declare the stakes off immediately after the entries close if it considers it advisable to do so." Adjourned. B. WATERS.

DOG CHAT

The following is the correct number of entries received for the W. K. C. show: Mastiffs, 14; St. Bernards, 148; bloodhounds, 11; great danes, 29; Newfoundlands, 7; Russian wolfhounds, 22; deer hounds, 3; greyhounds, 38; foxhounds, 15; retrievers 2; Cheaspeake Bay dogs, 6; pointers, 111; English setters, 102; Irish setters, 77; Gordon setters, 48; spaniels, 123; collies, 38; old English sheepdogs, 9; poodles, 77; bull dogs, 60; bull terriers, 80; Boston terreirs, 31; basset hounds, 4; dachshunds, 42; beagles, 54; fox, 143; Irish, 51; black and tans 19; white English terriers, 9; Dandie Dinmont terriers, 11; Bedlington terriers, 6; Scottish terriers 46; Skye terriers, 9; Yorkshire terriers, 29; toy terriers, 2; pugs, 8; toy spaniels, 39; Italian greyhounds, 8; schipperkes, 6; miscellaneous, 8; total, 1605. The duplicate entries number 205, leaving the management to tackle the questions of benching 1,400 dogs as aganist last year. In comparing he above entries with those of former years, from a fancy point of view, too much reliance must not be placed on mere numbers. Take English setters for instance, there were 235 shown in 1880, but it is safe to say the 102 entered this year are not worth the whole crowd as far as quality and type go. The continual steady advance in the bull dog must be gratifying to the progressive club that controls this special fancy. These bullterriers, also through their inherent good qualities, but without the aid of a specialty club, roll up an entry far ahead of former years. The same applies to "Scotties," evidently the coming breed in rough terriesrs, while Irish terriers, with 51 entries, show a very commendable advance since the four of 1885. There is a woeful falling off in pugs that is difficult to account for, but to offset this the toy spaniels have made a decided jump. Russian wolfhounds do not seem to carry out their promise of popular favor, and St. Bernards also show a falling off this year, but we trust the quality of the home bred ones will make up for this. Greyhounds seem to hold their own, and the quality is expected to be excellent. Spaniels, especially field spaniels, and clumbers, seem to be coming agian, the cocker entry, but for the reason already stated elsewhere, would have doubtless been a record one; as it is, it equals last year's. Yorkshire terriesr have taken a jump in numbers entered, and it is to be hoped the quality keeps pace, but we doubt it. The advance of the poode is very noteworthy from 58 last year to 77, this speaks well for those who have done so much to bring them forward; ten years ago there were 20 shown and a mixed lot, too. Black and tan terriers do not make much headway, but the beagle judge should feel proud of the entry of 54 which is within two of a record for New York. Pointers show a falling off, and it is a question if the quality will make up for it. The setters about hold their own. The Irishmen going a little ahead of late years. The lover of a good mastiff will deplore the continued falling in the entry of this grand old breed, the drop from 69 in 1889 to 14 this year is unaccountable. Still there are lots of good mastiffs in the country. Collies show a falling off from last year, but the quality can be counted on. All that remains now is to hope for good weather and a bid gate. Where the management will put all the dogs is a question we shall see solved on Feb. 19.

Our sincere sympathy goes out to Mr. and Mrs. Mortimer in the severe loss they have sustained through the sudden death of their eldest son. He was seventeen years old and an enthusiastic athlete, a clever horseman and a bright and promising youngman. He caught a cold last week, and this settling on his kidneys, he was seized with convulsions on Friday and died early on Sunday morning, after only two days illness. He will be buried at Babylon, L. I., next Thursday.

If the entry for the Westminster Kennel Club's Show is any indication of success then their nineteenth annual gathering will be a record one. That the club, with a $5 entry fee, is able during these depressing times to secure an entry of 1,605, shows one of two things—either the times are not so hard as they are said to be, or the kennel interests of the country are really advancing in spite of the fact that fewer field trials and shows were and are to be held during this season of 1894-5. Increased classification has a good deal to do with an increased entry and the wisdow of the W. K. C. management in putting on 33 extra classes this year is shown by the results. This is far and away a record entry for American shows, last year's entry at New York being 1,526. It is safe to conclude that if Mr. John E. Thayer and the Swiss Mountain Kennels had made entries as usual, the total would have come very near the 1,700 mark. Mr. Thayer's best bitches are busy with maternal duties, and the cause of Mrs. Smyth's absence is the dreadful accident she met with last November, and the many friends of the invincible trio who generally piloted the dogs of this kennel to victory will, sincerely sympathise with them in their disappointment.

The W K. C. Show of 1895 will be memorable in many ways, and none more so than from the fact that a very important contingent of English dogs will invade New York during the present week. With Mr. James Taylor, the English judge, came Messrs. E. S. and S. Woodiwiss two very well-known exhibitors on the other side. They arrived on the Umbria last Sunday after a very rough and cold vogaye, the ship being coated with ice when she arrived at her dock. Unfortunately the dogs belonging to the Messrs. Woodiwiss were not allowed to accompany their masters on the Umbria, and will arrive some time this week on one of the Wilson Line steamers sailing from Hull.

Members of the Bull Dog Club who were girding up their dogs to meet Mr. S. Woodwiss's strong team of bulldogs, will be disappointed to hear that his bull dogs have not been entered. The other dogs the brothers bring over will, however, serve to make competition lively for the home bred ones in greyhounds, rough and smooth collies, and bobtails, dachshunds and schipperkes. In greyhounds Mr. Sam Woodwiss enters Chestnut Wonder, a winner of 13 firsts, and the noted Real Jam, who has 16 firsts to her credit. In rough collies his Sir Hector, who is noted as the sire of the crack Great Gun, in entered in open and novice classes; in smooths he has Sedgemere Piebald, a dog he purchased recently. In old English sheepdogs he shows Washington, who has scored 9 first prizes. Mr. E. S. Woodwiss is strong in dachshunds and the struggle for honors in this breed is likely to be exciting, as he brings over the crack dog King Sol, winner of 6 firsts and four specials, Jane Austen, whose winnings are composed of "many firsts," Widgeon and Danish Belle, who has scored two first prize wins. The admirers of Schipperkes, a breed that has made little progress over here, will be able to get a line on what a really good "shipwreck" is when they see Mr Woodwiss's Stoots, who owns up to winning 23 firsts. We trust that Messrs. Woodwiss's plucky venture is but a forerunner of future of International competitions which will do much to keep the game alive.

Lovers of dogs who have in years past been charmed with the late J. M. Tracy's portraits and pictures of dogs in the field, should remember that the sale of the collection that he left at his death will take place on the evenings of Feb. 20 and 21, at 8 P. M., at the Fifth avenue auction rooms, 238 Fifth avenue, New York. The collection includes finished oil paintings and studies in black and white of most of the celebrated pointers and setters from Gladstone down to Prince Lucifer and Duke of Hessen. There are also pictures showing scenes in the field, and the large canvas, "Candidates for the Horse Show," and Chesapeake Bay dog retrieving a wild goose, are works of the first order. Several genre pictures are extremely attractive, especially "The Orphans," a little girl feeding two lambs from a milk bottle. "Snipe Shooting," "Woodcock Shooting," etc.

The friends of Mr. Edwin Booth who has been spending most of the winter at his old home in Hull, Yorkshire, will be interested to hear that he returns on the Wilson Line Steamer Galileo, which should arrive on the 16th or 17. Probably the Woodiwiss team will come on the same vessel. Mr. Booth brings over a crack St. Bernard that will be sure to create a stir in St. Bernard circles. This is Duke of Lincoln, sire of Duke of Lincoln II. another big winner. Duke of Lincoln has won 45 first prizes, and specials and is counted by some of the foremost judges as the best rough dog in England. He is a large dog, standing 35 inches high, and weighing 209 pounds

THE TRACY PAINTINGS—"SNIPE SHOOTING," No. 34.

Copyrighted by Mrs. J. M. Tracy.

Unlike most large dogs his legs are perfect, and he moves as active as a terrier. From press notices we have seen, his head is a strong feature in his favor, shape and markings are said to come as near perfection as we can hope for.

The mail vote for Associate Members' Officers of the A. K. C for 1895 resulted as follows: President, H. B. Cromwell, Vice-President, Edward Brooks; Secretary, A. C. Wilmerding; Delegates to A. K. C, H. T. Foote, H. H. Hunnewell, Jr., A. C. Wilmerding.

SOUTHERN F. T. CLUB'S TRIALS.

The trials of the Southern Field Trial Club were brought to an abrupt termination by bad weather, the worst that any club has experienced since the trials at Vincennes, Ind., in 1880, which were also stopped by wintry weather. On Monday night heavy rains set in, which continued until the afternoon of Wednesday. Then in the night the weather suddenly turned cold. There was a cold slide from the North Pole. The thermometer about Thursday morning registered about zero. There was a strong, cold wind blowing steadily; the ground was frozen hard and covered with patches of snow. Everything, so far as weather was concerned, was unfavorable for the trials. The birds were scarce, far too scarce for satisfactory work. A start was out of the question.

A petition was signed by all those interested in the All Age Stakes, excepting Mr. J. M. Avent, who refused to sign it, the purpose of which was that the stake be declared off for the reasons afore mentioned. Owing to Mr. Avent's annoying refusal, the club disliked to declare the stake off. It preferred to have a unanimous agreement to that effect. Toward night, the bad weather still prevailing, the club took the matter into its own hands, and declared the stake off and divided the purse pro rata amongst the starters, each one getting $29 and a few cents. They based their action on a clause of the rules which reads as follows: "All stakes shall be run to a finish if possible. If not possible, the judges may select the winners according to work done."

The judges were Dr. M. F. Rogers, Messrs. T. M. Brumby, the Secretary, and John D. King, of Jackson, Tenn. They were quite accurate in their decisions, but, in conducting the competition, they permitted the handlers to drift wide apart many times, and there was often too much hurry.

On Tuesday night, Feb. 6, the club held its regular annual meeting, and inaugurated new stakes, pointer stakes, a welcome addition to the pointer interests. The old officers were re-elected, namely, President, Maj. J. W. Renfroe; First Vice-President, Capt. Pat Henry; Second Vice-President, Dr. M. F. Rogers; Secretary and Treasurer, Mr. T. M. Brumby. The first Monday of February, 1896, was selected for the commencement of the next trials. The place of holding them will be determined later, but will be held at either New Albany or West Point, Miss.

The stakes are as follows:

Setter Derby, $450, divided into four prizes, $200, $125, $75, and $50. First forfeit $10, payable Aug. 1; second forfeit, $10, Nov. 1; $5 to start.

All Age Setter Stake, $400. Four prizes, first, $160; second, $120; third, $80; fourth, $40. First forfeit, Oct. 1, $10; second forfeit, Dec. 1, $10, and $5 to start.

Pointer Derby, $250. Four prizes, $100, $75, $50 and $25. The club agrees that if 25 entries will enter and pay second forfeit, it will increase the stake to the same value as the Setter Derby. The All Age Pointer Stake is of the same value as offered in the Pointer Derby with the same conditions, excepting time of entry and payment of forfeits, which are made the same as in the All Age Setter Stake.

The trials began on Feb. 5, at New Albany, Miss., and the same grounds were used as in previous years. The club shows most commendable energy in providing for the extra stakes for the pointers, and deserves the heartiest support. The club has striven earnestly to make a fair and equitable competition, without fear or favor, and it has succeeded in doing so, beside being in the van in field trial progress. In my opinion the club did wisely in cutting down the amount of its stakes. All clubs have been giving greater prizes than they could afford. It is much better to have clubs giving sure trials year after year than it is to give one trial at a loss and then quit, owing to too large prizes. The large prizes, therefore, make the competition too intensely professional.

THE DERBY.

The extremes of field trial competition, the very ordinary performance and the high class, were exhibited in the Derby.

But of the winners it can be said truly that they ran a well-sustained and superior race from start to finish, and, so far as natural qualities are concerned, their abilities were of an exceedingly high order.

Tony Boy, the winner of first, was the victor in an unusually hot competition. It took sound work and good finish to defeat his competitors. His excellent abilities to find and point were very closely pressed by both Tony's Gale and Delhi, but, in earnest work to the gun, he easily surpassed them. He ranges fast and wide, always keeping his handler's whereabouts in mind as a point to guide his range by. In beating out his ground, he showed excellent judgment. He stays out at his work without any urging. His locating and pointing are quick, accurate and sharp. His style in action and on point is pleasing. No better puppy has appeared in many a year. He has constantly improved from the beginning of the season, and is running better now than ever before.

Tony's Gale, second, is a dog of exceptionally high class field capabilities. A diligent, fast ranger; intelligent and successful in seeking; quick, stylish and accurate in his point work, he was a close competitor for first honors. He covered a great deal of ground, and displayed excellent judgment at all times. While he did not self-hunt, he did not work pleasantly to the gun, or, to express it more specifically, he handled hard. He is, nevertheless, a dog of very superior capabilities.

Delhi, third, is famous as the winner of first honors in both Derby and All Age Pointers, at West Point. He contested closely the honors for first. His failure was not in that he could not have done better, for he has most excellent capabilities, but in being sometimes disobedient and in some instances deficient in stanchness. He seemed to be impatient if held too long, on point, and did not care to honor his competitor's point at all times as he should have done to show finished work. At other times, he was perfectly reliable, whether on point or back. These faults are easily corrected. They are mere matters of training. With such a high-spirited dog, it requires time to complete his education to the gun. Both Delhi and Tippoo showed qualities in striking contrast to those of the pointers of a few years ago. The old time pointer was slow. He was disposed to potter and frequently was a loafer, or he would work a while and loaf a while. He was lacking in self-assertion and would much prefer to watch his companion or trail behind than to take the lead. Delhi goes at his birds with perfect confidence, and without any of the old time slovenliness. He stays out industriously at his work and covers a deal of ground. With more experience, his work to the gun will greatly improve, as will that, too, of Tippoo, a dog with most excellent natural abilities, which with more training will put him in the front flight, be the same setters or pointers. Seldom have the three winners in a Derby been of such genuine merit. In finding, ranging, bird sense, judgment and speed, Delhi was quite up with the best. His faults were chiefly faults of discipline.

The stamina of all the winners was not at any time lessened by the work required. They appeared quite as fresh and industrious at the last moment of the work as at the first, and some of their work was done in most unfavorable weather.

The drawing was as follows:

Avent and Thayer's black, white and tan bitch Cynosure Roderigo-Norah II.; with P. Lorrilard, Jr's., black, white and tan bitch Poloma, Eugene T.-Lou; Joe Tucker, handler.

Maj. J. W. Renfroe's black, white and tan dog Joe Cummings, Antonio-Picaola, W. W. Titus, handler, with Blue Ridge Kennels' black, white and tan dog Tom Beggs, Antonio-Ruby's Girl, D. E. Rose, handler.

Charlottesville Field Trial Kennels' liver and white pointer dog Delhi, Rip Rap-Queen II., C. E. Buckle, handler, with Bryson and Bedford's white, black and tan bitch, Ida B. Tremont-Leda, C. A. Galloway, handler.

Fox and Seiler's black, white and tan dog Tony's Gale, Antonio-Nellie, G. J. H. Johnson, handler, with Pierre Lorillard Jr's. black, white and tan dog Shad, Eugene T.-Lou, Joe Tucker, handler.

Avent and Thayer's black, white and tan bitch Clementine, Roderigo-Norah II., J. M. Avent, handler, with Jackson-Denmark Kennels' lemon and white bitch Lady Clare, Prince Lucifer-Clare, T. Bond, handler.

N. T. Harris's black, white and tan dog Tony Boy, Antonio-Laundress, D. E. Rose, handler, with Patrick Henry's liver and white dog Mars, De Soto Roy-Gladstone's Girl, C. A. Galloway, handler.

Charlottesville Field Trial Kennels' liver and white pointer dog Tippoo, Rip Rap-Monterey, C. E. Buckle, handler, with Blue Ridge Kennels' black, white and tan bitch, Lady Mildred, Antonio-Ruby's Girl, D. E. Rose, handler.

This stake was for all setter and pointer puppies whelped on or after Jan. 1, 1893. First prize, $250; second prize, $20; third prize, $150.

MONDAY.

A late start was made owing to the drawing taking place in the morning, and the time required to appoint two judges in place of Messrs. J. Williams and W. Wilson, who were absent. The latter had gone farther South to seek health, he having had an attack of pneumonia. Dr. M. F. Rogers and Mr. J. M. Brumby were appointed to serve instead.

It was at first decided to leave the choice of judges to the handlers, but, immediately, among them there was wire pulling for and against available judges. Messrs. Avent, Bond and Gilliam lodged a protest with the club against a certain party as judge. The handlers could not agree unanimously on any one. Finally, the club did what it should have done at first, namely, appoint its own judges.

The competition was very sloppy. Birds were scarce, which undoubtedly contributed to the lightness of the work, but such work as there was, was inferior, excepting the work of Joe Cummings, Delhi, Tony's Gale, Tony Boy and Lady Mildred; the rest of it was extremely poor.

There was more changing of courses, and the consequent perplexing of handlers, than was necessary in skillfully conducting the competition. To arrange the course so that the heats will be run smoothy and progressively is quite an art in itself. In several heats the handlers were mounted, which occasioned much rushing and uncertain work. The walking, however, was muddy, and the handlers had petitioned for permission to ride.

Cynosure-Poloma.—The heat began at 9.49, and was a poor one. The handlers were mounted, the grounds being very muddy. But in nearly every heat wherein the handlers were mounted, they rode too fast, became widely separated, thus rendering the judging difficult. Poloma pointed a bevy in sedge and Cynosure backed; the former moved on to locate and Cynosure moving forward and to one side, flushed two outlying birds, then the bevy flushed. Both were steady to shot. The birds were followed. Poloma made two good points, Cynosure one. The latter was heavy in his stride and worked out the ground irregularly. Poloma was the wider ranger and showed more judgment in beating out the ground. The heat ended at 10.27, Poloma out of sight at the time, which was a mistake, as both dogs should always be in sight when a heat is declared ended. Poloma was found in sedge, ahead in the course, pointing a bevy a few moments after the dogs were ordered up.

Joe Cummings-Tom Beggs.—They started at 10.34. Tom showed a liking for pointing on false scent and pottered sometimes. Both had good speed. Joe maintained the more uniform pace and range. They were cast off at 10.34, and ran till 11.14. Joe pointed a bevy well among a number of field larks, in open sedge. Sent on, both pointed the foot scent of the bevy. Joe pointed the scattered birds, and Tom made two flushes. Joe had much the better of the heat in every way.

Delhi-Ida B.—They started at 11.19, and ran nineteen minutes, when the running was suspended for lunch.

The lunch was taken at Capt. Byas' place, same as in years past. The way in which the eatables disappeared was the best testimony to good food and good appetites.

At 1.13, the heat was resumed. Ida was ranging in the open field a short distance from the edge of woods. A bevy flushed and went in the same direction in which she was going. Some said she flushed it and chased, others said that the bevy flushed wild, and went in the same direction as the bitch. While she was running fast, yet she did not appear to be chasing. On a single bird Delhi made a good point, which he held sometime till his handler walked almost up to him, when he wilfully jumped in and flushed. Then he remained steady. Many seemed to think that it was an unpardonable offense. As he exhibited it, it was much less serious than a false point, since it was a mere matter of discipline to correct him. Delhi next pointed in sedge, and his handler said that the bevy flushed when he called point. Delhi roaded accurately and carefully on the trail of a running bird. He got a little too close on it and flushed it. He had a wide range, good speed and judgment. He was a bit disobedient. Ida made an ordianary showing.

Tony's Gale-Shad.—They started at 1.56. On scattered birds of a bevy flushed by horsemen, Shad made a good point. He was unsteady to shot. In open sedge, Tony pointed, Shad backed; nothing found. Tony next took a long cast and pointed and found a bevy. Sent on. He pointed soon another bevy and Shad backed. He took a cast and got a point on a single bird. He ran by far the best heat, and had much the better of Shad in every respect. There was a good deal of swift work in this heat owing to the handlers being mounted. Up at 2.39.

Clementina-Lady Clare.—Off at 2.43. Lady pointed, and a single bird flew from the branches of an oak tree overhead. Whether she pointed it or not no one could say. Some scattered birds were flushed closely, and it is more probable that she pointed it on footscent, or perhaps stopped at a flush. A bevy was marked down in open sedge. Clementina pointed a single and Lady got a good point on the scattered birds. Both behaved well to shot. Clementina, worked off the course laid out by the judges, pointed a bevy. Up at 3.24. Clementina was the better ranger, though she pottered at times, and required urging then to make her work. She showed better speed and judgment in beating out the ground.

Tony Boy-Mars.—They began at 3.28. The handlers soon became widely scattered, and worked on different ground for some minutes. Tony took a long cast and found, and pointed a bevy nicely. Next, he made another long cast, and found another bevy. He was held some moments while Mars was being brought up. Sent on, he drew in nicely and accurately through the sedge to the bevy and pointed it. Next, working on, a bevy was marked down in open range. Tony got two good points on the scattered birds. Up at 4.03. Mars made but an ordinary showing. Tony ranged well, beat out his ground with judgment and was correct in his pointing and locating. In his longest casts he was not working out of bounds.

Tippoo-Lady Mildred.—At 4.09 they began in open sedge. Lady found and pointed a bevy in a plum thicket. Tippoo coming in pointed the same bevy. The birds had run. Both moved on and pointed the bevy. Mr. Rose objected to Tippoo roading on birds his bitch had found. The birds were followed. Tippoo pointed one and was steady to shot. Lady made a good point on a single and Tippoo at the same time close by roaded to a point on a bevy in the woods. Lady pointed a single nicely and Tippoo backed. Next, Tippoo pointed a single well, then flushed it wilfully. Next, Lady pointed scattered birds, and Tippoo drew in and flushed them. Next, the handlers, quite a distance apart, Lady pointed a bevy. She was steady to shot. Tippoo, coming up, dropped to a point on footscent. Sent on, he wheeled to a point and dropped; two birds were flushed to it. Both ranged well and beat out their ground fast and with judgment. Both showed a good knowledge and capabilities of superior point work. Tippoo displayed an excellent nose. He could follow a trail very reliably and quickly, but he was not staunch. He did not back reliably. With more work on birds, if he trains on, which from his plucky way of working, there is every indication that he will, he will make a most excellent field performer. The heat and work of the day ended at 4.53.

TUESDAY.

The weather signs were unfavorable. Frozen ground, a cloudy sky, a chilly temperature, and a thin spit of snow were not good conditions for a competition. A late start was made, later than there was occasion for, since the conditions were no better in the start than they were in the morning earlier. Birds were scarce. It required long and diligent search to find them. The point work therefore was light. The course in each heat was better arranged and managed than on the Monday. There was less going one way and another in erratic courses at short intervals.

SECOND ROUND.

Eight dogs were kept in, more by three or four than the work justified. Cynosure was withdrawn on account of sickness. She had signs of distemper. This would account for her poor work on the previous day. Several more heats were run than there was occasion for, in deciding the prizes.

Poloma-Joe Cummings.—The start, a very late one, was made at 10.30, about five miles from town. Poloma was near a bevy which flushed. On scattered birds she made a good point and was nicely backed by Joe. Next both pointed scattered birds in sedge. Up at 11.16. Joe had the better speed and range. Poloma pottered once in a while. Joe came in to his handler for orders oftener than he should.

Cynosure and Tony's Boy were next in order, but on account of the illness of the former the judges permitted her withdrawal.

Delhi-Tony's Gale.—They began at 11.14. Delhi opened the work by pointing a bevy nicely and was steady to shot. In woods, Delhi pointed; nothing found. Next he flushed a single. Sent on. Tony pointed a bevy in open weeds; Delhi refused to back, drew by and stole the point. The birds were marked down in an open cottonfield. An attempt was made to work on them, but without success, the dogs not working near enough to them to get any points. Up at 11.47. Both showed a wide range, uniform, fast speed, and diligent seeking for birds. Delhi was wilful and hard to handle. He showed excellent natural capabilities, his errors being more of discipline than otherwise. Tony also handled hard, and while he did not self-hunt, he took longer casts at times than was proper to good work to the gun.

Lady Clare-Lady Mildred.—They ran 27 minutes, beginning at 11.56. Lady Mildred was a bit awkward on a bevy that she flushed. On the scattered birds, she got a good point in a very difficult place for point work, that is in high, heavy sedge grass. While up for a few minutes, going for better ground, Lady Clare had a violent fit, and the heat then ended.

Tony Boy was run alone, 15 minutes, beginning at 12.40. He first pointed larks, next he roaded nicely to a point on a bevy in open sedge. His speed and range were excellent.

The party then went to lunch.

THIRD ROUND.

Tony's Gale and Tony Boy had both shown superiority enough to run together for second prizes. There was a useless prolonging of the contest.

Tony's Gale-Lady Mildred.—They started at 1.54. Lady pointed a bevy. Gale pointed. Nothing found. In woods, Lady pointed a single, then chased it. Gale pointed a single well, and Lady backed. Sent on. Lady flushed a single. Gale was lost some minutes in woods. On a marked bevy, Lady flushed an outlying single bird, and Tony's Gale pointed nicely the remaining birds. The birds were followed and Lady made a point on some of them. At the same time, Gale had taken a cast about 200 yards away in the open weed field, and pointed a bevy. He held his point steadily and well till his handler went up to him. Up at 2.30. Tony was hard to handle when ranging, but showed judgment in beating out his ground, and excellent skill in his point work. Lady's work in this heat was ordinary.

Tony Boy-Delhi.—They started at 2.35. Delhi made two points and Tony Boy one, and nothing was found to them. Delhi took a cast and pointed a bevy well, and it flushed wild to his point Working for the scattered birds, Tony pointed; Delhi backed; nothing found. Delhi took a cast to a sassafras thicket; a bevy was seen to flush from it. Whether Delhi flushed it, or whether it flushed wild from his point, or what not will never be known. In the meantime Tony had pointed a bevy and was mildly unsteady to wing. Next, Tony pointed scattered irds. Delhi flushed a single and next pointed scattered birds. Tony was nearby and made a not wholly certain point on some remaining birds. Up at 3.22. Delhi was a bit headstrong and handled hard. Tony ranged nicely and beat out his ground with excellent judgment. Both kept up a uniform fast pace and they covered a deal of ground.

FINAL.

Tony Boy-Tony's Gale, descendants of the same sire, began the final competition for first honors at 3.29. Tony Boy dropped to a point in sedge, and Tony's Gale backed, or they backed each other, probably the latter. There was nothing found. Both standing besi e a plum thicket, pointed a bevy. The birds were followed. Tony Boy dropped to a single bird which flushed wild a moment afterward. Tony Boy flushed a single. Up at 3.38. Both were superior workers in every respect, though Tony's Gale handled hard at times. Tony Boy worked prettily and easily to the gun.

The judges soon announced the winners; First, Tony Boy; second, Tony's Gale; third, Delhi.

THE ALL AGE STAKES.

The All Age Stakes was begun immediately after the Derby was ended.

There were 17 starters. None of them were newcomers, all having run before in previous trials, and several of them were famous winners.

But the work of Tuesday ended the competition, for the bad weather interfered, and thus prevented further competition.

The conditions of the stake were as follows:

Open to all setters and pointers which had never won first in any recognized field trials in America. First prize, $250; second, $150; third, $100.

Following is the order of drawing:

Dr. C. W. Duke's black, white and tan dog, Acolyte, Toledo Blade-Sue II., Thos. Bond, handler, with Bedford and Bryson's black, white and tan dog Tremont, Gladstone's Boy-Speckle Gown, Capt. R. P. McCargs, handler.

Kidwell and Stoddard's black, white and tan pointer dog Tick Boy, King of Kent-Bloom, J. B. Stoddard, handler, with Manchester Kennel Co.'s orange and white dog Gleam's Sport, Van Guard-Georgia Belle, A. P. Gilliam, handler.

F. R. Hitchcock's black, white and tan dog Tory Topaz, Count Gladstone IV.-Tory Diamond, J. M. Avent, handler, with Pierre Lorillard, Jr.'s orange and white bitch Ightfield Rosalie, Fred-Rosa, Joe Tucker, handler.

Jackson-Denmark Kennels' black, white and tan bitch Lillian Russell, Phillip Gladstone-Lou G., T. Bond, handler, with Major J. R. Purcell's black and white pointer bitch Lady Margaret, Dick Swiveler-Countless Bang, owner, handler.

W. W. Titus, black, white and tan bitch Minnie T., Dick Bondhu-Bettie B., owner, handler, with Avent and Thayer's black, white and tan dog Topsy's Rod, Roderigo-Topsy Avent, J. M. Avent, handler.

Maj. J. R. Purcell's black and white pointer dog Cid, Duke of Hessen-Barmaid, owner, handler, with Blue Ridge Kennels

black, white and tan bitch Allene, Gath's Mark-Ruby's Girl, D. E. Rose, handler.

Manchester Kennel Co.'s black and white dog Gleam's Pink, Van Guard-Georgia Belle, A. P. Gilliam, handler, with Blue Ridge Kennels' black, white and tan dog Blue Ridge Mark, Gath's Mark-Ollie T., D. E. Rose, handler.

Maj. J. R. Purcell's liver and white pointer dog St. Baise, Guy-Lady Spotswood, owner, handler, with M. T. Harris' black, white and Tan dog Tony Boy, Antonio-Laundress, D. E. Rose, handler.

Dudley Schofield's black, white and tan dog Joe Bowers, De Soto-Ruth Gates, R. P. McCargs, handler, a bye.

Alcolyte-Tremont.—They started at 3.46 in the open sedge. A bevy was marked down and the dogs were worked toward it. Acolyte pointed the scattered birds in woods, and Tremont backed. A point was made by each dog in the woods in a kind of uncertain way, the birds flushing wild. Sent on. A bevy was marked down in tall grass. The handlers and dogs got in among them and the handlers succeeded in getting most of them up. The heat was a poor one. Up at 4.30. Alcolyte had the better range and speed.

Tick Boy-Gleam's Sport.—They began at 4.32. Sport pointed then drew on to a flush on the bevy inexcusably. Sent on, he carelessly ran into another bevy and flushed it. On the scattered birds Sport got two good points. Tick at the same time was working where the birds were supposed to be but were not. Tick pointed; nothing found. Sport roaded earnestly quite a distance and pointed; nothing found. Tick coming up a while afteward, pointed near the same place; nothing found; both dogs acted as if they were on the trail of birds. Tick next made several points to which nothing was found. The heat ended as darkness set in. Up at 5.17.

On the following day the stakes were divided among the starters. The selling stake was not run. B. WATERS.

Special Prizes.

Although the majority of the specials offered at Detroit are confined to local and Canadian competition, there are several which will command the attention of "outsiders." The exhibitor who enters the largest number of any one recognized breed will win $10; and he who owns the best four Scotch terriers, will pocket two fiyers also. The Detroit Citizens Street R. Co.'s is evidently not a souless corporation, for this company puts up $10 for a kennel of smooth St. Bernards, and $5 for the best Russian wolfhound. The best pointer in the show is provided with a silver cup. The field trailers are not forgotten, as an antique silver cigar box, value, $16.50 will go to the owner of the best English setter with a field trial record. For the best pair of Russian wolfhounds Mr. McMillan offers $10. The best Gordon setter in open class wins an additional $5. The Detroit Belle Isle and Windsor Ferry Co. donate $10 for the best four poodles; and Mr. Geo. Hendrie stimulates the bloodhound men by offering ten dollars for the best pair of bloodhounds. Then $10 is donated for the best pair of St. Bernards, composed of one of each sex. Irish setter breeders who own dogs with field trial records are expected to compete for a silver cup, plated. Five dollars is offered for the best St. Bernard in the show, barring Sir Belvedere. The cocker spaniel breedres will try for a stud dog prize of $5 for the best cocker dog and two of his get. Irish setters are not forgotten, as five dollars is offered for the best kennel. And the "scotties" will have a shy at a silver card case, value, $10, for the best of the breed. Canadian exhibitors of St. Bernards will have a chance to win a $60 cup for the best rough coated dog. Another cup, value, $20, is put up for best foxterrier dog or bitch from Canada and the Walkerville Brewing Co. offer a silver trophy for the best Canadian smooth coated St. Bernard.

POINTS AND FLUSHES.

By a Staff Correspondent.

Prof. Edm. H. Osthaus and myself were the fortunate recipients of an invitation from Mr. W. W. Titus, to visit him at his home at Waverly, Miss., during the spare days intervening between the field trials at West Point and New Albany, Miss. We promptly accepted. The professor needed some relaxation from the incessant handling of paints and brushes, and I needed something that was an imitation of work.

Waverly is merely a station on the Southern Railway, about eleven miles east of West Point, and in the midst of one of the greatest game sections in the south. There were birds without limit. Every field had its own plentiful numbers. In one field, not great in its dimensions, Mr. Titus assured me that he had found six bevies. Forty to fifty bevies could be found in a day easily. I wouldn't mention all these good things, but for the fact that "Billy" has the shooting privileges, and therefore it would be useless to invade that particular section. Beside, in this county, the close season began on February 1st and lasted till September 15, therefore the shooting there is ended for this season. By the way, the game law is exceptionally strong in that county. The fine for an offense is a plump, arbitrary $25, of which $20 goes to the informer, and I believe each bird constitutes a separate offense. No shooting for outside markets is allowed at any time.

Mr. Titus has an ideal home for a sportsman. The house, a fine specimen of the architecture of ante bellum days, is situated on top of a gently sloping hill. Around it in every direction are the best of quail grounds. About one hundred yards from the house are the kennels and the kennel yards. The sloping side hill makes a natural drainage, and an artesian well furnishes a constant supply of fresh, good water.

Our quail shoot, made on the last day of the season, was much as other quail shoots are as to the shooting, but much unlike them as to the numbers of birds. Of the latter there was a bewildering abundance. Professor Osthaus shot a gun with barrels unusually short, 26 inches in length, something of a novelty, yet a most efficient gun in its execution.

But it is of the beagles I intended to write. Capt. James Young, whom his friends who love him call Capt. Jimmie, owned the pack. He is a brother of Capt. Billy and Major Val Young, owners of the famous Waverly pack of fox hounds. Throughout the land where fox hunters dwell, their names are household words. They and Mr. Titus are near neighbors, and were it not for the difference in names, they would be taken for brothers, so kindly is their social intercourse, and so generous are they in loaning to each other horses, saddles and other belongings.

They wished to make the stay of the stranger a pleasant one. So they arranged a rabbit hunt. It was planned that Capt. Jimmie and his pack would be pressed into service, or rather Capt. Billy was to call for him in the morning. There were six of us, Mr. J. T. Mayfield, joining the party, and there were but three guns. With the kindness so common in the South, every circumstance was so arranged as to give the visitors the sport.

There were seven beagles in the pack, most of them heavy with maternal possibilities. There were thickets surrounded by sedge and cotton fields. There was a scared little rabbit pursued by a pack of relentless little devils in full cry. As the rabbit passed Mr. Mayfield in the open cotton field he fired. The rabbit passed on. Next he faced death about fifteen yards from me. I looked calmly at him and felt sorry for him, for I was about to inflict sudden death. It is easy to kill a rabbit. This one was running very fast. By this time he was near a fence. It was time to accumulate him. I fired. The rabbit then was on the other side of the fence. We then looked for fur. When a fellow doesn't find the rabbit where he should have died, he looks for fur. The fur being found, the onus of the miss lies entirely with the rabbit. Mr. Titus found some fur and that settled it that the rabbit should have been shot. In the meantime, Prof. Osthaus' gun gave a hoarse, rude roar, and the rabbit was his. And so the sport went on. The voices of the beagles were, every few minutes, in eager cry after a fleeing victim. The result of the morning's sport was eight rabbits, of which Prof. Osthaus bagged three; Mr. Mayfield, two; Mr. Titus, one; myself, one, which ran inadvertently in the way, and the dogs caught one.

It is truly merry sport, full of swift action and ringing cry. It has all the features of a miniature fox chase, the cry nearby gradually diying away, then faintly heard in the distance, the voices growing louder gradually as the pack returns, till at last the full notes can be plainly heard again.

It was a great morning's sport, most interesting in itself, but rendered doubly so by charming companionship.

Professor Edm. H. Osthaus, who was in attendance at the trials at New Albany, left for Escambia, Fla., where he will enjoy the winter shooting and balmy climate. He has a lot of painting to do between times, or rather he has a lot of work to do and will shoot between times. At New Albany, he painted most life-like portraits of Delhi, Lillian Russell and Alcolyte, beside several other portraits in black and white.

The celebrated field trial handler, C. Tucker, was reported very ill at his home in Stanton, Tenn. He was suffering from a very severe attack of typhoid fever.

Mr. J. N. Seale, Division Superintendent of the M. & O. R. R., intended to visit the trials at New Albany, but was prevented by important business matters from so doing.

Mr. P. H. Bryson has not lost any of his old enthusiasm in a competition of good dogs. He came from St. Louis, his new home, to attend the trials at New Albany. With him came Mr. Whyte Bedford.

Maj. J. W. Renfroe, the President of the club, was also in attendance. He speaks in terms of praise of Seattle, Wash., where he will remain until the last of the present administration. His fine dog, Gleam II., a dog of grand style and some bird sense, a good, pleasing performer, went lame most unaccountably before the trials and for that reason he could not compete creditably, so was not entered. It was a great disappointment to him.

Mr. Spears, of Byhalia, a gentleman of renown in hunting circles, was present with a pack of his hounds. But the weather at New Albany was so severe, that all the chases were conducted at the fireside. There seemed to be a number of packs, each of which was the best. Mr. Spears, Capt. McCargs, Maj. Purcell, and Mr. Avent, were more enthusiastic in fox chasing than in setters and pointers. B. WATERS.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

NAMES CLAIMED.

Prepared Blanks sent free on application.

Count Noble Boy.—By H. S. Roberts, Providence, R. I., for Gordon setter dog, whelped May 23, by Count Noble (Ben Butler—Belle), out of Lady Maud (Ranger B.—Countess Whip).

Snow Gladstone.—By Mrs. R. Von Ohl, Jobstown, N. J., for all white English setter dog, whelped Jan. 17, by Ch. Breeze Gladstone (Gladstone—Sue), out of Mabel Petrel (Noble Petrel—Ruby II.)

Queen of the Fields.—By R. Von Ohl, Jobstown, N. J., for black, white and tan Gordon setter bitch, whelped Dec. 4, 1894, by Ch. Breeze Gladstone (Gladstone—Sue), out of Blanche Petrel (Noble Petrel—Ruby II.)

Little Joe M.—By R. Von Ohl, Jobstown, N. J., for white, with black ears, English setter dog, whelped Dec. 4, 1894, by Ch. Breeze Gladstone (Gladstone—Sue), out of Blanche Petrel (Noble Petrel—Ruby II.)

Percy C.—By J. C. Maull, Camden, N. J., for white, with black ears, English setter dog, whelped Dec. 4, 1894, by Ch. Breeze Gladstone (Gladstone—Sue), out of Blanche Petrel (Noble Petrel—Ruby II.)

Virginia of Virginia.—By J. C. Maull, Camden, N. J., for black, white and tan English setter bitch, whelped Dec. 4, 1894, by Ch. Breeze Gladstone (Gladstone—Sue), out of Blanche Petrel (Noble Petrel—Ruby II.)

BRED.

Prepared Blanks sent free on application.

Music—Raffler.—H. F. Schellhass's (Brooklyn, N. Y.) beagle bitch Music to James Mortimer's (Agent) Raffler (Ch. Ringwood—Ch. Lonely), Dec. 5, 1894.

Nellie G.—Inspector.—H. A. Kerby's (Providence, R I.), English setter bitch Nellie G. (Breeze Gladstone—Lady Snowflake), to Tallman and Wheeler's Inspector (Rowdy Rod—Spectre), Jan. 14

WHELPS.

Prepared Blanks sent free on application.

Blanche Petrel.—J. C. Maull's (Camden, N. J.), English setter bitch Blanche Petrel (Noble Petrel—Ruby II), Dec 4, four (two dogs), by F. G. Taylor's Champion Breeze Gladstone (Gladstone—Sue).

Mabel Petrel.—R. Von Ohl's (Jobstown, N. J.), English setter bitch Mabel Petrel (Noble Petrel—Ruby II.), Jan. 11, eight (five dogs), by F. G. Taylor's Ch. Breeze Gladstone (Gladstone Sue).

Blemton Dulcie.—Andrew Hopper's (Nyack, N. Y.), fox-terrier bitch Blemton Dulcie (Blemton Victor II.—Blemton Duchess), Jan. 17, four (one dog), by owner's Beverwyck Dobbin (Dobbin—Beverwyck Moonray).

SALES.

Prepared Blanks sent free on application.

Forest Noble.—Gordon setter dog by Count Noble, out of Maud Noble, by Miss S. A. Nickerson's (Providence, R. I.), to George Munroe (Providence, R. I.)

Cute.—Gordon setter bitch, whelped May 23, 1894, by Count Noble, out of Lady Maud, by Miss S. A. Nickerson, Providence R. I., to Mrs. Forest F. Tebbetts, Providence, R. I.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting).
Vigilant and Valkyrie. Bass Fishing at Block Island.

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, $5.
Forest and Stream *6 months and any two of the pictures*, $3.
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order Make orders payable to

FOREST AND STREAM PUB. CO., New York.

Butterflies and Moths.

"Butterflies and Moths" (British) is the second volume of Longmans, Green & Company's "Outdoor World" Library. It is illustrated with twelve colored plates, as well as numerous illustrations in the text, all of which must be very instructive to the lepidopterist. The chapter on catching butterflies and moths is a revelation to the lay reader, who is not previously aware of the subtleties of the art.—Adv.

The Florida Hill Country.

We have received from the Florida Central and Peninsular R R., Jacksonville, Fla., a handsome pamphlet descriptive of the "Features of the Hill Country of Florida." The Hill Country is in the northwestern part of the State, about Tallahassee. From the views given in the book it is a country of surpassing beauty, and it is, moreover, an interesting section for sportsmen on account of its unsurpassed fishing and shooting.—Adv.

A. S. Comstock's Protean Tent Catalogue for 1895 is out.

Trap-Shooting.

FIXTURES.

All ties divided unless otherwise reported.

Send notice of your shoot like the following:

Feb. 5-7.—UTICA, N. Y.—Two first days, targets; last day, live birds. Open to all. Send for programmes to E. D. Fulford or H. L. Gates.

Feb. 7—MORRISTOWN, N. J.—First match of the Class-Morfy series.

Feb 11, 12.—HOT SPRINGS, Ark.—Winter tournament of the Hot Springs Gun Club; targets. John J. Sumpter, Jr., Sec.

Feb. 12.—WILLARD PARK, N. J.—Second match of the Class-Morfey series.

Feb. 13.—YARDVILLE, N. J.—Live bird handicap at Chas. Zwirlin's; 25 birds, $10 entrance, birds extra.

Feb. 15, 16.—ROME, N. Y.—Tournament of the Rome, N. Y., Gun Club; first day, targets; second day, live birds.

Feb. 19.— .—Third match of the Class-Morfey series.

Feb. 19, 20, 21.—MARION, N. J.—Elliott Fulford Series of three races; 100 birds, $100 a side.

Feb. 22.—PITTSBURG, Pa.—Tournament of the North Side Gun Club; handicap target shoot.

Feb. 22.—ALBANY, N. Y.—First tournament of the Eastern New York Trap-Shooters' League, of the series of 1895, under the auspices of the West End Gun Club. Henry A. Kratz, Sec.

Feb. 22.—MAPLEWOOD, N. J.—All-day shoot of the Maplewood Gun Club; targets. O. L. Yeomans, Sec., Orange, N. J.

Feb. 27-28.—ELIZABETH, N. J.—Second bi-monthly tournament of the Elizabeth Gun Club; first day, targets; second day, live birds. Events open to all.

March 5-7.—RUTHERFORD, N. J.—Three-days' tournament of the Boiling Springs Gun Club; first two days targets, last day live birds. Wm. H. Huck, Sec.

April 3-5.—WILLARD PARK, Paterson, N. J.—Interstate Manufacturers' and Dealers' Association's third annual Grand American Handicap at live birds, at New York; $1,000 guaranteed, all surplus added. All ties in Grand American Handicap must be shot off; three moneys, three high guns.

April 3.—ASTOR HOUSE, New York.—Trapshooters' Convention, adjourned meeting; 8:30 P. M.

April 8-10.—HOT SPRINGS, Ark.—Fifth annual tournament of the Arkansas State Sportsmen's Association; targets. Programmes ready March 1. John J. Sumpter, Jr., Sec.

April 9-11.—WELLINGTON, Mass.—Three days' tournament of the Boston Shooting Association; targets. O. R. Dickey, Manager.

April 17-18.—LYNCHBURG, Va.—Tournament of the Interstate Manufacturers' and Dealers' Association, under the auspices of the Lynchburg Gun Club.

May 2.—ELIZABETH, N. J.—All day tournament of the Elizabeth Gun Club; New Jersey Trap Shooters' League events commence at 2 P. M. Rob't. Chetwood, Prest.

May 7-10.—CINCINNATI, Ohio.—Dupont tournament at Cincinnati. Liberal cash prizes added to the purses. R. S. Waddell, agent.

May 10.—WEIR CITY, Kan.—Ninth annual owl shoot of the Amateur Trap-Shooters' Association of Missouri and Kansas; $300 in cash added. W. W. McIlhany, Sec.

May 9-10.—WILMINGTON, N. C.—Tournament of the Interstate Manufacturers' and Dealers' Association, under the auspices of the Eastern Dog and Game Protective Association.

May 9-11.—NEWBURGH, N. Y.—West Newburgh G. and P. Association tournament. W. C. Gibb, Sec.

May 14-16.—DAYTON, O.—Ohio Trap-Shooters' League annual meeting and tournament, under the auspices of the Buckeye Gun Club, of Dayton, O. Ed. Taylor, Sec., 8 West Third street, Cincinnati.

May 21-23.—KANSAS CITY, Kan.—Annual tournament of the Kansas State Sportsmen's Association. A. W. Peck, Sec., Kansas City.

May 21-24.—KNOXVILLE, Tenn., Gun Club's fourteenth annual tournament; $1,500 added to the purses.

May 29-30.—CANAJOHARIE, N. Y.—Two-days' tournament of the Canajoharie Gun Club; targets. Chas. Weeks, Sec.

May 30-31.—GRAND RAPIDS, Mich.—Valley City Gun Club's annual tournament; targets; added money announced later. C. F. Rood, Sec.

June 3-8.—CHICAGO, Ill.—Illinois State Sportsmen's Association annual tournament. Convention at Sherman House June 4.

June 11-14.—MEMPHIS, Tenn.—Memphis Gun Club's annual tournament; $2,000 added money.

June 19-21.—CLEVELAND, O.—Chamberlain Cartridge and Target Company's second annual tournament; $1,200 in cash added.

June 24-28.—SARATOGA, N. Y.—Annual tournament of the New York State Sportsmen's Association, under the auspices of the Saratoga Gun Club. H. M. Levengston, Sec.

June 25-26.—ALTOONA, Pa.—Third annual tournament of the Altoona Rod and Gun Club at Wopsononock; targets. W. G. Clark, Sec.

Aug. 20-24.—HOLMESBURG, Pa.—Pennsylvania State Sportsmen's fifth annual tournament, under the auspices of the Keystone Shooting League, of Philadelphia. John C. Shallcross, Sec., Frankford, Pa.

Aug. 29-31.—HOT SPRINGS, S. D.—Hot Springs Gun Club's second annual tournament.

Oct. 9-11.—NEWBURGH, N. Y.—West Newburgh G. and R. Association tournament. W. C. Gibb, Sec.

Control of Trap-Shooting.

In a few weeks the work of the committee appointed at the Astor House meeting on Jan. 24, will be ready for the trap shooting public to criticize. That commtitee has about completed its labors so far as drafting a constitution for the proposed organization is concerned. The rough draft has been laid before competent counsel for an opinion, and it is possible that a few additions may be made to it at the next meeting of the committee, which takes place on Friday, Feb. 15.

There will unquestionably be much criticism, a good deal of it probably adverse criticism. The subject is one on which there is, in the details at least, a great variety of opinion. There is, however, no possibility of any difference of opinion arising in regard to the necessity of something being done to further the best interests of the sport of trap shooting. Contests among club members, for club badges, etc., soon fail to excite more than ordinary interest. Those members who are always at the top of the list naturally hunt about for new fields to conquer. But the tournaments of the present day do not satisfy them; and why? Is there not something in those tournaments, something for which under the present rules the management is not wholly responsible? Is it not possible that by concerted movement, by united action, that something might be rendered innocuous?

It would be no small inducement to shooters to go to a tour-

nament given by a club which was a member of the National Organization, if the fact that the tournament which was being given under such auspices was a guarantee that all the unpleasant features of many modern tournaments would be absent. The sport would then become more of a sport, and less of a machine for the annexing of other people's coin.

DRIVERS AND TWISTERS.

Buffalo has another gun club. On Thursday, Feb. 7, a new club was organized under the title of "The Keystone Gun Club, of Buffalo, N. Y.," The following is a list of the club's officers for its first year: President, E. Indenbitzen; Vice-President, O. V. J. Samson; Secretary, L. D. Kinney; Treasurer. W. J. Sulley; Captain, S. Duley; Official Scorer, J. Dugan.

Neaf Apgar and Aaron Woodruff, both well-known pigeon shots of this section, are booked to shoot a race at 100 live birds on Feb. 26, at Fanwood, N. J. Neaf Apgar, by the way, has severed his connection with Henry C. Squires & Son, and has gone into the shell loading business on his own account. He can now always be found at the store of the W. Fred Quimby Co., 294 Broadway, that being his place of business.

Pittsburg, Pa., Feb. 7.—Editor Forest and Stream: The Interstate Association has made arrangements for the giving of a tournament at Wilmington, N. C., May 9 and 10, under the auspices of the Eastern Dog and Game Protective Association. Elmer E. Shaner, Manager I. M. and D. A.

There is some talk of another gun club, devoted exclusively to the smashing of targets, being organized by some New Yorkers. The club is to have its grounds at West Farms, N. Y., and to be quite exclusive.

The organization of the Greenville Gun Club, of Jersey City, N. J., has been thorough and successful. The club has secured certain lands on the New York Bay shore, suitably situated between Linden and Chapel avenues, and proposes to hold its initial shoot there on or about March 1. The erection of a commodious club house is now under discussion. The following is a list of its officers: President, R. Duff; Secretary, W. C. Collins; Treasurer, J. J. Hill.

Mr. W. L. Colville, late of the Baker Gun Co., of Batavia, N. Y., writes as follows: "My engagement with the Baker Gun Co. terminates March 1, 1895. So far I have not made any arrangements to represent any other company, and may not therefore visit the trade this season unless matters shape themselves to the contrary." In regard to the above, Mr. E. L. Baker, President of the company, writes that his company has "dispensed with Mr. Colville's services not because they were unsatisfactory, but simply that we have so many orders on hand that we can see no need of keeping a traveling man on the road."

The friends of Sim Glover, of Rochester, N. Y., have made arrangements for that gentleman to shoot Capt. Brewer five different races at targets and live birds, each match for $50 a side. These matches are not to come off before May.

Next week Elliott and Fulford will try conclusions at Marion, N. J., in three 100 bird races shot on three consecutive days, Feb, 19, 20, 21. Both men are shooting in good form, and speculation on the result is about even. Elliott's work since he came East has made him a number of friends.

New fixtures this week are as follows: All day shoot of the White Plains, N. Y., Gun Club, Feb. 22, Washington's Birthday. The shooting, which commences at 10, will be at targets. R. S. Waddell, general agent in the Central States for Dupont's powders, announces a tournament at Cincinnati, May 7-10. The Interstate Association, through its manager, Elmer E. Shaner, of Pittsburgh, Pa. gives notice that a tournament will be held at Wilmington, N. C., on May 9-10, under the auspices of the Eastern Dog and Game Protective Association. The Pennsylvania State Sportsmen's Association's annual tournament will be held Aug. 20-23, not during the month of October, as previously announced.

Seth Clover, with his new trap and target, was not to be stopped by any such thing as a bilizzard and a temperature at 26 degrees below zero. Seth was duly on hand at the Utica shoot and showed the boys that what he was bragging about was worth looking at.

The following communication from Mr. Shallcross, Secretary of the Keystone Shooting League, of Philadelphia, Pa., explains the change of dates for the annual tournament of the Pennsylvania State Sportsman's Association: "The committee of the Keystone Shooting League having charge of the Pennsylvania State Sportsmen's Association's Tournament, that is to be held on the League grounds, at Holmesburg Junction, P. R. R. has decided to change the date of the shoot from the first week of October, as claimed, to Tuesday, Wednesday, Thursday and Friday, August 20, 21, 22d and 23d, 1895. This change was decided upon after obtaining the views of different members of the Association upon the subject, a full census of opinion showed that a better attendance could be had on the latter date than on the one originally claimed in October, as vacations would not be over, and the game season not in. It is the full intention of the Keystone Shooting League and its committee, to make this tournament a success in every sense of the word, and further, it is proposed to make the merchandise shoots particularly strong and interesting, and to further this, any donations that manufactureres or dealers may favor us with, will be duly acknowledged direct, and fully described and published in our programme and distributed direct to the sporting fraternity in all parts of the country, thereby calling direct and special attention to the goods and donors. We are also open to suggestions from any member of the Pennsylvania State Sportsmen's Association that they think will be of interest to the League. Jno. C. Shallcross, Secretary."

George Work and J. P. Knapp, both suffered defeat in two recent matches owing to conceding too great odds. Work shot a race with H. Yale Dolan, at Riverton, N. J., on Saturday, Feb 2, conceding his opponent six misses as kills. Had Work killed all his birds he would just have won, Dolan shooting ui his old form and killing 93; Work killed 96, thus losing by three birds = Knapp shot a 100 bird race at the Country Club, Westchester, N. Y., conceding his antagonist five misses as kills. The scores were, Knapp, 93; his opponent, 89; Knapp losing by one bird. This makes a new record for the Country Club; up until shortly before Christmas, Capt. Money held the record with 87 out of 100; then N. C. Reynal killed 89 in his match with Fred Hoey; Knapp has raised the record four birds by his last effort.

The following is taken from the Scranton, Pa., Republican, of Feb. 6: "Notwithstanding the bitter cold weather of yesterday, Mr. H. D. Swartz gave an exhibition in shooting at 50 pigeons on the grounds of the Green Ridge Gun Club, under the American Association rules, 30 yards rise and 50 yards boundary, in order to test his famous new, automatic "Scott Premier Gun." The following score will show how many he killed out of 50. The figure 2 denotes when he was compelled to use his second barrel. 11111211121211112222122221011112111121222222111221—49 killed. Mr. Swartz will shoot Dr. W. F. Carver, the champion wing shot of the world, a match, 100 birds each, 30 yards rise and 50 yards boundary, this coming April. Mr. Swartz has only missed one bird out of the last 75 he shot at."

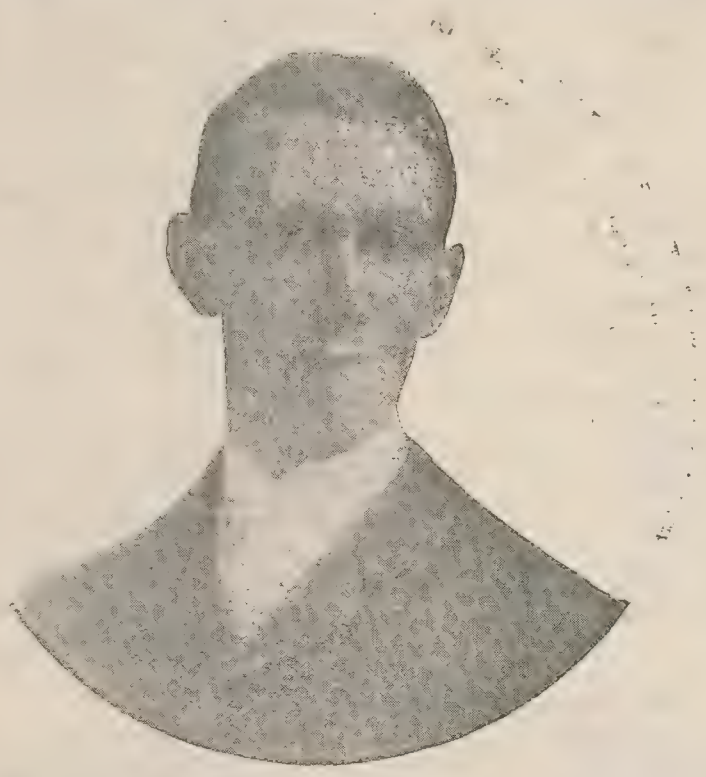
The Greenwich Rod and Gun Club, of Greenwich, N. Y., formed to protect and preserve the fish and game in the vicinity of its headquarters, was incorporated at Albany, Jan. 31. The Directors are: Robert Hamilton, John F. Barber, George R. Alliger, J. Harrington Keene, Eugene Crandall, Samuel Wallace, P. A. Grimes and E. S. Newbury.

The Strathroy Gun Club, of London, Ont., has elected the following officers for 1895: President, James Mason; Vice-President, James H. Lee; Secretary, F. P. Hughes; Treasurer, L. M. De Gex; Captain, J. W. Prangley; Manager, L. H. Dempier; Executive Committee, W. Dawson, W. A. Armstrong, W. J. Seed and R. F. Richardson. The day for the weekly shoots was changed from Friday to Thursday.

Frey Hoey, although he has done some good shooting at Monte Carlo, was not placed in the Grand Prix, the main event of the meeting. First money went to an Italian, Benvenuti; two Frenchmen, Drevon and Descharmais, tieing for second place, while Calari scored 14. There were 95 entries for this event. The above is reproduced from a cable message and is given as such. In the Consolation Race, the day after the decision of the Grand Prix, Hoey won first money with 23 straight.

A report was out last week that Capt. Bogardus has died at Antsell, Ga. The captain's many friends will be glad to learn that he is alive and well at his home, Elkhart, Ills., bearing his 65 years as most people do 50. He is still willing to make matches.

Louis Duryea has recently returned from a ducking trip along the Eastern shore of Virginia. While down there he was fortunate enough to secure a male and female eider duck, right and left. The preserves of these birds so far to the south is a good proof of the severity of the weather up north.



A note from Pittsburg, Pa., says that there is a probability of a series of 100 live bird races between Dr. C. M. Cundall, of Washington, Pa., and W. G. Clark, secretary of the Altoona Rod and Gun Club.

The first meeting of the New Jersey Trap Shooters' League takes place on Saturday, Feb. 16, on the grounds of the Boiling Springs Gun Club, Rutherford, N. J.

EDWARD BANKS.

Death of Arthur E. Mead.

A brief telegram to Forest and Stream, dated Knoxville, Tenn., Feb. 9, and signed Paul North, told of the death while coasting of Arthur E. Mead, of that city. Later details are to the effect that Arthur Mead, in company with six gentlemen and two ladies, were coasting down West Cumberland street, Knoxville, on Saturday afternoon, Feb. 9. It is not perfectly clear how the accident occurred, but it seems that while Mr. Mead was steering the sled in one of its runs, he suddenly lost control of the machine, the sled dashing with great force

against the sidewalk. Mr. Mead was thrown forward and his head struck a telephone pole, fracturing his skull. So serious were the injuries that he never regained consciousness, dying within 20 minutes of the occurring of the accident. Mr. Cary F. Spence, another member of the party, was thrown against the sidewalk and injured internally; it was said, however, that he would recover. The other members of the party escaped with only a few bruises.

Such in brief is the story of the accident which has robbed Knoxville of one of its best known and most popular young citizens. Mr. Mead was only 33 years old, but he was very prominent in both social and business circles. To readers of Forest and Stream he was best known as a member of that prominent Southern gun club, the gun club of Knoxville, Tenn. At the traps he was a first rate shot, a good companion and a gentleman. At the Chattanooga tournament last September, he shot through the programme but was not in good form. But that didn't worry him; he was satisfied, he said, that he'd get there some time. The records of the Knoxville Gun Club, published in a recent issue of this paper, show that he had completely recovered his form and was coming rapidly to the front when the season was closed. His average in the 'certificate shoots," of that club was the highest, but under the conditions of those contests he ranked but third.

Fond of a gun, a keen hunter, a good shot, quiet and unostentatious, the gap caused in the ranks of the Knoxville Gun Club by the death of Arthur Mead, "one of the Mead boys, of Knoxville," will remain unfilled for many a day.

Syracuse Gun Club.

Syracuse, N. Y., Feb. 7.—The Syracuse Gun Club held its semi monthly shoot this afternoon. Seven enthusiastic sportsmen braved the elements and fought for the medals in the blizzard which was raging. The club is in a capital condition; has a large membership; a club house on University Hill; ten blue rock traps and an electric pull. The club house and traps are superintended by "Elder" Forsyth, who has everything in apple pie order. The club has a system of handicapping by which the better shots shoot at less birds than the poorer ones. Three medals are competed for, known traps, unknown angles. The figures in brackets after the shooters' names show the number of targets shot at:

Class A.

*Willard, 50	11101111101110011111111110	
	11110010111111111111111101	—41
Mann, 46	11111111110111111111111011	
	10111111111011000101	—38

Class B.

*Morris, 48	11111111111110101111111111	
	10101111111111011110101	—41
Livingston, 45	11110111111111110110111010	
	11111111111011111111	—40
Holden, 47	11111111011011011111101111	
	11101011110110111111111	—39
F Lefever, 45	11111111101111101111101110	
	01111111111101110111	—37
Hunter, 48	11010101101011111011111000	
	10110110011110100111111	—32

*Willard wins Class A medal; Morris wins medal in Class B.

A. R. K.

Class Wins the First.

Morristown, N. J., Feb. 7.—The first match of the series of three 100 bird races arranged between Frank Class, of this place, and T. W. Morfey, of Paterson, N. J., took place this afternoon at the Morristown Driving Park, Class' own grounds. The weather was rather unfavorable to large scores; the wind, beginning to rise about the middle of the day, terminating in a blizzard at night. Snow began to fall about noon and continued during the remainder of the day. These matches have created more than ordinary interest owing to Morfey's long and unbroken string of victories in all kinds of matches, one handed, two handed, gun below the elbow, etc. It was generally conceded that when the matches were first made that in Class, Morfey was meeting the most dangerous opponent that he had ever tried conclusions with. Still had any pools been sold on the first race, it is more than probable that Morfey money would have made him favorite. The result shows that to Frank Class belongs the honor of checking Morfey's victorious career, the latter suffering defeat by five birds, the scores standing at the finish, 95-90.

Morfey led off with a kill, whereas Class missed his first bird; Morfey evened matters up by losing his third bird. The next to miss was Morfey again, who let his 9th get away; Class returned the compliment by missing his bird in the next, the 10th round; the score again being a tie. Both men then slipped up on their 14th birds, the score remaining a tie until the 18th round, when Class missed, giving Morfey a lead of one bird; this lead he kept to the end of the first 25 birds. His first bird on the next series, his 26th in the match, got away from him, tieing the score once more; when he lost his 38th bird, Class took the lead and was never headed again. Class was doing some great work then; the miss of his 18th bird was the last cypher scored to him until the 94th round, his run of straight kills amounting to exactly 75; as a matter of fact he killed 81 out of his last 82 birds, work calculated to beat anybody! The close of the first half of the match found the scores 46-43 in Class' favor; Morfey killed his next 25 straight, so that Class lead of three was not increased. In the last 25, Morfey dropped three, his 85th, 91st, and 95th, to Class' one, his 94th bird, thus giving Class the match by five birds. Morfey's long run was 36. Details of the score are as follows:

Match, 100 live birds per man, $100 a side, 5 traps, 30 yards rise, 50 yards boundary:

Frank Class	02222222201220121012222222—21	
	22212212121222212122222121—25

Vernon Gun Club's Monthly Shoot.

New York, Feb. 4th.—The Vernon Gun Club held their regular monthly live bird shoot at Dexter Park last Saturday, the 2d inst. Nine members, including President Thompson, were present. The birds were a fair lot, but owing to the ground being covered with snow, they were slightly slow in getting off, the flush ropes having to be used on many occasions. When once on the wing they were as hard birds as are usually trapped at club shoots.

Club shoot, 7 live birds, optional sweepstakes:

Dr. Little, 29	1211112—7	F. Thompson, 29	0012112—6
W. Thompson, 29	1222202—6	John Wright, 25	20*1112—5
J. Wischertt, 26	2101112—6	Dr. Lamadrid, 27	1102010—4
H. S. Welles, 26	2111101—6	F. Barrow, 25	0201012—4
L. Emery, 25	1102211—6		

The following sweep at 5 live birds, $5 entrance, class shooting, all ties divided, was decided after the above event was finished:

F. Tkompson, 29	12122—5	Dr. Little, 29	01102—3
Henry Bolzer, 29	11011—4	Dr. Lamadrid, 27	11002—3
W. Thompson, 29	2*111—4	J. Wischertt, 27	*0110—2
H. S. Welles, 26	1111*—4	J. Landman, 27	02000—1

The next club shoot will be at bluerocks, on the club grounds, Atlantic avenue and City line, Brooklyn, on Saturday, Feb. 9. Visiting shooters are always welcome.

The Meadville Gun Club.

Meadville, Pa., Jan. 31.—The Meadville Gun Club, of which I am an humble member, has started out to do something in the line of improvement this year. A committee appointed at the close of 1894 drew up a list of all the single shots fired at targets during the year by each one of the twenty-five members who lined up at the score during the year; the number of shots made by each member with the number of targets broken and number missed, and the percentage of broken targets. A list of the members was made, beginning with the one having the highest percentage and running down to the lowest. This gives each member a proper view of his record, and it is believed will stimulate to greater exertions. The club has been in existence a number of years, but not till last year did it succeed in having a home of its own; like the country schoolteacher, it boarded around. Last year a club house was built and paid for. Several tournaments of a local nature were held, and quite an interest in the club awakened. To stimulate the members to further improvement this year, a committee, consisting of Col. Reisinger, H. A. Johnson and Prof. Smith, was appointed to prepare a code of rules for prizes during the coming year. At the last meeting this committee reported the following rules, which were unanimously adopted. The committee was continued indefinitely to consider and report any new features which they might devise, and also to procure the badge, and to carry out the rule adopted. In pursuance with these instructions two gold and one silver badge have been ordered and on next Wednesday afternoon the first monthly contest will take place, on which date we look to a good shoot.

The rules referred to are as follows:

First—The club shall be divided by their records of 1894 into three classes, designated A, B and C.

Second—Class A shall include all whose record for said year was 60 per cent. or upward.

Third—Class B shall include all whose record for said year was below 60 and not below 50 per cent.

Fourth—Class C shall include all whose record for said year was below 50 per cent.

Fifth—Club shall procure an appropriate badge for each class, which badges shall be the permanent property of the club, but shall be given out monthly to those meriting them, under the following conditions.

Sixth—There shall be a contest for these badges monthly, at the first regular meeting, and the winner shall be entitled to the badge for his class till the next monthly contest, and as much longer as he is able to make the highest score in his class at the monthly shoot.

Seventh—The contest for the badges shall be made in a test shoot at 50 birds—25 from known traps at known angles, and 25 from known traps at unknown angles. Entry in this contest must be made for the whole number before shooting. The shoot shall be the first event of the meeting at which it occurs, and shall be from five traps.

Eighth—The badges shall be given to the captain before the shoot begins, and at its close shall be awarded to the member making the highest score in his class. They shall be retained by the winners until the next regular contest, and then be returned to the captain in good condition before the beginning of the shoot.

Ninth—Entries for this contest must be made and money paid before the close of the shoot at known traps and angles by those previously entered. No exceptions to this rule will be permitted.

Tenth—All ties shall be shot off at 10 birds, five unknown and five known angles, and subsequent ties at five known.

Eleventh—A member of a lower class who makes a better score than the highest made in the class above him at any monthly contest, shall be promoted to the class above and take the badge of that class.

Twelfth—One of the events of other regular shoots shall be a practice shoot on the same conditions as the contest shoot, except as to prizes and time of entry, but members who wish may enter in the shoot for only 25 birds, if they so desire.

Thirteenth—A badge of suitable character shall be given to the member whose percentage for the year, estimated on his scores at the monthly contests, shall show the highest gain over his percentage of the previous year, provided his shooting last year amounted in the aggregate to 250 birds, and that during the present year he shall shoot in at least five of the monthly contests.

Fourteenth—A badge or medal shall be awarded to the member whose percentage in these contests during the year shall show the highest of all who have entered and shot in at least six monthly contests for the medal.

Fifteenth—If less than five contestants appear at the regular monthly contest, the captain may adjourn the contest one week; provided the lack of attendance be in consequence of weather unfit for holding the shoot with comfort or pleasure.

Sixteenth—These rules shall go into effect on the first day of February, and the standard of excellence of the members at the close of the year upon which they shall be rated for the next year's division into classes, shall be the percentage of dead birds made in the first 50 bird events of all the regular meetings in which they entered during the year after these rules shall have gone into effect.

CHOKE BORE.

Inhospitable Weather at Utica.

Syracuse, N. Y., Feb. 8.—When Col. Courtney, of the Lefever Arms Co., and myself left this city on the morning of Feb. 5, we both felt as if we were bound on a fool's errand. A blizzard, with the thermometer touching 8 below zero, is hardly the weather to enjoy a tournament in, even if it is scheduled as the "midwinter tournament." We were the only two persons on the train bound for the tournament. At Rome another shooter came sneaking on board as if he was ashamed of being seen with a gun in his hand in such weather; this was W. Rayland, of the Rome Gun Club, which club by the way has a tournament on the 15th and 16th of this month. E. D. Fulford had things arranged capitally, having studied the comfort of the shooters. In the first place there was the club house with a good fire in it, and in the next place, a long shed also with a good fire in it, had been put up; under the shelter thus afforded the shooters stood and cracked away at the targets. Among those present were: V. D. Kenerson, of Worcester, Mass.; Ferd Van Dyke, of New York, the representative of the Winchester Repeating Arms Co.; the Browning Bros., of Ogden, Utah, the inventors of the Winchester gun; Sim Glover, of Rochester, N. Y.; W. R. Hobart, of New York, also a representative of the Winchester Company; H. R. Sweey, of Albany; M. M. Mayhew, John Fulford, E. D. Fulford, etc., of Utica.

The shooting was very difficult, as there was almost a blizzard raging, with a strong northwest gale blowing directly across the traps and drifting the snow around everywhere, making it almost impossible to see anything. The shooters were nearly frozen and danced around the shed until it was their turn at the score.

Sim Glover was in the best form and shooting well under the circumstances, but was closely followed by Fulford, Van Dyke, Browning Bros., Courtney and Mayhew. At 12.30 we adjourned to the cottage for lunch. I had fully expected to meet George Mosher, of the Syracuse Arms Co., at this shoot, but heard with regret that he had been suddenly called to Florida on account of the death of his brother.

The second day was marked by two notable features. One was the temperature—26 degrees below zero; the other was the arrival of Seth Clover, of Dunkirk, N. Y., who brought with him a sample of his trap and target, both of which he swears by. The shooting on this day was every bit as hard as on the first day, the intense cold being against good scores.

The live bird and 3d day of the mid-winter shoot brought together a larger number of shooters than the two preceding days. The day was clear and a little warmer, about zero weather, but the accomodations were bad for the live bird shooters, the shooters nearly freezing. The shed under which the shooters congregated was entirely too small, and open, and when a man went to the score he was shivering as if he had the ague. The new arrivals were Milt Lindsley, Corning and Evans, of Auburn; Smith, of Scranton; Pegnim, of Canajoharie, and a number of local live bird shots.

The first event of the day was a sweep of seven live birds for $5, birds included at 25 cents a piece. Sweny, of Albany, took first alone, killing all of his birds quick and clean. E. D. Fulford, Johnson, Van Dyke, Evans, Hobart and Hunter divide second. Corning and Clover divide third. Brewer and Kenerson, fourth. The birds were fair, very few duffers and a few corkers. The birds were deceiving; three-fourths of them were swift incomers as there were no buildings in sight except the sheds and club house. Van Dyke, Fulford, Hunter and Johnson really killed all their birds, those they lost falling dead out of bounds. The second event was the regular programme shoot. Twenty live birds, entrance $10, birds extra, and $5 for optional sweep of first fifteen birds, making $20 for the shoot, sweep and birds, ties divided 40, 30, 20, 10 in the regular shoot, and five high guns in sweep. Hardie Richardson took first alone, killing all of his birds clean, but was not in the sweep. Fulford, Van Dyke and Pegnim each killed 19, tieing for second place. Fulford and Van Dyke killed every bird, but were unlucky, each one having one falling dead out of bounds. Every shooter admired the quick, clean shooting of Pegnim; he fell down on a very fast incoming twister. Corning and Sweny tied on 18 for third money, Corning killing all of his birds, but losing two dead out of bounds; Kenerson, Hunter, Lindsley each killed 17, and divided fourth money. Kenerson was unlucky, drawing very hard birds; he also had one fall about six feet in bounds with its wing broken; in gathering this bird he went on the wrong side, driving it out of bounds. Mayhew was the most unlucky shooter of the day, drawing mostly white birds, and when the trap was sprung it was almost impossible to tell whether there was a bird in the trap or not. His gun also was out of order and would not cock at times. In the optional sweep, first 15 birds, Fulford first, Van Dyke and Sweny second, Corning third, Hunter and Mayhew fourth.

The third event was 7 live birds, $5, birds included, ties divided 40, 30, 20, 10, and was hotly contested. Van Dyke, Mayhew, E. D. Fulford, Scott, divide first; Corning, Glover, Sweney, Kilburn, A. S. Hunter, Evans, Lindsley, and Johnson, divide second; Pegnim and Clover, third; W. A. Hunter and Jones, fourth. The fourth event was 5 birds, $5, birds included, 3 high guns. E. D. Fulford, Van Dyke, and Evans divided.

A. R. K.

Shooting Pigeons in a Blizzard.

On his return to New York after his match with Elliott on the Westminster Kennel Club grounds, at Babylon, L. I., on Thursday, Feb. 7, George Work did not tarry in the city long. Notwithstanding the terrible snow storm and gale which was raging around New York just after the sun had set, he crossed over to the Pennsylvania Railroad station and took the 7.50 P. M. train for Philadelphia. He was booked to shoot a 100 bird race with R. A. Welch, of that city, the following day, Feb. 8, on the Riverton, N. J., Gun Club grounds. The bone of contention was the Riverton Challenge Plate; in Monte Carlo they would call it an objet d'art; "challenge plate," however, will do for America for the present. This trophy has been won by Work twice; Welch on the other hand has successfully defended his title to it no less than eight times in succession.

It was very fortunate, as it turned out, that Work had gone

to Philadelphia over night; had he stayed in New York trusting to going over in the morning, he could never have reached Riverton in time to shoot the match that day. The blizzard that raged all the previous night and all day Friday, the day of the match, knocked railroad schedules sky high, and made pigeon shooting savor more of work than play. Bad as the weather was, and wildly as the gale swooped down on the grounds of the Riverton Gun Club, the match was shot, and some fifty spectators were on hand to witness the removal of the club's trophy to the Empire City in care of George Work.

Both men did great shooting, and the score made by Work is an extraordinary one, when the conditions are taken into consideration. Although Welch retired in the 89th round, his score of 76 out of 88 shot at is a good one. The birds were good, and the wind played Hail Columbia as it whistled through their feathers.

Out of his first 50 birds Work scored 48, 30 of them needing but the use of one barrel. Altogether Work scored 37 first barrel kills, Welch being credited with 35 of the same kind. Under the circumstances, Work's 82 out of 89 may be classed among the best of his performances. His long runs were: 24, 16, 15, 12, 11; Welch's runs were: 15, 15, 13. With a lead of six birds to overcome, and only twelve more birds to shoot at, Welch realized the hopelessness of his case, and retired at the end of the 88th round, Work shooting at and missing his 89th bird. Had Work shot at his 100, he had a chance of scoring 93; from the form he was shooting in, it was any odds that he would have made 90 or better. Score:

EDWARD BANKS.

Moore Won the Larchmont Cup.

Saturday, Feb. 9, was slightly better for pigeon shooting than its predecessor, Friday; only slightly, not much. The sun, it is true, was shining brightly, but a northwest gale was driving the powdery snow in blinding clouds across the Larchmont Yacht Club's shooting grounds the whole of the time that the competition for the cup presented by J. P. Knapp was taking place. A temperature of 10 above zero did not add to the enjoyment of the occasion. Unpropitious as the day was, it speaks well for the popularity of the donor of the cup; for the equitable nature of the handicaps served out to those who entered; and also for the great interest taken in trap shooting among the members of the clubs around New York, when it is recorded that eleven men accepted their handicaps and put up their money to shoot in such weather.

The event was an optional $25 or $12.50 sweepstake at 25 live birds; handicaps varying from 26 to 30 yards, allowances as follows: 28 yards men, one miss as a no bird; 27 yards men, two misses as no birds; 26 yards men, three misses as no birds. The score given below shows the totals as they stood after the allowances had been shot up; the allowances were shot up at the end of each round when required. In the first round, Stafford, Butler and Jones each missed, and shot their allowances with the result shown in their detailed score, Floyd-Jones again missing and being credited with a cypher. In the second round, Harriman missed a right quarterer from No. 4 trap; he retrieved the error by killing an easy left quarterer from No. 3. Stafford used up his allowance on the third round when he drew a very fast driver from No. 1; he was still credited with a straight score when he killed a right quartering incomer from No. 3. Edey missed a strong and hard bird from No. 5 in the fourth round, and used up his allowance, being credited with a kill of a left quarterer from No. 2 when he went to shoot his extra bird at the end of the round. Hopkins struck a bad streak in the 5th and 6th rounds, both his birds getting away from him; his fifth was an incomer from No. 3 which fell dead over the boundary, while his sixth was a left quartering incomer from No. 1, by no means a hard bird. To make matters worse he slipped up again when he shot off his allowance bird on the 6th round, a right quartering driver from No. 1. Harriman was compelled to use up the second of his allowance birds in the 7th round by missing an easy left quartering incomer from No. 1; as he killed his extra bird he still had a straight score. "Harold" also used up his allowance on the same round, having a right quarterer from No. 5 drop dead over the boundary. Hopkins took his third and last allowance bird in the 8th round after losing a fast left quartering driver from No. 4; he followed up this miss by duplicating his work in the 6th round by missing his extra bird. He was thus in a bad way, all his allowance birds gone and two misses credited to him. Harriman was now the only man left with any allowance; he had one more miss as a no bird; this allowance he took advantage of in the 15th round, when he missed a fairly easy left quartering incomer from No. 2. Killing his allowance bird he was left with a string of fifteen kills, having the only straight score on the board. Seaver Page made the longest run of the scratch men before he missed a bird, not dropping one until the 12th round.

Edey was the first to be dropped under the rule of three misses out; he missed his 7th, 8th, and 9th, the last two being extremely hard birds. Floyd-Jones joined him in the next round, when his 10th bird fell dead out of bounds. George Work was the next to receive the "green button," having dropped his 6th, 8th and 14th birds; he was clean off his form and shot somewhat as if he was stale. Stafford shot well, but drew some of the few corkers which were in the traps, the result being that he retired in the 17th round. The next to drop out was Harriman, who looked like a good thing for a part of the money. His 16th and 17th got away from him, and his 19th fell dead out of bounds. Butler, who had cyphers placed to his credit in the 2d and 7th rounds, was shooting in good form and was decidedly in hard luck when his 21st bird just struggled over the boundary, the wind materially aiding it in its efforts to get away.

This left five men in the race, their conditions being as follows: Knapp and Page had one miss each; Moore, Hopkins and Harold, two each. Page's 24th got away hard hit, falling dead a few yards over the boundary, a piece of extremely hard luck. Knapp had but to kill his last bird to win his own cup and first money, but failed to do the trick. Harold also missed his 25th, leaving the other four tied for the three moneys, on 23 each. The ties were shot off at three birds each. Moore, Knapp and Page killed their birds; Hopkins killed his first bird, thus completing the second longest straight run of the event, 18 straight; he had bad luck with his next bird, which fell dead just over the right field boundary; this seemed to dishearten him, as he apparently clean missed his next bird, an easy one, too. The next series of three birds settled the business. Moore, who was shooting very well, killed his three and won the cup and first money, finishing his work in this event with the high run of the day of 19 straight. Knapp missed his second bird of the series and took second money, Page having dropped his first two birds; the latter took third money, 20 per cent. of the purse. Knapp's position at the close of the event was not due entirely to his skill; he shot in different form to that which he usually displays, slobbering many of his birds in an almost incomprehensible manner. The birds themselves were somewhat of an enigma. They should have been good birds but they were not; strong as the mischief when once started, they were very loathe to leave the traps time after time, making the event a tedious one. The only explanation at all satisfactory is that the severe cold of the past few days had caused their feet to have been frostbitten; hence they would naturally be tender and would deter the birds from jumping briskly when the trap was opened. This made them necessarily a very uneven lot, corkers being mixed up with others that were next door to duffers.

The way in which the traps fell to each shooter is often a revelation as to how much of an element of chance there is in live bird shooting from five unknown traps. The table given below shows that 248 pigeons were shot at in the main event, including, of couse, the allowance birds. A due proportion for five traps would be nearly 50 for each trap; the table shows that No. 1 and No. 2 were pulled well below the average:

	No. 1.	No. 2	No. 3.	No. 4.	No. 5.
Moore	6	5	8	8	4
Knapp	5	4	5	7	10
Page	3	6	8	6	8
Hopkins	4	4	11	9	3
Harold	2	5	6	2	11
Butler	2	7	4	7	2
Harriman	4	4	3	8	3
Stafford	5	1	5	4	4
Work	3	2	3	3	3
Jones	2	0	4	2	3
Edey	2	2	1	2	3
	38	10	58	58	54

Beyond the contestants, the puller, trappers, and representatives of the sporting papers, there were but few persons present at the shoot. Messrs. Arthur Duane and Jordan L. Mott, Jr., however, found the magnet too strong to resist, and with a few other fellow members, put in an appearance at Larchmont during the day. Mr. Mott was risking a great deal, too, as he has only just recovered from a bad attack of the grip. How the shoot progressed, and all the details thereof, is told by the following score:

EDWARD BANKS.

For Cleaner Tournaments.

Galesburg, Ills., Feb. 8.—Editor Forest and Stream: Much has been written, good, bad and indifferent, on this subject; as a real lover of a manly and beautiful sport, I submit the following, it has the merit of at least being new:

We seek first to increase the number of shooters, and in so doing bring about a larger attendance at the tournaments; it seems to be very well established that both trap and field shooting are now extremely popular sports, and are destined to become more so. Such being the case, those who would further encourage its growth, must probe deeply and thoroughly, to find all the causes which now retard its increase, and prevent many from joining our ranks. In considering this question the first proposition that comes up is, that the professional shooter is utterly unworthy of consideration in this matter; if the manufacturers must have him, as an advertisement of their wares, then let him attend as many "shoots" as he possibly can, but so heavily handicap him, that he will leave some of his employers' money, instead of carrying off that of the men whose guest he is. In most trade gatherings, conventions, etc., the boot seems to be on the other leg, the salesmen for the supply houses take it upon themselves to spend their employers' money, and right royally, too, in entertaining the gentlemen who are their present or prospective customers.

The bad feeling engendered among visiting or local shooters, is a very unpleasant feature of many "shoots"; some are certian to win, and others must just so surely lose; the losers are apt to think that they have been discriminated against, by trappers or referee if they are visitors; while if, as is so often the case, they are the local boys, they often talk about "sharks," and "combinations," and "we will hereafter bar all professionals"; albeit that at many small "shoots" the very men referred to are in no sense professionals. Men like to be winners, whether it is a social game, a test of speed, or the race of life for business success or social prestige; and just so surely as the stakes are high and the reward great, is the competition strong and severe, and the temptation great to gain at all hazards and by any means, fair or foul, the desired end. The majority of trap shooters go to a tournament for the good time to be had, the commingling of kindred spirits, the being in and with a crowd whose inclinations are so similar; no thought of gain, he only hopes he wont lose too much; he expects to charge up a good round sum of money, "to fun," and if perchance he should win a medal of the value of a few dollars, how well repaid; what an ample reward!

On the other hand there are also present a certain class, who attend from one to three shoots a week (during the season), who represent some firm which wishes to sell to the shooter; these agents may be public or private; there is also the class who would like to fill such places; and a very small class who are there simply as an investment or speculation; these men are all cool, calculating and alert, with eyes open by which to gain an advantage, with wits sharpened and trained by experience, all of which helps them more or less, in doing the right thing at the right time, in dropping into the right place; or mayhap three or four have a little partnership combination, by which they make in the divide more than they could hope to alone. The amateur goes from all this, thinks and talks it over with his friends and many of them make up their minds; the result can be seen to-day, in slim attendance at what should be large gatherings.

As a remedy to really enhance trapshooting, as a lover of it for the sport of it, for which we are all willing to pay, in common with all sportsmen, to reduce the cost of attending a tournament to the minimum, why not eliminate the gambling feature entirely; cut it off, as the one thing without which, many other evils will at once cease to exist too; introduce a system of medals, merchandise prizes, or pay a small sum for each target broken; make a small and only nominal entrance fee thus doing away with the temptations to combinations, crooked work, etc., fix it so the rewards are honors and honorable, not financial and remunerating. Of course there are many who will object to this idea, but none of the better class will be found opposing it. The great majority to whom the trade look for support, can, with this idea in force, be gotten out in large numbers to local tournaments, and persuaded to shoot, just for fun. Another feature should be the introduction of certain events, for those who never took a prize, whose average is low (as shown by the books, if an organization should exist in that State), and another, for those who never shot at the trap. Cater to this class if you would put trap shooting on a higher plane, and make it more popular and widespread; do not let it be said, "we just pay our entrance fees for the privilege of shooting in the company of Expert, Shark, Rounder and Co.," Do not continue to conduct tournaments so that the sport of the largest number of attendants shall be materially cut down, by the thoughts of their contributions to a fat purse, in which they knew they could have no chance, when they entered. As a concluding thought, allow the suggestion, that if the idea of establishing classes of shooters, their standing being determined by the records of an organization, be carried out, that great results might be obtained. There should be a State League in each State, and a National League formed of delegates from each State League; then with properly kept books, every member's standing and class could be known each year, or such other time as thought best.

If the Inter-State Manufacturers' and Dealers' Association, would really improve and increase trap shooting, would it not be a good plan for them to start work along some such lines as these, and labor for the great majority, to bring them out and increase their interests? At any rate let us hope that some one will feel called upon to move in the matter. The sooner, the better.

These ideas were in form some time since, but I hardly dared to give them expression, until I saw the courageous stand taken by Dr. Jackson, of Springfield, N. J., at the meeting held at the Astor House, in New York, on January 24; when he stood up as one, who always did and would, shoot "for the birds only."

NARRAGANSETT

Smeck vs. Eckert.

Allentown, Pa., Feb. 7.—The much talked of match for $500 between James Smeck and Isaac Eckert, of Reading, came off to-day at Hancock, Berks Co., Pa., on grounds near the public house of Mr. Swartz. The event was shot off in a blinding snow storm, with a strong west wind blowing across the traps; this combination made the shooting very difficult. A large number of sportsmen from all over the State were present at the match. The scores made do not look large when compared with the former records of the two men, but, taking the existing conditions into consideration, they must be counted as good ones. Smeck was the favorite in the betting, but there were plenty of takers; several good bets were placed before the starting of the match, and altogether about $1,000 changed hands on the result. When the match was about half over the Smeck men offered 100 to 50 on their man but found no takers. Some time ago Eckert beat Smeck in a 50 bird race, the scores standing 41-39; Smeck's victory over Eckert to-day makes the honors easy. A third match has been arranged to take place in about four weeks, under the same conditions as the one which was shot to-day. The following is a copy of the official score:

J. W. B.

Carteret and Watsons.

Chicago, Ills., Feb. 5.—Mr. W. P. Mussey, of Chicago, who has just returned from New York, says that he found the Carteret grounds puzzling to shoot over. In his race with Mr. Edey, 11 out of the 14 birds Mussey missed were out of No. 1 trap. There was snow on the ground, a bad background for a white bird. The fence made a background for a gun colored bird, and worst of all, a great many left quarterers out of No. 1 trap flew toward the clump of trees, against which a dark bird was hard to see, for a fellow with glasses. Mr. Mussey says pleasanter men to shoot with than the New Yorkers could not be found, but he does not think the Carteret game is as hard as the J. Watson game, of Chicago, as the birds are taken right out of the coops, full fed and fat, just before they are trapped, and so do not fly for all they would be worth if handled to a better advantage. Mr. Mussey was not used to the croquet ball method of "flagging" a slow starter, and said it seemed to him like doing a combined shooting and bowling match. But he was delighted with his experience in the East, and the many pleasant gentlemen he met.

E. HOUGH.

Bronx River Gun Club.

West Farms, N. Y., Feb. 9.—The Bronx River Gun Club had a shoot this afternoon. It was originally intended to shoot for a Franchotte gun, offered by one of the members, but the inclemency of the weather acted as a deterrent to the members. The result was that only nine men were present. The club medal shoot was decided, Fisher and Loomis tieing for the Class A medal, W. S. Brown winning in Class B. In the second event, a 4 bird sweep, Jas. Duane killed all his birds, using a Winchester repeating shotgun with 24 inch barrels. The scores in the events tell the rest of the story:

Medal Shoot, 10 live birds, handicap rise:

M Herrington, 30. 2022220**0— 5 H Cathart, 28....2220220212— 8
G E Graiff, 30...2221221122— 9 B G Loomis, 30..1121222222—10

C H Dittmar, 27. 1020120222— 7 C White, 30.....2121112*21— 6
W S Brown, 26..1212211220— 9

No. 2, 4 live birds, sweepstake: Jas Duane 4, M Herrington 4, B G Loomis 3, W L Hall 2, Wm Breidenbach 3.

J. T. MURPHY, Sec'y and Treas.

Christianson vs. Budd.

Randall, Iowa, Feb. 4.—Editor Forest and Stream: In report of Christianson-Budd match contained in your paper of Feb. 2, is following statement: "Both contestants used L. C. Smith guns, Winchester Leader shells, and E. C. powder." This may be true as far as Budd is concerned, but for my part it is not. My load was 3 drams Dupont Smokeless powder, Winchester Leader shell, primed, in first and 3-4 drams Schultz in U. M. C. Trap shell in second 1 1-8 oz. No. 7 Chicago chilled shot in both barrels. A participant is usually not a good judge as to whom the birds are favoring. My impression was that the first 100 birds ran fairly even to both contestants, but in the last 100, I was largely favored by the birds. It looks that way on the score, but Budd has it the other way, maybe he is right.

G. P. CHRISTIANSON.

Nebraska Trap Notes.

Omaha, Neb., Jan. 3.—Ever since J. C. Read issued his broadcast challenge to the live bird shots of the State, we have been having quite a revival at the trap. Read has three acceptances on his hands, and is doing a great deal of preliminary practice. Last Wednesday he shot a novel match with Messrs. Parmelee, Loomis, Montmorency and Peters. Read shot against the quartette for the price of the birds, he shooting at 100 live birds and the other four at 25 each. The weather was windy and disagreeable and the scores were bad:

Read	1002202000121200111022121122220
	22212021221111121110102212*1**20221
	1022002022221111122211*1211211222—77
Parmelee	2011111122011022120111120—20
Montmorency	1011120121011121112221102—21
Peters	2210022110200211110122000—16
Loomis	1021100211011110111220212O—18

Total, Read, 77; Opposition, 75. Will Simeral, Esq., referee.

At the regular February meetings of the Omaha and Bemis Park Gun Clubs, the two leading organizations in this part of the country, the advisability of consolidation will be discussed.

The J. C. Read-T. J. Hardin 100 live pigeon shoot came off on the Bemis Park Gun Club grounds, over the river, on Thursday afternoon, Jan. 31. A more disgustingly bad day could not have been conceived. A hurricane of sand and fine snow blew right across the range from north to south and the thermometer registered 6 degrees below. Incredible as it may seem, however, over two hundred enthusiastic sportsmen assembled on the grounds to witness the race, and the bulk of them had the fortitude to stick it out.

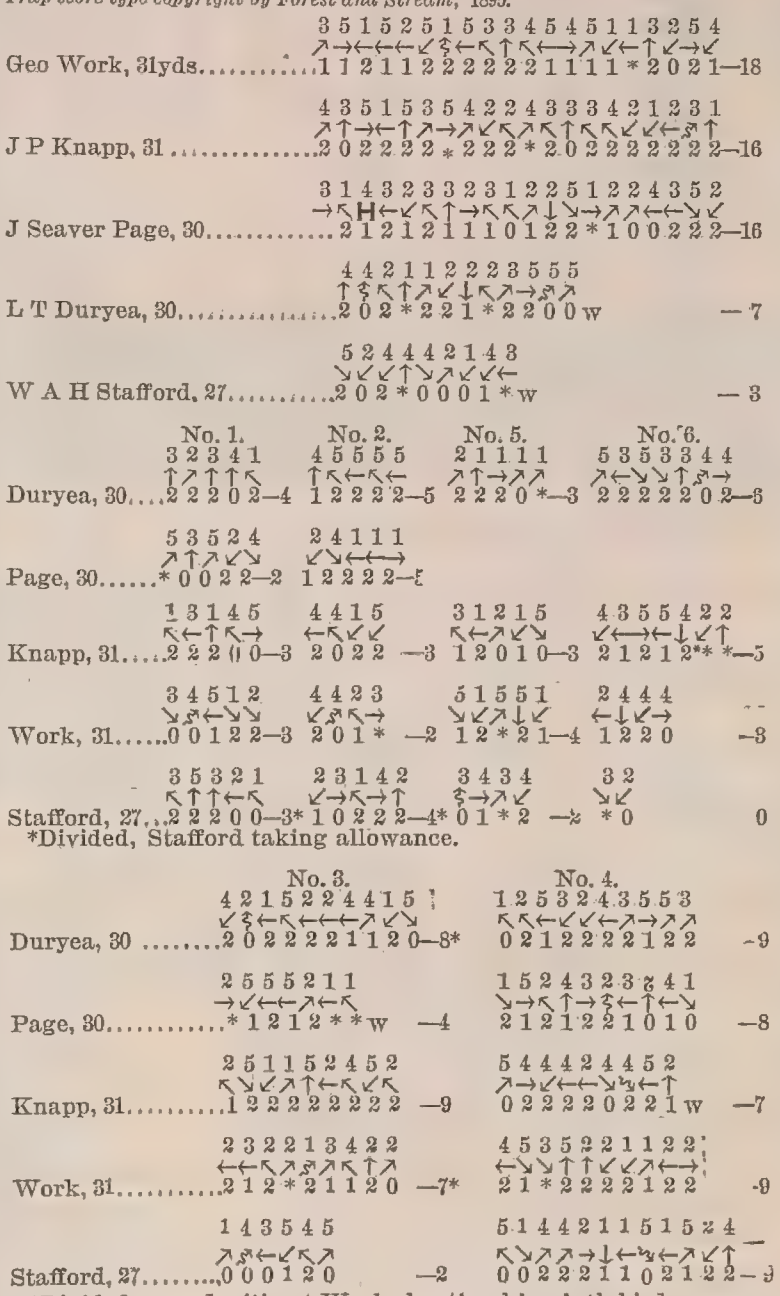
Of course a roaring fire was kept up in the club house, but this was not roomy enough to accomodate more than a fifth of the crowd, and how many endured those two and a half hours can be better imagined than described. The match was for $100 a side and the price of the birds, five unknown ground traps, 30 yards rise, 50 boundary, American Association rules; Goodley Brucker, referee, S. G. V. Griswold, scorer, and C. R. McCord, trap puller. The shoot was considered a cinch for Hardin, who is possibly as good a field shot as there is living, and there was quite a large sum of money changed hands. Read was groomed and handled by Frank Parmelee in a masterly manner, and it was to that individual's close attention and coaching that he was enabled to win. Hardin shot a ten guage, and was handicapped two yards. Read shooting a twelve guage. Hardin's blunderbuss missed fire only nineteen times, and he lost one bird by reason of his piece failing to cock. There was universal disgust at Hardin's work. That an old, intelligent shooter of his standing would enter a public race with such a gun was something that all failed to appreciate. The score follows:

Read	02220211100*1210122222120
	222111221*221022220021112
	21102121112221222222220011
	01202220210120012222120022—78
Hardin	22*21111110*2011101211011
	2112211202210*12222022110
	122112010221*111111001012
	21201121201010201001010—73

On Thursday afternoon next, Feb 7, the Read Nicolai shoot comes off at the same place and under the same conditions. Mr. Nicolai resides at Sutton, and is one of the expert trap shots of the State. On the same day, Billy Hardin, of Council Bluffs, and H. B. Kennedy, will shoot a 25 live bird match for $50 a side, and C. R. McCord, of Norfolk, Lawyer Will Simeral and S. G. V. Griswold will enter into a little triangle, 10 birds each, $10 a corner. With good weather there will be five hundred spectators present. With the thermometer averaging 2 degrees below zero for two weeks, this is a pretty fair evidence that there is a decided revival in trap shooting interests here, and the spring will see this largely augmented. If the Bemis Park and Omaha Gun Clubs do not consolidate, the Omaha will build a new club house and fit up grounds just west of the city. The Raymond Gun Club also intend to make many improvements on their grounds as soon as the winter breaks up and altogether the outlook is exceedingly bright for the trap shooter.

SANDY GRISWOLD.

Zero, Mock Suns and Corkers.



Such a combination as the above is calculated to make goose eggs plentiful, and to knock the spots off many a ninety per cent. man. It requires a good deal of nerve any way to stack up against such odds. As it turned out but five of the many members of the Carteret Club were found willing to risk the effects of the biting norwester that came from some region beyond the great lakes, and to compete at the club's grounds, Bergen Point, N. J., for the President's Cup, on Wednesday, Feb. 6. It isn't often that we of New York are treated to the sight of mock suns, but on the afternoon in question, Sergeant Dunn, of the New York Weather Bureau, had some capital specimens on tap. It is possible that they had something to do with the comparatively poor scores. Again, it is seldom that, here on the very sea coast, zero weather is dished up to us with a sauce piquante of a 40-miles-an-hour wind. That, too, had probably something to do with the registering of such a number of cyphers. Lastly; the pigeons at Carteret are generally only medium flyers; on February 6, Supt. Lumbreyer had a surprise in store for the members; his birds were strong, vigorous flyers; they had been kept well warmed and protected from the severe weather; this, added to "Phil's" patent "scare ups" and the strong wind, caused all calculations made on the way to the club to be rudely shattered. The birds were "corkers", scarcely a duffer among the lot. The scores show that out of the 260 birds trapped, only 182 scored as "good birds"; 22 others were "dead out of bounds." The following figures also speak for themselves: Work killed 46 out of 57, average 81 per cent.; Knapp with 46 out of 59, and Duryea with 42 out of 54, both averaged 78 per cent., Knapp's average being a fractional part of one per cent. better than Duryea's; Seaver Page scored 35 out of 47, averaging slightly better than 74 per cent.; Stafford averaged 53 per cent., killing 23 out of 43. When men like those named can only make the percentages quoted above, it goes without further parley that the shooting was extremely hard.

The trap score type plainly tells that there were many birds with incoming tendencies. And so there were, but those same birds came in like streaks of anything you please; the wind was behind them and almost all of them were in a hurry to keep appointments in the rear of the club house. The beauty of the whole affair was that there was no telling what sort of a bird was coming next. First it was a towering or twisting driver, then would come a left quarterer that skimmed swiftly over the frozen snow; the next bird might be an incomer that was blown high into the air by the wind the instant the trap was opened, being driven back over the score like a cock grouse, down a Jersey hillside. There was lots of fun in it, both for shooters and the onlookers. Some excellent kills might be mentioned, but it would take too long for particulars. In the cup match, Work, the donor, came out ahead by doing the best shooting of the day. The cup has now been competed for five times: Knapp won it twice, the dates being Dec. 19 and Jan. 2; Fred Hoey won it on Dec. 5; Seaver Page made 20 straight on Jan. 16, and scored a win; Work's win on this occasion was his first.

The one-handed matches that brought the afternoon's work to a close, produced some very pretty work. Knapp's shooting in these events is noticeable on account of this being his first essay at that kind of thing. Louis Duryea and George Work are experts at that kind of shooting. On Friday, Feb. 15, they shoot a match at 100 birds each; 50 using both hands and 50 using but one hand; Duryea calculates that he can beat Work in the one-handed half-century sufficiently far to counteract whatever lead (if any) Work may obtain over him when they use both hands. In event No. 4 Mr. Page was unfortunate enough to have his gun go back on him, in the 6th round, just when he was in the happy position of having the only straight score. His misses in the 8th and 10th rounds were probably due to the necessary change of weapons.

President's Cup, 20 live birds, handicap rise, optional sweepstakes, two moneys, high guns:

Trap score type copyright by Forest and Stream, 1895.

*Divided, Stafford taking allowance.

*Divided second without Work shooting his ninth bird.

Nos. 1 and 2 were five bird sweeps, Stafford being allowed one miss as a kill. Nos. 3 and 4 were 10 bird sweeps, Stafford allowed two misses as no birds. Nos. 5 and 6 were five bird sweeps, Duryea, Work and Knapp shooting one-handed, Stafford using both hands, standing on the 30 yards mark.

EDWARD BANKS.

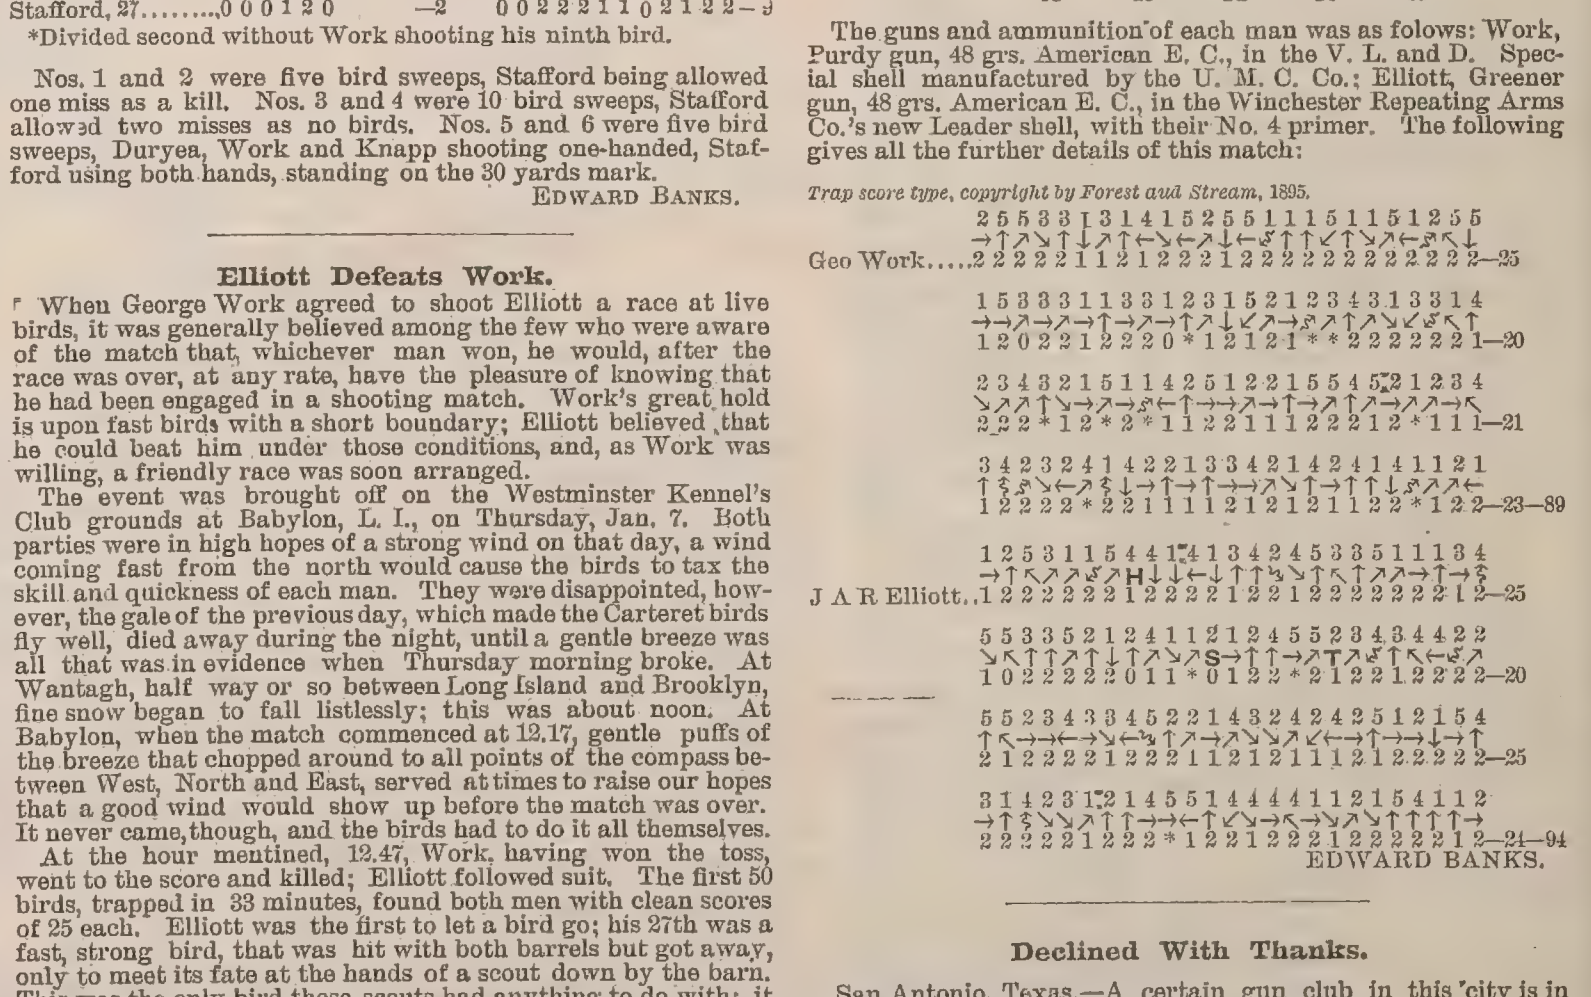
Elliott Defeats Work.

When George Work agreed to shoot Elliott a race at live birds, it was generally believed among the few who were aware of the match that, whichever man won, he would, after the race was over, at any rate, have the pleasure of knowing that he had been engaged in a shooting match. Work's great hold is upon fast birds with a short boundary; Elliott believed that he could beat him under those conditions, and, as Work was willing, a friendly race was soon arranged.

The event was brought off on the Westminster Kennel's Club grounds at Babylon, L. I., on Thursday, Jan. 7. Both parties were in high hopes of a strong wind on that day, a wind coming fast from the north would cause the birds to tax the skill and quickness of each man. They were disappointed, however, the gale of the previous day, which made the Carteret birds fly well, died away during the night, until a gentle breeze was all that was in evidence when Thursday morning broke. At Wantagh, half way or so between Long Island and Brooklyn, fine snow began to fall listlessly; this was about noon. At Babylon, when the match commenced at 12.17, gentle puffs of the breeze that chopped around to all points of the compass between West, North and East, served at times to raise our hopes that a good wind would show up before the match was over. It never came, though, and the birds had to do it all themselves.

At the hour mentined, 12.47, Work, having won the toss, went to the score and killed; Elliott followed suit. The first 50 birds, trapped in 33 minutes, found both men with clean scores of 25 each. Elliott was the first to let a bird go; his 27th was a fast, strong bird, that was hit with both barrels but got away, only to meet its fate at the hands of a scout down by the barn. This was the only bird those scouts had anything to do with; it was a cold day for them, with no potpie at the end of it! Work slipped up on his 28th, by no means a hard one; it was barely touched and flew round to the coop as if nothing was the matter. The score was thus a tie again. Elliott's 30th bird was a towering left quartering driver from No. 5; it was only lightly hit, probably shot under, with the first barrel, the second dropping it stone dead only just a few inches inside the boundary. Work's 32d was a hummer from No. 1, that required a very quick second to score it. Then Elliott, for his 33d, drew a driver from No. 2, not extra fast at that, which he hit hard with both barrels; the pigeon, however, reached the barn in safety. Work thus again had a lead of one, but only for a few minutes as he was slow on his 35th bird, shooting too far behind a right quarterer from No. 1. A tie once more. The 36th round saw no change in the position of affairs, both men having their birds drop dead out of bounds. Work's was a very fast driver from No. 2, that fell stone dead about seventy yards from the trap, while Elliott's was a right quartering driver that seemd to duck at the flash of the first shell; it was killed with the second barrel, but fell several yards over the 50 yards boundary. Work went ahead in the next round, the 37th, when Elliott drew a "flipper" from No. 2; it was clean missed with the first barrel; the second load of shot was a foot to the right of the bird as it sat on the ground, Elliott trying to kill it so as to get a no bird. After these two narrow escapes the bird jumped up and sailed gently over to the club house, Elliott being credited with a lost bird. Work went still further ahead in the 41st round, when a strong right quarterer from No. 5 carried both of Elliott's loads over the 21 yards boundary, dropping stone dead about three yards inside the 50 yards wire fence. This lead of two thus early in the race, made Work's chances look very rosy for a few seconds; but when his 42d, a very hard bird, and his 43d, both fell dead out of bounds, and Elliott had killed both his birds in those rounds, the score was again a tie. Work wound up his first half century with a splendid kill of a very fast driver from No. 4. Both men were a tie, with 45 out of 50 when Elliott killed his 50th bird, an easy one from No. 2. The first 100 was shot in 70 minutes, 37 minutes having been consumed in shooting at the last 50 birds.

It was in the third series of 25 birds that Work really lost the match, losing four birds, all dead out of bounds; Elliott killed his 25 straight. Work's first cypher in this series was in his 54th bird, an extremely fast driver from No. 3; this bird fell dead just over the 21 yards boundary. His 57th and 59th birds were terrors, as good birds as ever were trapped; both towered slightly, and apparently Work rather undershot them; one fell dead just behind the dead line, circling back after it was hit; the other pitched head foremost into the snow, without a kick left in him, close to the outside fence. In the series that closed at the end of the 75th round, Elliott manifestly "outlucked" his opponent; the birds drawn by each man presented time and again a remarkable contrast in that respect. Elliott was undoubtedly shooting well and cleanly, but it is rather improbable that he would have had a straight score had he drawn the birds that Work drew in that 25. The 75th round found Elliott four to the good, a lead that was almost insurmountable unless luck changed completely.



In the last 25 both men shot very well indeed; the united totals of 47 out of 50, three dead out of bounds, two of them inside the 50 yards boundary, makes a remarkable record, the quality of the birds being much improved. Work's 77th and Elliott's 78th were both hard birds, extremely well killed. Work's 81st carried his lead just inside the 50 yards boundary, Elliott's 85th serving him the same trick. Work's 82d, 86th, 87th, 95th and 98th birds were all very fast birds indeed; his 97th was hit hard with both barrels, but managed to fly clear up to and against the outer fence, before falling dead. Elliott's 82d, 83d, 96th, 97th, and 99th, were all excellent kills of hard driving birds. Out of his last 59 birds Elliott lost but one, his 85th, above mentioned, which would have been scored had the boundary been the usual one of 50 yards instead of 21 yards. The largest runs were: Elliott, 41, 26 and 15; Work, 27 and 15. Of Work's eleven lost birds, two fell dead inside the 50 yards boundary, and 7 fell dead outside that boundary but inside the lot; Elliott had three dead out of bounds, two of them inside the 50 yards boundary.

The result of the match cannot be said to satisfactorily determine the merits of the two men. Work was not shooting in his usual form, frequently undershooting towering birds. In addition to this he was certainly not fortune's favorite; the luck of the birds was decidedly against him. Elliott himself acknowledged this in a very straightforward way after the match was over: "I must admit," said he, "that I had the luck of the birds with me." On the other hand Elliott had a bad cold and a heavy cough, which necessitated frequent applications of Piso's Cure for Consumption during the two hours and ten minutes which it took to shoot the 200 birds. He complained, too, that never in all his pigeon shooting experiences had the five traps looked so far away from the score; he added, also, that never in any previous match had he used so much ammunition! He shot well, there's no two ways about that, although the birds were not really fast as a general rule in the Westminster Kennel Club's sense of the word. They were good birds, with several hummers among them The traps fell to each man as follows:

	No. 1	No. 2.	No. 3.	No. 4.	No. 5.
Work,	30	21	19	13	17
Elliott,	25	19	15	23	18
	55	40	34	36	35

The guns and ammunition of each man was as folows: Work, Purdy gun, 48 grs. American E. C., in the V. L. and D. Special shell manufactured by the U. M. C. Co.; Elliott, Greener gun, 48 grs. American E. C., in the Winchester Repeating Arms Co.'s new Leader shell, with their No. 4 primer. The following gives all the further details of this match:

Trap score type, copyright by Forest and Stream, 1895.

EDWARD BANKS.

Declined With Thanks.

San Antonio, Texas.—A certain gun club in this city is in receipt of a neatly written letter, fresh from the typewriter, of an enterprising but erratic mayor of an Illinois town, containing a novel and unique request cut bias. It comes to southwest Texas in the conventional full dress, but I propose to give it to Forest and Stream rather decollette.

The writer says that he proposes to shoot three matches with Dr. Carver, otherwise known by the Indians as the Evil Spirit of the Plains, and by trap shooters as the bete noir of aspirant trap shooters who desire notoriety.

The gentlemen will shoot one match in Illinois, one in Arkansas, and, if the club in San Antonio pays all expenses, lends its name and embonpoint to the occasion, they will shoot the third match in San Antonio for the modest consideration of 50 per cent. of the gate receipts.

I might give the Illinois official's name, and would but for the fact that some very good friends of mine told me to-day that he was a good fellow only gone wrong for this time. I will state right here, for the benefit of all parties concerned, that the sportsmen of southwest Texas are well up in trap shooting, and that a contest which smacks seriously of hippodrome finds no favor with them. They don't care about seeing the Illinois mayor shoot with Dr. Carver for gate money. They shoot themselves, and if the gentleman from the Sucker State would spend a little of the gate receipts which he will undoubtedly secure through his two matches in Illinois and Arkansas, buy a railroad ticket to San Antonio, we might be induced to put him against a little Dutchman that we know of and that lives in Cuero. A few simoleons of the realm might be won in this manner by the gentleman, but I hardly think his proposed contest with the Evil Spirit would draw any more than the cheap cigars that can be purchased in our trans-San Pedro district.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order Make orders payable to

FOREST AND STREAM PUB. CO., New York.

ON A WAR FOOTING.

There was tried in Chicago some years ago a scheme of uniting the interests of sportsmen and game dealers in an association of the two. It was fathered by South Water street and the same journalistic elements which are now again working in behalf of the street. The experiment was not a success—for the sportsmen. In any such arrangement their part must always be that of the motherless partridge of the fable, in which the elephant, moved by maternal instinct, sits down on the chick, to keep it warm.

Now that Warden Blow and his allies have come out flat-footed and under the thin disguise of a "compromise," show themselves bent on extending the privileges of the game stalls and ice-boxes and refrigerator cars, there is need of a clear understanding of the true attitude of sportsmen toward the dealers. They are now and must always be on a war footing. To act upon any other theory is to betray the cause of game preservation in this country. No one who adopts any other principle can be trusted to direct legislation or enforce the law.

SCHOONERS OF DEER MEAT.

A choice bit of farce-comedy might be written on that Yankee skipper's escapade with his cargo of Maine venison. Putting to sea with several tons of game unlawfully exported, he reasoned to himself that the cargo was contraband, and he might as well make something on it as the Boston fences to whom it was consigned; and so he put into another port and set out to peddle it on his own account. Detected, arrested, and haled before the Boston courts, he was made to "give away" the pals in Maine, who had shipped the game to their pals in the Boston markets. It just happened so, that a Maine Fish and Game Commissioner, in Boston at the time, got wind of this schoonerizing of Maine deer meat; and our Boston correspondent reports, having thus secured the evidence he now proposes to institute proceedings against the shippers. This is the funniest part of the whole story, that the Maine authorities should learn by accident in Boston of the exportation of schooner loads of venison from Maine ports. There is plenty of evidence to be had right in Maine—in Bangor, for instance, under the very nose of Commissioner Wentworth—of the unlawful exportation of Maine game. There is no necessity of the Maine Commissioners' going abroad to get home news of this sort.

There is farce-comedy in this; but there is something vastly more serious as well. A condition of affairs exists in Maine to-day with respect to the enforcement of the fish and game laws, for which it would be difficult to find any other explanation than one based on the theory that many of the wardens are vicious frauds. In what other way may we explain, for example, this wholesale export of game from Bangor, when the law says that it shall not be exported, and when the wardens are deputed to prevent its export? How shall we account otherwise for the fact that parties like Colonel Ziegler's, of Brooklyn, can go into the Maine woods with a retinue of fifty men, and live on deer and moose out of season, and these wardens be unable to find them when told to go and hunt them up?

If the Maine Sportsmen's Association shall get its bill passed, an opportunity will be afforded to cut off the whole lot of these thievish wardens; and what honest men there are among them can then be appointed. With the brains and integrity and public spirit of the Association and its leaders who are behind the new legislation, Maine may indulge the hope that a time will come when her game authorities will not have to go to Boston to get news of schooner loads of venison shipped from her own ports.

NEWS OF NIMROD.

The London correspondent of the New York Times cabled to that journal last Sunday that Professor Sayce, searching in Asia Minor for new cuneiform inscriptions, had come upon a memorial of Nimrod, the son of Cush, the mighty hunter before the Lord. This is the first time that anything has been learned of Nimrod outside of the meager and curiosity piquing mentions in the Old Testament. And it must be confessed that what the Times correspondent reports is most unsatisfactory. Professor Sayce, he says, identifies Nimrod "with Nazimuruda, and finds that he was the contemporary in Babylon of the Assyrian King, whose son restored Nineveh about fifty years before the exodus." That does not tell us what we all want to know about this oldest and most famous hunter of all history. What was his game, and how did he hunt it? Did he hunt for market or only for the fun of the thing? Did he kill his game in a truly sportsman-like manner, or was he in for hanging up all he could, in any way he could? These and a score of other details—just the data we require nowadays for estimating the standing and make-up of an aspirant for fame, as a mighty hunter—are the points we shall look for when Professor Sayce shall have deciphered his cuneiform record.

Our Chicago correspondent characterized his story of the Blow bill, the other day, as one of the most important and sensational pieces of news in this field that had ever come out of Chicago This cablegram concerning a hunter whose great grandfather sailed the Ark is the most curious and unique bit of "sporting intelligence" of the nineteenth century.

NEW YORK'S "BLOW BILL."

Always with the convening of the New York Legislature, the citizens of the State are called upon to exercise renewed vigilance and activity to restrain that body from doing the mischief it is capable of with respect to fish and game. What with the constantly recurring schemes of the party which happens to be in power, to debase the fish commission and the protective force to the level of political machinery, what with the silly and selfish plottings of individuals and local cliques for special privileges, and what with the demands of the dealers for enlarged license to sell game and fish, those who are really concerned for protection always breathe a profound sigh of relief when the session adjourns.

There is now before the Legislature a measure introduced by Mr. Wilks, which strikes at the foundation of the present market law. It proposes to add a new section as follows: "Sec. 249. No person shall be deemed to have violated any law or ordinance by reason of his selling, exposing for sale, transporting or possessing, or attempting so to do, the body, or a part of the body of any wild animal or bird in the close season for such animal or bird, provided it be proved by him that said wild animal or bird was killed outside this State."

There are two reasons why that section ought not to be incorporated into the law, reasons so cogent and involving such large interests that they should impel every individual sportsman and every association of sportsmen to protest promptly and emphatically, and to make the protest heard by their representatives at Albany.

The first reason is that the bill means an open game market the year around. That means the sale all the year of game killed in the State of New York.

The second reason is that it means also the sale all the year of game, killed in other States.

The New York Wilks bill is only another Illinois Blow bill.

New York cannot afford to have a market for her own game open all the year. She cannot afford to have a market for the game of her sister States open all the year.

With a law of this kind it would be impossible to check the market sale of game killed in New York, even if we were to have a force of protectors appointed and retained in office by reason of their fitness for the work. It would be all the more certainly impossible, when we shall have a force of protectors appointed, and retained for political purposes, as it is the intention of the leaders now in control to appoint and retain them.

PIONEER LIFE.

There died in Lynn, Mass., last week, a man who had witnessed from a rock in Nahant the fight between the Chesapeake and the Shannon in 1812. That is a period which to most of us seems as far off as the days of the Pilgrim and Captain John Smith; and yet we venture to say that the first years of the century have been brought perceptibly nearer and made very real to every one who has read the interesting reminiscences of George Smith, printed in our last two and present numbers. "Pioneer Life in Maine" is a title not sufficiently broad for these recollections, for they have to do with Connecticut and Pennsylvania and Ohio as well. Moreover, there is in them something of the spirit of the pioneers of every Frontier Settlement and Plantation and Territory and State. Who can have read that story of the setting out for Ohio, the parting of the sons from father and mother, the saying of those "everlasting farewells," without recalling the scene of the old shoemaker and his wife going forth from Danvis, bound for the far-off 'Hio? They were men—and women—of high courage, and brave and patient and filled with faith and hope in the pioneer settlements of those days. And there are just such men and women in the forefront of civilization today. "It is a true story," writes a Maine correspondent of Mr. Smith's recollections, "and just an every day record of the struggles of many of our first settlers in most of our Maine towns. I have heard dozens of men and women tell of just such struggles and many much harder. In the town of Holden the first settlers located six miles from the river, in order to get high land for corn; and for years had to carry their corn on their backs six miles over very swampy ground to the river, then in a boat five miles to the grist-mill and then back. Even now many of our back settlers endure many hardships which few dwellers in town can realize."

SNAP SHOTS.

The Dingley bill, which proposed to allow all the fur seals on the Prybilov Islands to be killed unless Great Britain consented to join in preventing pelagic sealing has met with opposition before the Ways and Means Committee of the House. It was discussed in committee when objections were raised that the measure would be in violation of our treaty with Great Britain, and would contravene the contract with the North American Commercial Co., which has the right to kill a stipulated number of seals annually. On Monday last, Chairman Wilson of the Ways and Means Committee, reported a bill authorizing the President to negotiate with Great Britain, Russia, and Japan, for a commission to investigate the question, and meantime to conclude a modus vivendi with those governments for the preservation of the seals. If such an arrangement cannot be concluded, the Secretary of the Treasury is authorized to kill every seal on the Islands.

Triton, a Berlin society for aquarium and terrarium culture, has taken a new departure. A prize of $250 will be awarded to the inventor of a process for destroying the parasitic animals of the aquarium without injury to the plants and fish. This subject interests not only growers of aquarium plants, but especially fish culturists. The only successful means of killing animal parasites of fishes in the World's Fair aquarium was the free use of salt in the tanks. Fungus was destroyed by the use of salt and carbolic acid.

The segregation bill, which proposed to cut off from the Yellowstone National Park a great slice from the northeast corner, with other lesser slices on the north, west, and south, has been adversely reported by the Committee on Public Lands of the House of Representatives. The reasons given by the committee, which have often been urged in Forest and Stream, are convincing, and set forth very clearly the dangers which would threaten the Park were any such action taken as was proposed by the bill.

EXPERIENCES IN MINNESOTA.

II.—In a Game Country.

Game in this section of the Roseau country is seldom disturbed by white men. Occasionally you will find an old half-breed hunter and trapper who ventures in, but they are few. Having made camp comfortable, H—— and I started out to explore the river to its source. This proved an undertaking such as we had not counted on, as the country is a frightful one to get through, windfalls so thick that it took us an hour to make a quarter of a mile; muskeags that few white men have crossed, covered with fallen trees, mostly old and partly rotten, yet solid enough to play havoc with moccasined feet; the grass grown to the height of three or four feet, completely covering holes as well as stumps and fallen trees, so that it is as dangerous, as rough. Naturally one must carefully pick his way. Once in a while we would strike a ridge where we found walking fairly good and could make time, considering the packs we were carrying.

It was on such a ridge bordering a small muskeag, that I sighted my first moose in that country. She did not see us, and fortunately the wind was in our favor; we got to within fifty yards of her before she saw us. She quickly walked behind a bunch of willows and came out about 150 yards in front of us. My guide wanted that particular moose badly, as he said "she was young and tender and he was tired of bacon and partridge." I never knew how stupid a wary beast could be. Every time he shot she would walk a step or two and stop to turn around and look at us, until several shots had been fired; when we did finally convince her that we were that savage creature known as man, she bade us good-bye and went. Fortunately she was not hit, and though I too wanted fresh meat badly, I was very glad she escaped unhurt.

I never in all my life saw so many partridges as there are in that section. Go where we would they were there and in great numbers. I believe that in one day we must have seen at least five thousand birds. At times you could see them in almost every place you would look, running in every direction and so tame you could almost reach them with your rifle, yet they told me "it was an off season for birds." We found more in this particular section than in any other; perhaps they had not been disturbed by fire for some time. We followed the banks of the river (so-called) as nearly as possible, though in many places we could step across the stream. I believe that few, if any, white men have ever followed this river to the lake it is supposed to start from. My old breed friend, Mimi, than whom no better guide or companion ever lived, told me that he "had once been there and knew of an old Indian who had hunted and trapped there, but never knew a white man to go there." Otter and beaver have their homes along the stream, and in one place we found the largest clearing I have ever seen made by beaver. Many of the cuttings were fresh, and they doubtless had been at work the day before. Some of the trees cut measured twelve and fourteen inches in diameter. Shortly after this Mimi went back there and set traps for them. He tells me that beaver are becoming very scarce in that country, though otter lynx, fisher, martin and mink are still quite plentiful. Muskrats are a drug in the market. One day I was out on the river after ducks, and fired into a colony of rats which were taking a sun bath on a large stone in the river; result, three rats. I saw at one look not less than twenty. There seemed to me an abundance of small game. There is no doubt that big game is quite plentiful, too, when not disturbed by fires.

In our search for the lake we had miscalculated our distance from camp, and after tramping for two days were compelled to turn back as our provisions were exhausted, having taken only a small supply with us. I should like to have gone back again with a fresh supply but time was limited. None of the small game seems to fear the presence of man. Several times I was close enough to that beautiful little animal, the mink, almost to stroke him. He would enjoy his morning bath, and come out and play around me, much to my amusement. He seemed to get as much enjoyment out of it as I did. All along this river there were tracks of moose, elk, and deer in great numbers, and all working toward the head waters or lake. There is no doubt in my mind that had we reached it we would have found an abundance of big game.

On our return to camp we found a native hunter had pitched his tent beside us for the night; that he was on his way to the nearest town or settlement; this we thought an excellent opportunity to send back to town a youth who started out with us "to see what camping out was like." He had been through the fire with us, and said his only excuse in going in was that he had some teeth that needed attention, as he had loosened the fillings the night of the fire. So he concluded to go in with the native. This same native was a walking arsenal, and if one did not know him to be all right he certainly would never guess it from his appearance. He carried a rifle, two revolvers, and an immense hunting-knife. He wore a vest and belt filled with cartridges. He was perfectly harmless, in fact a pretty good fellow. Now our youth wasn't particularly "stuck on" his face or his make-up, but concluded he would stay with him until the next day and go along to town. We broke camp at noon, and pulled out leaving him a ten-pound gun, about twenty pounds of ammunition, one pair of hip boots, a heavy fur overcoat, and some other necessary articles. We drove as rapidly as possibly, and stopped only when darkness had begun to settle, yet before we had finished making camp snug for the night who should walk in but the youth, carrying all his possessions and barefooted. He had sprinted it all the way. Fortunately for him we had been traveling on a well-beaten trail, or he would never have found us.

All through the country we had traveled were drying racks for preparing moose and elk meat for winter use by the Indians. Everywhere could be found the bones and skulls of moose, elk, and deer. The Red Lake Indians go over into Kittson County and slaughter them by the hundred. In such a country game wardens could not and do not exist. It would require a thousand good men to properly protect the game there, and then they should know the country. Natives and Indians slaughter game at all seasons of the year, yet a non-resident or sportsman who goes into that country is watched from St. Paul to the jumping off place. Perhaps the sportsman would be quite satisfied to shoot one moose for the sake of the head, that he might have to show to his children's children what grand and noble beasts used to roam over certain parts of the country. There is more game killed by the Indians in one season than by the sportsmen in ten. "Stop the sale of game" and you stop much of the slaughter by natives and market hunters. WABASH.

PIONEER LIFE IN MAINE.—III.

BY GEORGE SMITH,

In accordance with the suggestion of those who had listened many times to these stories of the dangers and privations of the pioneer settlers, the following account of the early settlement of the town of Freedom, Me., and pioneer life in that region, accompanied with a brief record of the years spent in the West, was written by the author at the age of eighty-one. ---D. C. SMITH.

Journey to Columbus.

It was now the first of October, and after looking round, my brothers went to work at the carpenter's trade as that was most in demand. I worked with them till December, and as the weather was so pleasant, I determined to take a tramp further west, across the State, and set out for Newark, the county seat of Licking County, arriving there about the 25th of Dec. I found it a pleasant location, but of not much enterprise. I continued my journey to Columbus, a distance of thirty miles, through a desolate wilderness, with the exception of one family. There was only a newly surveyed road, blazed out through a remarkably heavy-timbered forest. The country all the way was a dead level, and at this time of year the travel through this region was done on horseback. Mud was knee-deep the entire way. As I inquired of the man where I stayed one night, the distance to the first house, he said, "Stranger it is twenty-seven miles to Kilgore's, as you are afoot you will have a hard time getting through to-day, the roads are bad." As I felt so smart in those days, I determined to make the attempt, and started by daylight. The day was dark and rainy. I could not set foot upon the road without going nearly to the top of my boots. They had felled the trees on each side of the road, and I mounted these long trees to keep out of the mud. I clambered on, leaping from tree to tree, like a squirrel, and I fancied I was making good headway, till I perceived it began to grow duskish. I had no way of knowing how far I had gone, but I continued to leap from tree to tree, when suddenly I heard a terrible noise in the woods, as of some one in distress. I stopped a moment to listen, when the noise began on the other side of the road. Then I understood the music. I was sure it was wolves, although I had never heard their dismal howl before. What to do, I knew not. I thought of climbing a tree, and staying there till morning, but still I could not see a good chance for that. Soon the howling ceased, and I continued to leap as best I could, in the dark. At last, I could not see where to step, and losing my foothold on the logs, fell into the mud. Thinking this a safer way than on the logs, on account of the wolves, I continued in the mud. So having prepared myself with a shillaly, I continued to travel the rest of the night. After traveling in this way a long time, I began to feel tired, and never did a soul lament an undertaking more than I did at times. I had been told in the morning, I would see an old log cabin by the way, but no signs of it appeared.

Soon that infernal howl began again on both sides of the path, nearer than before. I smote on the logs with all my might with my shillaly; they would stop a moment then tune up again. I kept time for them, half an hour, till suddenly I thought I saw a light; after a moment I saw it again, right straight ahead. Never was a soul more rejoiced than I at this sight, and I put on the whole head of steam to reach it as quickly as possible; yet it seemed to be just as far off as ever in spite of my efforts.

At last I turned aside to meet it, and found the door, upon which I gave many solid raps, before I could wake the sleepers. A voice called out: "Who is there?" "A traveler," I replied. "We don't keep travelers, here," was the answer. "I am tired and faint, and cannot go farther," said I. "We have neither room, nor bed for one," said he. "Then let me lie on your floor, is all I ask," was my answer. I heard another voice say: "Let him in," and the door was opened, and I went in, took off my knapsack, and sat down on a bench, while the old man built a fire, for they had neither candles nor lamps.

By the time he had a good blazing fire, I had discovered they were Irish settlers. The old man began to inquire where I was from, and where I was going. When I told him to Columbus, he said that was a bad road of three miles. Seeing bread and milk on the table, I asked if they could let me have a dish of bread and milk. By this time, a girl was coming down a ladder from the chamber, "The stranger wants some milk and pone," the old man said. "No," said I, "bread." "You are a Yankee, I guess," said he. "Have you a wife?" he asked. When I told him, I had not, "you'll want one soon, I reckon," he said. "That may be, sometime or other," I replied, and the milk and pone being ready just at this moment, put an end to further conversation on this subject.

I sat up to a table of rare dimensions, being a large black walnut log, split in two, and the split side hewed off tolerably smooth, on the round side, four large holes were bored, and round sticks put in for legs, with the bark all on. But this did not hurt the milk and pone, for I enjoyed it that night, as I have ever since. As I turned away from the table the old man said: "And may I imagine how old you are, stranger? "Oh, yes, sir!" said I, "how old should you think?" Well, and I should think you might be twenty or twenty-five,' said he. "I am twenty-four," was my answer. "Indeed," said he, "but you must have a wife" Two more girls now appeared, coming down the ladder. I asked for a rug that I might lie down on the floor. "No, no," they all said, "stranger, you must go up chamber," there is a bed for you up there." The more I objected, the more they insisted upon my going, till I yielded; took off my boots, and up the ladder I went, one of the girls holding a roll of paper at the top of the ladder till I was in bed, where I was soon lost to all the wife introductions I had been hearing.

Being very tired, and having been up so late, I did not wake till I heard the old man coming up the ladder, to inquire after my health, as I expected. He shouted, "Have you rested well, and have you dreamed about your wife to-night?" I answered, "I have rested well, but have not dreamed much yet.' "You will soon," he replied, "for I've got a house full, and you can take your choice." I thanked him, and told him I would think more about it. As I came down into the room below, I was surprised to see four more girls sitting on the benches beside the mother, who was setting the table in the best possible manner. I asked if they were all of one family; the old man replied "yes, and I have one more, a son, who will soon be at home."

Breakfast of bacon and eggs being all ready, I was invited to breakfast with them. I could not well refuse, as I had such great offers made me of taking my choice of seven of the healthiest and homeliest girls I had ever met in one family; so I sat down with the old man and his wife, the girls arranged in the rear. Said the old man, "I reckon you are going to work in Columbus. What is your trade?" "Yes, if I can get a chance at the joiners' trade," said I. "You'll get a chance there, they are building many houses there." When breakfast was over, I offered to settle my bill. "Indeed," said he, "there'll be no bill if you take one of these girls along." I told him I could not maintain a wife, and the old lady said, "Let the young man do as he likes." He said the girls had never been from home to work, and were not as forward as other girls, nor should he allow them to go till they were married, as they would be spoiled. Finally, having heard his arguments through, in favor of taking a wife. I handed him two silver quarters, at which he was much surprised, as nothing but "scrip" was in circulation in those days.

I arrived at Columbus at noon, and immediately went to work at the joiners' trade at $30 a month. Here I remained two years—1815, 1816.

The Celebration of 1815.

The year 1815 was distinguished by the closing of the war of 1812, Jackson having settled the last accounts with them for going to Washington, and destroying the Navy Yard and President's house, and passed receipts in full with them on the 8th of Jan., 1815. On this occasion they had a great celebration in Columbus. As there was no cannon in Columbus at that early day; they invented a torpedo by sewing up a tanned cowhide in the strongest manner, into which they put a keg of powder, and then closed the aperture. They obtained a large roll of new tarred cable, which was wound round the cowskin in the most solid manner till it was all used; then another untanned ox-hide was put around the rope, and sewed up, as the first had been. Next, another tanned cable of greater dimensions than the first, was belayed about it in the best sailor style. It was then tarred all over and pronounced ready for use. A small tin tube was introduced into the keg of powder in the center of this torpedo, placed in a wagon and taken to Mound Hill, in the centre of Broad street, which was four rods wide, the mound filling the entire street and being twelve feet high, having three large trees growing on its summit.

The torpedo was hoisted to the top of the mound and placed between the stumps of these trees; the tin tube was filled with powder, and another fuse was attached to the tube. This fuse was a cotton thread, soaked in saltpetre and dried, reaching down the mound to the base, and buried in a train of powder which was arranged on a long strip of board. All things being ready, a lighted torch was produced, but no one dared apply it, as it was a dangerous undertaking. At ten o'clock, the way being clear, I took up the blazing match, swung it, and placing it on the train of powder, shot like an arrow down the hill to the company. As I turned, I saw a flash of the train, in a moment, saw the stream of fire going up like a rocket, with a deafening report, and a blaze that lighted up the surrounding country for a mile around.

There being no communication between the two countries, except by sailing vessels, the treaty of peace, signed long before this battle of New Orleans, did not reach us till months afterwards.

My brother Joshua, having come to Columbus, joined me in the work on the same building, and remained there two years. About this time John Smith came to see us, and after a short time went back to Zanesville. On the way he stopped in Granville over night. Here he found a man who wished to sell out, and John, liking the place, as the people were all New England people—bought the place and moved his family at once. The next year the people determined to build a large meeting house. He undertook to build it, and wrote to us to come on to help him; accordingly, we all worked on it the first year. Stephen—my mate—being single, and having no trade, carried on John's farm the first year. Two other young men, named Avery, owned the adjoining farm. They often changed work with each other, and, besides, the Averys had a sister, Polly by name, whose company Stephen was keeping, consequently there was much intercourse between John's family and the Averys'. It happened that the Averys were digging a well, with Stephen's help, when they had got to a depth of forty feet, they reached a ledge and was blasting it. They had ladders all the way down and a windlass to hoist out the rocks. A charge had been fired off in the well, and they waited for the smoke to clear away, that they might continue their work. Christopher Avery imprudently thought he would go down to see what luck in the blast, without tying the rope around his body, in case there should be need of its use. He descended the ladder backwards to the bottom of the well, and soon appeared again coming up; as he neared the top they noticed he did not take hold of the rounds of the ladder as he ought, and they reached down and got hold of one of his hands, but that moment he let go of the ladder with the other hand, and fell to the bottom of the well. The alarm was given, and all the neighborhood rushed to the scene. As all were sure he must be dead, it was proposed one should go down and put a rope about the body, and both could be drawn up together—Stephen undertook the job. He first tied a rope under his own arms, and then descended the ladder, and tied one end of another rope to the body, the other around himself, and shaking the rope as a signal, both were drawn up. Stephen was as dead as the other to appearances, the gas in the well had overcome him so, he had fainted, but the doctor being present with restoratives, at last brought him to. Polly being away, hearing the sad news, arrived home in time to see her brother

and lover—as she supposed—both dead. For more than a year she was a raving maniac, when she became sane again, and Stephen married her. I assisted him in building a small house, and he went to housekeeping in 1818.

Coming Home.

Silas and Samuel, having arrived in Granville this fall, concluded to remain with us. They lost their horse on the Alleghany Mountains by overfeeding. Silas went in to the business of making wagons, and Samuel went to work with John at the joiners' trade. As the meeting house was not finished, we had work enough for him. Having a fine lot of land in the village, I proposed to Benjamin, who was in partnership with me, that we should build on it the next summer. Accordingly, we began a two-story house, 30x46 feet. We got up the walls the first summer, when we received a letter from father saying he was coming on to Ohio, and as mother refused to come, he should leave her and Paul on the farm to do the best they could.

After hearing this letter read, it was decided that some one ought to go back. All were married but Benjamin and George, and we did not want to go, but they agreed at last, if I would go, to bear my expenses. I was to sell out the farm and bring mother on, as they all thought she would come if I went after her, so I consented to go. I found a man who was going to Massachusetts with two horses; he allowed me the chance to ride one by paying the expense of the horse. I left Granville the 6th of Jan., 1819. The winter was an open one, no snow on the ground, and I had good weather all the way, with the exception of one night, in Reading, Penn.

It was Sunday night; I stopped at a tavern kept by one Hoffman. I asked the barkeeper, who appeared at the door when I rung the bell, if I could be kept; he said I could, and I followed him to the stable to give orders about my horse, so we both went in together.

When he opened the bar-room door, such a sight met my eyes as I never saw before. About a dozen lying on the settees and benches, asleep, or drunk—the latter, probably—the floor covered with mud and water, and an inch deep, well mixed in with cigars, playing cards and broken goblets, or other hollow ware, and a well filled table in an adjoining dining room. They were very boisterous at times, speaking in a language, of which I could not understand one syllable, only when they swore; this was always in broken English, accompanied with a heavy smite of the fist, to make it more emphatic. I had called for supper on my first arrival, and the time seemed longer than I was accustomed to wait, so I called to the barkeeper, to know if my supper was ready. I was directed to the dining room, and there saw one of the ugliest looking wenches I had ever met, who beckoned for me to sit up. There was neither tea nor coffee on the table. I asked if they had any tea or coffee; she stood a moment, then went after the man, who said they had so many come in they were out of both; "then give me some water," said I, and I soon finished my supper of bacon and bread. When I inquired for a bed, the man showed me upstairs to a front chamber. Wherever I had stopped on my journey I had a lock and key to my door, and when I asked him for the key he said it was lost. So I shut the door and pressed my knife in over the latch as hard as possible. The room had no furniture but a bed and a chair. I took out my watch and laid it on the window stool close to the head of my bed, placed my pocketbook under the pillow, undressed as usual, lay down to sleep and was soon lost to all things around me.

How long I slept I cannot tell, but suddenly I was awakened by the sound of something falling to the floor. I raised myself up and looked at the door, and by the light of the moon shining in at the window, could see my knife on the floor. Then I understood what the noise meant. As I could hear the noise going on below, I began to feel rather fearful, knowing that someone had been trying my door, and my knife was out of the door. I lay still as a mouse, perhaps twenty-five minutes, when I heard the door latch begin to rattle, and I began to breathe like a person asleep, but kept my eye fixed on the door. Soon it began to open, and I could see the top of a man's head coming in; at last his face appeared in full view; I threw up my arms, and turned suddenly over, when he drew back, making no noise as he shut the door. I continued to breathe heavily, and it was not long before the door began to open, and the head appeared, then the shoulders and arms of a man. I could endure it no longer, and springing up in bed, I demanded his business. He drew back and quickly shut the door. I then jumped out of bed and dressed myself; it was but three o'clock, so I sat on the bed till four, when I took my portmanteau, and down stairs I went. All was quiet, and as I could not get my horse, I rung the bell two or three times before the man appeared, who asked, "What in h—l do you mean by getting up so early?" "I have very important business to attend to," I replied, "and must have my horse immediately." My bill was $1.25. I told him I had paid but 75 cents formerly; he "did not care, that was his price." So I paid the bill, told him he was keeping an excellent house, and I would make it known to all travellers I might meet, which I did at the next hotel where I took breakfast. They told me I was lucky to get off as I did, for it was the worst house in the State; many had been robbed there. A year before, a peddler, known to have considerable money with him, had stopped there one night, and was never seen or heard of afterwards, though his horse and wagon were found standing by the roadside, not far from the house, the next day. They were advertised, but no claimant appeared, and it was the general opinion that the man was murdered by some of the people who frequented the house.

I went from Reading direct to Elizabethtown, N. J., from there on to Newark, where I saw the first steamboat ever built in America—and I might say in the world—the Fulton. I crossed over to the city of New York, going out of the State by the way of New Rochelle, to Hartford, Conn.; from Hartford I went to Wrentham, Mass., where I left my horse as I had agreed, and took the stage to Boston, then to Newburyport, going on to Berwick, Maine, then to Portland, where I found a vessel all ready to sail for Belfast, the first fair wind.

Having waited two days, and no fair wind, I determined to go on foot to Hallowell, on the Kennebec River. It was now the 4th of February, 1819, with no snow on the ground, and very pleasant. I left Portland at six o'clock in the morning and arrived in Hallowell a little before ten o'clock in the evening; a journey of sixty-five miles, over four miles an hour. I was lame enough the next morning; however, I got ahead ten miles that day to a place called the Branch Mills, now in the town of China. Here I hired a horse, and arrived home at noon Sunday, the 7th day of February, having been on the road thirty-two days, and, what was most remarkable at this time of year, not a drop of rain or spit of snow fell on me in those days, nor did I see any snow on all the route, except some small patches on the top of the Alleghany Mountains, nor was there any in Freedom all the months of February and January, till the 27th day of February; it then clouded up, the wind northeast, and continued to snow four days and nights till the fences disappeared. It then rained a little, cleared off cold and freezing, so that it bore oxen anywhere over the fields, by which means people were enabled to go with their sleds into the woodlots and get their summer wood.

The snow soon began to melt away before the bright sun of March, though many had prophesied a great freshet; but it all went off by sunshine, without doing any damage on the river as was expected, and a warm, beautiful summer followed, the first, my father said, since 1816. No corn had been raised in Maine; the people had abandoned it altogether, and were raising millet instead. At that time Indian corn was $4 a bushel, brought in coasters from Boston. As the spring was so forward, I had half an acre planted, and it grew and got fully ripe, as it used to do, and thus it continued to do till 1834, when the cold seasons commenced again. On the 5th of May this year I rode to mill with a horse and sleigh, and the 15th and 16th of that month snow fell six inches deep, and no corn ripened that year, though it was planted June 12th; the water froze in many places, and snow did fall in old Freedom, Maine.

To return to my story; as my object in coming to Maine was to sell out the old farm, and take father and mother back to Ohio, I made it known to them in season. Father was well pleased, but mother would consent on no other condition than that I sell out the rest of the family and take them, too. As I could not consent to do this, I wrote to the boys in Ohio, asking what course I had better pursue. They wrote that I must not think of bringing on the others, nor of coming without father and mother. I offered the farm for sale, but it had no effect in gaining her consent, but the reverse.

About this time, our sister Rebecca, the youngest of the family, a beautiful girl of seventeen, was taken sick, and died in two months of quick consumption. This was a dreadful blow to all of us, as the bright star had set to rise no more to cheer us in this vale of tears. Now, my mother could not be induced to go, at any rate. "No, never," she would reply, if the subject was mentioned.

So I wrote to my brothers for directions—their answer was. "You must not compel them to come now, but you had better stay with them, as changes take place so suddenly—we cannot tell when—you had better wait a while." I did, and here I am in the State of Maine yet.

MY SAW MILL SITE.

Two men, two horses, and a burro; two Winchesters (one was a Ballard), and a pack. Every reader of Forest and Stream can finish the picture in his mind's eye, even to the mountains with their first covering of snow, to the valleys, the distant settlement and scattered ranches. Ostensible object—the location of a saw mill site for next season; real motive, anything shootable from elk to gopher, from American eagle to English sparrow. Opinion expressed before trip—by participants—"jolly good time, elegant saw timber, lots of game;" by family and friends—"whew! big fool, starve to death, heap cold, don't go!" Opinion expressed after trip—by all parties: "I told you so!" Hence all were bound to be satisfied.

Doc and I went together. I always hunt him up, because I don't like him. My wife does not like him either. She claims that he chews tobacco, and is not refined in his language. The fact of the case is she hates him, because on days when stoves have to be put up, or wood chopped, or the washer turned, Doc and I invariably have business appointments with the mallards on the lake, and those appointments must be kept even if it takes a leg. My reasons for dislike are very different. Doc can drop one with his right, and another with his left, while I get feathers with my right and left. He can outfish me, and out-prospect me. Why, the rascal actually left me hammering on a galena prospect this summer, and, strolling out on the mesa picked up in an hour, rough opal, white topaz, and hyalite that he sold in Maiden Lane for six hundred dollars, while my lead claim is waiting the next move in the tariff game. But Doc has one redeeming feature. He never complains about getting up and making breakfast. If we have no other work planned, he lets me sleep as long as I can, and he is my first partner to favor my greatest weakness. Since our prospecting trip I have been leaded as well as my claim, and I knew, especially as we were going to have some Massachusetts relatives visit us between Thanksgiving and New Years, that a change of scene and climate were essential to a restoration of health.

The region chosen was the eastern slope of the Wasatch Plateau in Sanpete and Sevier counties, Fish Lake Mountains being on southern limit. All the ridges and summits in our district were covered with pine timber, and the intervening canons and valleys afforded fair autumn feed. This is a spring range, and the showers of the late summer and early fall produce a good second growth when the cattle are being driven to their winter stamping ground in the Colorado valley below the Henry Mountains, and the sheep are hurrying to the desert wastes of the lower Sevier and of the sage-brush State. Of course, it is a good country for deer; but, on the other hand, it is a kind of mutual hunting ground for Thistle and Sanpete Utes, and we might get left. Fortunately all the bad Indians of Utah have had for two or three months past very important business dodging the government agents and holding pow-wows in San Juan County, and the good ones prefer to get their living from their white neighbors, so we were unmolested.

We packed light, having no use for a tent, and well aware that after we left the settlements we would have plenty of game of some kind or other. Not being an adept at the diamond hitch, I concluded that the less we took the less we could lose. Subsequent events ratified my judgment. Leaving Provo about three o'clock in the afternoon, that night we made Castilla Springs. The next day, through a light tracking snow, we followed the road over the divide between Utah and Sanpete valleys, and rested the second night in the hotel at Fairview. Fairview boasts two inns. It matters not at which the traveler stops, he invariably wishes that he had chosen the other. From Fairview we went east by a saw mill trail, until we had passed the last vestige of civilization and bumped against the precipitous bluff that forms the western face of the Wasatch Plateau.

Our noon camp was at the foot of the ascent, and with a mighty vow that until our return to the settlements we would abjure all the luxuries of city life, we disposed of a can of salmon while the horses finished the oats. Jack munched scrub-oaks and service-berry twigs until his hunger was satisfied, then we commenced to climb up the old cattle trail, knowing that we had flour, salt, baking-powder, and sidemeat enough to last ten days if necessity required. It was a long, hard pull to the summit, and the sun was low when we crossed the ridge. The last two hours we went through a foot of snow. Underneath, the ground was in some places soft, in others icy. We had to lead our beasts as best we could. On all that western slope we saw not a bird, nor a track, but when we reached the level upper terrace everything was changed. The warm Colorado valley winds had melted the snow from all but the highest crest-line and from canons with a northern exposure. The giant steps of the plateau province extended away toward the San Rafael swell. As we wandered down a short transverse divide we could see far to the south the summits of the Henry Mountains, while to the northeast lay Castle Valley and the deserts that border Green River canon.

Game was what we wanted. We had found the saw timber and buck tracks were of more interest than scenery. The buck tracks were present, but they were so cold that we felt that our venison would not be ready for the pan before to-morrow. In lieu of this we dropped a brace of pine hens from their roosting places, and made sure of a good supper. I believe Dendragapus, in late fall and early autumn, the most difficult bird in America to catch on the wing. It is no trick at all for a fair rifle-shot to pick off the heads of the fool birds as they rest in conscious and knot-like security on a dead limb. But they always select a tree that is close to a canon, and when once alarmed they stretch up their innocent necks and shoot, not up, but down like a streak of gray lightning that would beat a mallard backed by a gale, down and out of sight before the sportsman has caught even the direction. By long practice I have caught the proper angle, but cannot yet make sufficient allowance for velocity.

Camp was made about five o'clock. Doc dressed the birds, got supper, and fixed a "shake down" while I picketed the critters. Plenty of sign of big game encouraged us to believe that we had struck the right place. From the efforts of our live stock to stampede during the night we also believed that there was larger game than we anticipated in the immediate vicinity, and we kept a fire blazing that must have been regarded as a signal for a general uprising by the settlers in the valley thirty miles away. In the morning we found bear tracks within a hundred yards of camp.

For a week we plodded lazily southward, hunting early in the morning and in the afternoon, and moving camp in the middle of the day. We saw no person during that time, save our own two selves. We met with no startling incidents (honest confession is good for the soul). I learned to love Doc (at meal time). Doc conceived a similar affection for me (when I played night-herd and let him sleep.) We secured three bucks, one mountain lion, and one lynx. Had we been market hunters I believe that we could easily have secured twenty deer during our short stay. Then we crossed the divide westward into Grass Valley, coming through Burrville to Salina, and home by the Fairview route.

One fact of interest to ornithologists I must not forget to mention. In a warm sheltered "draw" having a southern exposure, I ran across a covey of Gambel's partridge (callipepla gambeli, Nutt.), here called "Arizona quail." I had only my rifle with me (44-70), but I secured one specimen. Although badly torn it was in recognizable condition. It was of a spring brood, and my identification of it was satisfactory. I took all the birds for this season's ('94) chicks. This is, I believe, as far north as this species has ever been found. The Arizona quail is not rare in the Buckskin Mountains, and it is sometimes found in the Valley of the Virgin, south of the Basin's Rim; but how this solitary lot of young birds got as far north as Fish Lake is a query with the undersigned.

This trip convinced me that, game commissioners to the contrary notwithstanding, there is on the Wasatch Plateau in Eastern Sanpete and Sevier, and Western Emery and Wayne counties an abundance of big game. The only thing for a white man to do is to get in his work before the Indians make their December round-up. Had we been two weeks later we might have been unsuccessful in everything but the location of the saw mill site.

SHOSHONE.

P. S.—The location of that saw mill site is unsatisfactory. I am going back next fall to locate over again.

PROVO, Utah.

Maine's New Laws.

Augusta, Me., Feb. 15, 1895.—Editor Forest and Stream: The Maine Legislature will probably make some changes in their game laws affecting the amount of game and fish taken, and close time. A bill has already passed to limit the taking of trout, and land-locked salmon to 25 instead of 50 pounds, as heretofore. It is provided that having less than 25 pounds, the taking of one additional fish is not a violation of the law. Another bill passed the house yesterday and probably became a law, making penalty for killing moose, caribou or deer, illegally, fine and imprsonment. Another bill has had its reading in the House, to prohibit the killing of cow or calf moose under penalty of $300, and imprisonment thirty days. The law on taking woodcock is most likely to be made Sept. 15 instead of Sept. 1, as now provided. A general law will be reported to-day making a new Board of Commoners, three instead of two, and increasing their power, also to vacate all warden's commissions with a view to start new, all wardens to give bonds. $30,000 is asked to enforce the law, and propagate fish and game. Most of these bills emanate from the Maine Sportsmen's Fish and Game Association.

CHANDLER.

THE SUNNY SOUTH.—II.

CHICAGO, ILLS, Jan. 22.—When I returned to Memphis from Brownsville, I met in Mr. Divine's office the very man we wanted to see, namely R. E. Bobo, the champion bear hunter of the world. With him Mr. Divine wished me to have a hunt before going on down to the mouth of the river. Both of these gentlemen spoke of kiling a bear as nonchalantly as I ever heard anyone speak of killing a squirrel.

In regard to Mr. Bobo, I use the term champion bear hunter of the world advisedly and after deliberation, valuing as lightly as Mr. Bobo himself, the usually empty title of "champion." Mr. Bobo never entered into a contest of hunting of any kind in all his life, yet living alone on his Mississippi plantation—on the beautiful Anise Ridge, in what is called the Delta country, about eighty miles below Memphis—he has in his hunting for mere sport—and he never hunted in any other way—killed, I presume, twice as many bear as any other man alive today. The Rocky Mountain hunter who kills a half dozen bears in a year is an object of veneration. If he kills twenty in a year he is a Grand Mogul. Not long ago an account was published in the daily press, probably untruthful at that, about a certain hunter in West Texas who had killed 160 bear in one year and who therefore thought he "was champion of the world."

"That fellow makes me tired," said Mr. Bobo, referring to the Texas hunter. But what was Mr. Bobo's record I shall say later, because I can't hurry this story, it's going to be so good. Suffice it to say at this point that simply, directly, without a bit of plan or forethought, except as through the kindness of Mr. Divine, I afterward learned that with the invariable and infallible Forest and Stream luck, I had blundered right on top of the man who, out of all the hunters of the United States or of the world, so far as I can tell, is most justly entitled to the name of the greatest bear killer. This I say sincerely and truthfully, with no exaggeration about it and I shall in due course prove all I say. Did we get any bear? Well, I should say—but about that I shall tell later. This story can not be hurried. Only, I bless the day I first went South to hunt.

WHAT MR. BOBO LOOKS LIKE.

The typical Mississippian is supposed to be tall, slim and dark-complexioned, but if so, Mr. Bobo does not follow copy, though his father, who came from North Carolina, brought up his family in Mississippi. Bobo himself reminds you of a bear in build. He is one of the old frontier type, powerful, hardy-looking, with florid complexion, long, sweeping, sandy moustache, and the cold blue shooting eye. Bobo would be the best possible immigration sign for the Delta—put him up with the card over him, "no malaria here." In character he fulfils his type—headlong, impetuous, powerful, crashing through things, not going around them. I often laughed to myself, though Bobo didn't know it, to see him riding through the cane-brake. It was like a wild bull of Bashan broken loose. Many men have thought they could follow Bobo through the cane, but it is said no man ever did it. There is but one champion in a class. And by and by I shall tell what qualities the bear hunter in that country must have.

Tom Divine—for this being the second day I have known Mr. Divine, I was already very often calling him Tom Divine, just as everybody else does—and Bob Bobo are the best of friends in the world, and either honors the requisition of the other unhesitatingly That was the only way I could have gone hunting with Mr. Bobo. Mr. Divine said he wanted him to take me, and that settled it. Once somebody wanted to hire Mr. Bobo at $10 or $20 a day to take in a hunting party. My! wasn't he hot about that! He hasn't gotten over it yet. "I'm no guide!" he said, "and I don't hire out. I hunt for fun."

REASONS FOR FRIENDSHIP.

The way these two men happened to be such good friends is this. You see, Tom Divine is the claim agent for the Yazoo and Mississippi Valley Railroad, an arm of the Illinois Central, which not many years ago was built down through the rich Delta country, as all the valley of the Misissippi from Memphis down is called. It is Tom Divine's business to settle damage suits against the road. When a cow is killed the damage claim is handed over to Tom Divine, and if a man's wife and family are run over by the cars, it becomes Tom Divine's business to appraise the cost value of the lady and the offspring. You would think that his business would make him hard, crabbed and cynical, but, well, that's where you don't know Tom Divine.

Now, it is part of Tom Divine's creed, in his calling, never to offer any more than $15 to settle any damage claim, no matter how big it may be. If a man's horse and buggy are run over, it strikes Tom they ought to be worth about $15 if they were a good horse and buggy. In the same way, if a man's wife and family are killed, he thinks $15 ought to square it, (and I violate no confidence, I trust, in saying it has been known to square it, too.) Well, the railroad was new to the cattle of the Delta for awhile, and it used to mash up a good many of them, one day including two or three heifers belonging to Mr. Bobo. Bobo sent in his claim. Tom came down one day to settle it.

They sat on a log near the railroad, on Bobo's plantation, and discussed the value of the heifers pretty much all the afternoon. Tom offered his regular $15. Bobo said $55. They couldn't agree. "Why, those cows are dead now, man," said Tom, who had never met Bobo before. "What's more, you've buried 'em. They ain't worth more'n $15 to us, and I'm only offering that because I rather like you." Still Bobo held out for $50, and they argued it till near sundown. In the distance appeared the smoke of a train bound up to Memphis. Tom arose, folded up his jack-knife—for of course both had been whittling—and said, "Well, Mr. Bobo, I see we can't agree. There's my train coming, so I reckon I'll get aboard and get back to town.

As he said this, he stood at one end of the log and Bobo was astride the other end of it. What Bobo did was to pull a long, large gun out of his clothes and draw down on Tom. "I don't reckon that's what you're going to do at all, Mr. Divine," said he; "I reckon you're going to sit down on this log and write me out a check for $50, right now."

"Dear me!" said Tom Divine, "fifty dollars? Why, that's what I've said all along.' Is it possible you have misunderstood me?" So he sat down and wrote a check for $50.

Not long after that, a man a little further down the road lost his wife and family from too great familiarity with the cars, and Tom went down and offered his same old $15 to compromise the matter, but the offer was not accepted. The neighbors got together and said it was a shame, as nice looking a woman as that and several fine children, should go at $15. So they were going to hang Tom. It was kind of woolly down in the Delta in those days. They had Tom up on the table, with a rope around his neck, and were about to make him jump off when Bobo, who was riding by, came in to see what was the matter. He recognized Tom, and at once called a halt. "I know that man," said he, "and he's all right. Turn him loose." Bobo's word being law through many a mile of the Delta side, he was at once obeyed, and Tom was set free, and afterward convinced the man that as his wife was a bit cross-eyed, and one of the children had warts, the lot wasn't worth over $15 at the outside on the hoof. He has a cold sort of way of looking at things, I think.

It was shortly after this that in one of the race troubles which sometimes spring up in that country (in Mississippi, 69.3 of the population are blacks) that in response to certain decisive actions in regard to a couple of its Afro-Americans of his plantation, the blacks of that settlement swore revenge against Mr. Bobo. They formed what Rider Haggard would call an impi, and had by several indunas, got ready to march on the house, and so happened that Mr. Divine and four or five friends were in the neighborhood, about five miles away, and they got word of the trouble. At once, mounting, they rode over to Bobo's place, and said they were with him. There was no uprising when the indunas heard of this. By this time both Rob and Tom had learned that a friend in need is a friend indeed. They have been like brothers ever since.

DOWN IN MISSISSIP'.

According to Mr. Divine's plans, I was to go down to Bobo—for Mr. Bobo enjoys the distinction of having a whole town named after him—on Monday, devote that day and Tuesday to the killing of a bear or so, and take the south-bound train Tuesday night for New Orleans, Mr. Divine agreeing to be on that train with all my personal baggage, so that if necessary, I could take the train at some siding below Bobo station, in case our hunt took us far away from home. How this railroad fashion of bear hunting progressed we shall see. At any rate, I reached Bobo Monday at noon, about as incredulous a bear hunter as ever was, but none the less enjoying the visit to a country entirely new to me. I found the "Delta" country a land of luxuriance, of big trees and heavy corn and cotton. You could hardly see the ground in any place, so dense was the vegetable growth.

At Bobo station I was met by Mr. Bobo's plantation manager and taken up to the house, which I found to be long, low, and wide, one storied, with wide galleries all about it, a typical plantation house. On every side were the outbuildings, smoke-houses, barns, store-rooms, negro houses, etc., which belong on a Southern plantation. We were now in a country where there is plenty of room. No piling up of twenty houses, one on top of the other, on a bit of ground somebody's grandfather stole of an Indian, but a spreading out, widely and lavishly, of the twenty buildings over as much ground as one cared to use. In short, here was a country of breadth, not of narrowness; of liberality, not of sordidness; of generosity, not of avarice and selfishness. I could not help thinking of the expression used by Gus Matthews, the editor of the leading daily of Memphis, in a conversation not long before that: "Where the trees grow big, and where the wild fowl come—there is where God meant man to live." Here the trees grow big, and the wild fowl come to the lakes among them, and it seemed a country meant for man to live in without fretting out his heart. For the time, I pitied the city dwellers, and rejoiced that for a little while I had left the city far away.

"I have between 800 and 1,000 acres here," said Mr. Bobo to me, "and there is no richer soil on earth. I came here a little more than ten years ago, and at that time all this groundwas covered as thick as it could stand with heavy blue cane. This high ridge was called the Anise Ridge, and it never overflowed, and at the time of my first hunt here the game was thicker around than I ever saw it anywhere. I said then I would own this ridge some day, and so I did. Come with me and I will show you something about potatoes."

HOW A PLANTATION IS RUN.

We went out into one of the fields where the potato crop was not yet dug, and there I saw a revelation in soil. There had been no rain for eight weeks, yet, there was not a cake nor a clod visible. You could crumble into fine black flour in your fingers the hardest clod you could find. Mr. Bobo showed me that in this loose loam you could dig potatoes with the naked fingers, and we fished out some great big ones, fat and mealy, and these I bore with me and had them cooked for supper as trophies of a nove chase.

"I lease nearly all of the land to a firm of potato growers," said Mr. Bobo, the Barker Bros., of Tennessee. "They pay me $10 an acre cash rent for it, and do all the work. They raise two crops a year on the land, right along.

"We raise cotton and corn, and cattle and hogs, and about everything we need to eat on the place, and as we have over 100 souls on the place, we don't ship much except cotton, and, of course, the potatoes. The negroes do all the work, and we pay them wages, but they are really as dependent as they were before the war. The negro only cares for one meal ahead and a place to sleep over night, and the further he can get in debt the better he is pleased. They never have any cash, and we don't dare let them have, and we have to watch mighty close to keep them from getting into us. The whole place is run on a system of accounts, each negro being given a piece of ground and means to farm it. At the end of the year he turns in his crop against his store account, and he is lucky if he comes out even, though the more he is in debt the better he thinks he has done. During the year he will come to me and ask for everything he can think of, and if I would let him have the goods he and his family would live high and dress well. I have to fairly be a father to the whole improvident, shiftless lot of them, and I try my best to get them to work hard and live close and so get ahead of the world, but it isn't much use. As a class, they can not think, and bid fair to be always dependents. They make the great problem for this country, and the question is not settled. Treat one as anything but an inferior, and you ruin him. No Northern man understands the negro, and only the Southern man knows how to get along with him. My hands here know there can't be any foolishness, but they have good treatment, and every chance in the world to get ahead, and I talk to them and reason with them over it, but only a few of them remember it. They are the products of a rich soil and an easy climate, and they do not grow in intelligence in any such measure as they should. They look to the whites still for their thinking."

As we talked, Mr. Bobo and I walked on over the whole plantation, cotton, corn and potatoes, to the very edge where the big timber shut in, black and mysterious. We looked at the many horses and mules, the pigs, poultry and cattle, all the busy population of the place. The soil seemed fruitful of every sort of life. We went over to the cotton-gin, and it seemed a most singular and amusing thing to all the hands to see a man who had never seen a cotton-gin at work before. But I made a good photograph of it, so I am sure I would know the next one I saw.

THE BOBO BEAR PACK.

And now Mr. Bobo went into the house and took down his hunting horn. "I will show you a few dogs," he said, and blew a call, at which there arose a great confusion of tongues, and the bear pack came running in from every direction, and from every sort of place. From under the house and out of the house and behind the house, and from out of the barns and the sheds and from across the fields, the hounds came galloping in dozens, every one of them at cry, till the yard was full of a howling, jumping, baying lot of dogs, more than I ever saw in one pack before.

"This is only a few of them," said Mr. Bobo. "They are scattered over the neighborhood for miles. My friend Felix Payne and I hunt together, and he keeps some of the dogs, and the negroes have them all around over the country. I suppose there are sixty or eighty of them if we had them altogether."

"It takes all sorts of dogs to make a bear pack, as you see," he continued. "The base of this pack is the old pack of fox hounds my father brought from North Carolina. I have always kept up the pack. We are obliged to have a great many dogs coming in all the time, for the life of a bear dog in this country is only about four years, and not all the dogs will make good bear dogs. We have to be continually training and trying and selecting. No one knows how many times the material of the pack has changed, though, of course, I remember a long line of good bear dogs I have had.

"I like a cross of staghound pretty well; such dogs usually will run a bear trail. Then we have half-breed curs which do well, too. We never dare let go of the cold foxhound nose though, for that must puzzle out the faint trails. Plenty of cold-nosed dogs will not run on a bear trail, and some cold ones will run deer, or cat, or coons or such stuff, none of which we want. The right bear dogs has nose enough to trail bear, and will not trail anything else."

ONE BEAR, ANYHOW.

"Now you must see my pet bear," said Mr. Bobo. So we walked over to the little house where this part of the live stock was kept. "I nearly always have a pet bear or so around," said Mr. Bobo. "We had a mate for this one but it got killed. Come out here, Miss Alice!"

Miss Alice proved to be a youngster, rather over a year old, of the black bear, native to that region. She was fat, sleek and saucy, and not afraid of the dogs, though she had sense enough to run into her house when Mr. Bobo laid the dogs on for fun. Miss Alice was willing to stand up and eat from Mr. Bobo's hand, but for the rest of us, she showed a very capricious temper. Once I thought to stroke her head, but she made a lightning-like swipe with a paw which just barely missed taking off a leg for me. The only one for whom Miss Alice is constantly trustworthy and affectionate is Horace, Mr. Bobo's son, who can hustle her round as he likes. No one else takes many liberties with her. We spent some time watching the odd actions of the bear, and I got some pictures of it and a few of the dogs, and of Mr. Bobo and his friend Mr. Felix Payne incidentally, the latter having by this time come over to see about that bear hunt.

One habit of this bear I never saw in any other, and it reminded me of the mooted "whickering" of the coon. It would lie by the half hour and lick at the head of a nail in the side of its house, all the time uttering a rapid, twittering note much like the distant sound of the sickle-bar of a reaper, only of higher key. It had worn the wood away from around the head of the nail by constant licking at it. While at this pastime the animal would move its paws a little, and apparently be quite happy, as a cat is when it purrs. The note was very high and rapid, a sort of "whickering" sound.

On the shed near the depot I had noticed a bear skin tacked out, and commenting on this, Mr. Bobo showed me three more, also a very large wolf. "We had a little hunt two weeks ago," said he, carelessly, "killed five bear. They are not very plenty, some way, this fall, and I think they are moving off hunting for the mast. Still, I reckon we can get a bear. You could kill a deer this evening if you wanted to, over at the edge of the field, but we don't bother very much with deer. Of course, we never kill anything but bear ahead of the dogs."

A LAND OF PLENTY.

Thus we passed the afternoon even too quickly, and at dark sat down to a plantation dinner, such a dinner, if I may be forgiven comment upon it, as no city club man ever saw, unless he went away from home. After all, no cooks surpass the Southern negroes, raised in the art, and I do think they are the only beings on earth who really know how to make coffee. The many breads, the different honeys, the several preserves of fruits, the fowls, the many vegetables—above all the delicious yams; you can't get sweet potatoes in the North—everything, Mr. Bobo said, except the coffee and the sugar, was the product of the country. "And the sugar doesn't come from very far down the river," said he. Verily, you could build a wall

about the little plantation of Bobo and live like a lord, in defiance of the rest of the world (though I don't know about the coffee!) The lord of this manor, unconscious of the fact, lives as a patriarch of old, the protector of many, the head of a large flock—a type, as I have said before, of the only aristocracy America can afford. The "first families" of the cities, who dress and act and live and marry, and die by rule of three and never know the larger lines of an actual breadth and nobility of character —those little men, those little men! They make me sick. The hope of America and American character, is not in them. Rather look for it in the places where its trees grow big, and the wild fowl come.

As I reflected on the easy condition of life in this land of plenty, I called to mind by contrast the black prairies of Dakota and of Kansas, where life to those who make a living from the soil is often such a struggle. Even there, in November, snow and ice had covered many a farm where half the year the farmer worked in order to live through the other half, raising but one crop of one sort, forced to buy everything he used. I could recall wide strips of country once settled where the shocks are now empty, the stoves kept unwarmed, the farm untrod, except by the antelope. Of course, all that country must some day support its population, but there is easier country, where the land costs less, and where you don't have to burn hay or corn, about which the American people seem yet to know but little. When I told my Mississippi friends about twisting hay to burn in a storm at twenty below zero, they shivered and looked about them contentedly. "I reckon those negroes of mine would better stay here, and not go to Oklohoma or Kansas," said Mr. Bobo, grimly.

PLANTATION COURT OF APPEAL.

After dinner, Mr. Bobo seems to hold a sort of open court, in the big room where the wide fire place is. A negro rapped at the door.

"Well, what do you want?" Mr. Bobo asked.

"Well, sah, Mr. Bobo, sah, my boy done cut his foot 'bout off wid an axe, a' I wants a doctah, sah, mighty bad."

"Write him an order for a doctor, quick, Jim," said Mr. Bobo to his manager. "I'll come over and see the boy pretty soon."

Another knock, and enter just within the door another negro.

"Well, what is it, Pete?" asked Mr. Bobo, turning around in his chair.

"Well, sah, Mr. Bobo, sah, I wants ten dollars pow'ful bad, sah."

"Well, you know you can't have it, don't you?" Giggle on the part of the nigger, who resumes. "I like it mighty well, sah, w'en my folks we needs a heap o' things."

"Oh, you only want to get into debt, that's all you want. Haven't you got any meal?"

"Yes sah, a few."

"And bacon?"

"Umph—humph."

"Well, what do you want?"

"Well, sah, my oldis' gal need er pair shoes pow'ful bad."

"Well, why don't you go over in the field, all your family, and pick up potatoes for the potato man?" You can earn six bits a day there, if you work, and that's money you've got earned and paid for. Go to work and get your own shoes, and don't come to me for them. You've got the chance to earn the money and do it easily, and that's the best thing for you."

Exit negro, shaking his head.

"Will he go to work for the money?" I asked.

"No," said Mr. Bobo, "he'd do without the shoes It's easier Oh, these people!"

FACTS ABOUT THE BEAR CHAMPIONSHIP.

To me the pleasure of novel surroundings and new country has more charm than the actual hunting part of a trip to such country. But I suppose there are a great many who want to know all about the bear we killed, and how many Bobo ever killed, how many are left, and what is the shortest way to kill those that are left. As to what Mr. Bobo did, and as to his claim which I set up for him as champion bear hunter of the world, I will quote his words on that subject as he spoke that first night.

"When I first visited this country," said Mr. Bobo, "a friend and I came in on a hunt. We were in a dug-out, and had come down the river some distance. The overflow was on then, and all this high ridge was covered with game. We tied up and went out a little way from the boat. My friend saw a deer and killed it, and then we killed two more in a few minutes. I walked down the ridge and saw a small bear, and I shot it, and then I saw another, a very large one, and I killed it, too, and a moment after I killed a third. We hunted about fifteen minutes and then had to stop, for our boat would hold no more meat.

The next year I came here and settled, and after that the hunting was always at hand. The first week I came here I killed thirteen bear. In one hunt of five days I killed 2,100 lbs. of meat. I have killed 1,200 lbs. of bear meat in two hours and fifteen minutes.

304 BEAR IN ONE YEAR.

"In one year I killed 304 bear, 52 deer, 13 panther, myself. You could kill bear then like hogs. There was good meat, and the bear were everywhere. So far as I know, that is the largest number of bear ever killed in one year by any one man.

'How many bear I ever killed in all, I have no manner of idea, but many hundreds, surely. I have killed a many a one that I never even skinned. I have a sort of weak stomach for cleaning a bear, and if no one was around to do that, very often I would ride away and leave the bear lying.

"I never sold any meat or hides but once. There was a lot of bear hide knocking around the place, and a Jew peddler came along and offered me $3 a piece for the lot. He gathered up 180 in all, and I let him have them.

"I have killed seven bear in one day, and six the day following, and very often three or four in a day. Once I killed in three days fourteen, three and six bear. My dogs are always good, and if we jumped a bear we were about sure to get him. Felix Payne and I kept count one year, and we jumped 151 bear and killed every one before we made a lose."

Such was the environment into which the Forest and Stream luck had brought me. It began to look to me like bear.

E. HOUGH.

HERMIT WAYS.

Edwin P. Brown, the miser hermit, of Westport Harbor, Mass., is dead. He was starved and frozen to death in his lone cabin in the wild woods. He was aged about sixty-five.

I had known him ever since I was a boy, twenty-five years ago. He purchased a small lot of open land in the wild wood far from the public road, and built a stone hut about 10x12, with one window and door. He was not friendly to visitors. He worked for the farmers in the neighborhood, and almost always carried with him an old single barrel gun, which he secreted in the weeds in the field where he was working. The lock would be wrapped in a big wad of old rags to keep dry the percussion. He wore the same suit summer and winter, which was composed of probably a thousand patches of every color and filth enough to hold them together. With all of this nastiness, his premises about his cabin and the foot-paths leading to it were kept most scrupulously clean. If you should drop a match stick on the ground he would tell you to pick it up and carry it away with you, or correct you if you should spit on the grass. The grass was mowed often, and the bushes along the paths cut, with everything as neat as a lawn.

He always believed in keeping his woodpile as large as his cabin, but was sparing in the use of it. His food consisted of salted herrings, crackers, cheese, and tea. He used neither tobacco nor liquor.

He had two old guns, and sometimes used to carry them both around with him, and while not afraid of guns in his own hand, he was frightened to a crazy frenzy if some one else should shoot in his hearing. I remember one instance when he was mowing a marsh for my father, my brother and I not thinking, started in for a pistol match, using a 22 cailber, and shooting in an opposite direction. He was some three hundred yards away, and came running up to the house screaming and yelling that we had shot him. If a person should shoot at a sea fowl across the bay, and he should see the smoke before hearing the report, he would run quickly to one side to dodge the bullet which he imagined was shot at him.

One time a thunderstorm came up while he was mowing and he came running up to the house, and told us that the lightning had struck his scythe, and would have killed him had he not jumped to one side. It was not an uncommon thing to hear him in the night during a thunderstorm, bombarding the sky with his old guns as fast as he could load and fire.

In the fall he used to bury one of his old guns in the ground "to give it a rest," and dig it up in the spring and shoot a lot of gravel from it to "smooth it out in good shape."

I have seen him shoot at geese just as fast as he could, as long as he could see them in the sky, and then claim that the last one in the row was dangerously wounded and going off to die. He was careful about shooting around the beaches, if there was a vessel in sight from shore for fear of killing some one on board.

He was a hard working and honest man, but his mind was unbalanced—I hear it was caused by a love affair. He was intelligent and apparently well educated, and quite rational on some things.

He had accumulated and deposited in the saving bank, I understand, about $2,000. and had $40 in his pocket when found dead in his shanty.

He would receive no favor from any one. If he used your grindstone to sharpen his ax, he would insist on paying for it; if you would not take anything for it he would leave a few coppers on the frame. He wouldn't even accept a ride on the road with you unless he could pay you something.

It is said that he used to live in Wisconsin. No one ever knew what caused him to live such a life, and he carried the secret to the grave.

J. W. BABBITT.

DANVERS, Mass.

SPORT IN IRELAND.

Having recently occupied some space in Forest and Stream on the subject of Canadian fishing, "past and present," some brief notes may be of interest on a somewhat similar subject—viz., sport, "old and new," in the South of Ireland.

At the outset, I may say that, while I have arrived at that point of vantage in a life-time, middle age, I look back to early days, spent with fox-hounds and harriers, or with rod and gun, in Southern Ireland, as among the happiest.

It would require longer time and space than is now at my disposal, to refer to all these sports in detail. Permit me on this occasion to say a word about the gun and snipe shooting in particular. Unhappily, I can but show rapid deterioation in this sport, in the lapse of time. Oh! for those days of happy boyhood, when I could, without quitting the snipe region, leave the paternal roof-tree at early dawn, walk steadily till "dewy eve," without let or hindrance, without "smell dog" or other encumbrance, one's only care being to regulate the search for snipe, so that each bog or ravine should be taken down-wind, an essential thing in snipe-shooting. We found it of importance, too, to shoot without setters or pointers. The noise made by their movements, through long grass or marsh, would, to the watchful snipe, give timely notice of the approach of the gunner. A retriever is, however, a useful appendage to pick up duck or snipe which might fall beyond arm's length, in a deep pool or stream.

And what splendid shooting we had! Comparatively easy side shots, the snipe coming round to the wind instead of flying straight away with their peculiar well-known twist, as they would have done had we gone up-wind. Those happy days were before Captain Boycott appeared on the scene; before the sport, or want of sport, of tenant eviction on the one side, and landlord hunting on the other. Peace and plenty reigned supreme, and there was harmony and good will among all classes. Those days were also before the days of breech-loading guns, choke bores, or hammerless ejectors. There was the old song before starting for a day's snipe shooting, to ensure being properly equipped, "powder, shot, caps and wads." The word "luncheon" was at times added, but it was unnecessary; for you could not pass a friendly farm house, at the hour of noon, without being asked to partake of the family dinner, and what a sight it was! father and mother, sons and daughters, serving men and women, sitting beside the long table, with heaps of smiling "prates," and not merely "prates," and "point" —the "point" at the red herring for the head of the family, or at the flitch of bacon on the rafters but bacon and cabbage "galore," the height of good living, with milk in mugsfull to wash down the abundant dinner. After refreshment of this kind, to vary the day's amusement there was, perhaps, an invitation from the farmer to see a bit of coursing. The brace of grayhounds was brought out, and the hare, whose form had been spotted previously, was found, and showed the well-known questionable and short-lived sport,—the "hurrish hurrish, she's dead, not unlike the Chinaman's idea of toboganning, "whish! walkee back a milee."

You then proceed on your snipe beat, and you must have been a poor shot, wanting in savoir fair, or energy, or knowledge of country, if you failed to bring home ten or twelve couple of snipe, with two or three brace of wild duck, mallard or teal.

The knowledge of country is an important factor in the success of such a day's shooting —a false step on a "shaky bog" might produce disastrous results. I have vivid recollections of my experience in "shaky bogs". During a shoot with an elder brother, we saw two rival sportsmen making for the line of bogs we had in view, and, in order to cut them out, we resolved on taking a direct route through a treacherous swamp, when we came upon a questionable spot, a possibly concealed "shaky bog." Being the younger brother and the lighter weight, I was detailed to try and gain firm land beyond by soft and quick steps, from tuft to tuft of grass I had gone but a step or two when, suddenly, I found all foothold gone, and a rapid sinking of body in the slimy mire, with an equally rapid sinking of mind, as, out of reach of friendly brother's hand or gun, there was apparently no rescue from this bottomless abyss. In this extremity, a happy thought, at once acted on, took the place of dull despair. I then threw myself forward on my gun. That in itself was not enough to prevent continuous sinking, but, with the slight support of the gun, I was enabled, from that point, to carry out a series of corkscrew movements with my body, till, at last, after long and no slight exertions, I rolled out, not "clean out," of my mud bath. How I recovered my gun, memory fails to record . Of one thing I am certain, that one rival sportsman, by my mishap, secured range and wind of our pet bogs, and we returned home, one of our party to be numbered among the "unwashed" of the land.

It was shortly after this that I was stationed with my company of infantry at a small town, Kinsale, on the southern coast of Ireland. Here there was abundant scope for both woodcock and snipe shooting; but there was. however, but one proprietor of all the shooting lands which he strictly preserved. He had, unfortunately, a deadly hatred of soldiers, and invariably refused all their applications for permission to shoot on his premises. My Captain, as good a sportsman as he was a polished gentlemen, asked me to accompany him on a visit to the old landlord. Dressed in our Sunday best, we used our every argument with the old gentleman. In order to secure permission to shoot over his lands, at length, having prolonged our interview beyond reasonable limits, we obtained the eagerly wished for permission, with the clear understanding that no hares were to be shot, woodcock and snipe being, like ourselves, "birds of passage."

On the following day, it did not take long to prepare for a battue, in the woodcock coverts. After our morning parade in Barracks, we had a general parade of every man in the company at the covert side, and soon the woods resounded with "Hi cock!" Hi cock!" mark that bird!" "cock forward!" etc. Unhappily one gunner, whose nervous system was, I imagine, affected by these, to him, strange noises of the soldiery beaters, had forgotten the instructions not to shoot a hare, and, at an early stage of our proceedings, took steady aim at an old jack hare, and balled him over, amid the shouts of the beaters. This breach of contract soon came to the ears of our landlord, our permit was cancelled, we returned to barracks wiser but sadder men. and thus ended our first lesson in shooting hares without leave.

On another occasion, when stationed in another small town in the South of Ireland, Yougall, reference to the contour ordinance survey map of the country conveyed to me important information as to the whereabouts of every snipe bog within twenty miles of barracks, and many bag of snipe I filled in this country, hitherto not considered good for sport. Moreover, it was not, as a rule, necessary to obtain a permit, the snipe bogs not being preserved. In one of my "walks abroad," in "breaking new ground," I had just opened fire in a perfect bit of country, nearly opposite the Manor House of the locality, when the loud voice of the keeper warned me off those lands which, he informed me, were strictly preserved. In soft undertone, however, quite unlike his previously commanding voice, he requested me not to mind him. "Go on shooting, your honor. There is a very likely spot just in front of you," and so there was. Here I filled my bag, and half a crown rewarded the faithful (?) keeper.

Such occasions as this, even at that early period, in shooting the country at one's own sweet will, with a contour map as one's only guide, we were, I admit, liable to find ourselves on a bit of pet preserved land.

I cannot easily forget one occasion when, with a keen and kindly sportsman, whose only fault was his extreme deafness, I was beating down wind on a perfect piece of snipe ground, with no ill-will in my heart toward man, woman, or child. A bird got up in my direct front, and flew toward my friend, who was on my left. I fired, and hit the bird, falling in an adjoining field, the fence of which was the boundary of a property which was strictly preserved. My friend, with his accustomed courtesy (he is the most courteous of men, the most gentle of gentlemen), at once got over the fence to pick up for me my bird, while I was busy with "powder, shot, caps, and wads," in going through the tedious loading motions. Before he had picked up the dead bird, an angry landlord appeared on the scene, and a volley of strong adjectives, apparently gathered from the four quarters of the globe, without the aid of dictionary, and with no choice diction,

was hurled at my unoffending friend, who, happily, owing to his deafness, heard not a word, merely saying, in reply to the furious landlord, who was now calling for our names, in order to institute legal proceedings—"I beg your pardon, sir." Having given the enraged landlord ample opportunity to explode and exhaust his sufficient supply of strong language, my friend, who had retained his habitual coolness, in happy ignorance of cause or probable effect of the strange scene, quietly picked up my snipe, and, having rejoined me, we proceeded in our shoot in our unpreserved route, amid a "feu de joie" of adjectives.

I could go on and fill many a page with accounts of mixed bags on the grouse mountains and moors of Southern Ireland, where both pointers and setters are as necessary as their absence is desirable in a snipe bog, where we carefully worked every inch of ground, and where brother vied with brother in scoring high.

In the evening count of game on the cottage floor we with pride laid out grouse, partridge, snipe, duck, with an occasional hare, the result of our day's sport with dog and gun; and in those happy days tenant vied with tenant in showing the young landlord and his friends the spots where sport could best be obtained.

How sad the contrast between past and present, not only as regards the relations between landlord and tenant, but as to quantity and quality of sport. Legislation has been so busy with land improvement act and landlord and tenant act, that snipe and wild duck, grouse and partridge, have been improved off the face of the land; and Boycott and Boycotting have been so busy that foxhounds and harriers have only the half-hearted support of the community.

May we not hope that there is yet a good time coming for dear old Ireland in its every industry and its every sport.

MICMAC.

THE CAMP OF NINETY-FOUR.

Although Western New York was at one time a paradise for game, the time has long gone by when the deer and turkeys were computed by comparison with the leaves on the trees, and the man who would make a bag these days must know the country thoroughly and work hard. Likewise, Western New York has many pleasant spots toward which the toil-worn worker may direct his steps in vacation; but he who would camp where the "madding crowd" does not interfere with his going around with no wearing apparel but a pair of pants and one suspender, must hustle around right smart, or he won't find it.

One such spot do I know of, and there have we camped for the past seven years, each succeeding season adding more pictures to memory's wall, wherewith to beguile our winter evenings and strengthen our resolve to return next year. And it is a lovely spot. Where the blue waters of old Ontario spend their time trying to lick the beach, midway between two small lake shore villages, lies a forest stretching for half a mile along the shore, and for an eighth of a mile inland, divided about midway by a tributary of the lake. In summer this creek is closed by a sandbar across the mouth, and there is no current. It is simply a lagoon—an arm of the lake, full of weeds, and rushes, and pond lillies. Around this creek the trees stand like sentinels; here a mighty chestnut, there a pine, or a dead hemlock rearing its black and leafless branches against the sky. The whole effect is of solemn beauty. Up around the bend, the effect is livened by clumps of birches, standing on the steep banks, back of the deep-green rushes. On the whole, it is very pretty, and is an elegant place to go after breakfast, and kick yourself for the naughty words you said when you dropped your pipe in the oatmeal.

The season of ninety-four was drawing on toward September, when we found ourselves in camp once more. The party consisted of N. N., the Deacon, his Brother Bill, and myself.

There is great charm in getting under a canvas roof again, and consequently it was a very merry party that stood on the shores of the "Beautiful Water" when we first arrived in camp. Even the dog was glad—and we (i. e., the dog and I) didn't even fight with each other to see who was going to be pillow for the night. One of us was always pillow, part of the time, anyway. When we'd go to sleep, the dog would be pillow; but when we woke up, I generally found that there had been mutiny during the night, and that I was now filling the position of combined feather bed and pillow. Then the dog and I would carry on a little conversation with ourselves, and the dog would get behind a trunk and put her paws in her ears.

The days in camp pass along more than smoothly. You begin to get fat and feel your oats, and you don't care whether school keeps or not. Sometimes you take your gun and go after woodcock, which you don't get, owing to a peculiar habit this bird has of flying in a different direction from that taken by the shot. Then again, on a calm evening, when the sun is setting, and you see the shiners jumping out of the water, you think there must be bass out there; so you get out your fishing-rod, bait with a piece of bologna, and proceed to fool around in the boat, pretending to fish, while some of the rest of the gang get supper. One day Deacon and I did catch a fish. Poor fellow. He'd been disappointed in love, probably, and wished to commit suicide. We hit him with the flat of an oar-blade, and the subsequent proceedings interested him no more.

After supper we swing the kettle—that dear old kettle. Some man ought to write an "Old Oaken Bucket" song about it—we swing the kettle off the fire, and pile on more wood. Then we light our pipes, and settle down to solid comfort. Stretched on the ground, watching the sparks which flew from the fire into the black void from whence no spark returns, beyond where the nearest bushes toss phantom arms in the fire-light, I conjured up fancies of the time when all this country was an unbroken wilderness, when, instead of the barges which now plow the waters of old Ontario, no craft but those of birch-bark had ever rested on its bosom; when the only sounds that disturbed the quiet of the forest were the cries of wild animals and the shouts of the Indian; when the Ongweehonwee danced their war-dance, celebrated their victories, and scalped their Algonquin enemies with reckless abandon. Musing thus on the past, I am suddenly made aware of a stir on the other side of the fire, and, looking up, I see that the Deacon has prepared himself for a speech. He turns a round-eyed, good-natured face, imported direct from Germany and guaranteed genuine, upon the rest of the crowd, and with the air of a man bestowing a wealth of thought upon some poor individual, he says, "Just think, boys! Perhaps this very log is one upon which old Pathfinder sat, when he held his council with Ching-ach-gook!"

"Yes," responds the unimaginative N——, with a slight tinge of sarcasm. "Or perhaps it's the one old Christopher Columbus brought over from Spain, to build a shanty with!"

This remark meets with the approval of the gang, but the Deacon's expression changes to one which might be called a "sardonic grin," and "Look here, you," he says. "What d'ye mean by insulting a gentleman? Don't you know that I'm the only man in the gang that you can't insult without getting hurt? You've got to fight; see?"

"All right, Julius," says N——, calmly. "Any time you wish to meet me in combat, you will find me right here, with my sleeves rolled up and spit on both my hands!"

At which the Deacon utters his well-known warwhoop, and advances upon the enemy. Not to be outdone, Bill and I likewise sail in, and for the next few minutes the air is full of flying blankets, pillows, and such-like weapons. The result is that we have to turn to and make the beds again, and eating everything eatable around camp, we turn in for the night, lulled to sleep by the monotone of the surf on the beach, and the wind in the trees. Bill attends to his last duty, which is that of adjusting his patent snorer, with which he proceeds to say nothing and saw wood.

Happy days! They come but once a year, but when they do we try and make up for lost time. Our camp-kit is all ready for next season, and our dishes still repose in a blissful state of uncleanliness. May they never be otherwise!

MAC.

Natural History.

WINTERING BOB WHITE.

Editor Forest and Stream:—Several times I have noticed articles in Forest and Stream on the propagation of quail.

I am prompted to give you a minute description of my experience, hoping that it may enable some of my brother sportsmen to have good shooting almost at their doors, if they live in a quail section of country. The expense and trouble are small.

About three years ago I bought eighteen Southern quail, eight cocks and ten hens. Their cost, delivered, was about five dollars.

I confined them in a box four feet square and ten inches high. The top of it was taken out. A strip, one inch wide, was sawed out of one side one inch above the bottom. This slot was three feet long, running from one corner to within a foot of the other corner. Through this slot the birds were watched and fed. To afford a water supply, an ordinary tin bread-pan was inserted in an aperture in the side of the box near the ground, the aperture being of the correct size for the pan to fit in nicely and securely.

To furnish a supply of sand and gravel, a board two inches wide and long enough to reach from side to side, was nailed across, one end being at the end of the slot described hereinbefore, thus fencing off a space one foot wide and four feet long. A small auger hole in the side, just over this space, afforded means for pouring in fresh sand, which was supplied through a funnel every few days. A piece of pasteboard was tacked over the hole when it was not in use, to prevent the birds from making frantic efforts to escape. They will endeavor to go through any opening above them, but not below them. Then the box was covered with cheese-cloth drawn taut and tacked securely around the edges. This covering gave plenty of light and air, and kept the birds from dashing their brains out in their struggles to escape whenever the cage was approached. They always try to fly up.

They were fed regularly twice a day, morning and night. Their diet was varied—cracked corn, wheat, buckwheat, and two or three times a week, cabbage, of which they are very fond. Watercress or anything green obtainable was also given them. I would sometimes slip in a large sheet of pasteboard covered with hayseed, and they would scratch and pick in it as if on their native heath. They were kept well supplied with sand and fresh water. I was particular to wash clean the watering pan every morning. The cage was kept in a large, airy, unused room where rats and cats could not enter. The temperature was kept at about 50 degrees, rarely below 32 degrees. Once in about every three or four weeks the cage was well cleaned and aired.

A small box, covered with burlap, having a sliding door at the bottom is used in removing the birds from the cage. The sliding door of the small box is placed against a similar door in the cage, the birds are driven into the small box, and thus the cage can be cleaned when necessary.

Some people may consider this method a great deal of trouble, but let them try it once, and if they have any sporting blood in their veins, they will soon become so interested that the care will become a pastime. At least, it was so with me.

As a result of my efforts, I had, on April 1, sixteen fine birds, two hens having died. Arrangements had been previously made with a farmer for the shooting privileges of his farm, about one hundred acres of which was comparatively dry bog meadow with plenty of cover. There were also in it two wooded islands of from five to ten acres each, surrounded by fertile grain fields. On one of these islands the cage was placed one night after dark in early April. A good supply of food was scattered about it, and the sliding door was drawn. Bright and early the next morning the quail walked quietly out into the woods. There was nothing to disturb or frighten them, and they forthwith selected that spot as their home.

Food was kept on the grounds, and they could be flushed within a short distance of it almost any day before they mated. Even then, they seemed to depend in part on securing their food from the supply furnished.

We observed that they did not pair off so early as our native birds.

There were hatched five or six bevies from these birds that season. We shot part of them. The next season they were more abundant and more were shot. Last fall "the woods were full of them," so to speak. As late as last Thanksgiving Day we flushed at least seventy-five birds within the limits of our domain.

Do not think that we left them to shift for themselves during the winter. In warm, sunny spots, with Southern exposures, on each of the islands, a low hovel or two was built by driving crotches in the ground. Palings were laid across and covered with straw, then brush was laid on to keep the straw from blowing away. In these little "quail houses," gravel was put and a good supply of grain was kept in them all winter. The quail soon discovered the shelter, and fed there regularly every day. When the weather turned very cool and the snow lay deep over the surrounding country, they fed and remained under these protecting covers nearly all the time. On two occasions, after a severe snowstorm, I blessed the thoughtful farmer who visited the covers and found the birds completely snowed in. Of course, they would have perished if he had not shoveled them out.

To repay us for these little attentions, we have each spring plenty of good strong birds for seed. From the little nucleus of sixteen quail, we not only get plenty of shooting for ourselves, but we have stocked the whole surrounding country. I have shot many birds, which I am satisfied were from our lot, at least two miles away from the original habitat.

One peculiarity I have observed: They have adapted themselves to this climate, and each succeeding season they nest nearer to the nesting time of our native birds. They grow to be much larger and finer than the original Southern stock.

At some future time I may give you a description of some of my pleasant and successful outings among them.

WAWAYANDA.

ORANGE COUNTY, New York.

Editor Forest and Stream;—Out of six pair of quail which I let out in April last, and which belonged to our gun club, there are left six bevies certain. They have been fed by a number of different persons here in town. The dozen I kept laid three nests of eggs, thirteen to seventeen in a nest. None of them hatched, so I let the birds out. I do not think they will thrive or propagate when shut up. But the law protects quail this season, which will make a big difference in our quail shooting next season, if the winter is not too severe.

C. F. ROBBINS, Fish and Game Warden.

OXFORD, Mass.

WILDFOWL BREEDING GROUNDS.

Editor Forest and Stream:—In your issue of Jan. 26 is an interesting article by "Coureur des Bois" upon the canvas-back duck supply. In the conclusion arrived at—viz., "that the time limit of the extermination of the canvas-back supply of the United States may be indefinitely extended," I am inclined to agree with the writer, so far as the Canadian conditions have to do with that supply.

There is, however, one statement made by "Coureur des Bois" that is inaccurate. One would infer from the general tenor of his article that the canvas-back did not breed within the line of settlement in Canada. Seton in his pamphlet upon the birds of Manitoba and the North West Territories quotes Hines as saying that the canvas-back breeds in the vicinity of Lake Manitoba. Be that as it may, I know that it breeds in Muskago Lake at the head of the Qu'Appelle chain. Last summer I also saw an occasional canvas-back in the great Cumberland Marsh; but as I was there in the breeding season, and kept in the main channels of the river, I naturally did not see many ducks of any kind, as at that time they remain very quiet and do not fly much.

Reverting to the Qu'Appelle Lakes again—in the spring the first ducks to arrive are the golden-eyes and the large mergansers, followed very closely by bluebills. Then come the mallards, redheads, widgeons, gadwalls, spoonbills, etc., and, nearly last of all, the canvas-backs. Of course, I am now writing only in general terms of the arrival of the main flight of each species. I have seen several hundreds of canvas-backs upon the surface of Wyosung Lake, between May 1 and 15, busily feeding upon the tender roots of certain water plants, which they brought up from the bottom, or playing, or courting. By this time all the golden-eyes and most of the bluebills and other ducks have gone farther north, to be followed about May 15 by the great body of the canvas-backs. Every year, however, a number of the latter breed and rear their young in Muskago Lake, the next above Wyosung Lake. In '83 and '84 I saw a number of canvas-backs breeding in the sloughs and small lakes upon the prairie north of the Qu'Appelle River, but since then most of the water has disappeared from our prairies, and with it the ducks. Jack Leader, who first came to this country in '79 as a member of the N. W. Mounted Police, and who is a shooter of considerable repute, told me a few days since that he has seen canvas-backs breeding in the sloughs and lakes in many places between here and the international boundary, but he never saw one west of the Cypress Hills.

The Indians and their squaws were in the habit of going about in the lakes and sloughs in Assiniboia, and with their dogs locating the nests of the ducks, or chasing the flappers out of the long grass. The latter they clubbed to death, and the eggs they gathered and literally carted them away in thousands. These they used for food for themselves. No eggs were sold, however, for the practice of gathering the eggs and killing the flappers was discountenanced by the white people. Last year an Act of the Dominion Parliament came into force, which made the Indians south of the North Saskatchewan River and certain bands north of it amenable to the Territorial game laws, which prohibit the taking of eggs and the killing of game in certain seasons. The result has been that many thousands of our ducks have been allowed to raise their broods, that a couple of years ago would never have got farther than the laying of the eggs.

Spring duck shooting is still allowed by law here, and great numbers of, principally mallards and bluebills are murdered every year. Of course, the most of them are never used as food for the reason that worn out by their long flight, and from other causes, they are miserably

poor and unfit for food. Those in the best condition are picked out, and the rest are permitted to go to waste.

When the ducks first come there is very little open water, and the shooters have every advantage over the ducks, and as the bluebills and other ducks, at that season of the year, are possessed of an insane desire to get alongside of anything in the water, be it made of wood, tin, or rubber, that has the slightest resemblance to a duck, great bags are made. It is otherwise with the canvas-backs. By the time they arrive there is plenty of open water; they are more wary and not so eager to decoy; and, as a result, fewer birds are secured, albeit they are at this time of the year the best ducks we have. This does not suit the game hog, and, as a rule, the canvas-back escapes fairly well. F. C. C.

FORT QU'APPELLE, Assa., N. W. T.

AN ANGLER'S SNAKE NOTES.

I have knocked around fishing and camping for a good many years, mostly in West Virginia, and have hardly ever started on one of my trips without some one cautioning me about snakes. From my experience with snakes, I don't think the camper has anything to fear from them, as I have never known of one of any species getting into our tent, and I have seen but very few in the vicinity of our camps. Once when contemplating a trip to the Gauly Mountains and River in West Virginia, I was strongly advised not to go into that country, as it was alive with rattlesnakes. One friend told me that when he was engaged in running a line for the C. & O. R. R. through these mountains, he had found rattlers so thick that you could smell them all the time. I was not deterred, however, and spent ten days hunting in these mountains, and rambling along the banks of the river without seeing one snake of any kind. I told our guide, Andy, that I would give him fifty cents if he would show me a live rattler, and the way he worked to earn it was astonishing, but without success. He poked around among laurel thickets, and the loose bowlders in sunny spots, hunting assiduously in places I would not have gone into for anything, and I am not afraid of snakes. In all my tramps through seven of the wildest counties of West Virginia I never saw a live rattlesnake, and not more than half a dozen that had been killed.

The only live wild rattler I ever did see was in Massachusetts when a boy. I was driving from West Newton to Northboro, and got out to ease the horse up a steep hill. Seeing some tiger lilies growing in the woods near the road, I went in to gather them, when a strange buzzing sound greeted my ears, and an enormous snake moved near my feet. I was much frightened, but did not know the danger I was in. The ladies in the carriage screamed for me to get in, and bade me drive to a farm house near by. From there the alarm was given, and a party of men hunted the snake, which they soon found, and killed.

A rattlesnake got into a house where I was staying one summer on the south branch of the Potomac in West Virginia. The lady of the house went into the room where her children slept, to quiet one of them who was crying, and who told her mother there was a rat in the room. She called her husband to bring a light, and discovered a large rattlesnake coiled in one of the corners. It was killed, and an investigation showed that it must have come in through a knot-hole in one of the floor boards, there being no cellar under the house.

I have run across a great many copperheads and black snakes (and, of course, water snakes, but they don't count), and from what I know of the copperheads I should think it much more dangerous than the rattlesnake, for it gives no warning of its presence, will not run away from you, and its bite is very venomous. One day as I left the shore of a river to fish, I picked up a small tin box, by running my fingers through the slats and deposited it in the boat. Arrived at the fishing grounds I picked the box up in the same way, and put it overboard; as soon as it touched the water a copperhead of about fifteen inches came out of it, and swam toward the boat, and was killed with an oar. Why it did not strike my hand is a mystery to me, and can only be accounted for by the fact that it was either numbed by the cold, or had not room enough inside the box to coil.

One day while gathering peaches in an orchard in West Virginia, I was accompanied by a barefoot urchin four years old. A particularly luscious peach was knocked down, and as I watched it fall I saw a movement in the grass, just as the boy jumped to grab the peach. I grabbed him, drew him back, and carefully looking saw an enormous copperhead coiled alongside the peach. That was a narrow escape for that boy.

The greatest number of snakes I ever saw on any trip was during a canoe run of one hundred and ten miles down the Elk River, West Virginia. Water snakes abounded, and blackheads and copperheads were numerous along the shores. Our guide shot a large copperhead through the tail, and captured it. He tied it with some leather woodbark to a bush near the tent to show it to us when we returned from fishing in the afternoon. It was terribly angry and savage, striking at us viciously, springing as far as its tether would permit. It was an ugly customer, and we dispatched it at once.

Almost every guide and farmer you meet in West Virginia has some marvelous snake stories to relate, but from my own observations I think many of the fearful encounters and miraculous escapes from death from snake-bites which they tell of are either inventions of their own brains, or are exaggerations which they have told so often that they believe them to be true themselves. Several years ago on the shore of Lake Roland, near this city, there was a very large water snake, which had his den in some big rocks. He was very shy, and would hide himself immediately on the approach of any one, as many had tried to kill him. I was out one morning at daylight fishing for black bass, and noticed something strange looking waving to and fro at the water's edge, quite near these rocks. My curiosity was enough excited for me to leave my fishing to investigate. When within a few feet of the object I made it out to be the tail of a good sized catfish, flapping slowly backward and forward. I got a long stout pole, and brought it down with all my force, where I thought it would do the most good, supposing it was a snapping turtle that had the fish. But to my surprise I found it was that big snake, which had tried to make his breakfast of the catfish, and had swallowed it down to its fins. I hauled the snake out on the brink, and released the fish, which on being put back into the lake swam feebly away.

EDWARD A. ROBINSON.

SOME PENNSYLVANIA MAMMALS.

In Part III. of the Proceedings of the Academy of Natural Sciences of Philadelphia for 1894, Mr. Samuel M. Rhoads has an interesting paper, entitled "Notes on the Mammals of Monroe and Pike Counties, Pennsylvania."

These two counties are sparsely inhabited, and some large mammals still exist there. Much of the region is elevated, lying from 1,000 to 1,500 feet above the sea level. The land is barren and stony, and has long since been denuded of its original forests of oak, pine and hemlock, which have been replaced in large measure by scrub-oaks and underbrush. The fauna and flora combine features of the Alleghanian, Canadian, and Carolinian regions.

Mr. Rhoads states that in spite of the immense range and the sparsely populated condition of the country, deer are becoming very scarce. Mr. Eilenberger, an old hunter, attributes this to continual destruction by residents at all seasons of the year, and to the forest fires, which often destroy newly-born fawns. This gentleman believes that a close season of three years and a law to prevent the export of deer for sale, would quickly and permanently restock the Pocomo wilderness with deer.

Mr. Rhoads expresses the opinion that the wapiti or elk was probably never so numerous in Pike and Monroe counties as in the Central Allegheny Mountains, but they were found here in some numbers, and the last capture in Pike County was not later than 1840 or 1845.

It will be remembered that remains of the bison and caribou were found in Hartman's Cave near Stroudsburg, and were described and figured by Dr. Joseph Leidy in the Pennsylvania Geological Report for 1887.

Old residents of this region agree in the belief that the beaver was exterminated in Northwestern Pennsylvania nearly fifty years ago, but their dams and meadows are still pointed out at various points along the Bush Kill and Dingman's Creek.

The black rat, though exterminated in most parts of Pennsylvania by its stronger relative, the Norway rat, still holds undisputed possession of the barn and outhouses of the more remote districts.

The Canada porcupine is almost, if not quite, exterminated on the Pocomo Plateau, and has not been seen by local hunters for several years.

Mr. Eilenberger assures Mr. Rhoads that a panther has not been killed in Pike County for thirty years, notwithstanding the frequent hair raising accounts of destruction by this animal which come from that locality. As this is the apparent starting-place of the bear and panther stories which occupy so large a portion of the Sunday Sun, Mr. Eilenberger's statement has a decided local interest. The wolf is reported to have been extinct in this region for forty years. The bear still exists, but the killing of an individual is a rare and remarkable event. The mink is still abundant, but the martin has been extinct for many years and nothing appears to be known by the inhabitants of the fisher. On the other hand, the otter is still moderately abundant, as are also the skunk and the raccoon.

Mr. Rhoad's paper mentions forty-five species, and is one of unusual interest.

Sea and River Fishing.

SOME ONE PLEASE TELL.

I am very fond of both rod and gun, and devote as much time as I can spare to the streams and woods in my immediate vicinity, but both fish and game are scarce. I am not much of a hunter and earn all I get. I have kept a little diary of my different outings the past season, and find that I was out 29 times after fish, the total catch amounting to 266 trout, 79 pickerel, and 1 bass. In hunting I have been out 21 times, and in all got 7 partridges, 2 grey squirrels, and 1 mink. The results must seem very small to many of your readers, but I take more pleasure in bringing home two dozen fair sized trout than if I got a hundred, and in hunting, when I can successfully still-hunt a partridge, getting him sitting, running or flying, I take more pleasure than if I shot a dozen over a dog.

I have been trying to follow in the footsteps of brother sportsmen by fishing with rod and reel in place of the 18-foot pole that I have used from a boy up to within the past two years, but have very often seen my neighbors pulling them in while I was trying with light tackle to keep a pickerel out of the weeds and finally losing him. I have also wasted a good deal of powder and shot on flying partridges; and so far have only been able to get one on the wing, but have hopes of better success some day when I get the hang of it. Last year I did not get a single duck, although several flocks hatched and were raised here; but they were nearly all shot before open season, in fact a farmer told me that on Aug. 1 he saw two men who had been shooting on the river and bagged 20 young ducks. I could not get sufficient evidence to make a case, but I intend to see that there is very little illegal shooting next season.

I am tempted to tell you of my first experience with rod and reel. It was two years ago when I got a nice little 8-ounce rod, some Natchaug silk line with a fine reel, and in a little canoe only large enough for one I tried the river one afternoon.

The wind was blowing quite fresh, but after getting about two miles up the river, finding I could not cast from the canoe I landed and tried from the bank.

At first cast I swung the hook behind me so as to throw well out in the river, but the hook did not come back worth a cent. I thought I must have too much line out, so reeled up a bit and tried again, this time I succeeded in sending the bait about two feet from the bank among the weeds. The hook caught there, and in pulling it off it came back with a spring and succeeded in winding the line about fourteen times around the pole. I got this disentangled, and tried again, giving myself a little more line but somehow the wind caught it and wound the line again around the pole. I got it straightened out once more, and thought it would be better to cast with the wind. This time I landed the bait about ten feet out on the water, and then tried to skip it along for pickerel. There seemed to be too much spring in the rod, as the bait would jump a foot or so above the water; and at the next try, in place of jumping I would find the line wound around the end of the pole. About that time I began to think that I would remain a "yanker fish-hog," or any of the numerous names found in Forest and Stream, to designate those who fish for fish; still I had invested about fifteen dollars in a lay out and hated to throw it away.

I fooled with it for some time but did not get a bite.

I wanted awfully to feel the limber rod bend, the reel sing, and all the other pleasures that we read about. I wanted, in fact, to get any kind of a fish on that hook so I would know how it would feel with so light a rod. I therefore dug up a couple of worms, and knowing that bull-pouts were plenty I determined to catch one of them.

I cast in bravely, after a little felt a bite, and remembering what I had read in Forest and Stream I gave him some line, say a couple of yards. Waiting till I thought he would be well cooled, I gave a quick gentle pull to plant the hook, but found that there was either too much line out, or he had come up near the bank to see what kind of fisherman I was. Anyway I did not seem to pull anything but slack line. Forgetting about the reel, and seeing the pole was not long enough to raise the hook from the water, I moved down the bank a few feet and tried again. This time the rod bent, and I felt I had hooked him. I had so much line out that I could not handle him, and just then I thought of the reel, but feeling a gentle tug I thought I would leave the line out, as he might want it when he made his "mad rush," when he "churned the waters, put on speed," etc., but he didn't seem to be built that way.

I then walked back from the bank a bit, so as to prick him up a bit and start him off on his "mad career," thinking that when he started I could run down toward the bank as fast as he could swim, and thus give him sufficient line to prevent his breaking away.

I felt he was still on, but nary a rush did he make.

I was doing some pretty hard thinking about the advocates of rod and reel, and concluded I would wind up sufficient line so that I could at least bring him to the surface and see what he looked like, even if then he broke away, as it was in my mind that I had to play him about fifteen or twenty minutes, drown him, and then pull him up the bank, as I had no landing net.

I therefore reeled up, getting the line into a snag on the reel; but after getting sufficient wound up I stepped back and prepared to run again when he started. I pulled up, he was still on, I worked him around to what I thought was a good position, and cautiously looked over, afraid he might see me and break away, my heart beating quite rapidly; in fact, I seemed quite excited, but imagine my disgust when I found a shiner 3 1-2 inches long that I had been working over for about ten minutes.

However, it was a beginning. I thought there still might be some hope. As the wind was blowing hard I determined to go up the river to the woods, get into some quiet bay and taking the shiner for bait try the pickerel again. Getting into the canoe I soon struck some good grounds and tried a cast, but not being able to stand up in the canoe, and the wind blowing it around as soon as I let go the paddle, my line wound around the pole, I got all tangled up and had to go ashore to get it untangled. While at work at this I managed to step on the shiner and spoiled my bait.

I had a good pork rind in my pocket, and made up my mind I would get so far back into the woods that the wind would not bother me before I cast again. I soon reached another place that I knew always yielded fish, and swinging the bait behind me prepared to make a good cast. I was not in luck. As the bait swung up the wind did catch it, and by the time the pole got back its swing the hook had caught in a branch over my head. I got out, climbed a small tree, cut off an inch limb with a small pocket-knife, recovered my hook and went further up.

It was then about 6 P. M., the wind was going down, and I soon struck a small bay that was perfectly calm. I made up my mind that I would here make a last effort. I paddled noiselessly up, going very slowly, and making hardly a ripple, as I wanted the canoe to stop in a certain spot, and having no anchor or anything to hitch to I did not want to make a noise stopping the canoe as I was afraid I could not cast far enough if I disturbed the fish. I finally reached there, took up my pole, shook the line out, and instead of swinging it behind me I swung it sideways, and cast back the other side of me. The bait seemed to barely touch the water about 12 or 15 feet away, when there was a splash, a very perceptible, in fact forcible yank, and the line started toward me, making straight for under the boat. I was between the fish and deep water. I thought he must be a big one, and would certainly prove the virtue of the tackle.

This all occurred in the space of about three seconds. The splash so unexpected surprised me and caused me to make an involuntary start which made the canoe rock. The fish was going under and would surely break the rod unless I could get it around the canoe before he commenced to pull it under, and in endeavoring to do this I upset the canoe. At the same instant, just as I was dipping under the water I noticed a big muskrat make a plunge about where my pickerel should have been. He seemed to scare the pickerel, as although I clung to the rod, there was a great pull, and the reel did sing, you bet. I let her sing as I had other business on hand. I was in about four feet of water, and steadily sinking in the soft mud. I wanted to play that fish, secure my paddle which was floating near, shove the canoe to the bank, put my watch into my upper vest pocket to get it out of the wet, and to get into more shallow water where I could work better, and wanted to do it all at once. I saw I could not accomplish it all, so I just put up the watch and turned to the reel, noticing that it was running out very fast. The fish seemed to be near the surface, as he left a ripple, but was already in deep water and making for the other shore, while I had only 75 yards of line on, and knew I had to check him at once or he would break away with all the line, and possibly might

yank the reel out of its seat as it did not seem to fit very well.

I caught the reel with my other hand, there was a great yank and a great commotion on the water. I involuntarily made a step forward, and in the same instant saw I had hooked a muskrat. But my step had taken me into deeper water, into a hole. I went under, and as I was going down the question rushed through my brain: "Had I better hang on, take the chances of losing line and reel, or the rat breaking away, or let go the pole and take the chances of the rat making the other shore, climbing the bank, getting the line wound around some tree or stick and thus breaking away or breaking only a piece of the line?

Under these circumstances, what should I have done?

J. BRUCE PAYNE.

OREGON NOTES.

As cumulative proof of the truth of the old saw that "a man that is born to be hung will never drown," let me relate the following incident: Last Saturday a party of us hunters chartered a small steamer, the Cygnet, for a trip down the Columbia. Among the party was my good friend Fred Swift, of the well-known hardware house of Hogue & Swift. As the sequel will show the main interest of this story will attach to the dress and paraphernalia of my friend Swift during the memorable performance somewhere in the "small hours ayant the morn" of Feb. 4, so I will describe them in detail as far as my knowledge will permit: A suit of heavy woollen underwear, a sweater, two pair of trousers, an undercoat, a leather overcoat, a shell-vest with forty loaded shotgun cartridges in it, a belt with about fifty revolver cartridges in it, a Colt six-shooter, frontier model, a large hunting-knife with scabbard for both revolver and knife, watch and chain, hat, woollen stockings with Arctic over-socks and hip rubber boots pulled up. There were other items of less importance, such as a dozen or more big silver dollars, match-box, comb, knife, keys, etc. About four o'clock in the morning, when it was darkest and the fog thick enough to slice with a cheese knife there came a cry of "man overboard!" It was Swift, of course. The steamer was stopped and the engines reversed, and in less than five minutes we had Swift with all his paraphernalia back aboard the boat except his hat. The waters of the Columbia are very cold at this season of the year, and particularly at that time in the morning, and it must be a matter of surprise to all old hunters how a little fellow of only a hundred and thirty pounds weight could keep himself above water for so long a time, particularly with such a load. He certainly manifested wonderful powers of endurance, and, withal must be an excellent swimmer. While stripping and congratulating him, Winters remarked: "Swift, I always thought you were a chappie sort of a sport, but there isn't another man in the State of Oregon that could have got out of that scrape alive," and we all concurred in the sentiment.

Swift and I were put off at Knapp's Landing, and the night was so dark and the fog so dense that we got lost in less than a minute and wandered around for an hour or more before we found the cabin. But Swift was the first man to have his boat and decoys out, and was ready for business with the ducks before the first streak of day, and stayed right by it all day. In the language of the Irish philosopher: "I must respect his pluck, but condemn his judgment," for such cumbersome loads as above described are unnecessary on such trips and are certainly dangerous.

J. Roberts Mead and Harry Beal went over to the Columbia yesterday for salmon trout, and fished all day with salmon eggs. There is nothing very remarkable about all this, if we will for the time forget the oft-repeated declarations of both these gentlemen that they would never, under any circumstances, fish with anything but the fly.

But there was one rather remarkable incident connected with the trip which I desire to tell readers of Forest and Stream about. Mr. Beal hooked, played, and with the assistance of Mr. Mead, properly landed a steel-head salmon (which Professor Jordan declares is a trout), which was thirty inches long and weighed nine and three-quarters pounds. And there would be nothing particularly remarkable about that if we did not consider the circumstances and tackle, for we have all hooked, played, and properly landed hundreds of steel-heads as large or larger. But Mr. Beal hooked and landed this fish with a No. 6 S. Allcock & Co. trout-hook attached to an ordinary trout line and rod. The fish had plenty of room for operations, for the Columbia is considerably more than a mile wide at this part, and all in all it was a most creditable performance on the part of these gentlemen.

Speaking of salmon reminds me of a good one on Mead, and I guess that I will have to tell it, even at the risk of losing the gentleman's friendship. It won't do to spoil so good a story for friendship's sake. He had been up to the falls of the Willamette fishing for salmon, and, in consequence of being a little too previous, the cold weather, water, and various other good and sufficient reasons failed to take a single salmon. Mr. Moore with his dip-net was there scooping up bushels of them, and not liking to see Mead go home empty handed gave him a couple of fine ones. Now, although Mead is one of the most honest, truthful and upright anglers I have ever met, he could not resist the temptation to claim these as his catch when he got home. Joe Paquet, one of our oldest and most successful salmon fishermen, could hardly believe that the salmon were taking the spoon so early, but his dreams were troubled that night and so the next day found him at the falls. Of course, he never got a strike, and while resting at the resort near the falls took occasion to mention to the proprietor that it was very strange that Mead could come up there and catch two fine salmon while he, the most expert of all salmon fishermen, could not even get a nibble. Then the resort man gave the whole business away, and Joe came home well satisfied of two things—viz.: the salmon were not yet biting, and secondly that the man whom he had always regarded as the personification of truth and veracity was as great a liar as any of us old hands at the business. But he said nothing. Shortly afterward Mead and I went up for more salmon, and, like Joe, we stopped in at the resort to rest. The proprietor did not know Mead from Job's off ox, and he knew, of course, that I would not lie, so he opened up on the yahoo that had been up there recently and gone back to Portland with a lie in his mouth about the salmon biting, and added: "Why, Moore gave the miserable cuss the only two fish he took home, and there was no necessity of his lying about such a little thing." The resort man had a great deal to say about the matter, and was very free in expressing his opinions about such contemptible creatures, that would rather lie when the truth would do better. Mead never said a word, then, but his face got very red, and when we came out he acknowledged the corn to me, and declared that it was the first time he had ever lied about fish, and, God helping him, it would be the last. I believe that Mead has sacredly kept that promise. He has so far as my knowledge goes.

S. H. GREENE.

PORTLAND, Oregon.

ANGLING NOTES.

Feeding Black Bass.

The voracity and pugnacity of the back bass have been favorite themes with fishermen for years, but the charges brought against the fish in these respects have been general rather than specific, as a rule, and doubtless many charges have been brought without foundation in fact. The last report of the United States Fish Commissioner for 1892, just at hand, adds to our knowledge of the qualities referred to in the black bass.

Generally new waters are stocked, or old waters restocked, by the introduction of adult black bass, but the United States has inaugurated the cultivation of young bass, not, however, as the young of the salmonidae are cultivated, but by the selection and separation of adult bass at spawning time, and the removal of the young after they are hatched naturally. Of a lot of black bass sent on to Washington from the Neosha station many died shortly after arrival, and an examination disclosed the fact that the fish had been injured by close contact in the cans, broken points of fins being found in their bodies, these wounds causing inflammation and death.

Fifteen bass were sent to Wytheville station where they spawned, and as soon as "the young were seen for the first time their innate voracity was shown by their attacks on tadpoles and other animal life that came within their reach."

At first food was furnished in the shape of frog and toad spawn, later in that of chopped and live fish, twenty to thirty pounds being supplied to them daily. Their appetite was unappeasable, apparently; the more they were fed the hungrier they seemed to become.

As they grew older their voracity knew no bounds, and in the absence of other food they hesitated not to devour one another. The report does not say how many of the bass were females, but say that eight were of that sex, and it must be assumed that only the young were left in the pond to be fed, and if the young of eight black bass consume from twenty to thirty pounds of food per day it will be understood that the question of food for fishes is one not to be lightly considered. I am fully aware that I may be accused of riding the hobby of fish food, but if it had been ridden more than it has been in the past there would have been fewer failures in fish culture and fish planting. If fish are to thrive in deep water they must have food and plenty of it.

Last season I went with a car load of fingerling landlocked salmon to plant them. A number of the fish died in the car, and upon opening them they were found gorged with chopped liver. I suggested that the next car load should not be fed for twenty-four hours before they were placed in the car. They were not fed for thirty-six hours before shipment, and were two days on the road. They came through with scarcely any loss, but where turned into the streams, then instant search for food was an object lesson. The turning into the water, the presence of men, the long journey on the cars, all gave way to a scramble for something to eat that was amusing to the spectator, showing that a hungry fish is very like a hungry man, and must be treated accordingly.

Goldfish as Bait.

A few days ago I was in a shop where there were a number of glass globes and jars, filled with water, gravel, water-weeds, and goldfish, and as I was talking with the man in charge of the aquaria a friend entered and suggested that the goldfish would make the best kind of bait for surface trolling for lake trout, and then asked: Except for the expense would not the goldfish make good black bass bait? I have not the least idea that any carniverous fish has, as a rule, any particular choice concerning the species of fish upon which it feeds. It is the attractiveness of certain small fish in the water, and their ability to survive changes in temperature, as well as to live long on the hook, that make them better bait than other small fish. I can recall a time when professional fishermen used small black bass as bait for pike, and they claimed that pike had such a dislike for and dread of the black bass that they took delight in eating their young. This seemed to be utter nonsense, and the eight-inch bass law stepped in to save the little bass from an ignoble death. On general principles a fish that is active and that can be seen the greatest distance in the water is the best bait-fish that can be used for any fish. Never having used the goldfish as bait for other fish, I cannot say how good a bait it may be, but I have paid fifty cents each for gold shiners to be used for lake trout bait, and I believe that goldfish can be bought for twenty-five cents each. Gold shiners (bream) are, I think, more attractive in the water as bait-fish than goldfish. The goldfish are of a deeper red color than the gold shiners, but the latter have glistening scales which the former lack. The gold shiner is a delicate fish, and the scales rub off easily, but there was a time, not very long ago, when in Northern New York they were considered the best obtainable lake trout bait, and as they were difficult to get in the spring they always commanded a high price. I say the best obtainable bait, because the best bait was a small white fish, and they have, since netting has been permitted, entirely taken the place of the gold shiner. In the palmy days of the gold shiner, when it was considered too good to be offered on the hook to pike, I went one spring to an Adirondack Lake for the surface trout trolling.

My guide had a bucket of frost fish (sound white fish) for bait, and judging from previous experience I concluded that I could just about clean the lake out of lake trout. I put a white fish on my gang, and trolled about half a day without getting a single strike, although I could see the trout breaking the surface from time to time. I finally said that white fish were altogether too rich for one who, up to that time, had been dependent for such bait upon finding an occasional white fish undigested in the stomach of a trout caught on a less common bait. In the bucket were a few plebeian suckers, which were rather more in my class. I exchanged the white fish for a sucker, and with it caught three trout in less than an hour's time, but that did not destroy my confidence in the white fish as bait. In the gold shiner days I have taken as many trout on suckers as I have on gold shiners. No matter what the bait may be it must be presented to a hungry fish, or presented in such a tempting fashion to a fish that is not hungry as to cause him to snap it, simply because he cannot resist the temptation.

Fishing is full of surprises, and I have just read:

> "We know it all at twenty,
> At fifty we confess
> We have unlearned a little—
> More or less."

But to answer the question, would goldfish make good black bass bait? I do not think they would, for the reason that black bass are peculiar, and seem to care only for food with which they are familiar. They would probably take goldfish if offered, but not regard them above other bait-fish. Some years ago in a pond where there were plenty of gold shiners the bass in the pond took them readily, but in a lake four miles away gold shiners were not considered a good bass bait. Crawfish is one of the very best of black bass baits, but in a lake where there are no crawfish the bass will take other baits much more readily than they will crawfish. But, then, bass are peculiar.

Do Fish Distinguish Color.

Dr. Hinde is not the only one who has been studying the mechanism of the eye of fishes. A friend has sent me a clipping from the London News with an article by an unknown angler, who says: "The more closely its fly (artificial) resembles the fly on the water the better chance we have. My notion is that the color attracts the fish. Now, Sir Herbert Maxwell, a practiced angler, avers that the part of the ocular mechanism, which procures color has not been found in the eye of fishes. He is more than inclined to doubt whether trout and salmon, can distinguish color at all. No fly is so large, and in color so marked as the May fly, as big as a small, yellowish butterfly. Sir Herbert thinks it quite conceivable that a trout, feeding on May flies, would take a scarlet or skyblue artificial imitation, if properly presented. He has not, it seems, made the experiment, because the May fly season is short and not to be wasted on mere science. But if Mr. Marston, or any other experienced angler, will try the experiment of scarlet and blue May flies, and if the trout take them the experiment is not crucial. The trout, an odd creature, may be trying an experiment, too. He may distinguish colors, yet have a fancy to partake of a red May fly. . . . Whoever will watch a trout feeding when they are fed with flies on the water, will note that he subjects every floating atom, say a petal of a flower, to the closest scrutiny. He sails off, and looks in a short-sighted way at objects hardly visible to the human eye, turning away his head with an air of mortification when they are not what he wants."

Doubtless there are times when some trout will rise at anything under the sun that has movement in the water, and it is quite likely that trout may be found that will rise at a blue May fly, for the trout is an odd creature as every trout fisherman knows, but let no one make the mistake of thinking that trout do not distinguish color, for if they do not I have spent my life as a fisherman for nothing. In no other way, than that trout do distinguish color, can I account for incidents in my own experience that would fill columns of this journal. The one incident that stands out prominently in my memory when trout did not or could not distinguish color was when I was fishing in the upper waters of the Hudson River for a big trout that was known to have its home in a pool where a trout stream came into the river. The very day that I had cast over the pool, as they believed in a workman-like manner, with flies of the most approved form and color to represent actual insects, a man came down to the bank with an alder pole, tied a line to it that was but little longer than the pole, fastened to the line a fly that was like nothing, in color or form, in nature, and wading out into the river, he cast over the pool that I had fished and caught a trout weighing over four pounds. He said it was a purple hackel that he used, and it was, but a purple that I had never seen before and have not seen since, and I think the receipt for making that particular shade of purple was lost as soon as that one hackle was made.

Two incidents of the other sort will suffice to relate. Fishing in the Adirondacks nearly thirty years ago in a pond where the trout were unsophisticated and so abundant that they tumbled over one another to get a fly cast on the water, I was using three flies alike in form and in size, but unlike in color. The trout rose persistently to our fly, and never to the others until that one was taken. There was no mistaking the fact that they wished that fly alone, and, hungry as they were, they only took the others after the blue-bodiced fly had been appropriated. I must confess that the fly of their desire was unlike any insect that I have ever seen, and with us it has not been a killer since that day. More recently I was fishing a pond made by damming a trout stream. The water was shallow, and the trout were educated. To get them one had to fish fine and far off, and even then do his most skillful casting. My fishing journal tells the story of the fishing: "Used Coachman, Green Drake, and Orange-black. The trout rose only to the Drake, and to test their perception of color I changed the Green Drake from one place to another on the leader and added from time to time a Professor, Grey Drake, Grizzly King, Stone fly, Red Fox, Montreal, Cowdung, brown Hackle, and Fern fly. Whatever the positions of the Green Drake on the leader the trout rose only to that, and paid not the least attention to the other flies named."

The Grey Drake referred to is so very like the Green

Drake that now, writing by artificial light, I can scarcely distinguish one from the other, but on that day the trout made no mistake. English anglers will say that during the May fly season they often cast an artificial May fly (and they make them over there to deceive the very elect) to no purpose, while the trout are rising all about to the natural fly. This, however, is a question of movement, not of color, but trout know more than they are sometimes credited with knowing.

A. N. CHENEY.

TROUT THAT RISE AT NIGHT.

Editor Forest and Stream:—I have been considerably puzzled over a matter which I would like to bring before the readers of Forest and Stream, in the hope that some of them, out of a more abundant experience than my own, may be able to solve the problem.

Several times in 1893 and 1894, while deer hunting I camped near a certain small lake in the Adirondacks, and on different occasions attempted to vary the bill of fare with trout, which I supposed must be found in this picturesque sheet of water. All the conditions seemed favorable. A clear, cold stream ran into the lake from a pond above where small trout were plenty, and in the outlet I took many small fish; but repeated casts with bait and all sorts of flies, failed to bring a rise from the lake itself. I paddled all over it, and tried a score of different places, patiently practicing every form of allurement that I knew of; but always with the same result. Others, I know, had met with a similar experience; and yet there was a tradition that some, when within the shadowy depths of that "gem of the woods," great trout were lying waiting for some past master of the gentle art to hale them forth. Evidently I was not that man, and as I had never seen a large fish break the surface of this water, although I had been on its bosom at daylight and at dusk, I began to think that its lily pads sheltered no fish of any size, and that for some inscrutable reason this promising spot had been omitted in the original stocking of the Adirondack lakes.

But I am now inclined to think differently, or at least to suspend judgment for the present. Late last August while in camp at this spot, having failed of securing a daylight shot I donned the jack, and my wife and I spent a considerable portion of the night on the lake. We neither saw nor heard any deer, but we did hear something else which has prompted me to pen this article. About eleven o'clock fish of some sort, and good big fish, too, began to rise all around us, and they kept it up until we left the lake at three o'clock A. M. Such a splashing I never heard, and I can truly say that it would have, and may have, prevented our hearing a deer come down to the water at any great distance from us. Now, what I would like to know is this, do trout ever rise at night in waters where they do not appear or take the fly by day? And, if so, what possible explanation can there be for this unusual proceeding? If it had been possible I would have remained over another night, and endeavored to settle this question myself, and I mean to do so yet; but I would very much like to know if others have noticed the same phenomenon, and satisfied themselves regarding it. I would also like to be informed as to whether it is a common thing for trout thus to indulge in late suppers and what sort of flies best suit their peculiar taste.

ARTHUR F. RICE.

ICE FISHING TIP-UPS.

In response to an inquiry we reprint some of the ice-fishing tip-ups that have been described in these columns. F. H. K. describes a tip-up and reel (Fig. 1). The tip-up is made of either pine or white wood, 20 inches long and 1-4 inch thick. Iron or brass wire, 3-52 of an inch is used. The balls weigh 15 to the pound. The drawing shows the tip-up when set and when sprung.

T. F. G. describes a tip-up (Fig. 2). Take a piece of any tough, elastic wood, 3 feet long, 1 inch wide by 1-4 inch thick at one end, and 3-4 inch wide by 1-4 inch at the top. Make a small hole through the top, and make a saw cut in top and bottom, 1 inch in depth, to wind the line on when it is not in use. Put the butt end in a cut made in the ice with an ax, stand the stick upright, then pack around the butt with snow and ice to hold the stick firmly. Tie a strip of black cloth on one end of the line. Put one end of the line through the hole at the top of the stick, the other end of the line with the cloth at the bottom. When the cloth is at the top it denotes a pickerel at the other end of the line.

A. F. describes a tip-up (Fig. 3). which he claims is good in all kinds of weather. When through fishing, the line can be readily detached from the hooked end of the wire. To set the tip-up, find the depth of water with the sounding-lead. The loop on the line is then adjusted, so as to suspend the bait at the right distance from the bottom.

Poke o' Moonshine recommends the following (Figs. 4, 5, 6, and 7): Place a round stick across the hole flat on the ice. Then take a stick with a crotch in it, one limb 6 inches long, the other 12. Attach the line to the longer one, and place the crotch over the round stick, the long butt lying on the ice. A dark rag is tied to the end of it. When the line is pulled the crotched stick will stand upright. Americus mentions two of the same mechanical principle but different in construction.

South Shore says that a cheap and good tip-up is made as follows: Take an oak strip, 6 feet long, 1 3-8 wide, 3-8 thick. Bore 3-4 inch holes at every 22 inches. The strips will make three traps. Saw so as to have half of the hole on the ends of each trap. Next saw off a strip 3-8 inch wide, two-thirds of the length of the strip, sawing off the strip on an angle so that it will turn only one way. Saw in a slit at the lower end for the flag and a short slit at the upper end for the line. Fasten on the flag with small tacks. A washer or burr between the strap and the main piece will make it much better. If properly made and set up at an angle of 45 degrees, South Shore claims that it can be seen further than any trap that he ever saw.

Ned describes a tip-up which he says is much used at the headwaters of Lake Champlain. Take four pieces of 1-2 inch spruce or pine board (spruce is the better, being stiffer) about 12 inches long. In the center, on one of the edges, cut a square notch 1-8 inch wide and deep. Take another piece of board, 1-2 inch square and 2 feet long, and put into the notch to form a cross. Fasten with a small brad. The cross-piece is placed two-thirds the distance from one end. Fasten the line to the short end, and place over the hole. A pull on the line will tip it up. Make also a common reel 16 inches long, out of a common board 2 inches wide by 1-2 thick. After attaching the line, place across the hole, leaving some slack loose on the ice. Then get a timber twig about 2 feet long, and stick it up beside the hole. Make a loop in the line, and hang it over the end of the twig in the loop. Attach a piece of colored cloth, and when the fish bites he will pull the signal off the twig. There being plenty of slack line, the fish has small chance to escape.

AMERICAN FISH IN BELGIUM.

The rainbow trout has become acclimated in the ponds of Baron Longchamps, near Waremme, Belgium. The baron has also some American catfish, which were obtained through the Central Society for the Protection of River Fisheries three years ago.

The fish are hardy, and have made considerable growth. There are two kinds of catfish in Belgium—the common horn pout or bullhead and the fork-tailed species. The former has reproduced readily, but the other has not been observed to spawn at all. Many of the young bullheads may be seen in the Antwerp Aquarium.

The Semois River has been successfully stocked with the large-mouthed black bass. On April 13, 1893, one hundred of the fish, measuring about 1 3-5 inches in length, were planted at a place called "The Neck." A fisherman, during several days fishing in the summer of 1894, took six bass by means of a dip-net in that part of the river, situated below the "Forge Rouselle" and below the point of deposit.

The fish averaged a little more than seven ounces in weight, showing a fairly good increase. On July 16, 1894, another fisherman had the good luck to catch on a hook baited with a worm, a black bass weighing nearly seven and one-half ounces.

Amateur fishermen, who have tasted the black bass, confirm what has already been said of that excellent fish—that its flesh is very firm and of a very delicate flavor.

Unfortunately the Semois contains trout also, the California rainbow having been introduced in its waters, and the battle for existence must be fought in Belgium, as it is now waging in certain parts of our own country, and with the odds in favor of the bass. The rainbow is increasing, and is being distributed far and near on the continent of Europe. It is now one of the commonest sights in the aquaria at Amsterdam, Antwerp, and Paris, but rather less common than our brook trout (fontinalis), which has also been introduced. T. H. B.

Winter Fishing on Tidewater.

NEWBERN, N. C., Feb. 15.—The temperature for the 10th instant was 21 deg., lowest; 11th, 19 deg.; 12th, 12 deg.; 13th, 17 deg.; 14th, 1 deg. Its effects have been peculiar here. In the first place, it has given our fish packers an unlimited supply of ice at the cost of harvesting it from the rivers. Some gatherers have made three or four dollars a day at the work, being paid by the boat load. Another Godsend to the poor has been the enhanced price of fish, and the facility with which the demand was met, fish appearing in great schools so benumbed with cold that they could be caught and lifted from the water with the hands. Thousands upon thousands of trout (weakfish), weighing from twelve to eighteen pounds, are found floating on the surface of New River and other estuaries, and are gathered up by every sort of device. Not only fishermen, but all who can get boats are out with rakes, pitchforks, dip-nets, oyster-tongs, and small sieves. One boy, fourteen years old, earned $24 cash in two hours. One man caught three thousand in five hours, and sold them to the fish packers for $240. They bring ten cents per pound in Newbern. Not only weakfish, but mullet, herring, shad, and other varieties of fish are caught. The crew of the Steamer Louise picked up 1,200 great trout on her trip from Jacksonville to Wilmington last Monday. Business is almost suspended along New River. The Parmlee Eccleston Lumber Mills, which have been running day and night gangs of one hundred and fifty hands, have shut down, because all the hands have gone fishing.

New River is an estuary three miles wide, and is receiving much attention at present. Government is making expensive improvements. Sportsmen are buying club sites. Fishing interests are being reinstated, and old fields resuscitated. Thomas A. McIntyre, Esq., of the New York Produce Exchange, has spent $100,000 on the Glencoe Stock Farm. The Wilmington, Newbern, and New York railroads has built docks 650 feet long, and warehouses for river traffic with tramways running to the main line; docks at two points. Steamboats connect at Jacksonville with the railroad. This is the most picturesque river in the whole tide water region, with high bluffs and wooded points of land and re-entering creeks. One of the most beautiful of these is Wallace Creek, opposite McIntyre's place. There is a most desirable property there, with 800 acres of arable land and timbers, and an old-time mansion with many outbuildings for sale at $10,000. In old times the seining privilege of this estate alone used to earn this sum every spring.

Shad fishing has already begun, and the season for herring and shad will continue until the middle of May.

The freezing weather has driven large numbers of ducks and other wild fowl to the open waters around Wilmington. One gunner in one morning bagged thirty-seven brace of mallard near the city. The woods around the town are said to be fairly alive with robins, and the boys are having fine sport with them.

CHARLES HALLOCK.

Florida Black Bass.

On the first day of May, '94, I joined a hunting party at the little phosphate town of Arcadia, on the South Florida Railroad, in Southwest Florida. Our destination was Scooter Lake, on the big Kissimee prairie. The first camp was made about twenty miles out, near a clump of cabbage palmetto trees, that grew on the banks of a small lake. While the boys were pitching tent and making preparations for the night, I rigged up some of the fishing tackle, I always have in my hunting clothes. I fastened a cork, just extracted from a beer bottle, about three feet from the hook, baited with a piece of bacon, and twirling it around my head, threw it afar out on the bosom of the little clear water lake. Hardly had the bait settled down ere the bobber went out of sight, and I felt a tug at the line. I couldn't play him very well standing on shore with a hand line, so just hauled him in by main strength and awkardness. It was a big-mouth, black bass, in fine form, weighing, perhaps, three pounds. I caught seven inside of fifteen minutes, ranging from two to four pounds. Soon a portion of them were frying on the pan. We had fish for supper and fish for breakfast, all that four men and three dogs could eat. With a rod, reel, and boat on any of these South Florida lakes, the sport is unending. Nearly every one who goes to Florida to angle, does so on the coast. But I prefer the fresh water lakes, and the shade of an overhanging tree.

WALTER. H. LIGHT.

Revolvers in Florida.

INDIANAPOLIS, Ind., Editor Forest and Stream:—The recent articles by Mr. Harmsworth in the Forest and Stream were very interesting, and especially so to those who have been in the localities which he mentioned, and can therefore assent to such portions of his experience as agrees with their own. I must criticize, however, his advice to his brother Englishmen to carry a revolver for protection in Florida, and think that such advice is not warranted by his own experience, and seems a poor return for such courtesies as were received by him while in that State. From my own experience of several winters of fishing in Florida at various points on the Gulf and Atlantic coasts, I do not consider it at all necessary to carry a revolver, excepting possibly as a part of a fishing outfit and for use only for firing at a mark, or for some shark that has taken bait and hook intended for some other fish. While I was at Cedar Keys several years ago, a man was killed in a quarrel in a saloon; and while I was at Lake Worth in November last, a colored man was shot while drunk and trying to force his way into a house in West Palm Beach; but the ordinary traveler, attending to his own business of sight-seeing, fishing, or hunting, has no connection with saloon quarrels or drunken burglars, and is as safe from insult or attack in Florida, as in any Northern city, or any city in England.

D. L. WHITTIER.

Game Bag and Gun.

THE ADIRONDACK DEER.

In the Utica Herald, Mr. W. E. Wolcott publishes annually an article on the deer of the North Woods. His paper for this year is full of facts, and we extract the following:

Among the most important matters in connection with the game laws which will probably be passed upon this winter are the changes affecting the deer shooting season. The number of visitors to the Adirondack region last year was greater than ever before, a correspondingly large increase was shown in the number of hunters, and the slaughter of deer attained such proportions as to give rise to fears that the supply might at no far distant day become exhausted. Hundreds of sportsmen from Central and Northern New York, as well as many from other parts of the State, are in the habit of visiting the Adirondacks annually to enjoy a few days deer shooting, and they very naturally take great interest in the subject of game protection. Of course, all have their ideas as to what should be done to protect the deer, and the views expressed often differ widely, but there seems to be a great unanimity of opinion that some further restrictive measures regarding hunting should be adopted forthwith. Some believe that the existing laws are good enough if properly enforced. Some advocate prohibiting floating for deer, or night shooting with the aid of jacks, and a number of clubs in the Adirondacks have already taken this step. Others urge that the hounding season should be curtailed, and the time for still-hunting extended into November. There is quite a strong sentiment in favor of making it illegal to kill does at any time, and there are those who believe that no deer should be killed in the water. Many believe that both floating and hounding should be abolished for a term of years. Of course it is next to impossible to frame a law regulating the killing of deer which will please everyone, but it is earnestly hoped that some action will be taken by the present Legislature to afford more adequate protection.

The hotel men, guides and other residents are also deeply interested in the subject, and perhaps give it more attention than those who only spend a few days or a few weeks each year in the woods. With a view of getting something of an idea of how many deer were killed in the Adirondacks from Aug. 15 to Nov. 1, last year, by the different methods of hunting, and of obtaining views as to whether the animals were diminishing or increasing in numbers, the Herald recently sent out letters of inquiry to well-known residents of all the different counties in the forest preserve. The persons addressed were also asked if there were any changes that guides would like made in the game laws for the protection of deer. Abstracts from some of the replies received will be of general interest.

Orrin Harris, Pyramid Lake House, Essex County—I would like to have the hunting season commence Sep. 1 and close Nov. 1, all modes of hunting of deer to commence together and end together.

Theodore C. Remonda, Morehouseville, Hamilton County—The guides and residents would favor a law prohibiting the hounding of deer. The open season to extend from Oct. 1 to Dec. 1, which would allow nothing but still-hunting, and do away with both hounding and jacking.

H. S. Downs, Chestertown, Warren County—The guides in this vicinity would be glad to see a law passed doing away with hounding entirely. They are beginning to regard the hounding of deer as very unsportsmanlike sport.

Monroe H. Bullock, Beaver River Club, Lewis County—We believe in giving every one of the sportsmen their sport of killing deer their way. The game law is satisfactory with us in this section, and if they will live up to the game law as they do here, there will be plenty of deer.

W. H. Roblee, North River, Warren County—The guides would like to have dogging until Nov. 1; still-hunting until Nov. 15, and jacking prohibited entirely.

Warren Humes, Harrisville, Lewis County—Experienced woodsmen are all in favor of doing away with hounding. If dogs are allowed to run as they have for two years past, in two or three years the deer would be nearly extinct in the Adirondacks.

Samuel Dunakin, Fourth Lake, Fulton Chain—There are changes in the game laws to be desired, but I am afraid not attainable, as the knocking out of jack hunting is as strongly opposed by outsiders as it is desired by people here. The only remedy I can see for the cause is to keep the season closed at least until Sep. 1, and even that only half does it.

O. L. Howland, Rudeston, Hamilton County—I would like to do away with hounding and let the open season run until December 1. Hounding must be stopped or the deer will be exterminated in less than five years.

Henry Studor, White Lake—The guides of course do not want any changes in the game law, but this does not imply the protection of deer.

Thomas Salmon, Conklingville, Saratoga County—I am in favor of stopping dogging entirely, extending the time until December 1 for still-hunting, and having the hunting season opened September 15, instead of August 15. They have a new name for floating and call it still-hunting. It is carried on quite extensively in this county wherever deer come to water. If anything is done in this direction, there must be a stop to killing after dark.

Morton S. Parmalee, Malone, Franklin County—I am in the woods a good deal winters and summers. The deer in my immediate beat are decreasing, I think from hounding so early in the season, but good men like Major Pond, chief protector, think on the whole they are increasing. As I understand the sentiment of the guides it is to abolish jack hunting and the killing of does. My own views are that unless some restrictive measures are taken the deer will in a few years be practically exterminated, except in the private parks.

Charles Fenton, Number Four, Lewis County—The guides and all parties interested in the preservation of Adirondack deer are in favor of stopping both hounding and jacking. I think this locality the worst of any in the Adirondacks for the slaughter of deer by hounding, as so much of the woods is now protected by private individuals and clubs, leaving a little section here open to the public. Hundreds of hunters and dogs occupy every lake, pond and stream, and the woods are full of hunters beside. I think it safe to say that there were during the whole hounding season fully 300 men and as many dogs, within a radius of three miles. Deer are nearly exterminated here and would be entirely so were it not for the adjacent private parks, where deer are not slaughtered so. In 1893 fully 300 were killed here, and 200 is a low estimate for the past season. Almost the whole of these deer were killed by residents along the borders of the wilderness for their meat and skins and for profit.

Eugene Beach, Gloversville, Fulton County—There are very few deer in Fulton county, and but little hunting if any of deer is done. I am in the habit of making a trip every spring into Hamilton county in the fishing season. I am confident that last spring there were many less deer in the part of the woods which I have visited for several years, than in former years. This decrease is certainly due to the hounding of deer in the fall. Many were killed there in the fall of 1893 and many more last fall. I am informed that logging camps in the woods are, some of them, kept supplied with venison in and out of season by men who are hired to hunt for that purpose. It is believed that game constables are in some cases aware of the fact and that they could bring the offenders to account. If the present law were strictly enforced, much improvement would result. I am inclined to believe the privilege of hounding should be much abridged if not entirely withdrawn.

A. R. Fuller, Meacham Lake Franklin County—Thirty-six deer were killed here. The guests at Meacham generally respect my request that no does be killed, but by night hunting no one can tell what he is shooting at, and more does than bucks are shot. In Meacham proper only two does were killed. We do no still-hunting. I do not think the public generally understand the term still-hunting. I am sure many think it is jacking, but still-hunting is done on wet leaves or snow, when a track is left for the hunter to follow. This is considered the only sportsmanlike way of killing deer, but if the only way very few but experienced hunters would ever kill a deer. It is not only hard work, but very few have the skill to follow a deer after starting, as they make many crooks and turns in a day's journey. During the season of 1894, seven miles from here, on what is called good hunting ground, eleven deer were killed by night hunting and hounding. Oct. 14 there came about three inches of snow, and eight of the guides, who had gotten through their work for the season at Meacham, went out on the 15th and killed twelve deer. That was the only good still-hunting day of the season. I have talked with several guides who agree with me that no does should be killed. Night hunting should be stopped. The penalty for violating the law should be increased, hunting should begin September 1 instead of August 15, and the whole month of October should be given for hounding. Give the still-hunters the first ten days of November, and no time after Nov. 10 to bring in the deer should be allowed. Whenever such time is given to bring in the venison, it is simply so many more days to kill. Also fix our laws in regard to dogs, so that every dog shall have an owner and if found without the owner's name, to be killed by any game protector or constable. This may seem a little severe, but there should be some way to stop the running of deer out of season, and owners of hunting dogs should comply with reasonable laws if they are allowed to use dogs at any season for hunting deer or other game.

Deer are reported to be decreasing at Rudeston, Hamilton county, White Lake, Oneida county, Harrisville, Lewis county, Fourth Lake, Fulton Chain, North Lake, Herkimer county, Number Four, Lewis county, Morehouseville, Hamilton county, Franklin county. They are reported on the increase at North River and Chestertown, Warren county, slightly; Beaver River, Lewis county, Sacandaga Valley, Saratoga county, probably increasing in Fulton county, but there are very few.

Estimates as to the number of deer killed in the various parts of the Adirondacks specified, from Aug. 15 to Nov. 1, 1894, by the different methods of hunting are as follows:

	Floating.	Hounding.	Still-hunt'g.	Total
Honnedaga Lake	..	58	5	63
North and South lakes	15	41	5	62
White Lake	11	30	4	45
Fourth Lake, Fulton chain	70	100	25	200
Stillwater, Beaver River	15	13	6	34
Number Four	6	200	5	211
Harrisville	4	95	15	114
Morehouseville	7	50	4	61
Rudeston	45	200	13	258
North River, Warren Co	25	10	1	36
Chesterton, Warren Co	50	100	25	175
Pyramid Lake, Essex Co	..	8	..	8
Franklin Co	50	300	..	350
Sacandaga Valley	..	25	..	25
Cranberry Lake	180	..	40	220
Long Lake	21	35	20	75
Raquette Lake	44	90	8	143
	540	1355	176	2080

Over 2,000 deer were killed in 1893 and about the same number in 1892. Reports from the different counties indicate that more were killed last year in many localities than in either of the preceding years. The total of 2,080 given above of course does not cover all the deer killed last year, and it is probable that the aggregate was nearer 2,500.

CHICAGO AND THE WEST.

IT WAS A TAME BUFFALO.

CHICAGO, Ill., Feb. 18.—Captain George S. Anderson, Superintendent of the National Park, who was in Chicago for one day this week, says that he investigated the report of the sale of buffalo meat in Helena, Mont., and found that one buffalo of the Allord herd had been slaughtered to keep it from dying anyhow, and that the carcass was put on sale at Helena.

MR. TRUDE ON GAME AND GAME LAWS.

Mr. A. S. Trude is easily the ablest and best known criminal lawyer of Chicago. Of late he has almost quit practice, and taken up the sports of the forest and stream. A while ago, I mentioned some facts in regard to Mr. Trude's shooting experience in the West. Nothing can be said against Mr. Trude's position in the following interview, which the Tribune of Chicago had with him this week after his return from Washington. Evidently he is in line with the true spirit of sportsmanship to-day, whatever may have been his errors in the past, and the value of his word and effort in the interest of proper legislation is hard to overestimate. All interested in the preservation of the Yellowstone Park game will read with interest what he says in regard to the latest attempt at spoliation of the nation's property. With acknowledgment to the Tribune, the interview is given in full:

A. S. Trude believes in the protection of game birds and fish. He came back from Washington yesterday, where he went to help kill a bill which provides for the building of a narrow gauge railroad into the heart of the Shoshone River country just west of the Yellowstone National Park. The ostensible object of the road, Mr. Trude says, is to bring out coal, but its real object is to give the pothunters, backed by Montana capital, an opportunity to get in there to slaughter the game for the Eastern markets, and to net, spear, or dynamite the fish for the same purpose.

"The Shoshone River is alive with mountain trout and salmon trout," said Mr. Trude. "There are 120 men at the head of the Snake River who are now killing off the fish there, and, seeing that in a short time the supply will be cut off, they are looking for fresh waters for fish and fresh fields for game. These men and others like them have depleted the Yellowstone, the Gallatin, the Madison, and the Jefferson rivers, and are now just about finishing up the supply in the Snake River. When they dynamite a stream they kill all the fish within the area of several acres and kill the deposited fish eggs as well. No supply can withstand such draughts. The statement that coal is the object of the proposed railroad is nonsense. There is no coal there, I think, and if there is any it could not be worked profitably. They are after the fish and game, and if we don't do something to stop their work there won't be anything left. I explained to a number of Congressmen the real objects of the bill to run a railroad over government land, and I think it will be killed. I saw Secretary Thurber. He is courtesy itself. I told him of the contemplated slaughter of game and fish by market hunters, and he intimated the President was too true a sportsman to sign a bill whose intent was to give market men a monopoly of the fish which belong to the people.

"By the way the Government extended the limits of Yellowstone Park the other day, in taking in sixty additional square miles and swallowing up "Trude Trail," and all this without consulting me. You see there was only one trail to the Shoshone River country, and it was a bad one. It was a spongy sort of trail, and mules would sink in it and drivers would swear on it. It was called S. B. Trail. I put some men at work, and cut out a decent trail which cost time and money. The men dubbed it Trude Trail. This has been taken in by the Government, and now I can't walk over my own highway without permission.

"The game is going fast. There are a lot of Englishmen who when at home will fine a man three times for killing a rabbit on their estates, but who will go to the Northwest of the United States and kill our magnificent elk just for the fun of seeing them fall. They don't touch carcass or horn; just shoot the animal and let it rot where it falls. These are the men who at home get after a man who kills a rabbit, first for killing the creature, then for trespass, and then for carrying a gun without a license. These men will send their dogs into Yellowstone Park to drive the animals out where they can be shot without subjecting their owners to the danger of arrest.

"It takes about nine days to get into the Shoshone country as things are now, and, of course, fish cannot be transported and kept in good condition for the markets. I brought out two young deer from there not long ago and gave them to Lincoln Park. I kept them long enough to acclimate them. The park people would not feed them as I directed, but gave them slough hay and killed them. That sort of treatment discourages one from doing anything more in the gift line.

"I went down to the Indian Territory just before I went to Washington. There and in Arkansas the market hunters are killing off the game and shipping it to the cities. The most of the quail are trapped. The markets ought to be closed to Illinois game at all seasons and there should be but a limited season for the sale of game from other States. An open market in Chicago the year through would be an invitation for law violation in those States which have non-export laws."

Mr. Trude was approached by a friend on the subject of the Blow bill, which it has been sought to foist upon the people of Illinois, this being the game dealers' bill alluded to in the last two weeks' issues of Forest and Stream. Mr. Trude was familiar with the bill, and he simply remarked with a wave of the hand:

"Don't you be worried over that for one minute. That bill will never pass. I know what I am talking about."

Mr. Trude's word carries weight. No man in Chicago can publish utterances of more interest and value to the sportsmen of the city than the statement printed above.

THE RIGHT TALK FROM DAKOTA.

Apropos of the above in regard to the attempted steal of the rights of the sportsmen of the West is the following letter from Mr. C. E. Robbins, the President of the North Dakota State Sportsmen's Association. It is the right sort of talk, and shows how ready a response the honest and fearless utterances of Forest and Stream on this question have found in the interested game country to the west of Chicago. It was well said editorially in Forest and Stream that Dakota was as much to be harmed as Illinois by the passage of the Blow bill in Illinois. Mr. Robbins' letter shows what the sportsmen of that State think about it. It reads as follows:

"The game law situation in the State of Illinois, as described in the last number of the Forest and Stream, is a question of vital importance to all law-abiding people in the North-west. It is a surprise to many that a man with experience like Game Warden Blow, should advocate such measures as are contained in his letter to the Illinois State Sportsmen's Association. A person might believe from reading his letter that he considered it legitimate business for the game 'fences' of Chicago to buy and sell property stolen from other States.

"Whenever game is shipped during the close season to Chicago or other city markets, it is in direct violation of law; and all persons connected with the business should be prosecuted to the same extent as other dealers in stolen property. Mr. Blow's idea seems to be that each State should protect its own game regardless of the laws of other States. We are not so selfish; and the Dakotas and Minnesota have game laws that in many respects are identical. It is the aim of legislators in these States to secure uniform game laws. Game in the Dakotas is disappearing very fast. If it were not for the ravages of market hunters some species would steadily increase, but the game markets of the large cities furnish an incentive for lawless men, who are well able to earn an honest living, to become thieves, and steal the game during the close season; for they know that in case of arrest that money will be furnished by interested parties to defend them and prevent conviction.

"Game protection in North Dakota would receive a fatal blow should the bill presented to the Legislature at Springfield in the interest of game destroyers, become a law. We sincerely hope that the Illinois Legislature will consider the interests of other States as well as their own in this matter, for we believe it is better for a few game dealers to be permitted to do a less, but more honest business, than it is to rob the people of their own and other States of the pleasure of game shooting for the future. You are at liberty to use this communication in any way you see fit. C. E. ROBBINS,

"Pre't N. D. State Sportsmen's Assoc'n."

Mr. Robbins and his friends need have small further concern over the Blow bill. At this writing a conservative judgment indicates that it is a dead proposition; as, see other columns.

THE POSSUM CLUB.

Mr. William Werner, the well-known Chicago caterer, better known as "Bill Werner" or "Possum Bill" among sportsmen of Chicago, gave his annual possum dinner to the "boys" last Wednesday evening, at his beautiful new place at 3112 Michigan avenue. If such a thing be possible, this was the best of all the good dinners he has yet given. It does seem that the possums taste better every year, and that Bill Werner grows more genial and mellow and tells a story better each year. The ones who have been privileged to meet at these little informal dinners would be sorry to relinquish their yearly meeting. This Mr. Werner says they never shall, for while he lives he intends each winter to give this possum dinner, at that season when possum an' sweet potatoes are ripe. There were present last Wednesday evening Messrs. Abner Price, W. P. Murray, George Andrews and the writer, of Chicago, and Frank Parmalee, of Omaha. All were guests of Mr. Werner, but the chief guest of the other guests was Captain A——, of the United States Army. The latter came, inclined to be skeptical as to the excellence of possum, but went away convinced that he had never before known the capabilities of the bird. He declared that as served (Mr. Werner had two specimens baked at full length and brought on upon a vast platter) the creature looked like Sioux dog, and tasted like peaches and cream. The little gathering was purely informal. There was conversation but no speeches, but it was finally made the sense of the meeting that possum he sho' am good to eat, likewise that Bill Werner sho' am the only man that can cook him.

GONE TO TEXAS.

Mr. H. G. Northrop, of the refrigerator transit department of the Union Pacific Railroad, and his friend, Mr. Henry W. Magill, of the Phoenix Insurance Company, are the last to inquire at the Forest and Stream office for information in regard to the happy hunting-grounds of Rockport, Texas. I told them that I could not conscientiously send anybody duck hunting in March (the date of their visit), and that probably they would have little or

no shooting at any rate then, but that for sailing, fishing and loafing, they could find no better place at which to pass the blustery month of March. They concluded to go, and, as usual, I gave them the address of the Bludworth boys and the yacht Novice, in both of which I feel now as though I had a proprietary interest from long acquaintance.

Mr. M. R. Bortree, President of the National Association, has been seeing what he could see since the close of the selling season in game. In doing this he has been forced to be rude to Warden Blow's friends, the game dealers and sellers, and has violated Mr. Blow's theory of letting the sale of game go on unmolested. Yesterday Mr. Bortree found fifteen illegal quail at Philip Henrici's restaurant, No. 108 Randoph street. The case is set for to-day. E. HOUGH.

Game and Fish Protection.

New York Legislation.

Senator Donaldson's bill to combine the Fish and Forest Commissions provides for a board of five commissioners of game and fisheries, game and forest, to serve for five years. The president, appointed by the Governor, shall have a salary of $5,000; each other commissioner a $1,000 salary, and $500 for expenses. The board shall appoint a State Fish Culturist—not one of their own number—who shall have charge, under the direction of the commissioners, of the culture of all fish in the State, with salary of $3,500. They may appoint an assistant fish culturist, salary $2,500. A secretary is provided for at $2,500, and an assistant secretary at $1,500. The duties of the board are the propagation and distribution of food and game fish and shell fish; the enforcement of the game, fish and forest laws. One of them is to be the shell fish commissioner. The commission shall appoint thirty-five game protectors and foresters to hold office during the pleasure of the board, which may summarily remove any one of them. The board shall designate one of the protectors as chief, two as assistants to the chief, and one as oyster protector. The chief shall give bond in $1,000, the others $500. The chief shall receive $2,000 a year, with $1,000 for traveling expenses; each assistant $1,500, with $450 traveling expenses, the oyster protector $1,200, and $450 expenses, each other protector $500 and $450 expenses, with one-half recoveries of fines, after expenses of recovery are paid.

Bills introduced in the Assembly are:

No. 68. Amends sec. 141, excepts Chatauqua Lake, Cassadaga Lake, Bear Lake and Findlay's Lake, from law permitting in fishing.

No. 173. Amends sec. 49, by adding Saratoga and Washington counties to those in which the rabbit open season is Aug. 15 to March 15.

No. 182. Amends sec. 56 by forbidding the use of dogs for deer hunting at any season, making the open season for deer Nov. 15 to Dec. 1, and season for sale and possession of same.

No. 217. Amends sec. 132 by adding, "nor within three miles of the mouth of the Niagara River," to localities where net fishing is forbidden; and by omitting the exemption in favor of Chaumont, Griffin and Three Mile Bay of Lake Ontario.

No. 242. Amends sec. 57 forbids killing deer in water, or using boat to head it off, or jack light.

No. 265. Amends sec. 136 by permitting nets in Hudson River below northern line of Rockland county from sunset Saturday to sunrise Monday.

No. 314. Amends sec. 49 by extending close of open season for rabbits and squirrels—now Jan. 1—to March 1.

No. 341. Provides a bounty of one cent on English sparrows and five cents for nest.

No. 349. Amends sec. 141 by permitting fishing in Lake Keuka or Crooked Lake.

No. 343. Adds a new section 249. No person shall be deemed to have violated any law or ordinance by reason of selling, exposing for sale, transporting or possessing, or attempting so to do, the body, or a part of the body of any wild animal or bird in the close season for such animal or bird, provided it be proved by him that said animal or bird was killed outside the State.

No. 454. Amends sec. 163 relating to Long Island only, so as to make snipe close season—now in Jan. 16 to July 1—Jan. 1 to May 15; and trout close season—now Sep. 16 to April 1—August 1 to March 29.

No. 534. Amends sec. 141 so as to permit taking suckers, eels and bullheads in Seneca Lake with seines 4 rods in length and meshes not less than 1 1-4 inches in size; or with spears.

THE CODE.—Senator Donaldson introduced his revised code Tuesday, our press day.

An Adirondack Capture.

For several months past rumors have been afloat relative to the depredations of a couple of desperate characters who have been slaughtering deer in the remote portion of the Adirondack wilderness about the head waters of West Canada Creek. These parties, one of whom is a Frenchman known as "French Louis" and the other an Indian renegade from the St. Regis reservation, have been in the habit of killing large numbers of deer in and out of season. It is said that the Indian has averaged a deer a day for several months past. The other has killed since the 1st of September last, no less than 27 deer. Most of the deer killed have been disposed of at the various lumbering camps in the vicinity of the slaughter, and such as they have been unable to dispose of are left to rot or be devoured by beasts and birds. During the months of December and January the protectors succeeded in getting sufficient evidence and Protector Kenwell and Special Officer Lobdell went in after the pair.

After a long and tedious drive over very bad roads they reached a lumber camp in the town of Wilmust late in the night of Jan. 28, the camp named being located about 20 miles from that of Lief. Wishing to surpise the Indian in his camp, the officers remained here until the afternoon of the following day, and then proceeded on snow-shoes and by the aid of a lantern reached Lief's camp about daylight on the 30, and found it without an occupant, but found plenty of evidence of illegal deer killing. Lief was tracked to the camp of the Canadian, Louis, about six miles further in the woods, and there these two worthies were found.

Under pretence of desiring to purchase furs the officers endeavored to get sufficient information to convict the Canadian, but made only a partial success of it. Louis' case is one of "I killed the dog but you must prove it," and while there is little doubt of his having killed large numbers of deer illegally, the officers thought best to secure the Indian as the greater offender of the two and the stronger case for conviction. Lief accompanied the officers back to his own camp, for the purpose of selling them his furs, and was there put under arrest, after having shown Messrs. H. and L. a carcass of fresh venison that had not been discovered by them during their first visit. He also brought to light the heads of three bucks that had not been killed earlier than the latter part of Dec. last. Louis, who seems to have mistrusted that all was not quite right, followed the party back to Lief's camp, and appeared very much frightened when he found the Indian a prisoner. He denied having killed any game out of season, or otherwise illegally, but it is safe to say that there will be sufficient evidence forthcoming in the near future to convict him on several counts unless he shall in the meantime leave the country.

Lief was brought out to Sageville with the intention of taking him to Fulton county for trial, but at Sageville he offered to plead, and was permitteed to do so, when he very obligingly confessed to a killing, on which he could not have been convicted on any evidence in the possession of the officers and was sentenced to 40 days' imprisonment in the Hamilton county jail. There are at least four or five other clear cases against him that ought to keep him sent up for several months, after which he will be sued for the penalties in the several cases, and if he does not flee the country, the chances are that he will be kept out of mischief for some time to come.

A few years ago Lief turned up as a witness in a case of illegal deer killing, tried in Herkimer county, and by very stout swearing succeeded in preventing a conviction where the people had a very strong case against one of his pals. He is a thoroughly bad egg, and it is to be hoped that both he and the Canadian, Louis, may be finally driven out of the woods.

Both have been in the habit of selling large quantities of deer skins to parties in Fulton and Hamilton counties and have no doubt been engaged in slaughtering deer for the hides alone when they could not dispose of the venison. It is, however, difficult to convict on any evidence other than fresh skins, for the old story, "these skins were taken from deer killed by the several parties whom we guided during the season," will always be given as an excuse for having any large number of skins on hand. Lief is a half breed renegade from the St. Regis reservation, who has followed hunting and trapping in the Canada Lakes country for the past four years, and the Canadian, "French Louis," has followed the same vocations in that vicinity for a somewhat longer period. S.

Maine Venison in Boston.

Boston, Feb. 16.—That wholesale, illegal shipment of venison out of Maine, of which the Forest and Stream had an account last week, is proving to be a most interesting affair. Capt. Millard Mitchel and Mate Charles W. Allen, of the schooner Monticello, are under arrest here in Massachusetts for stealing 90 saddles and carcasses of venison, valued at about $580. The schooner was loaded at Addison Point, Maine. They were well aware that the game was being unlawfully shipped, it seems, and they conceived of the idea that since the shipment was illegal anyway, they might have a hand in the spoils. So, though the venison was consigned to several Boston parties, the captain thought he would put into Gloucester and dispose of the cargo there. He did so, and he with the mate, according to the story of the officers, succeeded in selling off a big lot of the meat at 10 cents per pound. The men admitted selling venison, and surrendered the money they had obtained for it. The reason they gave the officers who arrested them for appropriating the goods was that they were aware that the whole shipping transaction was illegal anyway, and that they might as well have some of the benefits of it as the other fellows. They did not believe that the consignors of the venison would ever dare to make any complaint.

But the shippers of the venison are not to escape this time. Their names are given as George W. Bucknam, William E. Bailey and Byron E. Tibbetts, of Addison Point, and Harley Worcester, of Columbia Falls. As good fortune would have it, Fish and Game Commissioner Henry C. Stanley, of Maine, was in Boston at the time the arrest of the officers of the schooner was made, and he at once took measures to obtain all the facts with the names of the consignors. A stenographer was employed, and duplicate notes of all the proceedings went to Maine. I have it from good authority that the shippers who sent the venison out of the State are being prosecuted according to law. The penalty for having in possession or attempting to take or send out of the State more than the prescribed three deer in a season is $50 for each deer so had in possession or shipped out of the State. The whole cargo of 90 deer can be made to cost the shippers the snug little sum of $4,500. Commissioner Stanley is now satisfied that by vessel, from some of the many little out of the way ports in Maine, is the way that so many Maine deer have been getting into the Boston markets. Including the shipment of the Monticello, probably no less than 500 deer have illegally reached the markets here the past season. The Forest and Stream has already had accounts of these many deer arrivals, with the fact mentioned that they have come by vessel. It certainly looks now as though a case of sufficient magnitude was to be made of the consignment of venison by the Monticello to make the danger of such shipment sufficiently clear to both consignors and vessel owners to make them stop it. All that your correspondent said last week concerning the evils of deer and other game being received in Massachusetts is just and true, and a good deal more, but since we cannot make Massachusetts pass a law to prevent the sale of game that is illegal in a sister State, let us be glad that justice is overtakiug the shippers this time, in a wholesale way

Superintendent Phillips, of the Megantic Club preserve, writes to L. Dana Chapman that the trout eggs in the club's hatcheries are getting along finely. There has been no loss from the recent extremely cold weather, as was feared there might be. Under the direction of Isaac Tibbets, who had charge of the Rangeley trout hatcheries last year, the club secured 50,000 trout eggs, last fall, and Mr. Tibbetts has these eggs now in charge in the hatcheries. These eggs were secured from the native trout. Land-locked salmon have been planted in the waters of the club, and also land-locked smelts; in order that the salmon may have food. Both officers and members of the Megantic Club are working earnestly for the propagation of fish in their admirable waters. SPECIAL.

Prairies and Market Stall.

Worthington, Minn., Feb. 12.—Editor Forest and Stream: The proposed Illinois game laws has caused much discussion among the sportsmen of the West, and the interest is almost as great as it would be were the bill introduced in our own Legislature.

The bill as it now reads is without doubt the most vicious piece of legislation on record, and were its author the greediest of market hunters instead of the sworn protector of the game, he could not well have devised a measure more favorable to its total extermination.

Mr. Blow asks "what interest the sportsmen of Illinois have in passing laws to protect the game of other States." Now it may not occur to that gentleman, or if it has he overlooks—apparently in his zeal to serve the game dealers—the fact recognized by all thinking men, that the more sparsely settled States must of necessity be the source of supply from which game must come to restock older and depleted covers, the nursery in which game must be protected for the benefit of all alike, if it is to be preserved from total extermination and that without the greatest care extinction will follow anyhow. Already the game supply of the Western and Northwestern States has dwindled to a comparatively small remnant through the greed of market hunter and game dealer and the bulk of this trapped and slaughtered game has found its way to the game dealers of South Water street, Chicago, both in and out of season.

Sportsmen throughout the West favor wise and strictly enforced game laws and do the best they can to have them enacted and enforced. They have before them, however, the great task of educating the people up to a sensible view of the subject, a task more difficult with us than in an older community like Illinois, and we naturally look to the older States to set before us an example and object lesson—just, wise and properly enforced.

Our own markets consume immense quantities of game, but were the drain confined to this alone, the natural reproduction would make good the loss. When, however, an immense population like the city of Chicago is accessible to the Western hunter, a market in which he can dispose of all the game he may capture by any and every devise, and the profit for which is sufficient incentive to induce him to set our laws at defiance, the slaughter goes on at a rate that is fast depleting our supply to such an extent that it is only a question of a short time until the last bird has disappeared, and this, too, with a comparatively short open season for the sale of game. Judge, then, how long the supply would last with Chicago—the greatest game market in the West—thrown open for the entire year, with no restriction placed on the sale of game, nor method used in its capture, so long as it was ostensibly obtained outside the State. I would ask Mr. Blow how long he expects the Illinois supply to last after that of the surrounding States is exhausted—destroyed in the interest of his friends, the game dealers. Will these very good friends of his make a distinction between the home grown article and that of other States, and make careful inquiries in regard to where and how it was obtained before purchasing? or will they in the future, as in the past, take everything offered in and out of season, sell it to safe parties and call it fictitious names and swear it came from outside the State?

Probably they will if asked to do so—raise another little jack pot to pay Warden Blow's salary. They should do no less for so zealous a partisan. The sportsmen of Illinois can hardly be expected to contribute anything towards it, for they can have nothing in common with the ally of market hunters and commission men. W. R. H.

Game Protection in Pennsylvania.

The Pennsylvania State Sportsmen's Association is doing good work in behalf of better game protection in that State. Although of comparatively recent organization, being not yet five years old, there is every probability of its accomplishing something at this session of the State Legislature, that will be of permanance and lasting benefit to the sportsmen of the Keystone State. Word comes from Harrisburg that the bills mentioned in the following communication are well in hand, with good prospects of their becoming a law before summer is on deck:

At a meeting of the Pennsylvania State Sportsmen's Association held at Harrisburg, Pa., Feb. 7, 1895, the following preamble and resolutions were unanimously adopted:

Whereas, game of all kinds within the Commonwealth of Pennsylvania is rapidly becoming extinct, by reason of the inadequacy of our laws for their protection; therefore, be it resolved,

First. That we heartily indorse, and earnestly recommend the speedy passage of the bill creating a game commission, providing for game protectors, etc.

Second. The enactment of a law prohibiting the killing or taking of deer, squirrels, hare, rabbits, wild turkey, ruffed grouse, any kind of pheasant, quail, partridge and woodcock, at any time save between the 15th day of October and the 31st day of December next following, inclusive. Provided, however, that woodcock may be shot from the 1st of July to the 31st day of July, inclusive.

Third. That the fish laws be so amended as to prohibit the taking or catching of speckled trout for the purpose of sale.

Fourth. That the law permitting the gathering and taking the eggs of all game birds for scientific purposes, be amended to prohibit the taking of the same for any purpose.

Fifth. That Senator Grady's bill, No. 107, prohibiting the sale and exportation of game be amended by striking out all provisions relating to speckled trout, and extending its provisions to squirrels, hares, rabbits, wild turkeys, partridges, and all kinds of pheasants, and striking out in line 2, of section 4, the words "in this State or," and in lines 3 and 4 of the same section, the words "for the purpose of sale."

Sixth. That the legislative committee are hereby instructed to prepare the foregoing bills and amendments and urge the passage of the same.

N. A. HUGHES, President,
J. H. WORDEN, Vice-President,
HARRY W. THURMAN, Secretary.

New Jersey Legislation.

The bill prepared by Commissioner Frothingham and introduced into the Legislature last week is a comprehensive measure of which the chief points are as follows:

Wild deer, buck, doe or fawn may be killed or in posesssion only between Oct. 15 and 25 inclusive. Hare, rabbit, quail, ruffed grouse, gray, black or fox squirrel, European pheasant, European partridge, European grouse or woodcock, from Oct. 31 to Dec. 15 inclusive. Gray snipe (commonly called English or Wilson snipe), reed bird, rail bird or marsh hen, from Aug. 31 to Dec. 15 inclusive. Grass or upland plover or dove, from Aug. 1 to Sept. 30 inclusive. In shooting wild fowl, the boat or sink-box or other vessel cannot lawfully be placed at a greater distance than 100 feet from ice, marsh or meadow, bar or bank or heaped seaweed not covered with water at high tide; and the hours of shooting are between one hour before sunrise and one hour after sunset. Shooting at wild fowl from any vessel propelled by other means than oars or paddles is prohibited. The law prohibits owners from shooting on their own lands in the close season. It is unlawful to have in possession, sell or offer for sale any of the birds, fowl or animals enumerated after the same have been caught or trapped by means of any snare, swoop net, trap or device of any description whatever It is unlawful to have in possessison, sell or offer or expose for sale any game birds or animals enumerated, except during the seasons in which they may lawfully be killed. Sunday hunting, either with dog or gun, is prohibited. The law does not prevent individuals or associations from domesticating or bringing into the State animals or birds for propagation purposes, or to keep til a favorable season for release. Fishing with any contrivance whatsoever, except with rod and line in the manner called angling, is prohibited; this clause does not apply to eels caught by means of a wicker eel-basket or pot, nor to the spearing of eels, suckers or carp, the taking of winnows for bait with a seine not over twenty-five feet in length, provided that the young of trout, pickerel and bass are not injured; and it does not apply to the taking of fish under the direction of the Fish Commission of the State. Black bass, Oswego bass, can be taken between May 30 and Dec. 1 inclusive. Brook trout, April 1 to July 15 inclusive. Black bass less than nine inches in length, or trout less than six inches, cannot be killed, or kept in possession, or offered for sale. Explosives, drugs or medicated baits for taking or killing fish are forbidden. The turning of any deleterious or poisonous substance into the waters of the State, in quantities destructive to the life of the fish or disturbing their habits, is forbidden. Shutting off or drawing off the water of any pond, stream or lake, for the purpose of capturing fish, is prohibited. Set lines, or lines not under constant and immediate supervision, are prohibited in any waters inhabited by pickerel, black bass, perch or trout. Fishing through the ice, in waters inhabited by brook trout, and fishing for pickerel, pike or perch through the ice, except with single lines and hooks, one to each line, are prohibited. Fishing in any manner, from any lake, pond or stream stocked with fish by the fish and game commissioners, or by private individuals, is unlawful for three years from the time the stock is introduced; provided the fish and game commissioners post ten notices on the banks or shores of such waters. It is unlawful to enter or trespass on any land for the purpose of taking fish from any private waters if the same be posted. The term "waters of this State" means all waters within the State where the tide does not ebb and flow, but where the taste of said water is not brackish or salty. Waters under the exclusive control of individuals or associations, created and stocked exclusively by them, and not run ways for migratory fish, shall be considered private waters and exempt from the provisions of this act. Owners, lessees and tenants of any property shall not knowingly permit the erection or maintenance of any unlawful contrivance for the taking of game or fish, nor shall they permit the setting or drawing of any net whatsoever from the banks of any stream forming a boundary of said property; it is made their legal duty to immediately destroy all unlawful contrivances. It is unlawfu to remove from the State any of the birds, game or fish whose capture is prohibited or for which a close season is provided, excep when such are in the possession of the person who may have lawfully captured them, excepting unbroken packages in transit across the State.

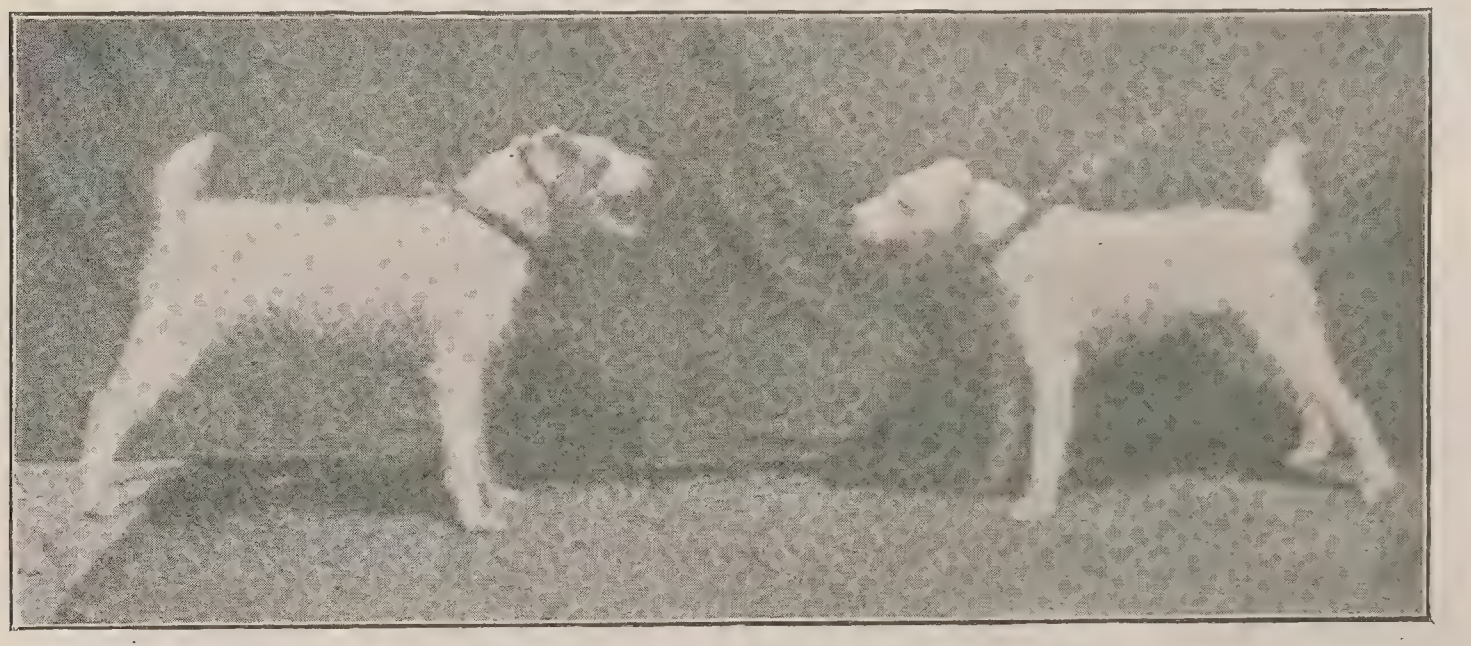
Nov. 9.—Chatham' Ont.—International F. T. Club. W. B. Wells Sec'y.

The Hill Hurst Kennels.

Hill Hurst is the name of Mr. Hunnewell's country seat, situated about two miles from Wellesley station, one of Boston's many picturesque suburbs. After a sharp drive in the keen, early morning air, we were quite prepared to carry out the first duty of the day—breakfast. A word or two about Hill Hurst, and we will walk across the lawn to the kennels. Mr. Hunnewell's house is beautifully situated on the crest of a hill, directly overlooking a large lake, a beautiful and picturesque sheet of water, at the other side of which rises the stately pile of buildings known as Wellesley College. In our many travels we have seen nothing to equal the picturesque peacefulness of this enchanting view from the windows of Hill Hurst. Park-like lawns surround the house, extending to the edges of the woods which cover some 300 acres.



Lighting our cigarettes we strolled across to the kennels which are situated at the edge of the woods, about a couple of hundred yards from the home. All was commotion as soon as we appeared. Pausing on our way long enough to inspect an ice-house looking structure which proved to be a tennis court, Mr. Hunnewell being one of the acknowledged experts at this active game, we opened the double gates of the kennel yards. This gate within a gate is an excellent arrangement as any one will imagine who has tried to keep half a dozen squirming terriers from escaping when the kennel yard door is opened. Before giving particulars of the dogs we might as well describe the kennel buildings. These are said to be of Mr. Hunnewell's own designing, and as he had seen no other kennels when he built these, they may be said to be original. The main kennel yard, surrounded by wire fencing, eight feet deep, covers about an acre of ground, in the middle of which is a small cemented pond, as shown in the picture. A very useful adjunct to any kennel. To the right, before reaching the main kennel building, were three wire-fenced yards, running from small, lean-to kennels. In these are several pups both of poodle and wire persuasion, and they extended us a noisy welcome. Arriving at the main kennel the front door leads into a large room which contains an office on one side and cook room with stove and feed bins on the other. On the walls are hung pictures of dogs, show chains, prize cards, and the very artistic diplomas given by the Paris shows, where the poodles have won honors. Another door leads into the six foot vestibule, dividing the range of kennel compartments. There are eight of these, four on each side, about 12x8 feet. Each compartment is fitted with a hinged bench, about a foot high, running along the sides. A door at the end leads into separate kennel yards. The front doors of the compartments are of solid wood and divided into two sections so that the top part can be opened to inspect the inmates. Inside the doors are wire doors, so that in warm weather the solid doors are swung open, and thus plenty of free ventilation is assured. All the flooring of building and inner kennel yards is cemented. A door at the back of the vestibule leads to the poodle kennels which are not so elaborate; similar in construction to those situated in the front part of the main kennel yard. Situated at the edge of the woods the buildings are amply shaded, and sheltered, and a number of trees in the main yard also afford grateful shade in summer time. At the far side of the big yard is a large boiler, inclosed in a little shed, a good arrangement, as nothing unsettles the dogs more than the fumes of cooking. Patrick Grady, with sundry help, has charge of the kennel. He graduated from the stable or the cattle section we forget which, but that his work is a labor of love with him is proved by the excellent care that he takes of his charges, and the cleanly manner in which everything pertaining to the kennels is kept. Since our visit Mr. Hunnewell has erected winter kennels, consisting of a glass enclosed piazza, reaching from one side of the main building. This affords a warm sheltered run for the puppies. Many owners of large kennels know but few of their dogs personally, but Mr. Hunnewell is on intimate terms with all the grown dogs, knows their individual characteristic, and takes delight in rambling through the woods with a score of them at his heels on the lookout for "chucks" or anything that may turn up in the way of varmin or "work for terriers."

HILL HURST KENNELS.

Grady started the inspection by bringing out Mr. Hunnewell's first love, Oakleigh Bruiser, and his new crack Cribbage, which he recently purchased from Mr. H. W. Smith, of Worcester, Mass. Naturally these two rivals for the charms of the kennel talked to each other in an animated manner, but like many readers of Forest and Stream, they were "chained to business," and though they would dearly have liked a rough up, such specimens of the wire hair race are too valuable to be permitted this natural indulgence. There is a little of the tuft hunter in nearly everyone's composition, and so we naturally turned to Cribbage, the Sultan of the harem, and found him much improved even on his Providence form, stouter and sturdier, his only drawback being an excess of whisker, but this will be attended to before he makes another public appearance. Since writing the above he was shown at the New England K. C. Terrier show and was put down in the orthodox manner. Wire hairs require trimming just as much as a man. There are not many of us who wish to go round with a shock of hair like the up-to-date football player. Although Cribbage has occupied such a prominent position in "wire" circles, little has been written of his history and attainments. He first saw light in Mr. W. Carrick's kennels, Carlisle, England, April 4, 1890. His sire was Trick and dam Carlisle Tinsel. On his dam's side his blood goes back to the crack Ch. Carlisle Tack and Vice, the mother of the noted Carlisle Tyro; in fact all through, his pedigree teems with patrician blood and his services as a sire should prove invaluable in his new home. Nearly five years old, Cribbage stands to-day a wonderfully well preserved terrier, as good in head, eye, cheek and carriage as he ever was. His is one of those long, clean heads that may shrink but never grow coarse. He has the best of ears, well sprung neck, and typical front with beautiful legs and feet and his bearing shows him to be game withal. Since his advent in this country he has carried all before him, accomplishing the hitherto unprecedented feat of beating one of the best smooth dogs living. Among his most meritorious victories before his importation may be counted the Prix d'Honneur, for the best sporting dog in the show at Antwerp, Belgium, beating fifty-three other first winners; another win to be proud of was when he took first and the Fox Terrier Club Cup at the Oxford Fox Terrier Show at London, England, afterwards taking first and cup at Glasgow, Scotland, where he lowered Vice-Regal's victorious flag. As if this was not enough to satisfy the most exalted ambition he came over here and twice won the Grand Challenge Cup, given by the American Fox Terrier Club, for the best smooth or wire fox terrier in the show, taking the honor from August Belmont's Blemton Victor II., who held the cup for three years previously. In color, Cribbage is white with tan on head and ears. In England his list of firsts include such great shows as the Kennel Club, Birmingham, Darlington, Wolverhampton, Fox Terrier Club and Gloucester, etc. To give the whole list would occupy too much space. His last appearance in England was at Darlington, June 28, 1893, but being out of condition, the celebrated Prompter was, even with his handicap, in the opinion of many good judges, unjustly awarded premier position. Cribbage had already been purchased by Mr. Smith, and came to this country with Surrey Janet in September, 1893. He was not exhibited until New York Show the following year, when he easily won firsts in open and novice classes, and with Surrey Janet, took the wire haired brace special and those for best brace wire or smooth, best wire dog and best wire or smooth dog in the show; this carried with it the Grand Challenge Cup, which had hitherto always fallen to a smooth. He followed these successes up at Boston a few weeks later, again winning the Grand Challenge Cup. The specialty show in May also saw him a big winner and he won all put up for his breed at the Rhode Island Fair Show last fall. Since our visit he held his own at the N. E. K. C. Terrier Show, running Ch. Blenton Victor II. very close for best in show.

Among the good ones he has sired is Curio, winner of several first prizes, and his get over here will, no doubt, be heard of before long, as several youngsters are making up very nicely. But Oakleigh Bruiser is all this time protesting, in canine fashion, that the pats and nice things should not all go to Cribbage, so we turn to one of the best wires seen on American benches before the advent of the Cribbage-Surrey-Janet string. Bruiser is a terrier all over, and pussies, rats and woodchucks would be mighty scared varmin if he could have his way all the time. He gets it sometimes and shows a scar or two for the privilege. Mr. Hunnewell has not dropped across many bargains in dog flesh, but Bruiser proved to be the one exception, his present owner buying him from Mr. Lindsay Hogg, after he had won several prizes at English shows. Oakleigh Bruiser is by Dudley Rarity, out of Brunette, and is therefore strong in the new Forest and Broom blood, consequently having a mixture of some of the best smooth and rough strains. On the maternal side he is a grandson of that good old terrier Brittle, of whom more anon. When he first appeared in America, Mr. R. F. Mayhew, the fox terrier judge, wrote of him: "Almost as good in coat as could be, of a dense, hard nature, in addition to which has a lean, nicely chiselled head, good expression and character, with plenty of bone and substance, and a nice top. He is inclined to stand with his elbows in, and might with advantage be longer in loin." Bruiser should be most valuable on weak coated bitches, for his coat is like pin wire, and what is of much importance these days, is very dense. He was whelped June, 2, 1891, and was bred by Mrs. Lee. Bruiser was not long in finding his way to the challenge class, and at Boston Show last year he attained Champion honors. In 1893 he won second at New York, to Daylesford Broom; firsts, Boston, Newark, Rhode Island Fair Show, and Akron. Last year he began the season with first at Saratoga, then New York, Boston and the specialty shows, in challenge classes, and since our visit has added to his laurels firsts at Providence and second to Cribbage at the Terrier Show. He has sired some nice stock, stamping his get with his own good terrier character.

CHAMPION OAKLEIGH BRUISER AND CRIBBAGE—HILL HURST KENNELS.

"Bring out Janet," says Mr. Hunnewell, and out trips the best wire hair in America, to our mind, in Surrey Janet. She was scarcely in as fine trim as she appeared a month later, at the Terrier Show, having just weaned a litter by Brittle—what a combination of terrier character this mating should produce! In the August, 1893, issue of the Fox Terrier Chronicle appeared an excellent biography of this beautiful terrier, in which we find this interesting news regarding Janet's very early life. A Mr. Harrold bred his bitch Jenny to Northfield Besom and three pups were born. Two were given away, and when Surrey Janet was well grown, Mr. Harrold, being anxious to dispose of her, offered her for the magnificent sum of 15 shillings ($3.75), to several "cute" wire exhibitors, but they looked "askew." Then Mr. Mutter saw the bitch in the street, and looked, longed and never left her till he bought her, and luckily so, for she proved the corner stone of the noted Surrey Kennels. Her first appearance was in June, 1892, at Harlow, and under Mr. Astley she won three seconds and first in Maiden class, successes that promised well for her future. Another show intervened, and then at Market Harboro, Mr. Redmond saw something to love, and she won in open and puppy classes. Then followed many winnings, until we find her at the Crystal Palace show with firsts in open and novice clases and a special. Different judges seemed to have had different opinions as to her merits then, for at one show she could take a second and turn the tables on her victors at the next. But recovering her premier position an unbroken list of wins followed, beginning with Cruft's, where she also took the special for best rough in the show. Now she was in the challenge ranks, and after winning at Bath and Preston shows, and Mr. Mansell having a commission to purchase the best wire bitch in England, he plumped for Surrey Janet, and she became Mr. H. W. Smith's property. Under his name she won several firsts, notably at Leicester, under Mr. Vicary, beating the crack dog Jack St. Leger, and two days after she downed Champion Prompter for the special, at Darlington, a few minutes after the latter had lowered Cribbage's colors. But her biggest triumph, and fitting close of her English career, was at Cirencester, where Mr. Hayward Field placed her first and special for best in show, rough or smooth, beating her little sister Sister Mary and several crack smooths. One cannot better describe Surrey Janet than to quote the above journal: "A beautiful bitch of correct size, an extra coat of the right texture, a lovely neck and fine shoulders and front, good bone, and with the best of feet, and to add to all these, a varminty looking head, with perfect outline and ears and correct facial expression for a wire."

"Now those critics over there said she was not right behind, I'll show you that there is not a stronger or faster terrier in the kennel," says Mr. Hunnewell. Suiting the action to the word, he threw a ball the length of the big kennel yard and Janet beat Cribbage in every race, showing not the slightest weakness in her hind legs. Surrey Janet was whelped Aug. 18, 1891. In 1893 she came over with Cribbage, and her career since thne has been one series of victories, sharing with her kennel mate the brace prize specials, and winning all the specials for her sex at New York, Boston and the Specialty shows in 1894.

Bushey Bramble, big with maternal anticipations, was next trotted out. She was due on Oct. 30, 1894, and there should be a nice family growing up by this time. This bitch was imported last summer, and was whelped Sept. 2, 1890. She is by veins ex-Bramble, and is nearly smooth bred but is broken rough to be a wire, her coat partaking of the wonderfully hard texture of her sire's. Her legs, feet, head and expression, bone and quarters are her most noticeable points. In color she is white, with right ear black and left ear ticked, and a spot on stern. In England she won first at Leicester, Darlington and Barnet, in 1891; Barking, Kew and Enfield in 1892, and first at the London Fox Terrier Club Show, at Uxbridge, in 1893, besides a number of specials. Since coming to America she has won first at Providence, only time show. She should make a valuable brood bitch.

One of the handsomest wires ever exhibited on our benches

came out next for inspection, though at the time she was by no means herself. For the past year she had been, in the language of the kennel, a "bad doer," and had fallen away in consequence. Her pretty head, however, always commanded attention, the evenly marked black and tan blending with the badger tint being a rare charm. At home and among friends Ryedale Pattern showed herself off to perfection, but in the ring was not apt to make the most of the opportunity, and therefore required expert handling. Pattern was whelped Aug. 9, 1887, and was by Ryedale Tip out of Beacon Beauty, and although a true wire in every expression and attribute, a good deal of smooth blood ran through her veins. She was bred by G. W. Corner, England. Her first win was at York, in 1888, in 1889 she scored at Olympia Show, York and Birmingham; in 1890 firsts at the Kennel Club Show, Darlington, Leicester and Leeds, were among her honors; in 1891 she took winning brackets at the Midland F. T. C. Show, Gloucester, Malden, Barnet, etc.; 1892, Harlow; 1893, at Cruft's she won two firsts, and then was imported by Mr. H. W. Smith, of Worcester. At New York, Baltimore, Philadelphia, Washington, Boston and the Rhode Island Fair Shows of 1893 she easily downed the best of our wires, and by this time was a champion. In 1894 firsts at New York, Boston and Specialty Show in May, added to her fine record, and since our visit, greatly improved in form, she won her last ribbon at the Terrier Show. Pattern was imported in whelp to Cribbage and that this mating threw some game stock is proved by the following occurrence. One of her pups, born in this country, having had his leg broken by being stepped on by a cow, was given to a farmer. At eight months old he would tackle any woodchuck on the farm, and at a year old would either kill the chuck in the hole or draw him out. Last July the farmer's foxhound,

HILL HURST KENNELS' POODLE VIVETTE.

ran what was supposed to be a fox, into a ledge. The terrier was brought out and put in the ledge. There was a rumpus directly, and the fight continuing for two and a half hours, the noise issuing from the scene of combat convinced the bystanders that a coon was laid up. Opening out the crevice with crowbars and picks, the body of the terrier was exposed to view, lying apparently lifeless; but in a moment he was up and at the varmin again. Finally both coon and dog were viewed but could not be reached. They would fight for a few minutes then rest for breath, then at it again. By the aid of a wire the terrier was drawn out, but not until he had fast hold of the coon and both came out together. The coon was played out, and as soon as the terrier was released he nipped him in the back and it was all over. The coon weighed seventeen pounds and the terrier fifteen pounds. The latter's scars will always bear witness to the gameness he derived from his breeding. Ryedale Pattern died Jan. 29, from internal hemorrhage and her death is a severe loss to the kennel.

The next to demand attention was Petition, imported by Mr. Hunnewell Aug., 1893, after winning at Croft's and Oxford Shows. She was whelped March, 1889, and is by Ebor Nick out of Heldgate Belle, running back to good wire blood on both sides. In color she is white with black ear. She is what is termed a nice stamp of bitch, though she shows too much coat, and should be shorter and firmer in back. At the Rhode Island Show in 1894 she took third in open class. When we saw her she was in whelp to Ch. Oakleigh Bruiser, and he should certainly correct her faults in the offspring. Like Henry Ward Beecher's dog, Petition has one absorbing idea and this is to watch the drain hole in the kennel pond, which she stands guard over for hours if allowed to, and Micawber-like, waits for something to turn up.

Brunette had also been released. She is one of the younger matrons, being now about eighteen months old, and is by Oakleigh Bruiser. She was not yet furnished up, but is a promising sort. She won last year at Boston third in open, novice and puppy classes, and first puppy and second to Bushey Bramble in open classes at the Rhode Island Fair Show, and the Terrier show. Her coat is her strong point, being of the texture of a besom.

Then the old warhorse, Brittle, came jumping out as frisky as a two year old. Brittle's career is so well known it is not necessary to go into extended particulars.

He was whelped Aug. 23, 1884, and is by Brick out of Vamp, and runs back to a lot of patrician smooth and wire strains. In England he won many prizes, being exhibited when the quality of the wires was at its zenith. He has beaten all the cracks, Carlisle Tack, Jack's Yarn, Tees Nap, Briggs Bruiser, Carlisle Tick, etc. Brittle was one of the six wires selected to compete against six smooths at the York Terrier Show in 1888, and the wires won. His head is considered almost perfection, and his general contour, style and expression cannot be excelled. Naturally he has lost his mouth and he has gone wide in front, but he is a grand terrier yet, and game as they make them. Only last year he held on to a coon that dragged him a hundred yards. He is particularly suited to smooth bitches and has sired several cracks in England, notably The Reclaimed and in America he is responsible for those friendly rivals, Brittle Beaut and Mister Great Snap among many others. He was owned by Mr. R. F. Mayhew for several years and was brought over by him in 1892, then sold to Mr. H. W. Smith, who in turn sold him to his present owner, who no doubt will keep him to the end.

In quick succession we were introduced to a lot of youngsters, who are sure to make their names known in future prize lists. One was Hill Hurst Trick, by Cribbage, out of Petition, who boasts a capital long head. Later he won in the puppy class at the Terrier Show. H. H. Snowflake, a low set one, that had a walkover in the puppy class at the Terrier Show; H. H. Blossom, by Daylesford Broom, out of Pinkey, a smooth from the Rutherford Kennel. She took third in open bitches at the Terrier Show, and first in novices.

Pinkey, just spoken of, is a fat, motherly sort of no account show bitch, but she can produce winners.

Then there was the smooth Diana and several promising pups, in the inclosed puppy runs. Tagging round our heels was Briar, a big, coarse sort, but a family pet, and sire of a capital pup

HILL HURST KENNELS' FOX-TERRIER CRIBBAGE.

out of a bitch so bad that sudden death was her portion. Talk about the science of breeding! it cannot hold a candle to chance.

A glance at Flipperty Gibbert, imported, one that her owner is not at all proud of, for she is one of those "pigs in a poke," that do not always come up to expectations. She was bred by W. O. Greenside, England, and is by Lord Edward out of Camellia and certainly is well enough bred to throw something good if mated right. She had a nice litter of five, three weeks old, by Oakleigh Bruiser. Her redeeming feature is her gameness. H. H. Vamp, a daughter of hers, by Brittle, is a very pretty yearling, that would make a good companion for some one.

Passing through the main kennel we came to the outside kennels described above, where most of the poodles are housed. Here in the first compartment was Oakleigh Flirt, a deerhound from Mr. Thayer's kennels. In the next compartment were two English setters from the Bayard-Avent kennels. These are handsome dogs and good fielders. They are owned by a friend of Mr. Hunnewell's. A pretty sort is Rose (Brittle-Petition), whom we found in the next kennel, with her sister Hill Hurst Pansy, sold to Mr. Belt. She was on a visit to Cribbage.

Returning to the open yard the crack brown poodle, Poobah, came up for inspection. This stylish dog is known to most showgoers, and was one of the first lot of browns imported by his owner from the Parisian kennels of M. Conlon in 1892. He is by Punch, out of Posey. Punch has won several prizes at French shows, and Poobah himself, won third at the Paris show of 1890. When first shown he had to run against his kennel mate, Diamand and was second to the latter at several of the best shows in 1893. In 1894 he took first at Saratoga, New York and Boston. Poobah has shown himself a great stock getter, some of his youngsters coming on, give great promise and are especially rich in color. Then we turned to Diamand, who was frisking around in great shape. His merits have been repeatedly described in these columns. He is also a French bred one and is by Bizon, who won first at Paris, 1892, out of Negress never shown. Diamand's winnings include firsts at R. I. S. F., Newark and R. I. P. A., in 1893, and second to Poobah at Saratoga and New York, and first Philadelphia, 1894.

There is little to choose between these two good ones. Next came Vivette, by Cartouche-Bella, and whose sire was also a Paris winner, taking third in 1892. She has a rich color with tight curl, and is a very sprightly dame, but was then heavy in whelp to Poobah. She has an unbroken record of wins at R. I. P. A. Show, in 1893, Saratoga, New York, and Boston, as well as two specials in 1894. The bobtailed Bellone came prancing up. She has turned in color. Many of these browns after having puppies, get mixed in color, and this, while I think it adds to their appearance, tells against them on the bench. She is not so tight in curl as Vivette and has had to run second to her at Saratoga, New York and Boston in 1894. She is a capital mother, however, and therefore valuable to her race Others I was introduced to were: Hill Hurst Ida, another that in color runs to a roan. She is counted the best brood bitch in the kennel, and was in whelp to Poobah. Last year she had two litters of eighteen and all were sold but two, at $50 each.

Hill Hurst Posey is the puppy winner at Saratoga last year and was second to her kennel mate, Dinah, at Boston.

Hill Hurst Nap is another youngster that commands attention. He is by Poobah out of H. H. Ida, and thus brother to Posey. He was reserve in puppy class at Boston. H. H. Dinah is considered the best puppy; she won in puppies at Boston, 1894, and was third to the older bitches in the open class. Her color is getting a little mixed even now, but she carries a capital crisp curl. She was in whelp to Diamand. Then a litter of seven July pups by Poobah-Bellone, were turned out, and the fuzzy little beggars were up to all sorts of fun. Two more youngsters

HILL HURST KENNELS' FOX-TERRIER BRTTTLE.

born in May, by Diamand ex Ida, claimed our attention, rich in color, these pups looked charming on the green grass. One of them was sold to Mr. O. Ames, second.

"Do you find any sale for these brown poodles?" I asked Mr. Hunnewell.

"Oh, yes! I cannot breed enough of them. I have never pushed their sale, but have disposed of about $1,000 worth during the year." And Mr. Hunnewell has some satisfaction in knowing that those who purchased these pups all claim their's are the best, for he was frequently told at New York and Boston shows that those they had purchased could beat any on the benches. Before leaving the poodles, a word of praise must be given to Patrick Grady, the kennel manager, who always shows his poodles in such capital condition, every curl in its place and none longer than the other.

Time was pressing and we strolled over to the stables, where several neat "tits" were being well looked after. Then to the house and luncheon, and another long look at that beautiful view across the Lake to Wellesley College. Jumping into the carriage we were whirled away to the station, bearing away pleasant memories of a pleasant day, spent among surroundings where the veriest misanthrope could find some happy moments.

H. W. L.

If a thing is worth doing at all it is worth doing well, and this was evidently Mr. H. H. Hunnewell, Jr.'s, sentiment when he determined to give rein to his fancy and indulge in a kennel of high class dogs. A brown poodle, brought from Paris, proved the cornerstone of what is now one of our most prominent kennels.

Brown poodles, a couple of years ago, were rarities in this country, and those Mr. Hunnewell imported were the first seen on our show benches. But there is a certain touch of the drawing-room about poodles. To a man of Mr. Hunnewell's activity and love of out-door sport, something more was required, and becoming imbued with a love for wire hair fox terriers he imported a few of these game terriers and the nucleus of the Hill Hurst Kennels was duly formed. There was a field in that breed for this gentleman's energy and wealth, and how wisely he has chosen is already seen by the prominence of the kennel in the prize lists of late shows. With this slight introduction, we will pass on to the story of a very pleasant day spent at one of the most charming of New England homes.

When we heard that Mr. James Taylor was to judge at New York and to set at rest the confusion that seemed to exist in the minds of exhibitors in America over the two Taylors in the English fancy, the one hailing from Manchester and London and the other from "Owdham," we wrote to the Stock-Keeper for a photograph of the English judge, and for biographical particulars. The astute editor of that up-to-date journal had a similar train of thought, and being on the ground, he was able to carry out the intention and this week our readers are favored with a capital portrait of Mr. Taylor and particulars of his canine career. Mr. Taylor's father was a naturalist, and at

HILL HURST KENNELL' POODLE DIAMOND.

the early age of five, his playmates were dogs, so he is not "a five minutes fancier, cackling over immature opinions that have not had time to hatch." Mr. Taylor's first visit to a dog show was in 1866, and bulldogs were his first fancy. In 1868 he bought a bitch puppy, for $74, and naming her Maggie Lander, he won in the following year, second prize at Birmingham. When Maggie died she had attained the rank of champion. This was a purchase that certainly promised well for his future sound judgment. Talma, the seventy-eight pound dog, whose name appears in the pedigree of Monkey Brand, was also owned by Mr. Taylor, and sold by him to a Mr. Joplin, who won with him at the Alexander Palace Show. Another of his bulls was Heathen, the sire of Monkey Brand. During his career he has bred and owned a number of canine celebrities. He first donned the ermine in 1872, and four years later judged at Birmingham, an engagement which he kept for ten years in succession. Business ties prevented him from accepting more judging appointments, until about four years ago. Since then invitations have poured upon him, and last year he beat the record as an all round judge, with sixty-four appointments! An interesting event occurred in his career at Birmingham in 1880, when he was asked to act as referee between Messrs. Redmond and Southwell, who were unable to agree over the merits of the fox terriers Brockenhurst Joe and Brockenhurst Rally, the latter gaining his fiat. For some years he owned a prominent kennel of greyhounds and his connection with Yorkshire terriers dates from 1865. As a pigeon fancier he has also shown good judgment. This is his third year as the Stock-Keeper's reporter-in-chief, and he has the reputation of being both able and impartial, which he must be to occupy such an important position. Moreover, he is the only show reporter that does not exhibit on the other side, and this is very much in his favor, for obvious reasons. It will be seen, therefore, from the foregoing, that Mr. Taylor comes with a reputation that should ensure him the good will even of those who, in the course of his judicial duties, he will probably disappoint, and, as he comes to us representing up-to-date fashions in dogs, his decisions should go far to help our breeders along the narrow path that leads to dog show honors.

"Love is a plant that grows best when well tended, and there is no limit to the exuberance of its growth. Give your children pets and flowers," says Dr. Gordon Stables, "and you bring them into unison with nature and nearer to God, if you but show them how to tend and treat them And the exercise of loving care for the lower animals will enlarge the heart and affections, so that regard for their fellow beings, who may be in poverty or sorrow, will find plenty of space therein. A child who never has a living pet as a companion, is very likely to grow up into a selfish, discontented grump, or a canting hypocrite. The doctrine that everything was made for man's use, is accountable for one-half the cruelty to dumb beasts we see around us every day of our lives."

The W. K. C. Show.

The W. K. C. Show opened this morning, Tuesday, with 1,406 dogs benched. The quality in several breeds is better than last year, notably in some St. Bernard classes, greyhounds, wolfhounds, setters, and different terrier breeds, especially bull terriers. A number of the well-known exhibitors were present. The benching is well arranged, most of it being on the main floor, but less space is left the aisles. Everything seems to be moving with the customary smoothness under Mr. Mortimer's watchful eye. As we go to press within an hour of the commencement of judging, more cannot be said, but a full report will appear next week. The man who says "What do you think of that?" is out in abundance already.

DOG CHAT

Mr. George Thomas sailed from Liverpool, Jan. 27, with a big team of new purchases which include wolfhounds, Irish terriers, spaniels, Bedlington terriers, and greyhounds. Particulars of some of these we have already given He also brings with him a team of foxterriers entered by Mr. Geo. Raper. There are Raby Rival, own brother to Dudley Sholler. Raby Truefit, winner in two firsts at Bolton show; Richmond Pearl, a bitch that has won at several shows, and Richmond Victory, another well-known terrier, which according to Stock-Keeper, Eng., has always done well.

From the above journal we also learn that American fanciers "have missed a treat just by the skin of a hap'orth of argument"; the cons having, by their strange quantity, downed the pros in favor of Mr W. H. Sprague taking advantage of the opportunity presented by the New York Show to introduce himself and his "boots" to the American kennel public." This is sad. We have seen a picture of those boots—they are great—something on the ultra field spaniel order. Mr. Sprague is celebrated in bull dog and whippet circles, and is kennel editor of the Licensed Victuallers' Gazette.

In the third number of "Our Dogs," the new English kennel journal, a very interesting account is given of Mr. Moses Woolland's famous kennl of Sussex and black field spaniels. In addition to a capital picture of the owner, several of the best exponents of the Bridford strain are portrayed. These include Bridford Brilliant, Ch. Bridford Shah, Ch. Bridford Dolly and Ch Bridford Giddie. Mr. Woolland's kennel, as all spaniel breeders know, stands at the very top in his particular fancy, though the word fancy in this connection may be a misnomer, for Mr. Woolland, being an ardent sportsman, all his spaniels are brought up to the gun, and while "long and low" enough to suit the demands of the show ring, we are told that their owner shoots over all his best spaniels and has never yet found their equal for work. He characterizes the contention, so often ventilated in the press, that this style of dog is useless for field work, as nousense, and instances the case of one of these pessimists who really had had but two days' shooting in his life! Several of the Bridford's have come to this country, but as Mr. Woolland is very conservative in his breeding operations, not allowing the public the use of his famous stud dogs and not being particularly anxious to sell his stock, it is safe to conclude that only the culls are expatriated.

The noted prize winning pointer, Sandford Graphic, died recently of old age. He was owned by Captain Moreton Thomas and bred by that clever pointer man, Mr. E. C. Norrish.

The dog fancy is making such rapid strides in England, that there is no telling what new craze will be the outcome. The—shall we say New Woman?—has already introduced us to a Ladies' Kennel Association, and a Ladies' Kennel Journal, and as if this were not sufficient for the decade, a purely Ladies' Dog Show is announced to take place during the coming summer in the Ranelagh Club grounds, London. We wrote New Woman, but this is scarcely fair, for this feminine fin de siecle product is scarcely to be credited with stooping to canine devotion when domestic duties and affections are given the go-by.

Mr. Everett Millais, whose researches into the mysteries of distemper among dogs, and other diseases incident to the canine family, is to deliver a lecture, the 28th of this month, on "Two of the Problems of Reproduction," before the medical and physical society of St. Thomas's Hospital, London. This lecture will deal with the knotty question as to the influence of the sire and the previous sire, explaining all the experiments and their results which he has lately made. As proving one instance at any rate of the influence of the previous sire, we were recently shown a fox terrier bitch from Mr. Belmont's kennels, a very large bitch with a remarkably long, clean head. This bitch was accidentally mated with a St. Bernard, and although bred six times subsequently to pure foxterriers every litter but the last one showed unmistakable signs of the cross in individual members of each litter. In the six litters all the pups were pure fox terriers in appearance.

Dog breeders are often at their wits' end to save a valuable litter of puppies when the mother is either too sick to nurse her young or dies in parturition. And it would pay the owners of valuable kennel stock to always keep their weather eye open for foster mothers. Cats have been known to suckle a pup or two, but an unique case is related in "Our Dogs," where a Mr. White, when he lost the pug bitch Queen of Leeds, unable to secure a foster mother for the puppies, not even a motherly "tabby," kept them alive for several days by letting them have nourishment from a guinea pig!

The Chicago show entries closed last Monday, Feb. 16. In looking over our remarks on the subject of giving so many specials to local entries at Detroit and Chicago, we are reminded that there is another side to the question—one which is of material importance to the show management. It is a well-known cry that exhibitors make a show possible. That is acknowledged, but it must also be conceded that exhibitors themselves bring nothing to the gate, therefore, the people of the town wherein the dog show is held, are looked to for the wherewithal to pay expenses and save financial loss to the show promoters. A show committee, with the exception of New York, is generally dependent on local generosity for its special prizes, and the locals naturally donate their prizes in a channel that will prove of some benefit to themselves, and their fellow townsmen and often, as in the cases of Detroit and Chicago, the club must either curtail its special list, or coincide with the locals. The object of local classes is therefore to interest the people of the town, and this can be done in no better way than to offer prizes and other inducements for the local element to exhibit. Mr. Jones enters his ki-yudo and it is safe to say that Mrs. Jones, the little Joneses and their aunts, cousins and so on, will go to see ki-yudo on his bench, though they may have seen him every day for the past two years, at home. All their relations pay for admission, and the result shows the wisdom of encouraging ki-yudo. There is another reason, too. Mr. Jones, being drawn to the show and being a man of discernment, is probably tempted, when he sees so many better dogs than ki-yudo, to invest in a dog of good parts and breeding and before he knows it he is a fancier, and to encourage such men and such a feeling is or should be the raison d'etre of a dog show. The president of the Mascontah Club tried to get the "boys" last year to take up the idea of having a special car to Chicago from New York, but the scheme fell through, and late last year he proposed to Spratts' Co. that they should make the arrangement. This strikes one as a good idea, and should be carried out. If we are to have circuits why not consider the transportation problem in a business-like manner. If exhibitors kick at existing transportation rates they should make an effort to get round the situation by united action. Additional specials at Chicago are $10 for the best kennel of bulldogs and $10 for best bull terrier dog in open class over 30 lbs. A friend of the Irish setter offers silver cup for best dog that has been placed at a public field trial. Another similar cup for the best Irish setter dog that has been placed at any public field trial. The three to be judged together.

Our "Scottie" owners are full of pluck. One of them has made a bid of $500 for the crack Hyndman Chief, but unfortunately Mr. H. Wood refused the tempting bait.

Wire hair terrier breeders will regret to hear that Hill Hurst Kennels' well-known bitch Ryedale Pattern was found dead in her kennel Jan. 29. The cause of death is said to have been internal hemorrhage. Pattern had been under the weather for a year or so, but was coming round nicely at the late Terrier Show. She was a winner of many prizes, both in England and America, and was imported by Mr. H. W. Smith, and afterward sold to Mr. Hunnewell. She was a handsomely marked, stylish bitch, with a great deal of terrier character and is a decided loss to this kennel.

A special party of press representatives left New York last Saturday on the old Dominion Line Steamer Yorktown for Southern Pines, N. C., where they will take part in a series of Southern sports extending from Feb. 18 to 23. The affair is under the management of the Seaboard Air Line. Tuesday and Wednesday there will be quail hunts, Thursday, a rabbit chase, Friday, a squirrel hunt, and Saturday a wild turkey hunt. The week's hunting will be interspersed with many minor events, such as barbecues, 'possum suppers, banjo concerts, and a grand ball.

Mr. E. Hough, commenting on the above says: "This would be good for the New England people to note. Mr. H. S. Joslin, of Oxford, Mass., a well-known lover of that breed, called on this office this week, and interested me in his description of the rabbit hunting in his country. If he should get into the covers of the South, with his pack, they would be likely to die of nervous prostration, trying to find all the trails they would find."

Mr. Louis Contoit tells us that last week he visited the Oak Grove Kennels, Moodus, Conn., to breed his well-known Irish setter bitches Bessie Glencho II., and Bessie Glencho VI., to Ch. Kildare. He found over one hundred dogs in the kennel and all in good condition. Mr. Contoit will breed Eudora to Kildare during the N. Y. Show and, as a little useful information for Irish setter breeders we quote his remarks regarding their mating: "All these bitches are of the pure Elcho, Jr., Bessie Glencho cross and all are wonderfully deep chested and fronted like terriers. These points are the only ones Kildare is deficient in and while my bitches are a little light in muzzle, Kildare is wonderfully good in thisrespect."

Another old landmark has passed over to the majority in Ch. Ossining. This good pointer was whelped in 1888, and was by Ch. Robert-le-Diable out of Countess Nellie O. The Pittsburg sportsman, J. O'Hara Denny, bred him. He was formerly known as Nellie's Bert, but as Ossining he was shown extensively by Mr. W. H. Hyland, Tarrytown, N. Y.

The kennel world will be delighted to hear that the Duquesne Kennel Club is once more an active factor in dogdom, and will hold a show April 10 to 13, the week previous to Boston's annual gathering.

Mr. W. E. Littel, the secretary, informs us that the premium lists, which will be issued the latter part of this week, will meet the views of the most exacting exhibitors. So far they have special premiums in the way of valuable merchandise and cash offered that excel in value all previous efforts in this direction. The club has secured the old City Hall, situated in the centre of Pittsburg, and is therefore within a couple of minutes walk of the leading hotels and railroad stations. The officers of the club are: President, John Moorhead, Jr.; Vice President, John M. Chaplin; Secretary-Treasurer, William E. Littel. Executive Committee, H. M. Breckenridge, Dr. John S. Philips, John Moorhead, Jr., John M. Chaplin and W. Arrott. Pittsburg is always a popular venue for exhibitors, being a sort of half way meeting place for the fancy East and West and the kind and considerate treatment previously accorded visitors by the fanciers of the Smoky City will, we are assured by Mr. Littel, be in no way relaxed this year. Mr. Littel's address is 79 Federal street, Allegheny, Pa.

An important meeting of the Canadian Kennel Club was held at Toronto, Feb. 7. Present, Dr. J. S. Niven, Chairman; R. Gibson, Dr. J. S. Griffin, R. W. Boyle, C. A. Stone, G. B. Sweetman and H. B. Donovan, Secretary. Messrs. T. G. Davey, R. McEwen and F. S. Wetherall were appointed a committee to represent the club with a veiw to an agreement with the American Kennel Club on the basis of the following motion by C. A. Stone, seconded by Dr. Griffin. "That this club, (C. K. C.), would be willing to recognize an agreement on the basis of a mutual recognition of wins and disqualifications, the wins at shows held under C. K. C. Rules to be published in the A. K. C. S. B. All dogs from Canada exhibited in the United States to be listed or registered with the C. K. C.; prize winners in either case, where qualified, must be registered with the club under whose auspices the show is held." The auditing committee reported for year ending Aug. 31, 1894, a debit balance of $11.89. On receipt of an apology and plea for reinstatement from Mr. F. H. F. Mercer, the club decided on motion of Mr. Sweetman and Mr. Stone, that on receipt of necessary fees he be reinstated. The following important letter was received from Mr. W. P. Fraser: "May I suggest that you bring before the Executive Committee at the meeting to be held at the Queen's Hotel, on Friday next, the question as to the advisability of abrogating the rules relating to the five hundred dog and five hundred dollar limit. This would enable the shows held by the Toronto Kennel Club, Hamilton Kennel Club, Montreal Kennel Association and probably Guelph Fat Stock Association at Guelph to be held under C. K. C. rules. As far as can be seen at present, there is no probability of the old agreement which existed between the American Kennel Club and Canadian Kennel Club being renewed, and thus Canadian dogs are practically shut out from qualifying for the title of champion.

"If the committee will take this matter under their kind consideration, and will see their way to repeal this rule, a fresh impetus will be given to clubs like above, and fanciers the Dominion over will feel grateful." Messrs. Fraser and Kirk argued in favor of this change, and finally it was voted that, "The Executive may use its discretion in modifying Section I, Rule XV., and Regulation No. V., by granting permission to recognized kennel clubs to hold shows under C. K. C. auspices, providing the entry list, judges and premiums offered, meet with the approbation of the committee and on payment of a fee of $10." Dr. W. H. Drummond, of Montreal, was elected a member of the committee, vice Mr. A. D. Stewart, resigned. Messrs. Stone, Davey, and Boyle were appointed to draft field trial rules and report at the next meeting. In the matter of F. Kirby's unpaid entry fees to the Toronto Fair Association's Show last year, the secretary was directed to write Mr. Kirby for an explanation. The following new members were elected: Alex. Gibb, Montreal; F. T. Miller, Trenton; C. M. Taylor, Lynn, Ont.; C. P. Simpson, Montreal; H. D. Smith, Compton; David Le Gault, Montreal; W. Wade, Oakmont, Pa. Mr. Donovan, the secretary, informs us that the meeting was unanimous and got through a great deal of business in a short time.

A number of dog chat "pars" were crowded out last week, among them the full description of Mr. E. Booth's new St. Bernards. In addition to Duke of Lincoln, he brings Kingstonian Guide for the W. K. C. Show. This is said to be a fine headed dog, a son of Ch. Scottish Guide, out of Lady St. Gothard and thus a grandson of St. Gothard III., that was shown here some years ago. Mr. Booth may also bring a son of Maroll.

Rather a novel situation cropped up at the Liverpool show. Mr. Mansfield was expected to judge Newfoundlands, but was unexpectedly prevented and sent his wife as a substitute. We have heard of the "grey mare being the better horse of the two," but we do not know whether the old saying is applicable in this instance.

America has drained England of some of her best collies and nothing in the male line seems to be coming up to take their places. Stock-Keeper remarks in the Liverpool report that there is an opening for a really tip top dog just now. Perhaps we can send them something very soon.

Mr. Henry D. Polhemus, of Brooklyn, died last week. He was a noted field sportsman, a member of the Robin's Island Club and the donor of the Polhemus cup that will be competed for at the W. K. C. Show this week.

Mr. A. C. Bradbury arrived safely on the steamer Cevic, Feb. 12. His trip was a hurried one, but he managed to do a good deal of business. Owing to the rough passage out, and delay in arriving at Liverpool, the poultry that he took over did not show to advantage, and he had to be content with V. H. C. cards instead of prizes. He brought quite a team of good dogs back with him, several of which are entered at the W. K. C. Show. At the Birch Bros. sale of collies, held during the Liverpool show, he purchased the collies Sefton Snow, by Sefton Hero ex-Sefton Grace; Sefton Ashleaf by Sefton Hero ex-Lucy Ashley, and two old English sheepdog puppies by Sir Tatton ex-Sefton Daisy. He also bought two more greyhound dogs, a black and brindle Greentick and the two—Butter Print by Herschel out of Greenfly, by Greentick, a white and fawn, and said to be a "real beauty"; White Faced Jim, by Page Boy, out of Tiny Laura, by Greentick, color red and white, and a fawn that completes the team. Butter Print is entered for the American Waterloo Cup, to be run next October. After N. Y. Show Mr. Bradbury will dispose of all his dogs and kennel fixtures, hampers, boxes, chains, etc.

A good show was held at Wellington, India, on New Year's Day, according to the Asian, classes were made for fox terriers and sporting dogs, and the rest came under the heading of Miscellaneous. The best dog in the show proved to be a bull terrier. The entries were chiefly owned by members of the English regiments stationed at Wellington and numbered twenty-seven.

Mr. Geo. Thomas arrived from England on one of the Leyland steamers last week and in addition to the Raper team of fox terriers brings for his own firm, the field spaniels Dark Despair, which he purchased from Mr. Pollard and Royd Monarch lately owned by Mr. Oates and a "young" English setter by Rockingham, the quotes around the young are ours as a dog by Rockingham cannot be counted very young. From Mr. Raper he purchased the Derby winning greyhound, Nap II, another Russian wolfhound and a capital brace of Bedlingtons, according to "Our Dogs."

Springside Kennels have purchased the noted pointers Duke of Hessen and Hempstead Pearl.

A dog show will be held at Oakland, Cal., May 1 to 4, the week previous to the San Francisco event. It is to be hoped that the A. K. C. will take some action at the annual meeting in regard to the 500 dog limit clause in challenge wins for the title of champion which at present works such a hradship on Californian, and Far Western exhibitors. It would be better to show magnanimity in this than to push that new rule disciplining officials of a show held outside of A. K. C. influence, who allow a disqualified member to exhibit at their shows.

The annual sale of Messrs. Rutherford's fox terriers will take place at the American Horse Exchange, New York, on Thursday, Feb. 21, at 2.30 P. M. A number of choice brood bitches and puppies will be sold. There are always good bargains to be picked up at these sales.

Visitors to the W. K. C. Show should not forget the auction sale of the Tracy paintings on Wednesday and Thursday evenings, Feb. 20 and 21. The Fifth Avenue Auction Rooms are within a block of the show building.

Dr. C. A. Lougest, owner of the Mt. Vernon Kennels, Franklin, Mass., writes: "I have much pleasure in forwarding check for advertisement of bloodhound pups in your paper. I have had above fifty inquiries through the advertisement."

The Spratts (Patent) Silver cup, to be given to the exhibitor showing the largest number of dogs at the W. K. C. Show is valued at $50, and not $5, as stated in our issue of Feb. 2.

Death of Champion Ossining.

Feb. 15.—Editor Forest and Steram: Champion Ossining (13,325), died on the 9th inst. His death was caused by pneumonia.

I prized him more than any dog I ever owned, for as an all round dog I have never owned his equal and doubt very much if I ever shall again. We have had many a pleasant day afield, and many a bird I have brought to bag over his points; he was equally good on quail, woodcock and grouse, a pleasant dog to shoot over, a hard, industrious worker, and game as a pebble.

Judging from his bench record he was beyond a doubt the best son of Champion Robert-le-Diable. Following is a list of his wins: 3d, New York, 2d, Boston, 1st, Cleveland, Kingston, Hamilton, Toronto, Montreal, Lynn, Danbury, 1st Challenge Gloversville, Pittsburg, Boston, and Omaha. In addition he won several specials. WM. H. HYLAND.

Pacific Coast Trials.

San Francisco, Cal., Feb. 18 (Special to Forest and Stream). The Derby winners were: First, C. Z. Herbert's pointer Doris, by Glenbeigh-Jill; second, J. G. Edwards' setter Nimrod, by Sportsman-Stephanie; third, S. F. Hughes' setter Silverplate, by Fred-Countess Noble. All Age Stake: First, Howard Vernon's Glenbeigh; second, W. G. Kerckhoff's Betsy Mark; third, J. M. Kilgariff's Sirius, by Sportsman-Sweetheart, and A. P. Kerckhoff's Mercury, by Dick Bondlure

A. R. C.

Trap-Shooting.

FIXTURES.

All ties divided unless otherwise reported.

Send notice of your shoot like the following:

Feb. 27-28.—ELIZABETH, N. J.—Second bi-monthly tournament of the Elizabeth Gun Club; first day, targets; second day, live birds. Events open to all.

March 5-7.—RUTHERFORD, N. J.—Three-days' tournament of the Boiling Springs Gun Club; first two days targets, last day live birds. Wm. H. Huck, Sec.

March 27.—SPRINGFIELD, N. J.—Tournament of the New Jersey Trap-Shooters' League, under the auspices of the Union Gun Club, of Springfield, N. J. E. D. Miller, Sec.

March 28.—NEWARK, N. J.—Live bird handicap at Erb's grounds, under the auspices of the Newark Gun Club; 25 birds, $10 entrance, birds extra, handicaps from 33 to 26 yards, class shooting, four moneys. W. H. Green, Sec.

April 3-5.—WILLARD PARK, Paterson, N. J.—Interstate Manufacturers' and Dealers' Association's third annual Grand American Handicap at live birds, at New York; $1,000 guaranteed, all surplus added. All ties in Grand American Handicap must be shot off; three moneys, three high guns.

April 3.—ASTOR HOUSE, New York.—Trapshooters' Convention, adjourned meeting; 8:30 P. M.

April 8-10.—HOT SPRINGS, Ark.—Fifth annual tournament of the Arkansas State Sportsmen's Association; targets. Programmes ready March 1. John J. Sumpter, Jr., Sec.

April 9-11.—WELLINGTON, Mass.—Three days' tournament of the Boston Shooting Association; targets. O. R. Dickey, Manager.

April 12.—HARTFORD, Conn.—All day shoot of the Hartford Gun Club; targets. D. S. Wadsworth, Sec.

April 16-18.—PITTSBURG, Pa.—Tournament of the Interstate Association, at Pittsburg, Pa., under the auspices of the Pittsburg Gun Club.

April 24-26.—PEEKSKILL, N. Y.—Annual tournament of the Peekskill Gun Club: first two days, targets; third day live birds. Orrin J. Loder, Sec.

May 17-18.—LYNCHBURG, Va.—Tournament of the Interstate

May 2.—ELIZABETH, N. J.—All day tournament of the Elizabeth Gun Club; New Jersey Trap Shooters' League events commence at 2 P. M. Rob't. E. Chetwood, Prest.

May 7-10.—CINCINNATI, Ohio.—Dupont tournament at Cincinnati. Liberal cash prizes added to the purses. R. S. Waddell, agent.

May 10.—WEIR CITY, Kan.—Ninth annual owl shoot of the Amateur Trap-Shooters' Association of Missouri and Kansas; $300 in cash added. W. W. McIlhany, Sec.

May 9-10.—WILMINGTON, N. C.—Tournament of the Interstate Manufacturers' and Dealers' Association, under the auspices of the Eastern Dog and Game Protective Association.

May 9-11.—NEWBURG, N. Y.—West Newburg G. and P. Association tournament. W. C. Gibb, Sec.

May 14-16.—DAYTON, O.—Ohio Trap-Shooters' League annual Manufacturers' and Dealers' Association, under the auspices of the Lynchburg Gun Club.
meeting and tournament, under the auspices of the Buckeye Gun Club, of Dayton, O. Ed. Taylor, Sec., 8 West Third street, Cincinnati.

May 21-23.—KANSAS CITY, Kan.—Annual tournament of the Kansas State Sportsmen's Association. A. W. Peck, Sec., Kansas City.

May 21-24.—KNOXVILLE, Tenn., Gun Club's fourteenth annual tournament; $1,500 added to the purses.

May 29-30.—CANAJOHARIE, N. Y.—Two-days' tournament of the Canajoharie Gun Club; targets. Chas. Weeks, Sec.

May 30-31.—GRAND RAPIDS, Mich.—Valley City Gun Club's annual tournament; targets; added money announced later. C. F. Rood, Sec.

June 3-8.—CHICAGO, Ill.—Illinois State Sportsmen's Association annual tournament. Convention at Sherman House June 4.

June 11-14.—MEMPHIS, Tenn.—Memphis Gun Club's annual tournament; $2,000 added money.

June 19-21.—CLEVELAND, O.—Chamberlain Cartridge and Target Company's second annual tournament; $1,200 in cash added.

June 24-28.—SARATOGA, N. Y.—Annual tournament of the New York State Sportsmen's Association, under the auspices of the Saratoga Gun Club. H. M. Levengston, Sec.

July 11-12.—ALTOONA, Pa.—Third annual tournament of the Altoona Rod and Gun Club at Wopsononock; targets. W. G. Clark, Sec.

Aug. 20-24.—HOLMESBURG, Pa.—Pennsylvania State Sportsmen's fifth annual tournament, under the auspices of the Keystone Shooting League, of Philadelphia. John C. Shallcross, Sec., Frankford, Pa.

Aug. 29-31.—HOT SPRINGS, S. D.—Hot Springs Gun Club's second annual tournament.

Oct. 9-11.—NEWBURG, N. Y.—West Newburg G. and R. Association tournament. W. C. Gibb, Sec.

DRIVERS AND TWISTERS.

Changes in, and additions to, the fixtures list this week are as follows: Lynchburg dates are changed to May 17 and 18. On March 27 the second tournament for 1895 of the New Jersey Trap Shooters' League will be held at Springfield, N. J., on the grounds of the Union Gun Club. March 28 will witness a 25 live bird sweep at Erb's grounds, Newark, N. J.. April 16-18 will be worth noting, as on those dates the Interstate Association will open the ball in target shooting, with a three days' tournament at Pittsburg; everybody who shoots knows what that means. April 24-26 belong to the Peekskill, N. Y., Gun Club, who advertise a three days' tournament on those dates; two days at targets, and one day, the last, at live birds.

T. W. Morfey, of Paterson, N. J., and Frank Class, of Morristown, N. J., made a match on Feb. 13, during the progress of the 25 bird race at Charlie Zwirlein's, the conditions of the race to be as follows: 100 birds each, $150 a side, loser to pay for the birds. Date and place are: March 7, at Zwirlein's grounds, Yardville, N. J. During the latter part of March, Zwirlein will hold a two days' shoot at live birds; he will give plenty of notice as regards dates, etc.

I understand that there is every likelihood of a sweepstake shoot at Willard Park, Paterson, N. J., onMarch 4. The main event will be a 25 bird race.

The Interstate Association has closed for tournaments at Pittsburg, Pa., April 16, 17 and 18, and at Lynchburg, Va., May 17 and 18. The tournament at Pittsburg will be under the auspices of the Pittsburg Gun Club, and at Lynchburg, under the auspices of the Lynchburg Gun Club. Each of the gun clubs will add $200 to the purses.

ELMER E. SHANER,
Manager Interstate Association.

The West End Gun Club, of Ottumwa, Ia., held its annual meeting on Feb. 4, electing the following officers for the ensuing year: President, J. F. Powell; Vice-President, R. S. Field; Sec.-Treas., F. J. Scott; Capt., L. T. Crissman. The club is in excellent shape financially, and with an increasing membership the prospects are that lots of powder will be burned in the season of 1895.

F. G. SCOTT, Sec.

Morfey easily defeated John Rothacker, of Philadelphia, in the second match at live birds, Rothacker shooting at 106 birds to Morfey's 100. Morfey killed 49 out of his first 50, the last bird falling dead out of bounds. Score: Morfey 89, Rothacker 85.

Writing from Hartford, under date of Feb. 14, Mr. D. S. Wadsworth, secretary of the gun club of that city, says: "The annual meeting of the Hartford Gun Club was held this evening, the following officers for 1895 being elected: President, John Melrose; Vice-President, E. L. Ropkins; Sec.-Treas., Dan'l. S. Wadsworth; Capt., C. H. Burbridge. It was decided to hold a tournament at targets on Friday, April 12; programmes later." He adds "Enclosed you will find a programme of what we intend to do up to June 29. We have just started out for the season with 25 members, seven new ones joining within a month." The programme states that: "The Hartford Gun Club will hold a series of prize shoots, open to all, at Union Grove, every Saturday after this date (Jan. 30), commencing at 1 P. M. sharp. A number of merchandise prizes will be shot for in addition to the following cash prizes $15, $10, $8, $7 and $5. Conditions: 25 targets per man, known angles. The scores to close on Saturday, Jan. 29, and any ten scores to count for the above prizes. Targets at one cent each to all contestants."

Among the many shoots arranged for Washington's Birthday Feb. 22, was one at the Rye, N. Y., Gun Club's grounds. Owing to a delay in the mails, the notice of the shoot was not received in time for any note of the fixture to be made.

The Directors elected by the Paterson Gun Club for the year of 1895 are T. C. Wright, T. W. Morfey, G. A. Hopper and Robert Boyle. Shooting days are the first and third Wednesdays of every month.

The Forester Gun Club, of Davenport, Ia., got out a capital programme for Wednesday, Thursday and Friday of this week. On Washington's Birthday, Carver and Budd shoot the third and deciding match of their series, 100 birds each, for a purse of $200.

Tuesday, Feb. 19, was taken up with a crow shoot at Holmesburg Junction, Pa., the Keystone Shooting League, of Philadelphia, having made arrangements for a sweep at 50 crows, $10 entrance, class shooting, birds extra.

If the Interstate Association's tournament at Pittsburg next April is anything like the one held last year in the same month, it will be a good starter for the association's season of 1895. The tournament committee is formed of the following shooters: "Old Hoss," "Jim Crow," Louis Lautenslager and Elmer Shaner.

By the way, out of consideration to newspaper men, printers, and for the purpose of saving breath and the possible attendant results of profane language, the Interstate Manufacturers' and Dealers' Association was knocked out of time last week, so far as the name went. The association is now exactly the same organization, has the same objects in view, and is just as active as ever, but it will in future be known as the "Interstate Association," the courts of New Jersey having permitted the change of title. What a relief!

The programme for the Elizabeth, N. J., bi-monthly tournament, Feb. 27 and 28, is to hand. The first day is devoted to targets, the second to live birds. On the last day a 25 bird race, $10 entrance, birds extra, is scheduled; for this event entries must be made not later than Feb. 26, to W. M. Parker, 24 Sayre street, Elizabeth, N. J. A deposit of $5 to be made at the time of making the entry.

EDWARD BANKS.

Nebraska Trap Notes.

Omaha, Neb., Feb. 13.—J. C. Read, of this city, and George Nicolai, of Sutton, shot their 100 pigeon race Friday afternoon on the Bemis Park Gun Club grounds, in the presence of six hundred spectators. The match was for $100 a side, 100 birds each, 30 yards rise, 50 boundary, American Association rules. Ted. Ackerman, President of the Stanton Gun Club, officiated as referee, while J. C. Spiece, of Columbus, pulled the traps and Captain Latchshaw, of Lincoln, and Billy Brewer, of this city, did the official scoring. Read shot a 12-guage Greener, 45 grains of E. C., and an ounce and one-eighth N. 9 chilled shot; Nicolai shot a $35 12-gauge Smith, 45 grains E. C. The weather, while cold, was admirable for the sport, with a gauze-covered sky and no wind. Several thousand dollars changed hands on the shoot, which was won by Nicolai by a margin of five birds. Read shot poorly and with little nerve, although on his own dunghill, while the agriculturist was cool and shady from "end to end." The score:

Nicolai—1122002 2x2022122212121x2022221222211220210111200221222022102 2201122222202202101211101122202221—82.

Read—2211220021201000211x21021212x01111101212222200200x0012220111112121222202122102201222222221212122201—77.

Read was badly broken up over the result, as he had counted on a lead pipe, still he had the courage to renew his challenge to shoot another similar match with any man in the State under the same conditions—Nicolai or Hardin preferred.

S. V. GRISWOLD.

New Jersey Trap-Shooters' League.

On Saturday, Feb. 16, the first tournament of the New Jersey Trap Shooters' League, series for 1895, was successfully carried out at Rutherford, N. J., under the auspices of the Boiling Springs Gun Club. Although it was well on towards noon before any shooting to amount to anything was done, yet no less than 3,390 targets were thrown before the boys quit shooting.

That these tournaments are popular is shown by the number of shooters present. Thirty-six entries in a 15 target race, and eight teams of five men entered in the big event, is extremely creditable. Of course the weather was delightful, but the sun during the earlier portions of the day made good scores extremely difficult to make, owing to the glare from the snow and ice on the meadows over which the targets were thrown. The Boiling Springs Club, as is the custom at these shoots, had everything in good running order and kept matters hustling. Among those who did most of the work were: Messrs. Edward A. Jeanneret, President of the club; Paul A. Jeanneret, Field Captain; Neaf Apgar, W. R. Hobart and John H. Outwater. W. N. Drake, Manager of the New Jersey Trap Shooters' League was also on hand and conducted the preparations for the club race. This latter event up to this year has been shot at known traps and known angles. At the annual meeting of the league held recently, a motion was made, and carried, to change the conditions of the event to unknown angles. There was a good deal of dissatisfaction expressed by the members of several clubs at the action of the meeting, it being claimed that the change made the test too severe for the younger and less experienced clubs. This is undoubtedly so to a certain extent, but the case of unknown angles also introduces a measure of luck into the contest. It is argued, therefore, by the adherents of the new system that by making it "unknown angles," the poorer shots run a chance of drawing a series of comparatively easy angles, while the better and more expert shots may draw angles of a more acute nature. Therefore, it is claimed, the more inexperienced shots, have more chance to make a race of it at unknown angles rather than if these races were shot at everything known, the latter condition placing all shooters on an equal footing and eliminating the elements of chance. As this contest, however, is intended to prove the superiority of one club over another, it would seem better to cut off as far as possible any element of luck, making the game purely one of skill. Another argument that has been used in favor of unknown angles is, that under that system the conditions far more nearly approach field shooting than do those where everything is known; also, that "unknown angles" is the favorite system now, and that "everything known" is monotonous and artificial. These arguments would have far more weight if the question set for decision were not one purely of skill. To rightly determine degrees of skill, the element of chance must be eliminated as far as possible from the contests which are to settle those degrees. At the Boiling Springs Club's ground on Feb. 16, a good illustration of the luck in the matter of angles was given time and again. This was due in no sense to the club or its management; it was due entirely to the whims, occasional activity and impulsiveness of the boys who set the traps. The absolute need of the "stops," now placed on all the best traps for the purpose of preventing the boys from throwing the targets at extraordinary angles, was conclusively proved time and again that afternoon.

The day's shoot was a most pleasant affair, and the gathering together of so many representatives from different clubs at these monthly re-unions, does a world of good. A great deal of the success of these gatherings depends upon the home management. At Rutherford, on Feb. 16, the members of the Boiling Springs Club left no stone unturned to make things comfortable for their guests. To the Messrs. Jeanneret in particular the success of this shoot was due to a very large extent. Major R. H. Breintnall, who was decidedly off color in the shooting line, officiated as referee during the club race. The following clubs entered teams in that event: Union Gun Club, of Springfield; Maplewood Gun Club, of Maplewood; South Side Gun Club, of Newark; Boiling Springs Gun Club, of Rutherford; Climax Gun Club, of Plainfield; Elizabeth Gun Club, of Elizabeth; Endeavor Gun Club, of Jersey City; Union Hill Gun Club, of Jersey City. The two last named teams had many men on their teams who are expert shots at live birds and in the field, but as their scores show their experience at inanimate target shooting has been very limited. Considering the extremely hard shooting that was given them to try their skill in the club race, the results should not prove disheartening. Scores in detail below:

Union.

E D Miller	1011110111101111111001101—19

DANIEL S. WADSWORTH, Sec'y.

Auburn Gun Club.

Auburn, N. Y., Feb. 13.—In snowy weather the Auburn Gun Club held its monthly badge shoot. Ten members competed, five shooting from scratch, the others receiving target allowances. These shoots are at unknown angles. Nellis with top score is credited with one point; Egbert as second high gun scores one-half a point. Score:

Tuttle	1111111111111111001	—18
Cowing	1111011101111110111	—17
Carr	1111111110110111111	—18

What Memphis Will Do.

Memphis, Tenn., Feb. 12.—Editor Forest and Stream: Finding that it will be impossible for us to get our programme in the hands of the shooters before the 1st of April, and in view of the numerous letters received from all over the country, asking information in regard to what rules we expect to shoot under, we deem it wisest to ask you to make the following announcement for us:

There will be eight 20 targets events each day with $500 added money each day, divided, 30, 20, 15, 15, 10, and 10. There will be $75 cash averages each day, divided, 50, 30, and 20, between shooters making the highest averages in the day's shoot, shooting in every event. There will also be $100 cash for averages, to be divided, 60 and 40 between the two shooters making the highest averages shooting in every event throughout the tournament. Known traps, and unknown angles; no handicap;

free for all; the world invited—especially the boys who were with us in our infancy, in 1894. We have special rates with the hotels, and feel sure of a half rate over all railroads. We are determined to make this the greatest gathering of high class shooters that ever met in the United States, and looking to that end, we are determined to give personal attention to all visitors and see that they enjoy themselves. T. A. Divine, Chairman; W. F. Allen, Irby Bennett, F. P. Poston, Fred Schmidt, Tournament Committee.

Essex Gun Club's Record for 1894.

The secretary of the Essex Gun Club, of Newark, N. J., Mr. Asa Whitehead, has issued the following particulars in regard to the club's record for 1894:

Number of active members on Jan. 24, 1894, 52; resigned during the year, 3; elected during same period, 3; number of active members on Jan. 24, 1895, 52. Number of shooting meetings held by club members, 10; average attendance at each club shoot, 9. Number of birds trapped in club shoots, 820; in sweepstakes, 628; shot at by members in club shoots, not entering for prizes, 88; total shot at during the year, 1,536. The table given below shows the scores made by the members at the different club shoots. For every bird killed above his handicap, each member scores one point:

	Handicap.	Feb.	March.	April.	May.	June.	Sept.	Oct.	Nov.	Dec.	Jan.	Shot at.	Killed.	Points.
1. M. Herrington	7	8	9	9	10	10	10	9	10	4	8	100	87	20

The Rome Tournament.

Rome, N. Y., Feb. 15.—To-day, the opening day of the two days' target and live bird shoot, held at Rome, was a model one for target shooting, but few shooters were in attendance. We were met at the depot by a covered sleigh, and taken to the shooting grounds, which are among the best in the State; the club has a good house and a background that can hardly be beaten. The shoot was gotten up by W. P. Rayland for the revival of the Rome Shooting Club, which has been in a trance since the State shoot was held there. W. H. Crutenden had charge of the traps. Among the out of town shooters were: Dan Lefever and Courtney, Geo. Mosher, W. H. Cruterden, Mayhew and J. Fulford, Sim Glover and Frank Lefever. Mr. Rayland did not let the boys wipe his eye, as he took first average in the team shoot from such men as Glover, Courtney Fulford, Mayhew, etc., breaking 128 out of 135 shot at; Mayhew took second average, with 127; and Glover, third, with 123. The best shooting was done by Rayland, Glover, Mayhew, Courtney and J. Fulford. Geo. Mosher was unfortunately taken sick and did not finish his score; this sickness accounts for his not shooting in his old form. Mr. Rayland had studied the comfort of the shooters and had a rousing fire in the club house; a good lunch was also provided.

No. 1, 10 targets, $1. D. Lefever, 9; Glover, 9; Courtney, 9; Breston, 9; Mayhew, 9; Rayland, 9; J. Fulford, 8; Cruttenden, 8; F. Lefever, 7; Mosher, 7.

No. 2, 10 targets, $1. Mayhew, 10; Rayland, 10; D. Lefever, 9; Glover, 9; Courtney, 9; Cruttenden, 9; Breston, 8; J. Fulford, 8; Mosher, 8; F. Lefever, 6.

No. 3, 20 targets, $2. Glover 18; Mayhew, 18; Rayland 19; D. Lefever, 17; Courtney, 17; Mosher, 17; J. Fulford, 15; Breston, 13; F. Lefever, 13.

No. 4, 10 targets, $1. Mayhew, 10; Rayland, 10; Courtney, 9; J. Fulford, 9; F. Lefever, 8; Glover, 8; Mosher, 7; D. Lefever, 5.

No. 5, 20 targets, $2.

SECOND DAY.

Fortune again smiled on the second day of the Rome shoot; the weather could not be better. The new arrivals were: H. White, A. S. White, H. Ayling, E. D. Fulford, Richardson and Judson, of Utica; Brainard and W. H. Wild, of Sherburn. The shooting was from one rotary ground trap, under American Association rules, handicaps fixed by W. P. Rayland. The birds were handled by J. Fulford and were a fine lot, all good birds, with a large percentage of screamers. The retriveing was done by Ebe, Mr. Rayland's black setter, who did his work well. A. S. White took first average, H. White, second, thus proving themselves competent to kill hard birds with the average shooters. Too much cannot be said in praise of W. P. Rayland for the manner in which he looked after the comfort of the shooters.

The entrance money in the above events was as follows: No. 1, $5; No. 2, $10; No. 3, $5, birds included; No. 4, $5; No. 5 was a miss and out, $2 entrance. A. R. K.

Onondago County Sportsmen.

Syracuse, N. Y., Feb. 14.—The Onondaga county Sportsmen's Club held its bi-weekly medal shoot at Maple Bay this afternoon. Only a few shooters braved the elements to go and battle for the medals, as there was a blinding snow-storm raging at 2 P. M., the time for the departure of the train. But those that did go found everything in first-class shape, two sets of traps and the electric pulls working in perfect order, keeping the targets in the air most of the time. It was a pretty race for the first-class medal between Courtney, Luther and Holloway; it was no one's race right up to the finish, when the colonel won by a single target. It was also a good race between Morris and Dalley, of Baldwinsville, and Hunter, of Fulton, for the second class medal, Hunter eventually winning. The best shooting was done by Frank Lefever, who missed his first seven birds, but eventually tied Courtney's score. The medal shoot is at 50 targets, unknown angles:

A. R. K.

Carver—Marshall Match.

Hot Springs, Ark., Feb. 14.—The third match of the Carver-Marshall series was shot here to-day. This match was originally scheduled for Tuesday, Feb. 12, but owing to the inclemency of the weather it was postponed until to-day. Although the day was quite an improvement over Tuesday, is was by no means a suitable one for pigeon shooting. The ground was covered with snow and the cold, raw atmosphere, with no sunshine to temper it, made it very unpleasant for contestant and spectators alike. Despite the disagreeable weather, a hundred people paid fifty cents each to see the contest, among them being a number of ladies. Those who braved the elements had the satisfaction of witnessing an interesting race. The match began promptly at 2 P. M. Carver having won the toss, sent Marshal to the score first, who killed a fast right quarterer with the first barrel but used the second for safety. Carver killed his first bird, a driver from 2 trap, with one barrel. On the second round Marshall took the lead as he killed his bird in fine style, while Carver's crossed the boundary not much the worse from the two charges sent after it. Marshall did not maintain the lead long as he lost his sixth, a left quarterer, dead out of bounds. He displayed very poor judgment on this bird; he hit it hard with his first barrel, and then immediately snapped the other barrel at it without any effect, the bird falling dead out of bounds. Had Marshall been a trifle more careful he would have easily scored the bird. From the sixth to the twenty-third the match was a tie. Carver lost his twenty-fourth bird and Marshall again took the lead. At the end of the first string of 25 the score stood, Marshall 24, Carver 23. Each let their 26th bird escape; Marshall's fell dead out of bounds by a few yards, and Carver's escaped with the loss of a few feathers. The score was again tied when Marshall let his 29th, a right quarterer, that flew like a cork screw across the boundary unhurt Marshall did clean work up to the 43d bird, which fell dead just beyond where the deadline and boundary meets on the left.

Carver in the meantime had gotten down to business and was using his first with deadly precision. He killed straight from the 26th to the 52d round. At the end of the 50th round the score stood, Carver, 47; Marshall, 46. Carver lost his 52d bird, dead out of bounds, and the score was once more a tie. The Keithsburg man experienced another piece of bad luck on his 56th bird; this was a snow white one, which was released from number 2 trap, an incomer that quartered a little to the left; it was hit hard with the first barrel, but only slightly with the second; it just managed to cross the deadline, where it was picked up by a spectator. Each shooter killed 24 out of the third string of 25, and the score at the end of the 75th round stood, Carver, 71; Marshall, 70; Marshall did his best shooting from the 57th to the 79th round; by killing 25 straight at this stage of the race he succeeded once more in tieing the score, the doctor having lost his 79th bird. The pace that Carver set was too fast for Marshall, as his 80th bird beat him out, regardless of the fact that each shot made the feathers fly, and Carver again led by one bird. Marshall killed twelve more straight and then lost his 93d bird; this seemed to unnerve him, as he lost three of the remaining seven, and only scored 20 out of the last 25. The doctor was shooting at the same steady gait, and once more scored 24 out of 25. Thus the final score was, Carver, 95; Marshall, 90. The doctor lost one out of bounds, and Marshall five.

The doctor shot a 7 1-2 pounds Cashmore ejector gun, 4 drams of American Wood powder, 1 1-4 ounce of number 8 chilled shot, in U. M. C. Trap Shells. Marshall shot 7 3-4 pounds Smith ejector, 3 1-2 drams of E. C. powder, 1 1-4 ounce 7 chilled, in U. M. C. Trap Shells. G. W. Hughes acted as referee; John J. Sumpter, scorer, and your correspondent as rap puller. The birds were a good lot, and a number of fine kills were made by both shooters. The match was for $100 a side, 100 live birds each man, 30 yards rise, 50 yards boundary, American Shooting Association rules to govern:

PAUL R. LITZKE.

Work Shot in Good Form.

A novelty in the way of pigeon shooting matches was decided at the Larchmont Club's grounds on Friday, Feb. 15. The contestants were George Work and L. T. Duryea, both well-known pigeon shots. The conditions were 100 birds each, 0 yards rise, 50 yards boundary. On the first 50 birds each man used but one hand; the last half of the macth was shot in the usual manner, both hands being used. On the first 25 birds in the one handed match, Duryea led Work by three birds; then Duryea struck a bad streak and the score was tied on the 34th round; it remained a tie until the 49th round when Duryea missed; following this up with a miss of his 50th bird, he was two birds behind when the match was half over. In the second half, using both hands, Work killed 45 to Duryea's 44, Work's last two birds getting away from him. The 200 birds trapped were a good lot of strong flyers, a brisk wind materially aiding them in their flight. Scores:

Grand totals, Work, 85; Duryea, 82.

Feb. 18.—The outcome of the match shot Feb. 15 was a second match, which came off this afternoon on the same grounds and under precisely the same conditions, save that there was no wind to help the birds. Both men did some great work, as the birds were a good lot notwithstanding the lack of breeze to aid them. Duryea's uphill race on the last 25 birds of the match is specially remarkable; at the end of the 75th round Work led him by four birds, yet the 96th round found them separated by only one bird. Work then killed his next four, and Duryea doing the same, the score was unaltered, Work eventually winning by just a single kill!

Summary: Work, 44 and 46, total, 90; Duryea, 42 and 47, total, 89.

Weir City, Kansas.

Weir City, Kansas, Feb. 15.—I enclose scores made by a few members of the Business Men's Gun Club, at their regular medal shoots. The attendance was smaller than usual, and as some of the best marksmen in the club were absent, the scores ran low None of the boys were able to shoot their average, on account of the cold weather. Two gold medals were contested for. One is the regluar club medal, which is shot for under a handicap of birds allowed. The other is known as the "President's Medal," and was donated to the club by President King.

It is a very handsome badge, of unusual worth, and as the shooters are divided into amateurs, semi-experts and experts, according to the number of times they have won the medal, the interest in this shoot is always great. Wm. Sowers won both badges, and as he is by no means a veteran at the trap, naturally feels quite proud of his achievements. The figures in brackets after each shooter's name, denotes number of birds allowed.

MARMALUKE.

New York German Gun Club.

The following facts in connection with the New York German Gun Club, furnished by the secretary, G. A. Leutheusser, will be of interest:

The officers elected for the coming year at the annual meeting held recently are: August Schmitt, President; Peter Garms, Jr., Vice-President; Fred Sauter, Captain; John Steuernagel, Recording Secretary; G. A. Leutheusser, Corresponding Secretary, and J. P. Dannefelser, Treasurer. The constitution and by-laws of the club were changed and revised. The shooting grounds of the club will be Dexter Park, as in the past, and the third Wednesday of each month was accepted as the regular meeting and shooting day. Distribution of prizes to the best scores during the past year as follows:

Captain Fred Sauter received a handsome sterling silver trophy, known as the "President's Cup," for the highest aggregate kills during the last year. The same gentleman won a corduroy hunting suit for most kills with first barrels. J. F. Wellbrock, one sole leather gun case for the most kills during all medal shoots. J. Fraser, gold medal for most kills in five club shoots. S. C. Edwards, won a cartridge case for the most kills during all private shoots. J. F. Wellbrock scored the

highest average with 90 per cent., and won the handsome gold medal of the club twice during the year. The medal will be still open for contest during the coming season, as it must be won three times in succession to become the property of the winner.

The past year has been one of successes for the club and the coming season promises to add greatly to the prosperity and welfare of our organization. We are indebted to the courtesy of several members for the following named prizes, which will increase the interest of our season's shoots: President, August Schmitt presented the club with a sterling silver trophy, "The President's Cup." Captain Fred Sauter, a valuable animal rug or game gun rack, as the winner may choose. Peter Garms, Sr., and Chas. Lenone gave a gold medal each. J. P. Dannefelser subscribed a gun case.

Unknown Gun Club.

Brooklyn, N. Y., Feb. 14.—The Unknown Gun Club, of Brooklyn, N. Y., held its monthly shoot at Dexter's Park, L. I., this afternoon. After the shoot the following officers for 1895 were elected: H. Knebel, President; E. B. Vroome, Vice President; Havan Staden, Treasurer; the election of Secretary will take place at the next meeting. The programme for 1895 is the following: Three cash prizes or more for each shoot, according to the number of members who attend the shoot; a gold medal for the best yearly average in seven shoots out of twelve; also twelve extra prizes to members who take part in four shoots or more up to twelve. The initiation fee for new members is $2; dues for one year, $3. After the meeting the club wound up with a supper and enjoyed a pleasant time. The following is the result of the club shoot:

C Akhurst, 25	1111111—7	A Bainppen, 22	1011010 4

DUTCHER.

Good Scores at Yardville.

Yardville, N. J., Feb. 13.—In the 25 bird race, set for to-day at Charlie Zwirlein's grounds, the purse was divided into four moneys, and as all but three of the fourteen shooters failed to win a place, it shows that the shooting was of a high class. $10 entrance, birds extra, handicap rise, 50 yards boundary:

A. Ivins, 22; C. Wright, 17; J. W. Morfey, 25; J. A. R. Elliott, 22; Capt. Money, 21; C. Reinhart, 22; F. Class, 21; Eddie Hill, 22; J. L. Brewer, 23; J. Timmins, 22; A. Willey, 20; J. Riggotts, 21; C. Zwirlein, 20; B. Muser, 21.

THOMAS ABBETT.

Climax Monthly Shoot.

The monthly shoot of the Climax Gun Club, of Plainfield, N. J., was held at the club grounds, Benner's Hotel, near Fanwood, N. J., on Wednesday, Feb. 13. The early part of the day was unpromising, a soft snow falling in flurries at intervals. About 1 P. M., the sun managed to show himself, the result being a pleasant afternoon for target shooting. A great addition to the club's property is a good shooting house, 16x44 feet, extremely well lighted, and, in short, all that one could wish. Eighteen members put in an appearance and shot their strings in the club race. This race is shot under what is commonly called around here, the Climax handicap; that is, the poorer shoots are given an allowance of extra targets to shoot at, the number varying from 1 to 10; scratch men shoot at 25 targets. Points are scored as follows: 20 breaks count one; 21 breaks count two points, and so on up to 25, which number credits six points to the man that breaks that number. No one, no matter how many more than 25 he breaks, can score more than six points in any one shoot. At the end of the year, merchandise prizes are given by the club to those who have the highest number of points credited to them in the total number of club shoots held during the season. This, the first shoot of the season, resulted as follows: "Edwards," 5 points; Neaf Apgar and C. Hebbard, 3 each; Van Dyke, D. Terry and Goodman, 2; Manning, J. Darby and McCarthy, 1. The club shoot as well as all the other events shot on that day were at unknown angles, except of course in the two last events, which were at five pairs with the usual angles. Scores:

Crow Shoot at Hanover.

Hanover, Pa., Feb. 6.—Some members of the Hanover Gun Club had a shoot this afternoon. The event was a novelty in this section, being shot under the following conditions: Six crows per man, 30 yards rise, American Shooting Association live bird rules:

C S Shirk	221201—5	J F Bucher	001222—4
Jno Sanders	200200—2	W F Weaver	111201—5
Chas Rhine	000211—3	C Smith*	021 —2
W B Allewelt	000001—1	*Smith shot at only 3 birds.	

Boiling Springs Annual Tournament.

The programme for the annual tournament of the Boiling Springs Gun Club, of Rutherford, N. J., to be held on March 5, 6, 7, was ready for distribution on Saturday, Feb. 16. The programme contains a "short sketch of the Boiling Springs Fishing and Gun Club," reviewing in brief the history of the club since its organization on October 31, 1878, more than 16 years ago.

"The club has held several tournaments which have always been successful. At the contest of the New Jersey Trap Shooters League, held at Rutherford, in May, 1892, 900 blue rock targets were thrown in one day. The present tournament will, we hope, prove as great a success as any held heretofore. Nothing will be left undone to make any and all shooters comfortable; a good dinner will be served on the grounds, each day, from 12 o'clock to 2 o'clock; there are three good hotels in the town, and their rates are very moderate. All kinds of shells will be on hand at lowest prices. Excursion tickets from New York to Carlstadt or Rutherford, 40 cents; transportation from Rutherford to club grounds, 15 cents.

"The shooting at artificials will be at known traps, unknown angles; American Association rules, modified, will govern all contests. Targets, 2 1-2 cents each; one-half cent for each target thrown will constitute the average money to be divided, after each day's shooting, among those who have shot in all the events of the programme, and it is to be divided 50, 30 and 20 per cent. The handicap committee will consist of Messrs. Jacob Pentz, Justus Von Lengerke and Edw. A. Jeanneret; the standing of these gentlemen is a sure guarantee that every shooter will be justly dealt with. Entries for the live bird event will be received by Mr. Gus E. Greiff, No. 8 Murray street, New York City, until March 5. Each application must be accompanied by a deposit of five dollars. Should the event not be completed on the 7th, it will go over to the next day, March 8.

"P. A. JEANNERET,
"W. H. HUCK,
"GUS E. GREIFF,
"Tournament Committee."

There are one or two slight errors in the programme, neither of them, however, of much importance. The one which calls for most attention is that of the dates; those given on the cover name March 5, 6 and 7 as the days of the tournament, and those dates are correct; inside the programme the dates are the same in April; these are manifestly wrong, as April 7 is a Sunday, and the other days mentioned will be taken up with live bird shooting at the Grand American Handicap meeting, at Willard Park. The number of targets, 900, thrown at the tournament in May, 1892, is also manifestly an error. Another mistake is one which occurs at the foot of the cut of T. H. Keller, which graces one of the pages of the programme. Mr. Keller is not in any way connected with the Winchester Repeating Arms Company as there stated, but is a representative of the United States Cartridge Company. These little discrepancies, however, do not mar the make up of the programme to any extent. It is important, however, to remember that the dates are March 5, 6 and 7. The two first days are devoted to targets, and the events scheduled for each day are precisely similar; they call for 145 targets at a total entrance fee of $17.50, each event being at unknown angles. There are five 10 target, two 15 target, two 20 target and one 25 target races each day. The purses are divided as follows: 12 entries or under, 3 moneys; over 12 entries, 4 moneys. Shooting commences at 10 A. M., sharp, each of these two days. On March 7, live bird day, shooting begins at 9.30; the only scheduled event is a 20 live bird race, $10 entrance, birds extra, five moneys. The particulars regarding entrance for this event will be found in the last paragraph of the "sketch" given above. The members of the Boiling Springs Gun Club intend to make this tournament one of the pleasantest gatherings of the season and have made many preparations looking to that result.

Morfey Takes the Second.

Paterson, N. J., Feb. 12.—Honors are now easy between Frank Class, of Morristown, N. J., and T. W. Morfey, of this city. Morfey defeating Class by a single bird on this date, the scores being 93-92 In the first match, shot at Morristown, on Feb. 7, Class won by 95-90. The match to-day was shot at Willard Park, near Paterson; being so easily reached from New York there was quite a large attendance of spectators from that city. After the bad breaks made by both men on the first 25 birds, they settled down to business, and did some great work. Toward the close of the match, there was quite a lot of excitement, particularly when Morfey's 92d bird fell dead out of bounds, Class being consequently but one behind. A lot of money changed hands, the Paterson boys scooping in every Morristown shekel they could manage to get hold of. Scores:

Sweep, 5 birds, $3: This event had seven entries—Morfey, Apgar, Timmons, Reinhardt, Capt. Money and J. L. Brewer—each killed their 5 birds; N. E. Money killed 4.

Rifle Range and Gallery.

RIFLE NOTES.

The Zettler Rifle Club, B. Walther, President, with headquarters at 219 Bowery, New York, announces a two-days' shoot at their range on Feb. 21 and 22. A capital programme has been arranged by the shooting committee, which is composed as follows: Louis Flach, Chairman; H. D. Muller, Geb. Krauss, F. C. Ross, Henry Holges, R. Busse, M. Dorrler. B. Zettler is shooting master. Shooting commences at 2 P. M. on the 21st, and at 9 A. M. on Washington's Birthday; it closes each night at midnight.

There will be some unique prizes to be shot for, 100 yards range, at the parade of the Washington Rangers, Feb. 22, at Cosmopolitan Park, 169th street and Amsterdam avenue. A fine full dress suit will be offered for German members, an elegant bedroom set for Irish members, and a bicycle for members neither German nor Irish. Entries can be made at headquarters, 544 West Twenty-ninth street.

The Heidenreich Rifle Club, of New York, has decided to enter 25 members in the Schuetzen Bund.

At the match shoot held at George A. Schmitt's Evergreen Grove on Feb. 3, between Buff Rosenthal and G. Worn, with 180 shots a side, the following average was made, Rosenthal giving Worn a forty point handicap: Rosenthal, 245 1-10; Worn, 238. Possible, 250; distance 75 feet. Fred. C. Ross, referee.

There is some talk of a meeting between Prof. John Loris, now in England, and Dr. Carver, the weapons being rifles and pistols. The showing made by Loris while in Europe has been such that he has found a man willing to back him against Carver for $2,500 a side and the championship of the world. The meeting, however, is hardly likely to come off, as Carver has but little time given him for preparation. Carver, also, is busy with the shotgun, and could hardly reach England and be in trim to shoot for $2,500 or any part of that sum in the time stated—eight or ten weeks.

Accompanied by a large crowd of friends, both ladies and gentlemen, the New Jersey State Rifle Team left for the South on Tuesday, Feb. 19, to do battle with the crack riflemen of Georgia at Savannah. The Jersey team consists of Gen. Bird W. Spencer, Inspector-General of Rifle Practice; Col. A. R. Kuser, of Gov. Werts's staff; Col. Decker, of Paterson; Capt. A. L. Reid, of Trenton; John L. Kuser, of Trenton; Theodore E. Beck and William Hayes, of Newark. The match is for a trophy to be porvided by the Georgia team and will take place on Washington's Birthday.

Company A, Seventh Regiment, N.G.S.N.Y., won the regimental team race which was postponed from January. The scores are given elsewhere..

Rifle Shooting in Canada.

Parry Sound, Ont., Feb. 10.—The Dominion Off-hand Rifle Association shot their monthly match on Feb. 1 and 2 on their respective ranges. The following gives the scores in detail:

St. Louis Riflemen Won.

St. Louis, Mo., Feb. 15.—The return match between the Columbia Rifle and Pistol Club of Rochester and the Missouri Rifle and Pistol Club of St. Louis, Mo., was shot last night. The conditions were the same as those of the first match, which was shot Jan. 10, excepting that this time the Columbia Club's target was used (25 ring, 1 1-2 in. ball, 1-2 in. center, 1-4 in. rings). St. Louis won again by a score of 4,734 to 4,631. Dorman and Hutchison, the "Dromios," of the Missouri Club, were absent, and their places were taken by Herold and Zukoski, of B team. Only two shots were challenged, which were decided, one in favor of Rochester and the other for St. Louis. The Columbia Club showed a marked improvement over its shooting in the first match. St. Louis shot in the following order:

Robert W. Staley	25 25 24 22 25 25 25 24 25 24—244	
	25 24 24 23 24 25 25 23 23 25—241	—485

HORACE KEPHART, Sec.

The Burgess Folding Gun.

The Burgess Gun Co., of Buffalo, N. Y., has lately put upon the market something entirely new in the way of a repeating arm. It is a 12 gauge repeater, and is especially constructed for the use of police officers, sheriffs, U. S. Marshals, express messengers, prison guards, banks, etc., and is attracting a good deal of attention, particularly in the Western and Southern States, where the gun is being largely used. It will take the place of a revolver, and do much better and more certain work, and when choke bored it becomes a most convenient and effective gun for field and cover shooting.

It is known as the Burgess "Folding Gun." The barrel and stock part fold together, so as to shorten the gun to the length of the barrel, and when closed, the gun can be conveniently carried in a holster with belt, or in a valise, or kept in places where a longer gun could not be concealed or made available.

The breech mechanism is the same as, and interchangeable with that of, the Standard Burgess gun, which has met with such great success in the two years it has been on the market; but in place of the separable joint for attaching barrel to the frame, a slip hinge allows the gun to be carried folded and loaded in magazine and barrel. It is then only necessary to grasp the gun by the pistol grip and by a quick motion throw the barrel outward when it springs into place and locks, and the gun is instantly ready to commence firing

The heavy spring on top of barrel engages the frame to shift the joint vertically and interlock the threaded portions of frame and barrel the instant the gun straightens. The spring may be lifted from the frame by its lever, when the rear of the barrel may be struck down to unlock the threads, so the gun will then fold to half its length.

The weight of the gun is from five to six and one-half pounds. The length of barrels nineteen to twenty inches. The illustration shows the method of carrying gun in holster. The gun carries six cartridges. Drawing the gun from the holster and throwing it to the shoulder is accomplished in one motion so that the gun can be drawn and fired six times in three seconds.

Mounted officers or sportsmen shooting from horseback will find this the most convenient saddle gun ever made.—Adv.

Gun Grease.

The Martin Fire Arms Company, of New Haven, have placed upon the market a preparation for preserving metals, called the "Martin Rust Repeller." It is put up in collapsible tubes, and it is said that it will not gum or grow rancid.—Adv.

14. Larchmont schooner race, L. I. Sound.

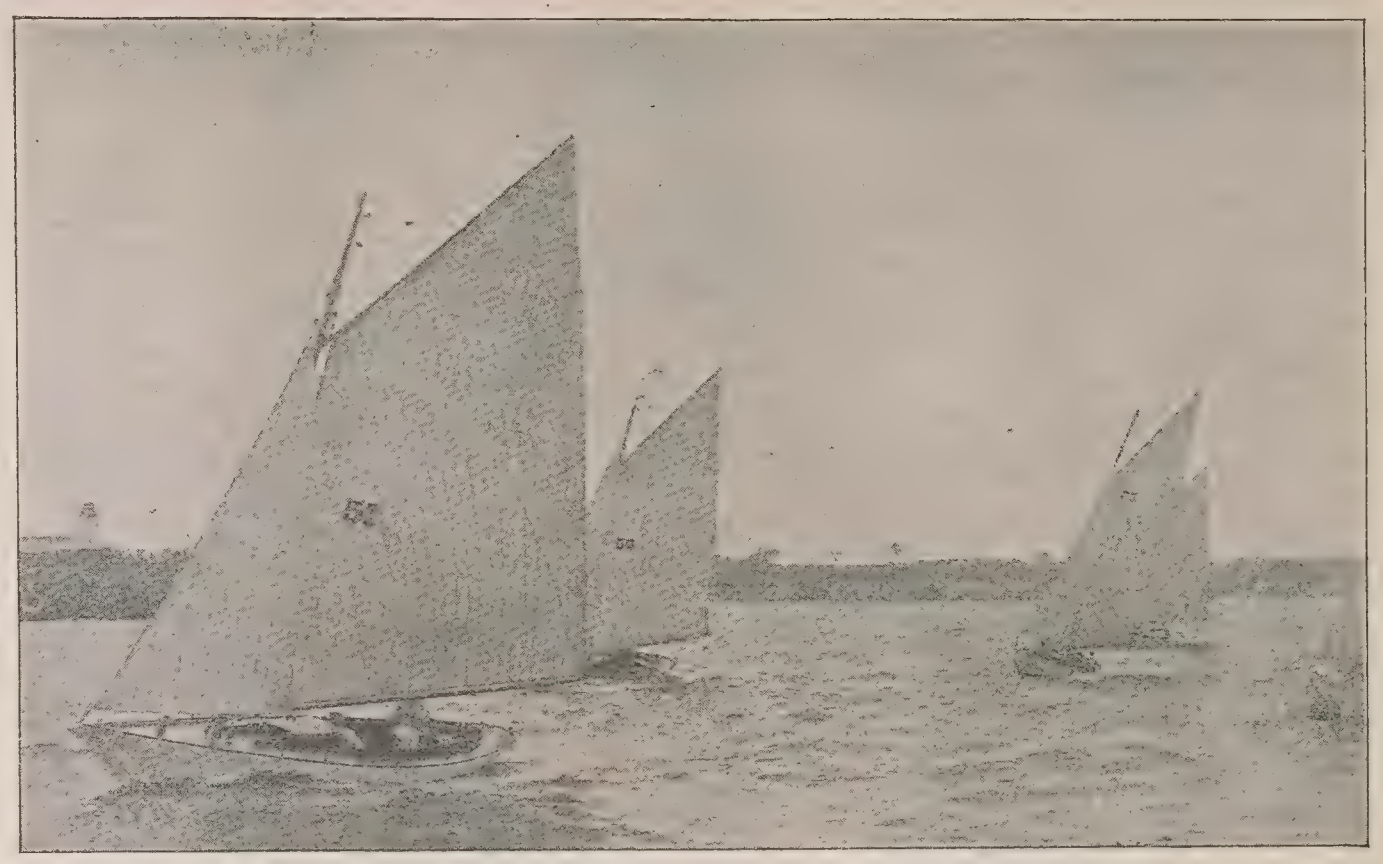
In the absence of a national yachting association, such as exists n Great Britain in the Yacht Racing Association and in France in the Union des Yachts Francais, the New York Yacht Club occupies a peculiar position in American yachting. While its direct nfluence for the betterment of yachting is perhaps no greater than hat of several other clubs, it possesses a very strong negative influence, such as is not enjoyed by any other club, and which enables it to control the progress of improvement in yachting rules. Of the many changes and improvements made in racing methods within the last dozen years, very few have originated within the club, and those of outside origin have had to encounter for its opposition.

The movement for the classification of yachts by racing length (length and sail area combined) was begun by the Forest and Stream in 1889, and met with hearty encouragement from both the Larchmont and Seawanhaka clubs. The friends of the proposed measure presented very strong arguments of a technical nature in ts favor, backed by statistics showing the operation of each system n practice, and the probable effects of the proposed classification on the American racing fleet. The special committee of the New York Y. C. favored the change, as did the similar committees of he Seawanhaka and Larchmont clubs, and strongly recommended its adoption.

The attitude of the club as a whole, however, was hostile to the measure, the majority of the members gave no thought to the matter and took no pains to inform themselves as to the points involved. A small but powerful minority, made up mainly of the Boston contingent of the club, put itself in active opposition to the change, and used all of their influence to defeat it. The many facts and figures in its favor presented by the Forest and Stream, and by the committees in their reports, were met by no rebutting evidence, but only by the statement that the men who had successfully defended the America's Cup were opposed to the change and that they knew that it would work to the detriment of yacht-racing.

Before the question of the simultaneous adoption of the proposed classification by the three clubs came to a vote, it was quite evident that the Boston influence, coupled with the general indifference of the members to an important matter, was quite enough to defeat it in the New York Y. C. The change could easily have passed the Seawanhaka C. Y. C., but when the position of the New York Y. C. became known, the committee of the former club recommended that no change be made by it; believing it better hat the then existing uniform classification by waterline length hould be retained by all the clubs until they were ready to act in unity in replacing it by a better one; rather than that there should be a conflict between the two systems.

The Larchmont Y. C., however, took a different view of the matter, and in the spring of 1899 adopted the new system of classifying by racing length in place of waterline, which it has adhered to ever since.



With the close of the season of 1890 came the death of the 40-ft class and the stagnation in building and racing which unfortunately still exists, broken only at intervals by such spasmodic attempts at class racing as the 46-footers and the Boston 21-footers.

With no building and little racing, the necessity for a classification almost disappeared; and it mattered little whether waterline or racing length was the standard.

In view of the depressed state of racing from 1890 to the present ime, it has always been a satisfaction to us that we were defeated n our efforts for the new classification, which would inevitably, if adopted, have been blamed for all the ills that have afflicted yachting since the death of the 40-footers. In this connection it is interesting to note that the club which has fared best in the racing during this time, with the greatest number of races and the largest entry lists, has been the Larchmont, with the new classification, and not the New York, the Seawanhaka, the Eastern or the Atlantic, under the old.

As we have had occasion to note from time to time, opinion has been gradually changing in favor of a racing length classification; and it has been evident that the measure could be passed at any time by a united effort of any two clubs. At the same time, with little racing and less building, there has been no pressing necessity for a change. The movement has, however, rapidly gained strength of late, and lo! now it has come to pass that the New York Y. C. has quietly accepted that which it once refused.

The New York Y. C. having finally accepted the new system, there is nothing to prevent the next step, the general adoption of a uniform system of classification by racing length, by all the large clubs. While this will be a decided advance, we do not look for any rapid revival of racing or building, as many unfavorable conditions outside of the measurement rule are still in existence. Should there be, however, a revival of building and class racing, the type of boat and the quality of the racing will be far better than under the old system.

FLEET OF "KNOCKABOUTS" IN MARBLEHEAD HEAD, CARL LEADING.
FROM PHOTO BY N. L. STEBBINS.

In justice to The Yachtsman, we would say that the comments quoted on page 114 of our issue of Feb. 9 should have been credited to it, and not, as would appear, to the other English journal first quoted. The Yachtsman has discussed the question of the new deed on its merits, and entirely apart from such an outside consideration as the action of the Squadron, and deserves every credit for its fair and independent position.

We learn from the American Shipbuilder that W. G. Nourse has purchased the entire working plant and equipment formerly operated by Chas. P. Willard & Co., of Chicago, Ill., and will operate the same in building marine engines and boilers, steam launches, etc. The works will be known as the Marine Iron Works, with Mr. Nourse as manager; they are located at Clybourn and Southport avenues, foot C street.

New Yachting Terms.

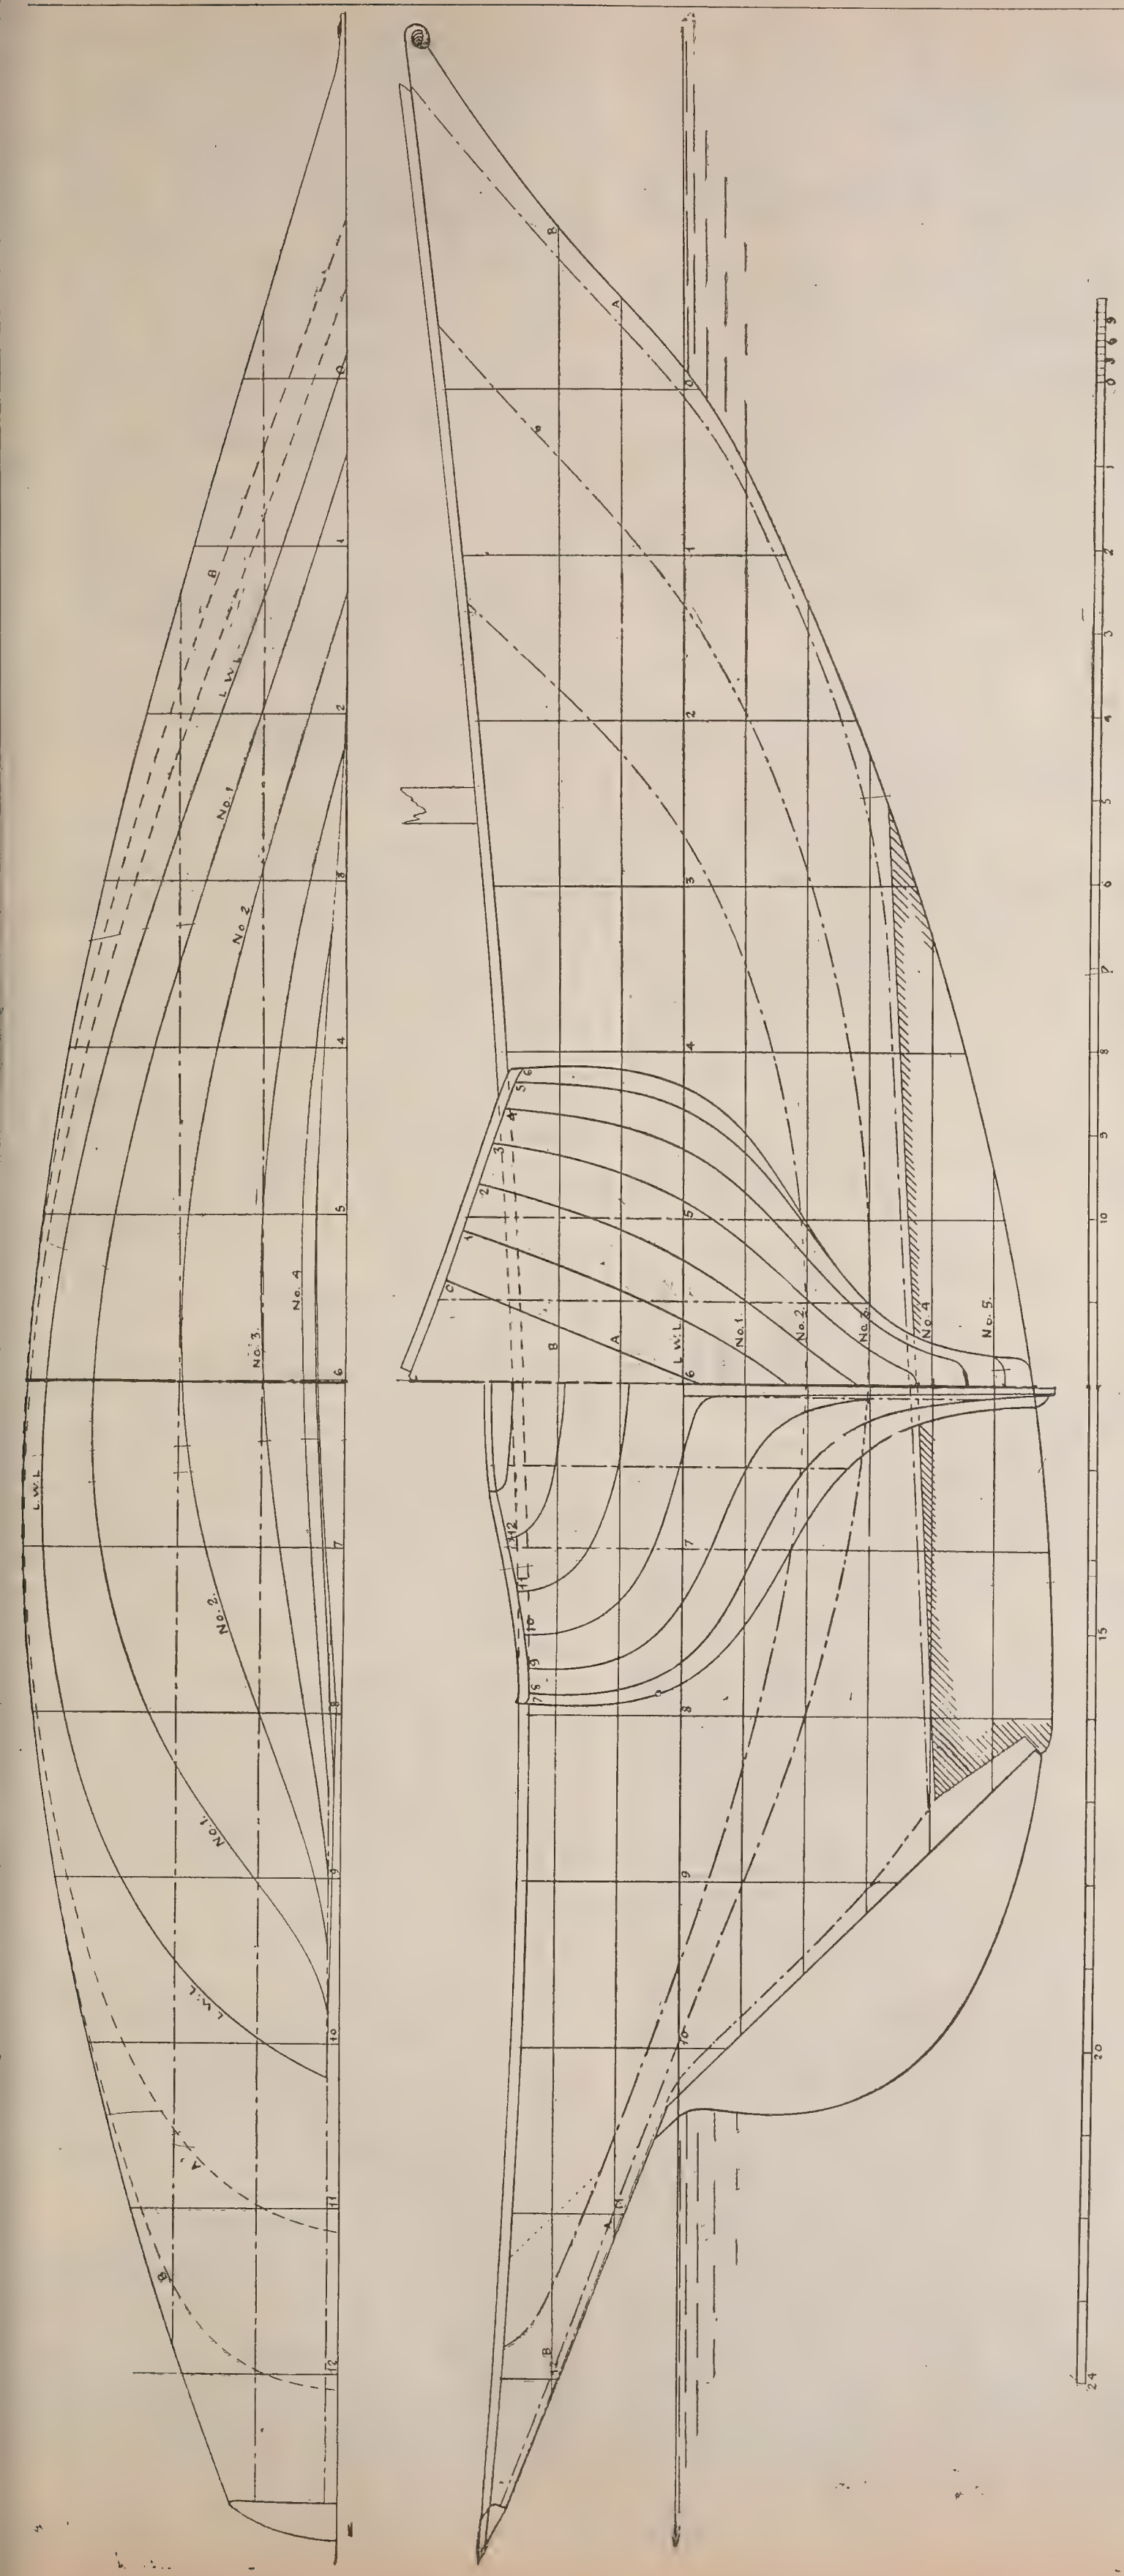
New York, Feb. 11. Editor Forest and Stream: In the description of the new British cutter Ailsa, as published in the daily papers, I note the phrase "a narrowing wind." Now, although judging from the context, I can frame a tolerably satisfactory definition I would like to see it officially explained. I have asked several yachtsmen about it, including one who sailed his own handsome schooner in English waters last summer, and all of them admit that the term is new to them, though in common with the rest of us they can give a shrewd guess at its meaning.

"Floaty," if I mistake not, was a new English coinage of last year, and now we have "narrowing." Why not its converse, "widening?" They are all good words. Don't denounce them simply because they are English. AMATEUR.

The term "narrowing wind" is, we believe, comparatively new; probably one of those attempts made at times, with more or less success by yachting writers, to enlarge the rather limited vocabulary at their disposal. Anyone who has ever attempted to report a yacht race in detail, and with regard to strict accuracy and clearness of expression, will understand that style is inevitably sacrificed to technical detail. In such a case, these special terms are a boon to a writer. The term "narrowing" was undoubtedly suggested by the common use of the word "broad;" which would seem to cover the case better than our correspondent's proposed "widening."

The other term, "floaty," is also new, but less definite and ex p icit.

There is a strong temptation to a writer to avoid a constant repetition, especially of names; and it is quite a common practice to speak of the "white boat," the "keel boat," the "cutter," or the "sloop," where but two boats are concerned. During the season of 1893 we received several vigorous protests against this practice. the writers all declaring that they could not distinguish the boats, and requesting that the names be used invariably.



Model Making in Plastic Materials.

Editor of Forest and Stream: I am greatly pleased with the attention you have given to my letter respecting model yacht construction. Crude as my ideas were, they succeeded in providing me with a practical and novel method, explained in your columns of the last issue, and for which I thank you heartily. I have since learned that plaster of Paris is unsuitable as a mould, much greater pressure being necessary to compress the paper pulp than I at first considered; and its use would undoubtedly be impracticable for amateur designers and constructors. The "paper patch" method you so kindly explain, promises many more advantages to me, and no doubt to many of your readers, and I shall test it to the best of my ability at an early date, and will venture to report my experience. A. M. YOUNG.

We shall be glad to hear from our correspondent as to his success, and from others interested in the subject.

SAIL PLAN OF "KNOCKABOUT" CARL.

"KNOCKABOUT" CARL, DESIGNED BY W. E. WATERHOUSE, 1892.

The New York Y. C.

The annual meeting of the New York Y. C. was held on Feb. 14, Vice-Com. Brown presiding. The reports showed the club to be in a very prosperous condition, with a membership of over 1,100, a fleet of 300 yachts, and a handsome balance in the treasury. The following officers were elected: Com., Edward M. Brown, st. Sylvia; Vice-Com., Henry C. Ward, sch. Clytie; Rear Com., James C. Bergen, sl. Hildegarde; Sec., J. V. S. Oddie; Treas., F. W. J. Hurst; Meas., John Hyslop; Fleet Surgeon, Morris J. Asch, M. D.; Regatta Committee, S. Nicholson Kane, Chester Griswold, Irving Grinnell; Committee on Admissions, Frank T. Robinson, Robert Center, D. T. Worden, C. McK. Leoser, Joseph Stickney; House Committee, E. E. Chase, C. Alfred Grymes, H. Edwards Ficken, and Arthur Ingraham; Library Committee, Fordham Morris, William Gardnes, and Arthur H. Clark; Committee on Club Stations, W. H. Thomas, E. C. Benedict, Clarence McKim, L. Vaughan Clark, F. L. Anthony, F. P. Sands, and Lewis Cass Ledyard.

The following members were elected: A. G. Hamilton, Albert B. Hilton, F. M. Hoyt, Harry S. Henry, James Sibley Watson, Augustus S. Van Wickle, J. Henry Whitney, Charles H. McIntire, George R. Evans, U. S. N.; Harry M. Hodges, U. S. N.; W. J. Arkell, H. Ray Miller, E. C. Gregory, W. O. Hulme, U. S. N.; Henry E. Picking, U. S. N.; Percival W. Clement, William H. Watrous, Henry D. Macdonald, John A. Shearman, U. S. N.; R. C. Oswald, William H. Emory, U. S. N.; C. L. Wilson, Howard C. Smith, Walter Stanton, Hugh K. Norman, James B. Dickson, Stephen Loines, Edwin C. Hoyt, Thomas H. Kerr.

Mr. Ogden Goelet notified the club, by letter, that he would offer this year the usual $1,000 and $500 cups for a race off Newport. The announcements were made of a letter from Secretary Grant, of the Royal Yacht Squadron, and also that the club had renewed the leases of the town house and the Newport station, each for five years. The annual regatta was set for June 13.

The report of the committee on revision of the classification and racing rules was discussed at length, but the proposed amendments were finally carried, with two exceptions; that limiting the crew to the number on board when the yacht is measured, and the following: If an overlap exists between two yachts when both of them, without tacking, are about to pass a mark on the required side, then the outside yacht must, as far as possible, short of tacking, give the inside yacht room to pass clear of the mark.

The most important amendments were that establishing a classification on sailing length, and that limiting the number of crew in each class; both of which were adopted. We are unable to give them in full this week, but will do so shortly.

The Carl, 21ft. "Knockabout"

Widely as opinions may differ, both as to the ends to be attained in a perfect measurement rule and as to the extent to which existing rules exert a beneficial influence on yachting, there is one hard fact that cannot be disposed of by the advocates of unlimited sail area and other "plain and simple rules;" that, in these days at least, unlimited racing soon exhausts itself, leaving for a time nothing in its place. It is one of the healthy signs of the times that, the great yachting bodies having thus far failed, possibly for very good reasons, to produce a general measurement rule which does not tend to extremes, the smaller clubs are dealing with the question locally, but none the less effectively, by special legislation of the most extreme restrictive nature. Especially is this the case in England and Scotland, where the small rater, though perfect as a racing machine, quite evidently does not meet the wants of the majority of yachtsmen, who are not prepared to build a new and more expensive sailing toy each year. It is this class of racing yachtsmen which has produced the little "one-design" craft of the Clyde and Thames, and the older classes of the Clyde, as well as the Irish "Mermaids" and "Water wags;" the men who have organized each class having bound it with the most rigid restrictions, in many cases to the extreme of building from one uniform design and specification.

In this country the same causes are leading to the same results; we find first that any class, however popular at first, under the general measurement rule and existing classification, but without special restrictions, has a life of one or possibly two years. This has been the case of the forties, the thirties, the forty-six footers and the Boston twenty-one footers. The reaction caused by the lapsing of a class does incalculable harm to yachting, driving men into steam or into other sports; many of them being permanently lost to racing.

One of the most brilliant failures in the way of a regular racing class, limited only by the regular rule, is the twenty-one foot class of 1892 in Eastern waters; starting out with a burst of enthusiasm and showing a fleet of a dozen boats, but practically dying at the end of its first season.

In contrast to this brief meteoric racing is the class which has in a measure succeeded the twenty-one footers, of which Alpha was the head; a class that from a small beginning has grown lustily, and has now a fair promise of permanence.

Through the kindness of the designer, Mr. W. E. Waterhouse, of the firm of Waterhouse & Cheesebrough, we are able to illustrate the first and one of the best of the now famous "Knockabouts," the little Carl, built in the spring of 1892. The intention of her owner, Mr. C. H. W. Foster, of the Eastern Y. C., was to get a small and handy craft; not for racing, he then having the forty-six footer Barbara on the stocks, but for knocking about off Marblehead and Half-way Rock, alone or with a friend. To this end the hull was made of moderate dimensions and compact form; and with a very simple sail plan, the tack of the jib fast to the stemhead. From the first the boat was a success, showing very fair speed, even compared with the regular twenty-one footers in general sailing, though of course not fast enough to race with them. In point of convenience and sea-going qualities, she left nothing to be desired; the latter being tested once in particular, on the occasion of the Gloucester celebration in the fall, when Mr. Foster and his skipper sailed over from Marblehead to Gloucester and back to see the races in a gale that brought to grief some of the big fishermen, sailing in a race in the same water. The little boat was dry and easy, and made fine speed under reefed canvas.

The present "Knockabout" class had its origin in the Carl, and took its name from the work that she was built for, and so successfully accomplished. Before the first half-dozen boats had been built, it was seen that the class, as it then was, could be made to give plenty of good racing; but that unless some stringent limits were placed on outbuilding, it would soon degenerate into something no better than its predecessor. To this end various rules were adopted by the different clubs interested, the Corinthian of Marblehead adopting the following late in 1893:

"A knockabout boat is a seaworthy, keel (not to include a fin-keel), decked or half-decked boat of fair accommodations and rigged simply without bowsprit and with only mainsail and only one head-sail, and capable of being comfortably managed by one man in any ordinary summer weather.

"Limitations have been placed on the class as follows: l. w. l. not to exceed 21 feet; beam not to exceed 8 feet; crew three persons; depth amidships from gunwale to rabbet line shall not be less than 3 feet 3 inches; freeboard shall not be less than 18 inches; mast at deck not less than 5 feet from forward end of the water-line. The limits on beam, depth, freeboard and place of mast not to exclude any existing boats which otherwise would come within the requirements. The sail area shall be limited to 500 square feet, measured by this formula; multiply 85 per cent. of the base by one-half of the sum of the gaff and the distance from top of sheave of upper throat halliard block to stem head."

Last year the "Knockabout" class was remarkably successful, the racing about Boston practically centering in it; while at the same time the boats were used for cruising and general work. After the close of the season, an association composed of the owners of the boats formed and adopted the following rules, the necessity of prohibiting all "freak" features and extreme light construction being apparent:

A knockabout boat is a seaworthy keel boat (not to include fin-keels) decked or half-decked, of fair accommodations, rigged simply, without bowsprit, and with only mainsail and one head sail.

The load water-line length shall not exceed 21 feet.

The beam at the load water-line shall be at least seven and not more than eight feet.

The freeboard shall be not less than 20 inches.

The forward side of mast at the deck shall be not less than five feet from the forward end of the load water-line.

The planking, including deck, shall be not less than three-quarters of an inch thick, finished.

The frames shall be not less than one inch square, and spaced not more than 12 inches on centers.

The deadwood shall be filled in.

The rudder shall be hung on stern post.

The outside ballast shall be not less than 3,500 pounds.

The limits of the freeboard, beam, planking, frames, deadwood, rudder and place of mast shall not exclude any existing knockabout boats which otherwise come within the restrictions.

The sail area shall be limited to 500 square feet, measured by the formula, viz.: Multiply 85 per cent. of the base by half of the sum of the gaff and the distance from the top of the sheave of the upper throat halliard block to the stem head.

The Carl and her successors may be taken as the realization of that ideal which was sought for by so many with but indifferent success between 1880 and 1886, a small, smart and thoroughly serviceable cutter. That the early boats were more or less failures

was due to faulty dimensions, too little power and beam, heavy construction, insufficient ballast or similar defects; they did good work for their day, as compared with the existing boats then used for cruising; but all had serious faults. In the "Knockabout" of to-day, the skillful designers who have made the class, have utilized the experience and knowledge obtained in the 40-ft. and other larger and more important classes to turn out a 21-ft. cutter that is quite as near perfection as is likely to be seen for many a day. Staunch, strong and sturdy, widely separated from the freaks of the fin type, they meet the needs of a very large number of good keen yachtsmen; men who are wise enough to enjoy a close race in the class, even though some finny fellow sailing alongside is able to make loops around them.

As already stated, Carl was not built for racing, but with the growth of the "Knockabout" fleet and the introduction of racing, her owner was hardly the one to stay ashore, and last year she stood second on the record, according to the very complete summary prepared by the Boston Globe. Her dimensions are as follows:

Length over all	30 ft. 6 in.
l. w. l.	20 ft. 9 in.
Beam, extreme	7 ft. 9 in.
l. w. l.	7 ft. 3 in.
Draft	4 ft. 6 in.
Freeboard, lowest	1 ft. 10 in.
Ballast, lead keel	2.32 tons.
Mast from stem	5 ft. 3 in.
Deck to hounds	27 ft. 8 in.
Boom	23 ft. 3 in.
Gaff	13 ft. 3 in.

Carl was built by the Lawley Co., a guarantee of good construction, and she is neither flimsy nor clumsy, but put together to stand, and at the same time with every care to avoid useless weight. The cockpit is water-tight, and there is room for quite a cabin; some of the later boats of the class, fitted up for cruising rather than day sailing, showing remarkably good accommodations on the same dimensions. Messrs. Waterhouse & Cheesebrough have turned out a number of similar boats within the past two years, most of them being built by the Lawley Co.

A New Western Steam Yacht.

Editor Forest and Stream: The Detroit River Navy will next summer have added to its fleet of beautiful yachts a notable craft, by Commodore M. B. Mills, being the largest steel yacht ever launched west of Cleveland, the contract for which has been let to the Detroit Boat Works, after models and specifications by Fred. A. Ballin.

The interest in yachting has been rapidly developing in Detroit during the last four years, and within five years a number of very handsome and fast boats have been placed on the river. It was a long time before the advantages for the magnificent and fascinating sport offered to the people of the beautiful City of the Straits were fully appreciated by them at their true worth. Thirty years ago Commodore R. C. Barker brought to these waters the Coral, a very tidy and fleet little craft, and the interest in sailing yachts at that time was lively, though spasmodic; but the history of yachting in the vicinity of Detroit may be said to date from that time. Later, the predilection for steam yachts has been overshadowing the love for sailing craft, and the wealthy gentlemen of the city and vicinage have taken to the former.

Commodore Mills has been one of the most active men recently in connection with the advancement of the interests of yachtsmen, and the yacht Grace, which he now owns, has been regarded as one of the best boats on the river; but she, with all the rest, will have to be contented with a more modest position when the new craft is put in commission.

A description of it will, perhaps, be of interest in this connection, which is given your readers through the courtesy of the Detroit Free Press:

The length over all will be 132 ft., water line 110 ft., beam 17 ft. 6 in., and depth 8 ft. 9 in. She will be schooner-rigged with clipper bow, flush deck, metal bulwarks about 12 in. above the deck, and a netted handrail above. The hull will be of the best quality of milled open hearth steel. She is to have three water-tight bulkheads, one in the bow and one at each end of the machinery space.

The decks will be of clear white pine, in narrow width, fastened to the steel deck frame by brass screws.

The propelling power will be a triple expansion engine, 10, 16 and 26. in. cylinders by 6-in. stroke. There will be a surface condenser of the salt water type with the necessary air and circulating pumps, boiler feed pumps, blower engines and electric light plant. The boilers will be of Taylor's improved water tube type, 8 ft. in width and 9 ft. in length, with a heating surface of 1,600 sq. ft. It is intended that she will develop 350 H. P., which is fully 100 more than any yacht now in the river. There will be a special device for discharging ashes by the means of a steam blower, so that there will be no dust. The coal bunkers will have a capacity of twenty tons of hard coal and an arrangeme t will be made whereby the oil tanks in the machinery rooms can be filled through deck pipes which close up tight. Her propeller will be 4 ft. 6 in, diam.

On deck forward will be located a large deck house finished in mahogany. It will be 24 ft. long and the average width will be 8 ft. This will be used as a dining and lounging-room. The room will be designed and patterned according to the ancient style of Italian renaissance. The ceilings will be of electro-plastic metal, and around the sides will be continuous divans, upholstered in morocco leather, in colors to harmonize with the rugs and decorations on the ceiling. The windows will be of French plate glass, draped with curtains of brocaded silk. In the center of the room will stand a 12-ft. mahogany folding-table with lockers and shelves underneath. There will be china closets and lockers in the corners. The floor will be covered with linoleum and rugs.

On top of the deck house, which will be surrounded by a brass railing, will be the steering wheel, binnacle and a powerful electric search-light. Another feature will be an electric flag of eighty-five colored bulbs forming the commodore's private colors. From each side of the top of the deck house a bridge runs to the edge of the ship.

From the inside of the deck house a mahogany staircase leads down to the smoking-room, containing sofas on each side which can be converted into berths. This room will be 9 ft. by 15, and among its articles of furniture will be a sidebard with necessary drawers, lockers and shelves to be filled with cut glass, etc. The woodwork in this room will be cherry and patterned in the old colonial style. The ceiling will be decorated with lincrusta, colored and metalized to match the sofas and ottomans, which will be upholstered in morocco, harmonizing perfectly with the mohair curtains and Wilton carpets.

From this room a door leads forward to the captain's stateroom which will be finished in natural butternut, with all the necessary requisites of a perfect sleeping apartment. The engineer's room will also be a comfortable one and will adjoin the engine room.

Another door from the smoking-room leads to the lavatory and galley, the latter being fitted up with all the necessary lockers, drawers, shelves and racks for a first-class yacht, also a large ice-box holding half a ton of ice. There will be a sink, hot and cold water, a large yacht range and a dumb waiter to run to the deck house. The woodwork will be natural pine, the floor covered with linoleum and the ceiling tinted with light colors.

Forward of the galley will be located the crew's quarters, containing eight bunks of galvanized piping and with canvas mattresses. There will be lockers, seats, wardrobes, and a mess table in this room. A special companionway of mahogany admits from the fore deck to this room. Forward of the crew's quarters are chain lockers and a storage room.

Abaft the mainmast is located a companionway, from which a mahogany staircase leads to the passage below the deck from which admission is gained on the starboard side to the owner's stateroom. This room will be a marvel of beauty. The interior woodwork of this and the bathroom adjoining, will be of white mahogany, natural finish and in Louis XIV. style. The ceilings will be decorated in ivory with raised ornaments of silver. The berth will be finely decorated, the hangings being of the same general style as the deck house, of brocaded silk. The floor will be covered with the newest design in French velvet carpet. Adjoining this and connected by a door is another stateroom decorated in a similar style with the same woodwork. It will contain a stationary washstand with hot and cold water and wardrobes. The ceiling decorations will be gold leaf to correspond with the carpet.

Abaft this room communicating with the saloon is the butler's pantry, finished in quartered Cuba birch and containing an ice-box, china closets, lockers with cut-glass fronts, a small sink and racks for glassware.

Turning from the stairway through the passageway entrance is gained to the main saloon, the full width of the ship and 17 ft. long. The woodwork is quartered Cuba birch and the ceiling will be made of raised ornaments, festoons and wreaths, colored and richly gilded, Louis XIII. style. There will be continuous divans around the room which can be changed at will into four commodious berths, all upholstered in velour imperator, specially designed and imported for this room. The only occasion on which this material was ever before used in America was in the Pullman cars exhibited at the World's Fair. The curtains will be velour de Guinness in colors to match the covering and French carpet, which will be very elaborate. There will be a fine birch round table as well as a writing-desk and book-case built into the sides of the room. There will be a toilet room in one corner and a washstand built under the stairway. The sides between the side lights will be utilized for china closets, neatly decorated with spindle work and cut-glass mirrors.

Leading into the main saloon will be two spare staterooms containing berths, wardrobes and washstands with lockers under the berths. The woodwork will be mahogany, rococco style. The walls will be covered with French cretonne tufted. The hangings will be light silk trimmed with lace. There will be velvet carpets and the ceilings will be decorated to correspond with the colors of the cretonne.

On deck forward will be placed a power yacht capstan-windlass for working ship or hoisting anchors, of which there will be two. The anchor chain will be a three-eighths cable, forty fathoms in length. There will be davits for two life-boats, finished in natural wood with mahogany trimmings and gratings and nickel-plated fittings. There will also be a 21-ft. naphtha launch.

Awnings will be spread over the forward and after part of the ship with the necessary side curtains on the after-deck, the ridge ropes to be carried by crow feet from the gaff. By means of the side curtains the after-deck can be housed in and will be lighted by many incandescent globes from above.

The deck fittings, such as mooring bits, deck and bunker scuttles, will be of polished brass. The house over the boiler will be flush riveted steel plate. There will also be a large mahogany skylight over the engine-room, owner's room and main saloon, with brass guards, quadrants and hinges.

The steering gear is specially designed so that there will be no slack in the cable in any position. The engine signal from the top of the deck house and bridge will be brass cranks and all bell ropes leading through the cabin will be encased in polished brass piping. The interior of the yacht will be lighted by fifty 16-candle power incandescent lamps furnished by the dynamo in the engine-room, in conjunction with a storage battery plant. All fixtures, clusters and chandeliers will be of neat and original design in bronze.

KEUKA.

Detroit, Jan. 31, 1895.

The New 90-footers.

The designers and builders of the American defender and the new Valkyrie III. are equally active in guarding the secrets of the drafting-room and shops; the result being a host of idle and improbable rumors, many of them totally unworthy of credence. From the Clyde comes a report that the new Watson boat will be built of "nickel-plated steel," by which is meant "nickel steel," an alloy of great strength and having other desirable qualities. While Mr. Watson has doubtless investigated the subject of metal construction, in view of Vigilant's bottom of Tobin bronze, we doubt very much that he will forsake the method which has given such good results in Queen Mab, Valkyrie II., Britannia and many other yachts, the true composite build.

The refusal of the Hereshoffs to disclose anything about the new boat gives free scope to the imagination of writers, and wonderful tales of the "important if true" variety, are now coming from Bristol. The following story, by Mr. W. E. Robinson, in the Boston Globe, contains all of the facts at present known, and is reasonable and logical in its deductions. Stories of fin-keels and centerboards to the contrary, we look for such a boat as Mr. Robinson describes, a keel cutter of about 25 ft. beam and 18 ft. extreme draft, of the conventional construction, with frames running down close to the lead keel, as distinguished from the canoe hull with plate fin and bulb. At the same time the hull will be boldly cut away below, as in Calluna and Vendetta, making a model of fin type. The construction is more likely to be of composite than of all metal. The new steam yacht Eugenia was launched on Feb. 12, the ice being cut away from the front of the shop. As soon as the ice is out and the new railway of the firm in Walker's Cove completed, she will be hauled out. The Gould 20-rater is nearly completed, and will be moved over to the north shop, and the mould for the lead keel of the Cup defender will be placed very soon on the vacant ways in the south shop, where Gloriana, Wasp, Navahoe and Colonia were built. The masonry foundations of the ways have been strengthened lately, and a new melting-pot has been set in the yard.

Mr. Robinson's story is as follows:

"The probability that the Cup defender, now building by the Herreshoffs, will be a composite boat, wood planking on steel frames, as outlined exclusively in The Globe last Sunday, seems stronger than ever in view of the many known facts which point to that plan of construction as against the Tobin bronze plating on steel frames, which was originally considered.

"Work in the south shop on the mould for the big lead keel is proceeding, although somewhat slowly. The lead for running the keel is on hand and is piled just outside on the south side of the shop, where it is handy to the melting-pots. It is believed that this lead would not be on hand so early were the boat to be a Tobin bronze one, and the lead keel run after the boat was plated, as was done in Colonia and Vigilant.

"The preparations for the running of the lead keel in the very place in the south shop where the boat is to be built points almost conclusively to composite construction. With the lead keel in place, the fashioning and placing of the oak keel above it, the bolting of the two together and the framing and planking of the boat, follow naturally. If Tobin bronze plating were to be used, much of the work of riveting the steel keel plate, floors and frames could be done better without the lead keel.

"In view of the fact that the boat must be delivered June 1, and consequently launched a couple of weeks before that, in order to have a trial trip, it is more than probable that only the speediest and best methods of building will be used. Another indication of composite construction is thereby afforded. A composite boat can be built much more quickly than a Tobin bronze plated boat, and this is in itself a strong factor.

"The recent arrival by freight of a large quantity of mahogany in long lengths and of excellent quality is also a pointer toward composite construction. Double planking, with the outer skin of mahogany, is the most likely form such construction would take in the Herreshoffs' hand, and it would be no more difficult to do in a large than in a small boat. Thorough strapping by diagonal steel straps across the steel frames and deck beams would make dependence on the strength of the planking much less necessary than might at first appear, and double planking could be made light, yet sufficiently strong. A composite boat would be much lighter than a Tobin bronze or a steel one, and in lightness of construction lies much of success in the coming cup contest.

"Further bearing on the matter of composite construction is the fact that but a few steel workers have returned, and that more do not appear to be coming. The gang of steel workers now at the works is not large enough to plate a boat with the degree of speed which is a necessity in this case. It is only large enough to bend the steel frames and do what riveting may be required in setting up the frame and in strapping it. On the other hand the force of wood-workers in the shops is a large one, and as it is known that they all expect to be kept very busy until June 1, the inference of work on a composite boat is a very strong one. There is certainly not work enough on other boats in the shops to give so large a gang steady work for so long a time.

"With the arrival of the last lot of mahogany, there appears to be more of that wood in stock than would be likely to be used except for the purpose before named. The arrival of wood stock has also so much increased that help has been given the man in charge of measuring it up. In short, if the boat does not turn out to be a composite one, then all signs will have failed and the Herreshoffs departed much from their usual methods of work.

"As to the type of boat it can be asserted, with no small degree of confidence, that the Cup defender will be a keel boat, and as near a fin keel in model and shape as she can be made, and yet retain the ordinary form of construction without the use of a plate fin to carry the lead keel. Indications are that she will be of good draft, considerably more than Colonia of 15 feet, and if she has a centerboard it will be but a small auxiliary one forward to keep her from falling off when going to windward in light airs, a similar one, in fact, to the one found useful on Jubilee. She should not be much beamier than was Colonia of 24 feet, certainly the beam will not be nearly that of Vigilant, which was 26.

"The water line length is designed at 89 feet. This is four feet over the design of Vigilant and Colonia, but both those boats were over that line when in final racing trim, Vigilant measuring nearly 87 feet. The additional length, however, gives opportunity for fining the lines forward and aft, and the making of an easier form to drive through the water. The under water body will be fined away as much as possible and the deadwood cut away, both forward and aft, even to the possible extent of using a balanced rudder instead of one hung on the stern post.

"The keel, with its deep deadwood and lead keel below, will drop straight from the garboard, and the garboard itself will have just enough hollow for strength. The lead will be low down and rising 70 tons in weight. The boat will, therefore, be a powerful one, yet it is doubtful if a much larger sail plan than that of Vigilant will be carried, because of finer lines and an easier boat to drive. A 100-foot mainboom is about as long as can be handled and kept from buckling.

"The shortening of the keel and the cutting away of all deadwood, together with the upward-curving ends of the lead keel, will make the boat very quick in stays, and she should be at no disadvantage in this respect to her British antagonist. Should a balanced rudder be used, no one need be surprised to find a big tiller to control it, as on the British boats, instead of the usual American style of a wheel on all boats over 40 feet. British helmsmen have always claimed not only better and more sensitive steering from a tiller than from a wheel, but also greater quickness in putting a boat about. The latter portion of the claim seems substantiated by some observations of Navahoe's sailing abroad. A tiller on an American Cup defender would be a novelty, but would be a possible advantage and certainly not a detriment.

"The lead keel may be bulbed to secure lead at the lowest possible point, a feature which neither Colonia nor Vigilant had, alleged sketches and plans to the contrary notwithstanding.

"Confirmation of The Globe's statement of the saving in weight by having few interior fittings and berthing the crew on an attendant steamer is at hand. Mr. Iselin is looking for a steamer suitable as a tender to the new boat, and wishes accommodations on her for half a hundred men. He wants her by May 15, and presumably will have his crew ready by that time, so as to take charge of the new boat as soon as she is delivered to him.

"This shows that, as in the Vigilant's case, money is no object to the syndicate, and that the expense may run as high, if not higher, than it did then.

"Summing up the Cup defender, it can be said that although she is a keel boat, yet she will be no copy of keel boats from abroad, but a legitimate development from Wasp and from the successful fin keels of the smaller classes.

"She will be the fastest boat yet turned out from an American designer's hands, and unless all indications are at fault, she will be so much faster than Vigilant and the others that their use in racing will be only to tune her up to her highest pitch by forcing her to see how much she can beat them. The writer has always felt confident that the Herreshoffs could beat the Vigilant, but whether enough to beat an improved Britannia was the doubt. Now, however, he feels confident not only of beating the American boats, but also the challenger, whether Fife's or Watson's new one.

"The Cup will not, indeed, be defended without a close and interesting contest, in which neither side can afford to throw away any points, but the outlook for success is good if the Cup defender comes up to indications and expectations."

YACHT NEWS NOTES.

Lampa, schr., arrived at Gibraltar on Feb. 15, all well. Her owner, Mr. R. S. Palmer, with Messrs. H. W. Bull and Lyman Colt, sailed from New York on Feb. 16 to join her.

Messrs. Waterhouse & Chesebrough have placed an order with the Canley Co. for a steam yacht of composite build, 125 over all, 100 ft. l. w. l., 16 ft. beam, 6 ft. draft, with a speed of 14 knots under natural draft. Her owner, as yet unknown, is presumably Dr. W. B. Hopkins, of Philadelphia, former owner of Gloriana and Cinderella.

After some delay due to ice and cold weather, which prevented her complete launching at the first attempt, on Feb. 7, the new Fife cutter Ailsa was set afloat on the following day, and eight days later she sailed from Glasgow for the Mediterranean, where she will meet Britannia. The yacht is very much cut away below, making her of the fin type, in spite of her composite construction, and she is heavily canvassed, her sail area being 11,500 sq. ft., and her rating 172.

The record for speed is now held by the new torpedo-boat destroyer, Boxer, built by Messrs. J. I. Thornycroft & Co. She was taken out on Jan. 8 for her second preliminary trial of speed at the Maplins, having a full load of 30 tons on board, and attained a mean speed over six runs on the measured mile of no less than 29.314 knots. The result is the more remarkable, as the boat was down to her load-draft of water, 7 ft. 2 in. She is 201 ft. 6 in. long, 19 ft. beam, and is fitted with boilers and engines of the same type and size as those of the Ardent.—Nautical Magazine.

This is all very well, as far as official trials over the measured mile, but an American yacht still holds unbroken the newspaper record, 3.16 knots.

The owner of the steam yachts Vamoose and Judge have finally agreed to race on the Sound in June, for $1,000 per side. The owners of Norwood, Yankee Doodle and Rex will be allowed to enter, if they are desirous of doing so.

The annual meeting of the Indian Harbor Y. C. was held on Feb. 14, the following officers being elected: Com., Charles T. Willis, sloop Mistral; Vice-Com., William Osborn, slp. Crocodile; Rear Com., George G. Tyson, cutter Vorant; Sec., G. W. Pfeiffer; Treas., Richard Outwater; Regatta Committee—Frank B. Jones, Chairman; Richard Outwater and D. W. Merritt. Trustees (to serve three years)—D. Malcolm Winne and Louis R. Alberger.

The annual meeting of the American Y. C. was held on Feb. 12, the following officers being elected: Com., John H. Flagler; Vice-Com., Caleb G. Evans; Rear Com., Charles T. Willis; Sec., Thomas L. Scovill; Treas., William Porter Allen; Fleet Surgeon, Charles I. Pardee, M. D.; Meas., Charles H. Haswell; Consulting Engineer, George W. Magee, U. S. N. Trustees (to serve three years)—W. H. Starbuck, W. E. Connor; to serve one year, the unexpired term of Mr. E. S. Chapin, resigned, William H. Catlin; to serve one year, the unexpired term of Mr. Clement Gould, deceased, Edwin H. Weatherbee. Regatta Committee—Stuyvesant Wainwright, Chairman; Horace See, Marsells Clark Parsons, Isaiah Parsons and Simeon Ford. The club will run a coach between the clubhouse at Milton Point and 135th street, New York, during the season.

Mohican, schr., Dr. Herring, arrived at Plymouth, Eng., on Feb. 14, all well on board. The yacht left St. Michaels, Azores, on Jan. 31.

The annual meeting of the Atlantic Y. C. was held on Feb. 11 at the Waldorf, in New York, Com. Banks presiding. The following officers were elected: Com., George J. Gould, steam yacht Atalanta; Vice-Com., Frederick T. Adams, schr. yacht Sachem; Rear Com., William A. Hazard, schr. yacht Fenella; Sec., David E. Austen; Treas., H. C. Wintringham. Trustees—David Banks, A. P. Ketchum, J. Fred. Ackerman, J. Rogers Maxwell, Jefferson Hogan, Thomas L. Arnold. Membership Committee—Philip G. Sanford, David E. Austen, Louis F. Jackson; Measurer, Henry J. Gielow; Regatta Committee—John L. Bliss, George H. Church. George W. M McNulty, Henry J. Gielow, Charles E. Walling; Nominating Committee for next year; Thomas L. Arnold, L. F. Jackon, David E. Austen, P. G. Sanford, John L. Bliss and George H. Church.

The Huguenot Y. C., of New Rochelle, is building a new house. The club has adopted the Seawanhaka rule, and one-gun start, and its courses will be four-sided, sailed twice around.

June 11 was set for the annual regatta, the cruise to be held in August. It was decided to admit to life membership all members of 15 years' standing upon the payment of $100; and also to admit not over 20 members of less standing on payment of $250 each.

At the meeting of the Eastern Y. C., on Feb. 12, the following members were elected: Com., William Amory Gardner; Vice-Com., Charles F. Adams, 2d; Rear Com., Henry W. Lamb; Sec., William S. Eaton, Jr.; Treas., Patrick T. Jackson; Meas., Henry Taggard; Members of Council at Large, Augustus Hemenway and F. E. Peabody; Regatta Committee—William S. Eaton, Jr., Augustus N. Rantoul, P. T. Jackson, Thomas Nelson and Henry H. Buck. Committee on Admissions, F. E. Peabody, Gordon Dexter, C. F. Adams, 2d., William Caleb Loring and the Secretary. House Committee—T. Wattson Merrill, Frederick E. Snow, Dr. Franklin Dexter, Robert Saltonstall and the Secretary.

CANOE NEWS NOTES.

Vice-Com. Quick has called a meeting of the executive committee of the Atlantic Division, which will be held at Trenton, N. J., on Saturday, March 2, at 8 P. M., at the Hotel Algonquin. All members of the division are invited to be present. The majority of the committee expect to leave New York on the 5 P. M. train on March 2, Penna. R. R.

The annual meeting of the Palisade C. C. was held on Feb. 5, at the club-house, Hoboken, the following officers being elected: Com., P. Hildebrandt; Vice-Com., J. L. Held; Capt., C. Speer; Lieut., F. McKechnie; Sec., J. E. Davis; Treas., E. Baker. The Palisade C. C. has a limited membership of 30 and a fleet of 16 canoes, 2 canoe yawls, one 25 ft. war canoe and 2 club dingheys. A club four and a tandem paddling canoe will probably be added this season. In a couple of weeks Capt. Speer, who is an expert all-around canoeist, will begin to train a crew for the war canoe.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order Make orders payable to

FOREST AND STREAM PUB. CO., New York.

BARRELS OF OYSTERS.

We observe with regret that some of our esteemed contemporaries have manifested a proneness to print unkind words about Secretary Doyle, of the New York Fish Commission, because they say he has been sending barrels of oysters to certain members of the Legislature. Mr. Doyle is interested in the passage of Senator Donaldson's bill to combine the Forestry and Fish Commissions into one fat salaried political machine. The Doyle oysters are reputed to have been put where they will do the most good; that is to say, they have been judiciously distributed among members who may make themselves useful in promoting the progress of the desired legislation. The oyster is well understood to be one of the most seductive things in creation; barrels of oysters impinging upon the stomachs of Senators and Assemblymen would in all probability prove absolutely irresistible; the stoutest virtue would go down before a continued bombardment. It is to be hoped that this new-fangled oyster culture of legislation may be investigated and scientifically determined by students of under surface politics, for if the tales of Secretary Doyle's bivalvular donations shall be shown to be founded upon an oyster bed of truth, so to speak, they will partially explain the confidence which the promoters of the Donaldson scheme express as to its future. It will be seen at once that the man who has planted his oysters in the halls of legislation has inside information as to what is going to happen. He is in the position of the race-track expert who lays his bets with confidence because he knows what the horses have been doctored with in the stable.

All we claim to know about this oyster business is what has been printed in the newspapers. We assume, however, that Mr. Doyle has not sent his oysters to unreceptive legislative stomachs. It is possible, indeed, that he has paid expressage on the succulent shellfish for no one who has not asked for them or intimated that such donations would not be unacceptable. It might even develop that these barrels of oysters represented a petty tax long levied upon officials connected with the fish commission, in substance a form of legislative blackmail resorted to by men who when they thought that a consignment of Mr. Doyle's oysters would go well had no foolish hesitation about asking for them.

This Donaldson bill is a natural outgrowth of the oyster barrel system of legislation. It is on the face of it the product of politicians who look upon the State Treasury as an oyster bed to be tonged and dredged and set out on the half-shell for the gullets of professional politicians. Here are some of the fat oysters it provides:

One President's salary	$5,000
President's expenses (say)	2,500
Four Commissioners' salaries	4,000
Commissioners' expenses	2,000
State Fishculturist's salary	3,500
Assistant's salary	2,500
Secretary's salary	2,500
Assistant's salary	1,500
Total	$23,500

The total of $23,500 is equal to two-thirds of the entire amounts expended in the fiscal year 1892--93 on all the fish hatcheries of the State, but it must be remembered that not a cent of this $23,500 is to go to the actual work of fish culture. None of it gets closer to that purpose than the item of the salary for a "State fish culturist." If the members of the Legislature who have not been oyster barreled, shall regard the raid on the Treasury contemplated by this bill as extravagant, they might, perhaps, compromise with their barreled associates and secure the elimination of this item of $3,500 for a "State fish culturist." It would be quite simple to demonstrate, we think, that no State fish culturist has ever lived or ever will live worth $3,500, when he has to have a $13,000 set of commissioners to "direct" him and a set of $6,500 assistants and secretaries to piece him out. Even the half-shell politicians might concede a practical fish culturist to be altogether superfluous in this fish and forestry scheme.

BLOW, WILKS & COMPANY.

Our Chicago staff-correspondent's report on the Blow bill gives the pleasing intelligence that the measure has received its death-blow at Springfield. The market men of Chicago have found out that the Illinois Legislature does not share Warden Blow's queer notion about the sale of game at all seasons of the year. There is solid ground for trust that the Chicago markets will not be opened for Western game, not this year at least.

We believe that there is equally substantial reason for believing that the New York Wilks bill, exposed in these columns last week, will be killed. This is a bill to permit the sale all the year around of game not killed in the State. It would practically mean the sale of game from other States and from New York as well. It is in effect a Blow bill; and every reason advanced for the defeat of the Blow bill at Springfield should be used in opposition to the Wilks bill at Albany.

ZOOLOGICAL GARDEN FOR NEWYORK

The project to establish a zoological society and a zoological garden for New York is one which appeals strongly to all who are interested in natural history. The matter has several times before been brought up and has always met with general approval, but for some reason nothing has ever been done in the matter. Such a society was formed in 1879, and two years later it was stated that it had obtained its land and was about to build, but that was the last heard of the matter. It is a wonder and a shame that, while many American cities have excellent collections of wild animals, New York, the greatest and richest of all, has nothing of this nature that is worthy of the name. The few animals on exhibition in the Central Park cannot be dignified by the name of a zoological collection and cannot be compared with those in the gardens of Philadelphia, Cincinnati, Washington and Chicago.

A bill recently introduced in the Legislature by Assemblyman Niles incorporates the New York Zoological Society, and provides for the establishment of a zoological garden in the city of New York. The names of a number of well-known citizens are given in the list of persons to be created a corporation, under the title of the New York Zoological Society. The corporation is to have power to establish and maintain in this city a zoological garden for the purpose of encouraging study and original research in zoology, and of furnishing instruction and recreation to the people; and for this purpose it may purchase and hold animals, plants and specimens appropriate to these objects. The usual business privileges of such corporations are granted to it; and, besides, the commissioners of the sinking fund are authorized to appropriate for its use any of the lands belonging to the city north of One Hundred and Fifty-fifth street. Such appropriation may be revoked, however, if after the expiration of five years from the passage of the act, a zoological garden is not established thereon. The lands so allotted shall be used only for the purposes of this zoological garden. The Park Commissioners are authorized to dispose of the animals and other property now constituting the Central Park menagerie to this corporation on such terms as they may see fit. As soon as any lands are set apart, or any city property shall have been transferred to the corporation, the Mayor of New York and the President of the Department of Parks shall become and be ex-officio members of the board of managers of this corporation. Admission to the zoological garden shall be free to the public for at least four days of each week, subject to such rules as may be prescribed by the corporation.

Of the desirability of establishing such a zoological garden there can be no question. Under the conditions prescribed in the bill it could hardly be self-supporting, and would probably have to depend largely on contributions. The bill should pass, and every encouragement should be given to those who are willing to undertake a work, which, under the most favorable circumstances can hardly promise a return on the money invested.

We hope for this project a better fate than that of its predecessors; and as an earnest of our good wishes for the success of the enterprise, we undertake that if any more Indian chiefs shall send grizzly bear cubs to the Forest and Stream, the zoological garden shall have them.

New York may, after all, have its zoological garden before it shall have its aquarium. Months and years have been consumed in doing over the historic Castle Garden, on the Battery, from a receiving depot for immigrants to an aquarium for fresh-water and salt water fish; and after spending tens of thousands of dollars in doing the work in a fashion hopelessly wrong, the bungling authorities are now spending vast sums in undoing their folly. Here was an opportunity to provide the finest aquarium in the world, but it was thrown away—and a lot of money with it

SNAP SHOTS.

Some farmers of Sussex County, New Jersey, have held a meeting for the denouncing of game laws. This prompts the American Agriculturist to suggest that such meetings should be held all over the country. "The so-called sporting element," it says, "has grown to be an intolerable nuisance and needs to be sat down upon." But just who is to do the sitting down upon the obnoxious element? Not the farmers, as a class, for they themselves largely compose that element, not the editors of agricultural papers as a class, for they are sportsmen, too; not the merchants, nor the lawyers, nor the doctors, nor the clergymen, nor the mechanics, nor the Army, nor the navy, nor the telegraph operators, nor the Senators, nor Congressmen, nor any other "class." Would not it be better for the farmer, instead of seeking the repeal of all game laws, to just join in and help make the laws effective, to the end that there may be fish and game for all of us, farmers included? We hesitate to assume the role of telling the American Agriculturist people how to run their paper, but that is about the doctrine we would cause to be preached if we were dictating a game law policy for a farmer's journal.

It will be remembered that in the Sundry Civil Service Bill, as passed by the House, the appropriation for the Yellowstone National Park, referred only to the improvement of that reservation, nothing being said about its protection. The importance of having a small sum of money with which to pay extra scouts for the protection of the game during the winter has often been insisted on in these columns and is recognized by all who are familiar with the needs of the Park. It is satisfactory to learn that the bill, as reported by the appropriation committee of the Senate, is so far modified that this item reads: "For the improvement and protection of the Yellowstone National Park, to be expended by and under the direction of the Secretary of War, forty thousand dollars, of which not more than one thousand eight hundred dollars may be expended for the compensation of scouts employed in the protection of said Park." There is every reason to believe that this item will be favorably acted on by the Senate, and it is to be hoped that the House will confer.

An officer of the New York Society for the Prevention of Cruelty to Animals was called the other day to shoot a disabled horse in the street, to put it out of misery; and he killed a man before he did the horse. Last week, near this city, an express agent was attacked by a masked robber; a fusilade ensued, and when the smoke cleared it was found that the highwayman had escaped, but a non-combatant pet dog had been killed. These incidents teach us that even the best intentioned bullets may fly wide of the mark.

The death of General R. U. Sherman removes a personality long prominent and honored in public life. General Sherman was an excellent type of those who dignify the recreations of wood and stream by participation in them. We quote in another column the tribute to him as an angler and nature lover, written by Mr. W. E. Wolcott for the Utica Herald.

Mr. F. F. Frisbie's capital photographs of scenes "on the trail," will bring to the memory of many another the glorious days spent in the Rockies. It is one chief charm characteristic of all such chronicler of the field that in them one may live over again his own out-door holidays.

The Sportsman Tourist.

ON THE TRAIL.

Where rugged peaks with snowy summits high,
O'ertop green valleys low and pierce the azure sky;
Where foaming rapids roar, thro' canyons dark and deep,
Thro' forest shade, where lordly buck doth sleep.
Beside calm pools and gem-like "tarns," beneath whose crystal tide
Each rock an emerald seems, and beauteous trout doth hide.
We wander on, until the light of day grows pale,
And darkness gathers o'er our camp beside the "trail."

It is an argument held by many that civilization has increased the capacity of the human race for enjoyment. Is this so, or is it that civilization has given us more means of enjoyment? Do we, the civilized man, enjoy what we have more than our untutored progenitors, in the past ages, enjoyed what they had? Do not the so-called luxuries of our modern life bring in their train a thousand and one ills, trials and cares, that were unknown to the child of nature? The modern dweller in our cities, towns and villages, lives an artificial life, and the original animal man was not intended for such a life. It is not real, as anything artificial is not real.

I do not mean for one moment to advocate a return to "savage life," but I believe that many a man would be better physically, mentally and morally if he could, or would, leave behind him civilization for a season and live far from the haunts of man, free from the cares and trammels of modern society. To roam hither and yon, with no care for the morrow, commencing with nature in her wildest, as well as in her gentle moods, will teach a man much that civilization cannot. There we "Find tongues in trees, books in the running brooks, sermons in stones and good in everything."

Life in the mountains "on the trail," brings man near to Nature's heart, and he who has not tried it can not realize nor imagine the charms of such travel. It has been my good fortune to pass many months in the midst of nature's most charming nooks, and though at times the trail has been rough and the sky not always serene, the pleasures have far exceeded the hardships.

Let the reader (in imagination) follow us on one of our little trips and live a short season where the air is pure and "sparkling like champagne," where the sky is clearer blue than in the east, and where the mere fact that you are alive is a joy, and you bless the hour that gave you birth.

The Great Union Pacific Railroad, pioneer of trans-continental lines, with its many branches, carries the would be tourist and camper into many sections of the west that are as near perfection, for the pleasures of the camper, hunter, tourist and "disciple of the rod," as can be found. And that section of Idaho lying north of the Oregon Short Line division of the Union Pacific, has many inducements to offer that are worthy of mention. First, is the great variety and comparatively large supply of big game. We say, comparatively advisedly, as no section of the West has the hordes of wild animals that could be found a few years ago. Then, again, the angler can hope for success in most of the rivers, lakes and streams. The climate is fine, the altitude averages much lower than Colorado and some of the other Western States, and this to the tourist is a very important fact, as it takes time for the Eastern man's lungs to get accustomed to the very high altitudes before he can climb and hunt with ease and comfort.

There are many points that can be used as a base for an expedition, but in this case we will start from Mountain Home. We will skip all preliminaries, as it is not in the provinces of this short article, to give outfitting illustrations, and besides there are so many good works now published treating of these subjects so exhaustively, that it is better for the novice to procure these. The Forest and Stream's catalogue of sportsmen's books contains names of many of these works.

Mountain Home is a small, but growing frontier town, with fair hotel accommodations and good outfitting stores, as far as food supplies goes, but not a good place to procure a general outfit. It is from this point that the stage line for the Rocky Bar country takes its departure. Sixty miles north on the stage road you are in the heart of a mountainous country at an elevation of 4,000 to 8,000 feet. Along a trail leading from Junction Bar, the scene of placer mining in olden time, and the junction of Feather River with the South Boise River, we wend our way. Our pack horses are led, or follow the leader, the rear man urging them forward, or driving them back on the trail if they try to stop to crop the luxuriant bunch grass that covers the mountain side. The trail runs along by the river's side, and then strikes off into some grassy swale or shady grove of towering pines, or wends its way through thickets of quaking asp and bunches of sarvis berry bushes. Anon, it climbs some rocky knoll, or winds along the steep side or brow of some mountain, the precipitous side of which ends far below us and is laved by the rushing river, the roar of whose sparkling, dashing waters comes faintly up to us as we gaze down upon it from our lofty perch. Onward we ride, until we reach the waters of Willow creek,

ON THE TRAIL.
"Anon it climbs some rocky knoll."

which comes tumbling down over massive rocks and through meadows green, sending its share of the melting snows from the peaks above to join the greater volume of the Boise, which in its turn speeds on to the mightier Snake, which twists and turns in its sinuous course until it yields its tribute to the greatest of the western rivers, the mighty Columbia.

"Oh, rushing river, emerald hued,
How mad thou art and fearless,
No frowning gates though granite-barred
Can curb thy waters peerless.
The silent gods of stone
Revoke their ancient laws of might
When through the gorge with wing-swift flight
Thy wind-tossed waves are speeding,
Each moment wilder grown.—"Rhymes of the Rockies."

The trail we follow leads us now beside the willow clad banks of a veritable mountain trout stream. Its source is in a spur of the Sawtooth range, and cold springs and melting snows join their trickling waters, and gathering power and volume as they flow, become a respectable stream from a mere rivulet. Two species of trout teem in its waters and in the little brooklets that feed it. One of our party, an inveterate angler, cuts a willow switch, and tying on a hook, jumps from his pony, and with his hat knocks a grass hopper over, and soon has him fluttering on the hook. As we ford a little pushing, crystal stream, half hidden beneath the thick growing brush, our horses pause to drink. The angler dangles his hopper, not two feet from his horse's nose, and lo and behold! the next moment is taking in a half-pound trout. "Well, that beats me," said one of the party, "but I believe Joy could catch trout out of a meadow with a heavy dew on it."

The trail enters a rocky canon, and even the waters of Willow Creek make quite a respectable showing as they plunge through the narrow and rugged granite walls. The trail is rough, and further progress is blocked by the trunk of an immense fir tree which had fallen. We soon have the axe from its place on old Buck's side pack, its leather cover is removed, and sturdy arms attack the fallen giant, who disputes our right of way. Each man takes his turn, and the chips fly merrily. Soon we roll the severed log over the crest of the rocks into the torrent, and wend our way along among the rocks until the canon is passed. Grassy meadows and open glades now make our pathway easy, but in crossing through some jack pines, Pinto tries to rub off his pack; we dismount and tighten up the diamond, and see that the other packs are right, then on again.

As the sun gets low, a charming spot is reached; a grassy hillside with a spreading fir tree, and the rushing water of our stream just below us. We all dismount, off come the saddles, and while the patient pack horses are being relieved of their loads, the riding animals roll over in their joy that the day on the trail is done. Then we proceed to prepare the camp; but that is not the "trail," and we will not here describe the pleasures of camp life, but will say to those who have not been with us on "the trail:"

Far in the West there lies a charmed land, where the mountains
Lift, through their perpetual snows, their lofty and luminous summits,
Numberless torrents, with ceaseless sounds, descend to the ocean,
Like the great chords of a harp in loud solemn vibrations.
Spreading between these streams are the wondrous, beautiful prairies
Billowy bays of grass ever rolling in shadow and sunshine.

FRANK F. FRISBIE.

THE SUNNY SOUTH.—III.

THE START FOR THE BEAR CHASE.

CHICAGO, Ill., Jan. 21.—Early on the morning after my arrival at the Bobo plantation we were in the saddle and off for our bear hunt. I had one day in which to kill my bear and catch a train. My personal baggage, consisting of my camera and bag, were to be put on the train at Bobo station that night. Twenty miles or so further down the road, nobody seemed to know just where, I was to catch the same train, we meantime having killed the bear. Mr. Bobo informed that, besides running his plantation, he had large timber contracts, especially with the railroad, and that a force of his men were then at work at one of his camps, about twenty miles below, on the Sunflower River.

"We will work on down in that direction," said he, "but will put out the dogs at another good place about half way to the camp. If we make a strike and kill there, we will not go on down to the camp, but will put you on your train at the nearest station on the road this evening. If we don't, we'll go on down to the camp on the Sunflower, and there we are sure of a bear to-morrow."

"But, my dear sir," said I, "what will Mr. Divine do if I don't show up on board that train to-night? I've promised to be there."

"I reckon Tom Divine knows what sort of man you're with," said Mr. Bobo, "and he can probably take care of himself, and you'll be getting plenty to eat yourself. Does he think I'm going out after bear and not get any bear? No bear, no train, my boy, so you might just as well be cheerful over it."

So I was cheerful, seeing that I was in the hands of my friends, though troubled a little about possible delay for the others at New Orleans on my account. Really, I wanted the bear as badly as anybody, and though I suppose I would have given up the bear to keep the engagement, I was not absolutely filled with grief to see the matter taken out of my hands thus decisively.

We made a great cavalcade as we filed out into the woods that morning. There were eight guns in all, Mr.

ON THE TRAIL.
"The precipitous side."

Bobo and his friend, Mr. Felix Payne, Mr. Bobo's son Horace and his nephew, Mr. Frank Harris, son of the county sheriff, and myself. Three colored boys of experience in bear hunting with Mr. Bobo, went along, Tom, Pete and Bill. These latter had been scouring the settlement the night before to get the dogs together, and complained they could not get them all, one valuable dog especially being missing, thought to be about eight miles up the railroad. I tried to count the pack as they swarmed around us, but I could not do so. The boys told us there were fifty-three in all with us. I imagine there are no larger or better bear packs in the country than the one we had, though Mr. Bobo complained that most of the dogs we had were young and inexperienced.

ON THE TRAIL.
Grassy Meadows and Open Glades.

"We might kill more bear by taking the six or eight best ones," he said, "but we have to be continually training the young ones to keep up the pack."

TRAINING THE PACK.

We had hardly gone half mile from the house before some of the puppies began to trail a deer, stringing out at cry. At once the process of training began, and it was a rough one. The young men, Mr. Horace and Mr. Frank rode in at speed, followed by Tom, Pete and Bill, and using clubs, rifle barrels, anything at hand, pounded the dogs back off the trail amid much doleful lamentation on the part of the dogs. For my part, I wish this need not have happened, for about half of the dogs had given tongue, and the music of it was enough to make one's shoulder blades creep. I noticed one old ginger-colored, big-headed half-breed, a stag and fox hound cross, with long white whiskers about his face, who did not stir from the path, and who looked with disdain at the noisy puppies as they came back.

"That's old Henry," said Mr. Bobo, "the best bear dog we've got. He won't open on anything but bear, and if he does open, you can bet it is bear."

I saw a slim, slit-eared, peaked-nosed fox hound go out and snuff at the trail the puppies had raised such a row over, then turn around and came back to the horses.

"That's Raphael," said Mr. Bobo, "he's got a colder nose than Henry, and Henry knows it. Raphael won't run anything but bear either, and if he opens, Henry will go to him. He won't go to the puppies. If Raphael opens, and Henry goes to him and opens too, you can bet all you have that it's bear, and pretty fresh, for old Henry's nose isn't cold enough to run a very faint trail. That's how we work one dog with another. When we get a bear trail lined out, we lay all the dogs on to it we can, and let 'er roll. I'm afraid we're going to have trouble with the puppies, but that's part of the game."

ON THE EDGE OF A CANE BRAKE.

We now rode through the magnificent timber of oak, ash, hickory and gum, and about eight miles from home came to a heavy cane brake, cut across by an old wooden tramway, once used in lumbering at that point. We now began to strike the bear country. The trees grew as large, but not so closely together. In the opens there were shrubs with tough, interlocking limbs. The brake itself was like a million cane fish poles set on end, so densely that it seemed a mouse could not crawl between. It was a thicket, a jungle, such as I had never seen in all my life before. Over the narrow tram road, whose loose and treacherous boards clattered complainingly under the horses' hoofs, the delicate green fringes of the cane met and interlocked. Nature was rapidly eating up the trace of man. Some of the boards of the tram were rotten, some were gone. The brake was swallowing the path. Into the dark multiplicity of the reiterant slender shafts of green, we sought to look, but fifteen feet from the eye the green was black, and the black was a wall. I had seen my first cane brake, and then at once I could understand why there were bears in this country. No riding, but foot over this country, and no stalking it, foot by foot, and no trapping over it, and no putting out of bait on it. The cover was the harborage of the game; everywhere in that cover the game could find its food. Why should a bear come out into the open and invite a bullet?

THE START.

But man, the great hunter, had invented for this country precisely the best way of killing the game desired, and this I was now to see in operation. There was a whimper from a puppy, a confused burst of twenty mingled tongues, and at length a tenore-robusto note from Raphael, answered by a deep "Boo-boo-boo-oo!" from Henry, as he sprang into the cover, and then—ah, me! but that was a glorious sound. I tingled.

"Come on!" cried Mr. Bobo, and off he went, I following, a thousand punishing switches of fine boughs cutting the face as we went at a run down the trail and cut into the old tramway. Of course we could not go into the cane. We pulled up together on the tram. "It'll cross near here if it heads this way," said Mr. Bobo. "Keep still now. Don't let your horse charge at the cane. Jerk his head off, jerk him! Keep everything still while I listen to the dogs. That bear ought to come right through here—oh, hang it! there's the pack split, and the young dogs are running a deer. Get after them, there, boys, get 'em off that deer! Raphael's alone, and he's right away off in there to the left of us; don't you hear him?"

I could hear what seemed to me a hundred thousand dogs, but they all sounded much alike, and they all made me feel one way; I wanted to shoot something right away.

"It's too bad about that deer," said Mr. Bobo. "Raphael's running a bear, but if he hears those others he may get jealous and cut over to them, thinking they've got his trail closer up. If he does that we're out of it. Hallo! here's Henry come back."

Old Henry walked deliberately out of the brake, looked up in his master's face, wagged an intelligent stump of a tail, and then taking his accustomed place at the heels of his master's horse, curled himself up for a nap, as if to say that he didn't care a cent what those fool puppies were doing.

"Too cold for your nose, eh, Henry?" said Mr. Bobo, and resumed his listening. "It looks bad for us," said he, "unless the boys can get the dogs over on to Raphael's trail. He's running the bear still, don't you hear?"

It was all my ears could do to catch the faint "ow! ow! ow-ow!" which was dying off in the distance, but Mr. Bobo knew which way the dog was going, and apparently what he was thinking about. I began to see something about where the skill in this sort of bear hunting was. It wasn't in the shooting, by a long ways.

Mr. Bobo and I sat on our horses at the tram for nearly two hours, and still the chase did not head our way. Horace and Frank came back, bringing a number of the dogs. They had seen a big buck lying within two feet of them behind a log, but obeyed orders and did not shoot. They reported that the colored boys had gone up to the head of the break, to try to turn the dogs there. After a while Bill came back, and said he heard "cane a-poppin' ahead of Raphel," and he thought it was the bear. Finally Raphael seemed to have headed over to some of the younger dogs, and the chase frayed out into nothing definite. Then everybody blew lustily upon his horn, and one by one for an hour the panting dogs came crawling in on the tram road out of the cane. Mr. Bobo was chagrined. "It wouldn't happen once in a hundred times," said he, "but I think they've lost the right trail, on account of the young dogs, and the deer divided the pack leaving Raphael alone. We might as well go on."

So we went on, passing along deer trails between great bodies of cane, down winding, dry bayou beds, through faint "hacks" (or trails cut through the cane) around and around, every way, till it puzzled me to tell what direction we had had or were about to have. It was plain to me that his was the easiest country to get lost in I had ever seen. Road, there was none. We simply were threading the brakes at the only thin places. Miss those, and—well, I don't know what then. But Mr. Bobo kept on with the instinct of the natural woodsman and the knowledge of the blind ways of the wilderness which years in these same woods had given him. The rest of us didn't know where we were going, only I knew I wasn't going to catch any train that night, sure.

THE SUNFLOWER WILDERNESS.

A couple of hours before dark we came out into open woods, and on the left could see the dark and sluggish waters of the Sunflower River. This stream was deep and narrow, and lay at the bottom of a great trough cut deep down into the allurium of that ancient valley. As we skirted along its banks, the surface of the water seemed a hundred feet below us, and we must have scrambled down that far from the top of the bluff to the point where we made our fording of the stream.

It was a pretty picture, that one at the ford. The deep banks, shaded thick with its many tints of green, were lit up by the evening sun which made bright the broken water. The horsemen, each with a rifle across his saddle bow, were scattered from one bank to the other of the stream. Upon the further bank one raised a horn to his lips and called long and loud to the dogs, some of which hesitated about taking to the water. A long line of swimming hounds crossed the river, while some were upon the further shore shaking themselves, many others, pursued by the whippers-in, ran up and down the hillier side of the stream crying to be carried over and afraid to make the plunge. A more spirited hunting scene would be hard to find than that presented us here in the heart of the great Sunflower wilderness, and I thought at the time that the artist who could paint it could achieve a lasting fame.

TIMBER FOR BEAR.

"We are now," said Mr. Bobo, "getting into the wildest country in the Mississippi valley. Below here I can show you a strip of country 40 miles by 60 or 75 miles, without a house on it, and it is full of game. All this land is as rich as any that lives out of doors, and some day it will be farmed, I suppose, though I hope I will never see that day. The valuable timber is just beginning to attract attention, and the first of the logging operations are now going on. The great market for this timber is in Europe, and a European firm is now operating below here. The finest ash timber in the world is in these bottoms, and no better oak ever grew than you see around you in these woods. Eventually the gum wood will come to be used for furniture and other purposes, and is a wood not yet appreciated as it will be. Very much of the European demand is for fine oak staves for use in wine casks. A stave piece of oak four feet long and eight inches wide, cut with the proper curve and about four inches thick, is worth $1.80 for each piece as it lies here on the ground, and it has to go all the way to Europe by water down the Sunflower to the railroad and thence out. This timber industry is one which will grow. As it does grow, the game will get more and more crowded out. It is not so abundant now as it once was, but it will be a long time before it is killed out. You may say that from here down to Vicksburg, and all along the Hatchee bottom is a big hunting ground yet.

ON THE TRAIL.
Ready to Break Camp After a Snowstorm.

BEAR WISDOM.

"I suppose you know that a bear is bound to go where the feed is. They will travel any distance to get to feed. All this in here is bear country. In the summer time the bear can get plenty of feed all over the country, poke berries and pawpaws, and all that sort of thing, up to about October. Then its summer feed dies down, and the bear go on to the mast, acorns and nuts. If there is

no mast where they are at the close of summer, they leave that section and travel till they locate the mast. A good bear hunter puts no dependence on what he hears about plenty of bear in the summer, for he knows that in the fall they may all have moved out and be a hundred miles from there.

"When the nuts get ripe in the fall the bear climbs the trees for them. They pull in the branches of the trees with their paws, and you can hear the limbs breaking and popping at a great rate. We say the bear are 'lapping' at that time, I suppose because they go up into the laps, or forks of the trees while feeding.

"Early this year we had a heavy freeze all over northern Mississippi, and this killed down the mast over a good deal of the country, and I know the bear have moved out very largely. A good bear hunter, when he goes out to hunt, does not just go into the woods hit or miss. He studies the feed, and knowing the habits of the game, he moves around until he 'locates the mast.' Now, if I had known you were coming down here for a hunt a couple of weeks before you came, I'd have known by this time right where the big body of the bear were feeding. The first thing I'd have done would be to find how far south this freeze went. Then I'd have gone down there and hunted up the watering places, and studied its feed and looked up the sign. Then I'd have been ready to go right where the game was at once.

"I am not exaggerating when I tell you that right where we will hunt we could kill bear like frogs if the mast was good. It is not good, but the bear have not all left, of course, and even if they were moving out we would hit some traveler's trail. Don't you be uneasy, we'll get our bear to-morrow. And I'll show you the wildest country you ever saw."

ON THE TRAIL.
Welcome back to the Ranch With a Load of Meat.

THE WILDEST COUNTRY IN THE UNITED STATES.

As to the accuracy of the latter statement there is no doubt. By mere chance I had blundered into what I now believe to be the wildest, most impenetrable piece of country in the United States and the best hunting country for bear, deer, turkey and fur. We hear all about the Rockies, and I read about the Adirondacks and other such well known regions till I get sick of it. Once in a while, too, we hear in a vague way about the hunting of the South, and it is understood there are still deer and a few bear there. But that there should exist so wide a strip of country so wild and so abounding with big game, I had never had any idea on earth, nor do I believe that many northern men have known of it. It was the Forest and Stream luck that led me to it. As it is certain that a great many others will now want to go there, and as it is also certain that most of these cannot go there, and could not do any successful hunting if they did go there, I beg patience while I try to describe, slowly and carefully, the conditions of the country and the necessities for sport there. This will best appear from the plain description of our own hunt, which was succesful.

AT THE TIMBER CAMP.

It was dusk when we reached the Bobo timber camp, on the banks of the Sunflower, about twenty miles from the plantation. Here we found three shacks, or cabins, made of upright shakes, two used for sleeping rooms and one for a kitchen. All about the woods and the dense cane brakes shut in close. The only road was the logging trail, a roll-way down to the river being established just back of the houses. We found Fitcher Bobo, Mr. Bobo's oldest son, in charge here of the gang of loggers and rafters. The foreman's name was Heide.

It was an ideal camp for a hunter as well as a timberman, this rough spot in the heart of the big wilderness, and indeed it looked a hunter's camp. Two or three hides of bear were tacked out on the walls of the shanties. Heide brought us the skin of a panther not long killed; a large one, measuring eight feet nine inches. He also exhibited with pride a great bear skin, killed by himself not long ago as he was walking out along the road after deer. The bear came out of the cane, and he killed it stone dead with a charge of buckshot. It was lean and the coat was thin.

Mr. Bobo made inquiries among the camp boys about bear sign, and I was glad to hear one of them tell of tracks lately seen at a water hole a couple of miles away. Mr. Bobo had not been down in this country before that fall, and proceeded to learn all possible about the water in such and such bayous, etc., points of interest for the hunt that was to follow.

BROILED DOG.

We had a pleasant time about the vast camp fire that night, and I recall one incident that will serve sufficiently well to illustrate the headlong and impetuous character of our hunt and hunter in chief. The camp was full of dogs, and it was a good deal of a task to get enough corn bread cooked for them all. They swarmed around underfoot, and whenever one dog jostled against another there was a fight at once. Every dog of the pack was a good, cheerful fighter, and didn't need a second invitation to pitch in. They would fight anywhere they happened to be, and they were usually between somebody's legs or under someone's feet. There were no stoves in the shanties, and our fire, a great affair built of long hardwood slabs, was built between two of the houses which stood end to end. The dogs were all around the fire, under the horses, and continually getting under foot. It seemed etiquette to stop a fight with a club. At length one particularly quarrelsome hound started a good lively fight with another dog right at Mr. Bobo's feet. He made a good free kick at the growling, biting aggregate, and happening to catch the hound just right, lifted him clear off the ground and sent him back downward right in the middle of the big log fire! Happily, the fire was not blazing, and the dog lit on a piece of log. Here he lay for a moment, wriggling to turn over, with a foul smell of singed hair arising, until finally he made a spring and got off. Running under the house, at once every dog under there jumped on to him and licked him because his singed hair didn't smell good, and for a few moments we had the biggest and most universal and loudest dog fight I ever heard or witnessed Meantime Mr. Bobo continued his story, not changing a muscle of his face. The dog was not hurt much, but I did not envy him his lot. To be kicked about in two, roasted alive, and then jumped on by your neighbors is what you might call hard luck, especially when it all happens in less than fifteen seconds, and right when you're not expecting it.

STORIES.

Mr. Bobo told us plenty of bear stories, as you may suppose, and I wish I had time for some of them.

"It is a mistake to think that the black bear of this country is a small and timid animal," said he. "They will run from a man or from the dogs just as every kind of bear usually will, but they don't seem much afraid to stop and fight the dogs when they feel so disposed. A bear won't leave his bed till the dogs get right on to him. If he's fat, he will climb a tree or sit up by a tree and fight, rather than run. If he gets hold of a dog he will bite his whole head in. Of course, the best bear dog is one that won't fight too close.

"I have had two or three bear come at me, one an old she bear which I shot almost up against me. I have killed many a bear with a pistol, and many with just my knife when the pack had them bayed so I could get at them close. Of course, it's all in the dogs. You rarely ever shoot a bear over fifteen or twenty yards at the outside. If you hit it anywhere in the hollow of the body back of its fore legs, the dogs will get it sure. Of course, wounded bear might come for a fellow oftener, but you see we always have the dogs there, so the danger is small. The shooting of the bear is the last part of the whole business. We all carry the light carbine model Winchester, 44-40 or 38-40, as that is the handiest gun to ride cane with. We are so close when we shoot that we usually hit the bear about right to kill him the first shot. It sometimes happens that a dog is hit by a bullet that has gone through a bear. I have had dogs killed that way.

"As to the size of bears in this country, I have killed them to weigh 700 pounds dressed. That was a fat bear. A weight of 300 or 400 is common, I may say.

"I consider the wild hog the most dangerous animal to meet in these woods. They will charge anything. All the other animals will run.

"There are some wolves in these bottoms. I once had a man out with me once who was treed, or rather chased up on a log, by a pack of wolves. He broke his gun stock off hitting them, but he killed several before we got at him.

"There are a good many panthers in these woods, but I never really knew of one attacking a man. One followed another man and me one night for over six miles. We had to swim our horses over a bayou at one place, and it left us there."

I asked Mr. Bobo the old Forest and Stream question whether or not the panther screamed, telling that some wise men had said it never did.

"Well, maybe they never heard one holler," said he, "and so they thought no one else ever did. They do, just the same. Their call is a sort of scream. No, I shouldn't say it was like a woman's scream. I have heard them give a sort of coarse, rumbling purr or whine. like a big cat, too. The panther that followed us was crying out every once in a while. It sometimes came up within a few feet of us in the dark. I think a good willow switch would do to scare away about any panther in the country."

Meantime the New Orleans express was speeding southward. I had quite forgotten it.

909 Security Building, Chicago, Ill. E. HOUGH.

FLORIDA FUN.—III.

The day after the boys started home was bright, with a bracing northwest wind, so after an early dinner H—— and Joe started for an old field three miles south from town, where a man said there were two coveys that had never been disturbed.

Arrived at the field, they canvassed it and the adjacent ground for two hours, without finding the least sign of quail, and at last, filled with disgust, reviling liars in general and Florida quail liars in particular, they started homeward, but when about half-way back to town, turned into a weed-grown pear orchard. They had found some in there, a week before, and the way Joe went to work showed that he was determined to find them again. He finally disappeared in the weeds, and did not come when called, so H—— started to hunt the dog, expecting to find him on a point, but happening to look toward the woods, he saw the dog sixty rods away, in full chase of something which could not be seen for the bushes, but which Joe soon ran up a big pine. H—— was not in a very good humor before this happened, and now he was glad of a chance to take it out of Joe's hide, so he cut a good switch and started for the dog. Joe knew what was coming, and meekly started to meet his expected thrashing; but his big, brown eyes flashed so eloquently to be let off easily that H—— only whipped him a little, and then sent him back into the weeds. In a few minutes he found the trail of a running covey, which he followed several hundred yards before they stopped. They wound around through the weeds, and crossed their trail several times. It was nearly sundown, and they were very much opposed to flight, and consequent scattering so near roosting time, but it was useless. Joe held to the trail as surely as if they had been leading him by a string, and at last they were driven into a corner and had to fly. H—— was very desirous of marking them down exactly, so decided to take but one shot as they rose. Selecting the extreme right-hand one, the shot left a cloud of feathers in the air and a very dead bird fell in the weeds. H—— watched their flight through the open pine woods, then saw them swerve to the right and drop at the edge of a little swamp. "All right, Joe, they are right on a line between the up-turned root and that magnolia-tree in the swamp. Now, we will go down there, and you will find them, and I'll undertake to kill every one you find." Joe had kept his eye on the spot where the dead bird fell, and did not look away from it now, but wagged his tail to say that he heard. Then he brought the dead one, and they started for the others, both man and dog fully determined to wipe that bunch of quail from off the face of the earth. Fifteen feet from the edge of the bushes Joe pointed. It did not fly twenty feet before it was knocked into pulp. It was not the way to get nice meat, but it would have been out of sight if it got ten feet farther, and H——'s blood was up, determined to kill every one of those birds. Another got up and tried to get back to the field, but dropped in the grass thirty yards away, leaving a lot of floating feathers, drifting slowly to the ground. Joe accidentally flushed the third one in the edge of the swamp. H—— made a clean miss with the first, and tried to get it with the second just as it disappeared in the tall, thick bushes, and got a lot of feathers, but did not see whether it fell, and Joe failed to find it. He came back and pointed another one, which topped the bushes, and went straight away, and H—— made one of those unaccountable and aggravating misses that fall to the lot of every sportsman. Then H—— sat down on a log, and gave himself a talking to.

"Now look here, old man. You said you were going to kill every one of those birds, and you've let two get away out of five. It's plain that you are rattled. You saw the bushes when you tried to kill those lost two birds. Now mind, you don't see any more bushes when you try to shoot. Just see the bird, and nothing else, do you hear? Joe is on a point now, but you just take out your watch and see that three minutes pass before you get up from this log."

When the three minutes were up, H—— walked leisurely toward the dog. The bird got up twenty feet away, and flew back over H——'s head. He threw up his gun, and was about to shoot before it passed over him, but said: "Steady, old man!" turned and watched the bird till his eye had correctly located the bird and the direction of its flight, then threw the gun to his shoulder and following the flight of the bird for an instant, pulled the trigger and made a clean kill, the bird falling inside of thirty yards. Whereupon he shook hands with himself, but with a caution not to get rattled again.

The next one found did not have to go twenty feet to get out of sight, but a charge of shot literally split it wide open. There was nothing left of it but two wings, held together by shreds of the breast. Then Joe found the trail of one that had run and followed it to a point, a rod from the edge of the bushes. H—— did not want to shoot the birds all to pieces, so decided he would get between this one and the swamp and take his chance on killing it, if it flew over his head as he expected it would, but it circled to the right expecting to enter the bushes thirty yards below. "You've got lots of time," said H—— to himself, and then dropped the bird just at the edge of the bushes. While he stood waiting for Joe to find some more, one flushed from almost under his feet, and by so doing made a fatal mistake. Then Joe was made to hunt the ground all over again very closely, but it was ten minutes before another one was found and added to the bag. Judging that this was about the last of them, H—— started to get up to the one he had missed, and marked. Joe found its trail in thick grass, followed it some distance and pointed, but before H—— got there it flushed.

probably remembering its narrow escape a short time before. As it was now dark and the bird flew in the wrong direction, it was not followed, and man and dog set out for the town—a mile and a half away. They were tired. They had been afield for six hours. H—— had not stopped an instant, except the few minutes he sat on the log while Joe had traveled full sixty miles. The faithful old fellow was so tired that he stopped at the first house they came to, and insisted on staying there, and lagged behind his master all the way to town, but they were very well contented as they trudged along, for both had done their very best and they had got the quail.

The next day it rained, and the next one was a continuation of the rainy one.

The following day being fair, in the afternoon Mr. Lee Cawthon, one of the thoroughbreds among sportsmen, suggested that H—— go with him to see if some quail could be found. They found three coveys, and did a lot of poor shooting, only getting sixteen quail out of about thirty-five shots. H—— remarked that if they only had somebody with them who could shoot a nice lot of birds would have been killed, but they consoled themselves by thinking that more fun could be had with the birds they did not kill than with the dead ones, and resolved to try it the next afternoon, and H—— also resolved to brace up and kill every bird he shot at.

On the next day's shoot the first find was in thin weeds in a pear orchard. Joe was going rapidly, right with the wind, when he dropped flat on the ground and lay motionless. When the shooters came up, quail got up on every side of them. Lee scored one on the rise, but H—— being a little too far off, and trees in the way, did not shoot. Three or four birds dropped in tall grass in the edge of the orchard, the rest dropping on the farther side of a narrow swamp. Getting the birds out of the grass, Lee got one and H—— got feathers from another, and marked it down on the farther edge of the swamp. Getting through the swamp, Joe struck the trail of another one, and followed it fifty yards along the edge. When it flushed, H—— showed what a full choke gun will do, when pointed right at a quail only twenty yards away. While hunting for this dead one, Joe flushed another, which H—— felt sure he would get, but just as he was about to shoot, the bird darted suddenly upward. H—— tried to follow this movement of the bird, but had so nearly pulled the trigger that the gun was fired before it caught up with the unexpected movement, and the bird disappeared in the swamp. Meanwhile Lee's pointer had given his master three shots along the edge of the swamp, but he scored only one, the others going into the swamp. Then the dogs got the trail of another, and followed it into the swamp, and out into the grass and back in the swamp again where they lost it. It had probably flown, while the men and dogs were busy with the others. Then H—— went to look for the one he had feathered when it flew out of the field. Joe pointed it, and when it was kicked out it could not fly, so Joe caught it, and while bringing it in made another point. Two birds flushed and flew right into the swamp, only a few feet distant. H—— remembered he was "not to see the bushes," and snapped both birds before they flew forty feet. Then he shook hands with himself, and sent Joe for the two birds. Lee now came up, and showed where he had marked the two birds in the swamp. H—— told him to get out on the farther side and be ready for them, when H—— and Joe should drive them out. They gave him a couple of shots, but both got away.

Now, just a word about Lee's shooting, which according to this account seems rather indifferent. It must be borne in mind that he is still a young man, and has had no such opportunities to perfect his shooting as H—— has had. In fact, there is no excuse for H—— not being a good field shot, for he has had a vast amount of practice. Lee has all the fine instincts of a thorough sportsman, and with enough practice will make an expert wing shot. H—— suggested that more birds could be killed with a cylinder bored gun; Lee said that was true, but it was lots more fun to kill one with a full choked gun, and, besides, it was hardly fair to the quail to use a scattering gun.

Next they got in the cart, and drove to an old plantation two miles farther from town. Here was an ideal place for quail. There was a hundred acres of sedge, briars, weeds, and dead grass, with two thicket-bordered brooks running through the center and woods all round. They entered this tract where there was a bare hill commanding a view of the whole ground. Joe paused a moment, and looked it over, then looked back at H——, gave one joyous bark, and sailed out into the sedge carrying a high head and waving tail, sure he would find birds. His black head can just be seen above the sedge as he makes a wide cast to leeward, then comes up against the wind in a bounding gallop, but presently he drops to a trot, then stops, and, turning his head, looks for H——, who is still standing on the hill. H—— starts toward the dog, and the black head drops out of sight. By the time H—— gets there the birds have run, but Joe speedily roads them fifty yards to a solid point. H—— has called to Lee to come on, and his pointer backs Joe. The dogs are on opposite sides of the birds, and are facing each other. For a minute the two men stand, and admire the two dogs, wishing for a camera to preserve the inspiring sight. Then they put them up and get two, the rest going just across the thicket, and dropping in very thick high grass. Joe gets out of sight, and they can't find him, but presently Lee's dog points in grass knee high. H—— flushes the bird, and it goes toward Lee, who is forty yards away. H—— said: "Shoot it," and Lee tried both barrels at it but failed to get it, and H—— tried to console him by telling him it was the most difficult shot ever tried. At the report of Lee's gun the rest of the birds flew out of the high grass, and then Joe walked out of it with a "what's the matter with you fellows?" look on his face.

These birds flew through the thicket, and scattered along it for a hundred yards. Lee went after them, and got several shots and bagged two, while H—— followed a single one he saw drop a short ways out in the sedge. The cover was thick enough to thoroughly hide a turkey, but that quail ran several rods before it was pointed. It rose high, and circled to the right, trying to get back to the thicket, but instead of getting there, it illustrated how badly a choke bored gun will spoil a quail, and another one that was near by did not feel safe and tried to dodge behind a bush and get safely to the woods, but just before it reached the bush the shooter held true on it. Then H—— went over to help Lee, and missed a couple that got safely into the woods. Lee went after them, and got one which he was a long time in finding, and H—— turned out into the sedge to look for another covey. The sedge was so high the dog was soon out of sight, and did not come when called; so H——, confident the dog was on a point, spent fifteen minutes hunting him, by climbing the tall pine stumps and, looking, but could see no dog. Finally he heard quail chattering, and a moment later saw them rise from the sedge, part going to the thicket and the rest going off to the right, were not marked. A little later a single one flew, and was marked. Joe came to where H—— was still standing on a stump, and Lee and his dog coming up, both went after the single bird. Both dogs got on its trail, and roaded to a point. Both men shot at it, and probably both hit it; anyway it was killed. Then the dogs struck out for more birds, and Joe was soon lost again, but was presently seen on a hill side, pointing in thick grass. H—— tried to flush the bird, and kicked the grass all around in front of the dog, but no bird came out. Then Joe was told to catch it, and pounced on a thick tuft of grass which he tore open and then caught the bird, but let it go, probably thinking H—— wanted to shoot it. Anyhow, he did shoot it. Soon afterward Lee's dog pointed near by, and it took both men to knock a few feathers out of it, but it was so hard hit that Joe caught it when they followed it up.

The dogs pointed again before going after the wounded one and two birds flushed. Each man picked a bird, and both made clean kills. When going after the wounded one they flushed another, which, by using both barrels, they managed to wound, but could not mark it, so did not go after it. Over at the thicket they got up the rest of the birds and scored two misses apiece. H—— marked one in the edge of the field, and got it; then the other birds were followed into the woods, but Lee's dog in trying to jump over a barbed wire fence got his flanks caught on the top wire and his struggles soon got his hind legs into a very serious tangle among the wires. It looked as if legs would be broken, and the dog's hide cut into strings. H—— dropped his gun, and tried to release the dog, but as he was a big dog and hung on the other side of the fence, he could not do much with him until Lee got on the other side and held him up, while H—— untangled him. Meanwhile Joe concluded that H—— and the dog were fighting, and had to be severely kicked to keep him from chewing the other dog's head off. For a few minutes the two men and two dogs were mighty busy, but the unfortunate dog was released without any injury beyond a few cuts and scratches from the barbs, and pointed a quail before he got one hundred yards from the fence. That was the last bird for the day, and it got away.

It was nearly sundown, and they noted they were tired enough to quit, so they got in the road and walked to the cart. At the foot of the hill they stopped to drink from the pure water that ran down the brook, and laid out their birds on the bridge floor to count them. There were just eighteen, and they thought it was enough. H—— has had many shooting companions, but none pleasanter than Mr. Cawthon. He has the true instinct of the sportsman, which takes care that a shooting companion shall have his share of the sport, rejoices at his success, and finds excuses for his failures. He is just the opposite of the game hog.

Florida quail are somewhat different from the northern ones in their habits. They are more frequently found in the woods, and the Florida dog hunts them in the woods, as well, or better than he does in the fields, but the northern dog is not a satisfactory woods hunter, because he has not been in the habit of finding them there. These piney woods quail are great runners, and do not lie nor fly closely pressed, and it is very seldom a dog finds them without trailing a long way, and when they alight they are almost sure to run some distance before hiding; neither do they lie so well as the northern ones, but will frequently fly from the dog after he has pointed and is perfectly quiet. For this reason it is well to get within shooting distance as soon as possible after the dog points one.

Very reluctantly H—— packed his trunk that evening to take his departure for Pensacola, for there were still quail to be had, and Mr. Cawthon urged him to stay, but that had to be the last of the quail shooting for a while, at least, though H——promises himself just a few more days with Mr. Cawthon, five or six maybe, before he has to face the cold March weather of Wisconsin. Now, H—— didn't know a soul in Pensacola, but two hours after he got there, he saw some guns and fishing tackle in Johnson & Forbe's show window, went in and introduced himself as a lover of field sports and as an occasional contributor to Forest and Stream. "Yes, glad to see you," said Mr. Willis. "We all are the biggest lot of gun cranks in town, and we read Forest and Stream, too. Mr. H——, shake hands with Mr. Beers, our full-choke duck crank, and Mr. B. Forbes, our cylinder-bored, all-round shooting crank, and Mr. H. S. Forbes, our full-choke quail crank." Then these big souled sportsmen took H—— right into their hearts, and began to overflow with plans for helping him to generous slices of quail and duck shooting, and offered to put all the fish in Pensacola waters at his disposal, if he would stay till they got ripe.

The first event to come off was a trip to the ducking grounds at the mouth of the Escambia River, where the club have a house, boats, decoys, etc. On this trip, Mr. Beers—Ben, the boys call him, took H—— under his wing, and sure did himself proud as an entertainer and chaperone to a lone duck hunter in a strange land. Every inch of him is good fellow, but he does not deserve any credit for it, because he is just built that way and couldn't help it if he tried. It is ten miles to the club house, but the road was good, the weather warm as summer, and the time so pleasantly passed in talk that it was a very short ten miles.

Mr. Beers said his first shooting experience happened when he was a small boy living in New Orleans. His father brought a musket from the war, and it lay around the house until Ben and his brother managed to get a cap and some powder. They had no shot, but substituted a handful of small nails. After charging the gun, they started in quest of game, and seeing a buzzard soaring high over the city, decided that their pet chickens were in great danger from this hawk, and thus they must kill it. The explosion of the over-loaded gun roused the entire population for several blocks around, and in a few seconds 500 people were collected to learn what had "busted." Then the little fellows got scared, and running into the house, never stopped till they were on the roof. As they cautiously peeped over the edge of the cornice, a policeman spied them and ordered them to come down or be instantly shot to death; so they came down and were marched off to jail for shooting in the city limits. But it did not break Ben from shooting, for he never misses a chance to go after ducks. A few days ago he was sitting half asleep in a blind, when he was roused by a rush of wings that made him think at least fifty mallards were dropping right among the decoys, and on looking out he was made very wide awake indeed by seeing an enormous grey eagle swoop onto a dead mud hen that lay among the decoys and start away with it. Then Ben stood up and put a charge of No. 5 shot right into the eagle, but it just humped itself a little and dropped the mud hen, but the second shot winged it, and it was Ben's eagle. Then while he and his boatman were examining the great bird, another eagle swooped down on the mud hen, lying only a few yards away, and carried it off, Ben and his man being so surprised that they never thought of shooting it.

It was dark soon after Ben and H. reached the club house, and soon afterwards a thunder storm came on, one of the big kind that always confine themselves to the South, but the hunters were so cosy before the bright fire in the old fireplace, and spent the evening discussing various social and political problems; then setting the clock to alarm at the next morning, they turned in. When they got up the sky was black as ink, and the wind blew forty miles an hour. The temperature had fallen twenty degrees. It was impossibe to row a boat against such a gale, and the intended trip across the bay after mallards had to be given up. So they waited till daylight and then went three-quarters of a mile down the river to try for bluebills. As they rounded a point, some green-winged teal got up, and H. being in advance, dropped one, then so soon as the gun was empty, a big bunch of mallards arose nearer than the teal, and I thought how useless was an empty gun. At the mouth of the river was a substantial blind, having a floor just above the water. Here part of the decoys were put out and H. put in the blind. Ben put out the rest of the decoys near the bank, put on his grass suit and sat down in the rushes, and the boatman started out on the bog to stir up the ducks. There were several shots offered during the next hour, but so violent was the wind that the shooting was almost at random, and ten shots only brought down six ducks, one of which fell into the bay and was blown out to sea. Another was only winged and the wind blew it so far away that it was out of range when it struck the water, so it deliberately swam ashore, walked up the bank and into the rushes. Another wounded one fell into the water fifty yards away, and in shooting at it on the water it was plainly seen that the wind carried the shot charge two or three feet to one side. In a couple of hours the wind had blown most of the heat out of the men's bodies, so they rowed back to the house, built a rousing fire, ate another breakfast, and after getting thoroughly warm started to Pensacola, voting they had had a good time anyway.

Dorsey, the boatman, is deserving of mention, for there is no better one. His mother was a negro and his father an Indian, and in this case the union bore good fruit. He rows a boat, handles the horses or cooks a good meal to perfection, and is entirely reliable. He is a keen sportsman, too, and no doubt would get his share of the game if he had opportunity to shoot.

Pensacola offers many inducements to the tourist angler. It is a very comfortable place to stop, water transportation is abundant and cheap, either by sail boats or naptha launches. Its land-locked bogs are of great extent and pretty enough to satisfy anyone, and there are a great many points of interest about the navy yard and the forts that have defended the entrance to the bay. Along the outer beach of Santa Rosa Island, the shell-gatherer can get all he wants in quantity and variety. In their season there is great abundance of nearly all varieties of both fresh and salt water fish, common to this latitude, but it is too far north for much good fishing before the first of March, and the winter weather would hardly satisfy those in search of a tropical climate. There is a good many days of perfect weather, but there are some rainy ones and cloudy days with wind that is too cold for the enjoyment of laziness. During March and April, both the climate and the fish just hump themselves to give the angler a good time.

H. has set his heart on landing a fifteen-foot shark, and harpooning just one big porpoise out of the scores that he sees tumbling and rolling in the bay, but as it is too early for this sport, he and Joe will go quail hunting for the next three weeks. The capture of shark and porpoise and a lot of ten pound red snappers will be duly announced—after they are landed. H. has thought every day of the many readers of Forest, and Stream who for various reasons cannot help him enjoy these good things in person, and hopes they may derive some pleasure from the next best thing, reading about them in "our paper," for he gets a vast amount of solid comfort from reading the narratives of his fellow contributors, and feels under obligations to them.

O. H. HAMPTON.

Expects to Read It Forty Years.

OREGON.—I consider the Forest and Stream the finest paper in the United States for a sportsman. My name has been on your list during the past ten or eleven years, and I expect to continue the balance of my lifetime, which should be thirty or forty years more, at least.

FRANK M. FARLAND.

"The Next Best Thing."

NEW YORK.—On account of my poor health, I am unable to have my usual hunting, but I get along very well reading Forest and Stream. I could not stand it if it was not for the old Forest and Stream; it fills a place nothing else can fill.

M. S. GOODING.

Vom Hofe Reels.

Anglers, before placing their orders elsewhere, should see the Vom Hofe reels, manufactured by Julius Vom Hofe, Brooklyn, N. Y. These reels are not sold at retail by the manufacturer, but may be found in the leading fishing-tackle stores everywhere. The angler who purchases a Vom Hofe reel, even in the cheaper grades, is sure of one of the best articles that skill and honest work can produce. The reels are unsurpassed for fine workmanship, smoothness in running and durability.—Adv.

Game Bag and Gun.

Sportsmen's Exposition.

May 13 to 18. Madison Square Garden, New York.—First annual Sportsmen's Exposition.

A SINGLE SHOT.

"Come Beau, old dog! how are your stiff, rheumatic legs this bracing September morning?' I called to the nine year old liver and white pointer, as he lay on his side in the sun, slowly and laboriously stretching himself, a result of the previous day's hunt.

"Do you feel like giving them another bout to-day?" For reply, the old thoroughbred speedily found his feet and nearly upset me in his gambols and efforts to lick my face.

"That will do, old dog. I knew it was idle to ask you, for you would go while you could stand, and, as you are agreeable, we will do our best to get that old grouse of the alder patch, which has cost me so many scratches and barked shins searching after him, and which has fooled us so often in coming out just where we were not."

So, picking up my cylinder Parker 12-bore, 6 1-4 pounds, we two fast friends left Rye Beach, New Hampshire, on that perfect morning, such a one as only that lovely resort can boast. We made across the stony fields for the cover of the native's "partridge," but my own dearest foe, the ruffed grouse.

At that season the trees are still in full leaf, and the hunting of the much-hunted grouse is not the tame affair it is in Maine or sections where their tameness at times encourages pistol practice at their heads, but it takes a past grand master of the guild to bring down the hurtling meteor of the woods, in the yard or two only of the glimpse he allows you to get of him.

Beau and I, in our many hunts of him, have mutually agreed that entirely too frequently he was one too many for us. The dog was seven years old when I began to hunt him, and his training in the field had been nothing, so that I despaired of teaching the "tricks" to a dog so old. But his strain was fine, and what he lacked in accomplishments he made up for in a way that only "blood will tell"; hence he was sadly handicapped in his encounters with this cunning ruffed grouse.

The bird we were especially after that day, "used" in a dense alder thicket, so heavy with undergrowth it was impossible to keep the dog in sight. On half a dozen previous days the welcome roar of his wings alone told me that he was there, or had been; for he stood not on the order of his going, and I never could get a sight of the color of his feathers.

The last time I came around the alders, I noticed a small clearing adjacent to them, and leading up into the woods—a tongue, as it were, about 40 yards wide—and I said to myself, "Old fellow, I believe you come out through here, and as I have always entered the alders on the opposite side, the trick was yours. We'll see what Beau and I can do with you the next time."

When we reached the woods, the dog soon limbered up, and had his hunting cap on, poor old fellow! he always wore it very jauntily so long as the flesh was willing, but it was not so strong as his spirit. Thereon he raised nothing, and as I had made a detour through the woods to come out at the upper end of my new-found clearing, I called him in to me.

"Beau, old dog, we've got a tough customer to deal with. This bird has fooled us so often; I reckon he thinks we are a pair of chumps."

The dog's big, brown eyes rested on mine as if to say, "I'm ready for him," but still the uncertain wag of his tail proclamed a certain spice of uncertainty.

Moving up to about twenty yards or so of the alders, so I could command a view over their tops, right in the centre of the little clearing I sent the dog in, and taking a firm grip of my Parker, I awaited developments.

For what seemed ages, so keen was I to bag that particular bird, I could hear the dog working in through the undergrowth, and I knew it would soon be pretty warm for old Mr. Grouse if he was putting up there that morning.

On a sudden, the noise the dog was making ceased. Firmer still I grip my gun and brace myself for the expected.

Yes, he's there, and as the welcome sound of his "rise" caught my ear, every sense and nerve was alert. Eagerly I scan the tops of the alders. For one instant he seems stationary in the air as he shot into view, balancing in his turn to get his line of flight, then bore down on me not fifteen yards high. What a royal bird he is! Now or never! With an effort when I first saw him, I pulled myself together. Calmly, now, my gun covers him and follows his flight until I judge he is past me sufficiently to make a fine driving shot. As I press the trigger and see him give way in his fall, while the smoke lifting reveals the welcome cloud of fine down floating off on the air, only those who have done likewise know how I felt.

As I slip another shell in, the old dog comes running up, both eyes an interrogation point. Did you get him? "You bet I did, thanks to you, old felllow."

Together we find him, for Beau is no retriever. As I smooth down his broad, brown back and place his black, velvety collar in place, I stow him away in my pocket with the remark, "You tried it once too often, my beauty."

J. L. B.

Sportsmen as Epicures.

Editor Forest and Stream:

As it is generally admitted that game of all kinds is yearly becoming more scarce, even to the extent of extermination, and many of my fellow sportsmen are publishing theories as to the cause. I wish to be permitted to express, through the columns of Forest and Stream, my views on the subject.

The present condition of affairs is attributed by some persons to the forest fires, by others to the severe winters; some say it is caused by game-destroying vermin; the poacher is blamed for it, and many persons believe that it is due to pot-hunting. But while I agree that all of these causes contribute more or less to the general result, I believe that the scarcity of game is to a great extent due to the selfishness of sportsmen.

I do not contend that the extermination of game may be caused by legitimate sport; on the contrary, I claim that the amount killed by sportsmen in a legitimate manner is much smaller than the natural increase, and that our game species would thrive and become plenty if they had nothing but their natural enemies and the legitimate sportsmen to contend against.

But in no other class of persons, in proportion to their numbers, are there so many epicures as among sportsmen. No one appreciates the flesh of a wild bird or animal so much as the person who has pursued them, and taking the markets of this city as a basis, I am confident that at least seventy five per cent. of the game sold is purchased by sportsmen. And these same sportsmen, after sitting down to a game dinner and partaking freely of game of various kinds, will write articles deploring the sale of game and condemning the poor devil who kills the game which they eat. "Consistency! Thou art a jewel." If these gourmands would only reflect they must surely see the absurdity of their position. The traffic in game, like the traffic in every other commodity, is governed by the law of supply and demand, and while there is game to be had, with hungry sportsmen willing to purchase, the nefarious practice of pot-hunting will continue to exist.

The most effectual, and in fact the only means by which the traffic in game can be stopped is to cut off the demand. If game cannot be sold, it will not be killed for that purpose; and if sportsmen and every person who delights in Nature and admires her creations would consider it their duty to discourage in every possible way the purchase and consumption of dead game the present system of market hunting could be completely eradicated.

PENNSYLVANIA. J. F. O'NEILL.

Four Deer With Four Shots.

The night before Christmas Arthur Snyder (a boy 15 years old) and I went out after deer. We had not gone more than a mile from the mill when my dog Frank struck a scent from up the canon. We rode slowly and looked the ground over carefully. Soon we saw a big buck pawing for browse. I saw but one; Arthur said he saw two. We hitched our horses and were slipping up very careful, as we thought, the snow was 18 inches deep, but it made a crunching noise. We had not gone far when we saw a deer running down the ridge from our right, about 100 yards beyond where we saw those feeding; it may have been mossing in a fallen tree-top and have seen us. We kept on, and soon I saw one standing about 300 yards off. I told Arthur I would take a shot at it, and if the others ran out he would have a good chance to shoot a buck. I thought the one standing was a doe; I raised my sight for 300 yards, sat down in the snow, took a knee rest, put the cross hairs on the centre of the neck and pulled the trigger. At the crack of the rifle, which was very little, for I was using a nitro-powder, the deer fell. In a few seconds Arthur pointed out two bucks trotting out up the ridge. I told him to wait and they would stop as soon as they got on to the ridge; they did stop; he raised his rear sight for 200 yards and fired off hand, and down dropped the biggest buck, shot through the back just over the heart. It was a splendid shot, and this was his second deer; he had killed one last winter.

Wednesday I went out on the mountain, back of the mill. I wanted to get a deer or two to make into sausage. I had got within half a mile of the summit when Frank struck a scent off at my left. I rode along very slow and looked the ground over very carefully. Soon I saw three deer lying under a fir tree; I got down from the horse and raised my rifle with the telescope sight, to take a look at them. When I got the glass on them they did not look to be more than twenty yards away, although they were about 100. I drew up off-hand and shot at the old doe's neck. The young ones did not get up; I shot at the head of the one that was lying next to the old doe. The other young one jumped up and trotted up on to a little rise about fifteen feet from where its mate lay; I shot at its neck, and it fell. That was four deer I had killed at four shots. It was the best I had ever done with a new rifle. They were the last deer I expect to shoot at this winter. It is forty-one years this winter since I killed my first deer, but I have never had a combination that is equal to the one I now have, yet I never expect to use it in hunting game for market, although I may kill a few deer to give to friends; but my love for hunting has not diminished, and it is the first winter I have confined my hunting to horseback. I am very anxious to try my new outfit on a bear, and I shall go over on Meyers' Creek as soon as they come out in the spring.

WASHINGTON. L. W. WILMOT.

OPINIONS.

"Hew to the line, let the chips fall where they may." Should you stand close enough to have your eye knocked out, do not blame the chip, but institute a "still-hunt" for the power that propelled the projectile.

Editor Forest and Stream:

I have been a purchaser and reader of your sometimes valuable paper long enough to be the possessor of a number of opinions, distinctly my own (now published for the first time). Whether I have been a patron of sports long enough to entitle those opinions to space in your journal or not remains to be seen; but in this day of "full cry" about the "market hunter," we should at least study the cause and then as carefully apply the remedy or remedies.

It is very strange that some of the brainy people of sports have not thought to apply the law of supply and demand to the "disappearing game" question. There is a dearth of employment and an over-production of employees. While it is true that many people are outlaws by choice, thousands to one are outlaws from necessity, and what is true of transgressors of the law is also, in great part, true of the "market hunter."

Let us glance at two pictures that are not hung in rooms at the art loan now in progress in this city.

Picture No. 1.—The scene carries us back to the days of 61-65. There is a roaring camp fire on the corner in the village, and to the accompaniment of lusty cheers, a frothing speaker is telling the youth what a glorious cause is the cause of one's country. A mustering officer in a bright uniform paints in roseate hues to verdant aspirants for glory undying, the romantic life of a "bowld soger boy." How they will march as victors into the enemies' cities, the bands playing "See the Conquering Hero Comes," that advancement will surely and rapidly follow those who now enroll their names upon the muster sheet. The company is filled and in a few days is on its way to the front. The recruit has been the recipient of many hearty handshakes, and of God speeds; and now that the parting with loved ones is passed, he pictures over and over again his old home as he last saw it, when the setting sun threw around it a glory whose memory will be his only companion during long and lonely vigils. We need not stop to detail the desperate fighting and weary marches, of the longing for home and loved ones. He is far out on the skirmish line one day, and along with others is surprised and taken a prisoner; and thus ends the first chapter in our heroe's war experience He had dreamed of leading captives through the enemie's cities; but the officer in bright uniform who enrolled his name made no mention of the uncertainties of war; and he who would lead the victorious captors is driven through the cities of the enemy an object of contempt to be spat upon. He asks his fellow prisoners whither they are bound, and they know not, but hope not to that prison, that with its keeper, has become the adjective of horror on all their lips. But it is so, and one day he forms one of the string of "fresh fish" that file between menacing arms into the dread stockade. During those dreadful weeks how the memory of brighter days come to dispel the gloom of his awful surroundings! how his fitful slumber is filled with faces away in Northland that he will never see more! Awakening, his surrroundings are more dismal than ever before! The mustering officer had not told him of the southern "preserves," and one day he oversteps the line—the guard fires, and a shivering, ragged wretch falls to earth, to gasp once or twice, and give up his spirit. Perish here all golden dreams of the returning conquering hero. Far away from friends and those most dear, perishes the victim of "preserves."

The other picture finds its scene in Fatherland. A flaming poster tells in ten line pica letters of the occidental El Dorado, the land of the free, where there is room enough and land enough for all, where sweet songsters warble all day in shady woodlands, and where laughing, sparkling waters, teem with finned beauties, while in the forest depths are found the deer and abundance of game. Added to the delightful climate, its diversified flora, its sunny skies, there is no place where the emigrant is more welcome than in America. She needs you all! Who will come and build up his fortune in the new land? The reader "enlists," and in a few days his belongings are on the wharf, while many promises are made to those he leaves behind to write them all about this wonderful land! He is hustled aboard along with others, and ere long his native shores fade from the sight of the watching emigrant.

The days upon the ocean are spent upon golden dreams of tomorrows, of the land where all are free, where a living can be had for the shooting of it, where the streams teem with fish life, and chance thought, has he not with him the trusty firearm that was his father's? and in a land where game is so plentiful, should employment fail, why could he not supply those who have not time to follow the chase?

His capture dates from the moment of his enlistment. On his arrival at Castle Garden he is corraled and in a drove with others is driven aboard his train. "Where to?" he asks the fellow in the next pen, but no one can enlighten him. "Westward ho!" the train trends, and he is as much of a curio to the people who crowd the platforms at way stations as our would-be hero was in the enemie's cities. He is set down in Minnesota. The snow has not come, and Autumn fires have spread destruction and desolation. There is no enjoyment! But a small amount of the hoarded coin is left between him and actual want. And this is the home of the free! Of nature's prodigality, where all who list can have a home! The wind's sighs as it disturbs the pine, find echo in the emigrant's heart—this recruit in life's army. Why not expend his remaining money for ammunition; go into the forest with the gun that had been his father's gift and secure some of that game with which the country abounds? The thought is put into practice and he soon finds himself on the edge of a fine forest. But what is this sign that meets his eye? He cannot read it, but a something in the very character forebodes him no good. A stranger approaches who is able to understand his question of the sign's meaning, and he interprets to him that it means "No Trespassing—Preserved." And he adds that the preserve belongs to one of the country's most popular "sportsman," who owns great chunks of stock in the particular "greyhound of the seas" that brought the emigrant to freedom's shore. In a strange land, far away from all restraining influence; with no money, fireside or food; betrayed by the millionaire "sportsman" hog, what will he do? What would you do, gentle reader?

We said the other fell a victim at the "preserve" line; and to you remains the finishing touch of the second picture, only asking that the last brush efforts be such as practical word artists would supply.

It is truly a matter of supply and demand. With four and one half million wage earners out of employment, in September, two hundred and seventy-one thousand more came during the year to supply that which we need not. I am one of the forty-seven thousand unemployed in this city alone; and should you for a moment think that I shall not join the army of market shooters another winter, you wrong me. And this in the face of the statement (B. Waters in "About New Orleans") that market shooters make from $5,000 to $6,000 per year net profit. If out of employment another winter and can shoot a couple of dollars worth per day, aye, even one dollar per day, I will do so rather than spend the time in idleness, when profit and pleasure can be combined.

We saw by the daily press a few weeks since that the President of the United States had gone to South Carolina for ducks. He got them. The press credited him with two hundred birds. Yet we find no comment on this slaughter when had a fortunate market hunter been about one-third as successful, the welkin would still be ringing with denunciations by the "sprotsman." How about this, "most potent, grave and reverend seignoirs, my very noble and approved good masters?"

Whisper! If a man whose rating is $6,000,000 and who is the recipient of a salary of $50,000 per year, is entitled to two hundred ducks, how many is the poor emigrant, whom the millionaire sportsman has enticed to this country for his passage money, and who possesess nothing but the old-time muzzle loader pathfinder of his dad, entitled to?

This use of "preserve" seems to be first met with in the biography of the first President. After mention of his stature and commanding appearance, the author goes on to speak of his strength, and said when he found a man hunting on his property he asked to examine his gun, which he thrust under the fence and easily gave it a twist which rendered it useless to its owner. This of the immortal Washington!

Forest and Stream, Rod and Gun.—How often have I studied that heading! On this winter's eve, me thinks I see foam at the vessel's prow, yet can hardly make out whether the canoe contains one of nature's sons or a member of one of the modern canoe club. The sky I paint myself. As I take it, it will be noon; and the sportsmen have come to the welcome shade of the branches that beckon to them. You can easily see Jean in the left foreground as he presides over the grilling board, and you wonder what's in the soup. In the right foreground are doe and fawn, eavesdropping the angler and hunter in their discussion of modern death-dealing sportsman's accessories. I have painted all this to myself again and again—in the glad springtime when the leaves first appear,—in summer's heat and in autumn's colorings—but at no time have I been able to paint the picture as a bench show with a bull dog in the first row!

Editorializing on the "hounding of deer," you publish J. C. Blanton's note in issue Jan. 12, about how "Bennie" and himself got deer by "hounding." Your position in the matter is very much like an over-indulgent father toward a very badly spoiled child.

Now, in conclusion, first to make a labor preserve of this country; close the Eastern gates and guard well the Northern boundary line; and when you have a contented, well employed, well paid laboring class, you have the major part of the disappearing game question settled.

Wherever you meet the "duffer" treat him cordially and well, let him try your improved arm that his conversion may be accomplished.

DON F. BARTLETT.

Natural History.

WOODS NOTES.

A MAINE BEAR RECORD.

In eight towns bordering the southern forest of Rangeley Lake, in the northwestern part of Oxford County, has been killed 77 bears the past season; in Bethel 14, Newry 16, Byron 14, Roxbury 12, Rumford 5, Andover 7, Gilead 5, Mason 4.

WINTER GAME HAUNTS THE WATER.

Apropos about grouse locating near streams and brooks in winter, I shot sixteen one morning following the bed of a brook, one winter before protection laws were made. They were mostly in pairs, and seemed to come from high land, making their way down toward the brook. I tracked them in the light snow, which had fallen the night before.

COLD WATER EXTRACTS FROST.

It is a curious fact that cold water will extract frost from a frozen object quicker than hot water or even fire. Thus frozen fish soaked in cold water will soften much more quickly than in boiling water. Often have I in the coldest winter days, while traversing over lakes, finding my feet freezing, cut a hole through the ice and stuck my booted feet down into the water, which immediately took out the frost and made them feel comfortable.

In our last cold snap, in which the thermometer fell to 26 below, attended with a heavy gale of wind, during the night our house plants froze and the ground in the pots solid. I profusely showered them with cold water and they are to-day bright as ever and in full bloom.

LOONS AND FISH.

In a late number of Forest and Stream a writer deplores the shooting of loons (the great northern diver), and fears their extermination. Any sportsman familiar with their habits knows very well that the loon destroys more fish in one day than would feed many men. And in good trouting waters they are very destructive.

WILD PIGEONS.

I can remember when the farmers in Northern Maine used to net them on the grain fields after harvesting in the fall.

They baited them with wheat several days, on a smooth patch of earth prepared for the purpose, and after the birds got familiar with the arrangement they set their net and would sometimes secure many dozens, which they killed by pinching their heads with thumb and finger, as they stuck their heads up through the net. I knew one man, who, after his thumb got sore in the operation, used to bite their heads with his teeth.

ANIMAL SENSE.

Whenever wild animals are suddenly started by coming upon them unexpectedly, they rush away at fearful speed for a short distance, say one-fourth of a mile or less, then stop short, raise their head high in air, and take a good look to see what frightened them; then they immediately continue their flight.

Whether or not it is the trait of curiosity, same as we mortals possess, or to ascertain if they are pursued, or to make sure of their sense of smell, we cannot tell; but it is, nevertheless, a universal trait in all wild animals.

Apropos of this fact, I was at one time roasting a grouse on a stick for a lunch, on a wet day in the Rangeley wilderness, way back in the forties. It was raining slowly, my gun sat against a tree at my back with the case on, and I was thinking how good that partridge would taste, for I was very hungry. All nature was hushed in the stillness like death. Not a leaf stirred in that lonely forest, fifty miles from an opening. Suddenly a loud snap of a broken stick behind the tree I was leaning against, brought me to my feet at a jump, and turning in the air before I struck the ground. There, within four feet of me, I beheld a large black bear. But he did not stay there a moment; in fact, he appeared to be as frightened as I was, and in five seconds was hidden in the thick woods.

He was probably attracted by the smell of the roasting bird. He had a white spot on his breast. I set a bear trap which I had with me beside that tree, and baited it with a grouse and started on up the mountain, and before I had gone a mile I heard him scream. He had come back to see what frightened him, and was caught.

MAINE. J. G. RICH.

Camp-Fire Flickerings.

"That reminds me."

The first cold snap of winter had struck the wilds of Muskoka, and the dry crispy snow was whirling into little drifts around the corners of the houses, while a few old sportsmen were seated around a warm, roaring coal stove and discussing the number of deer that had been killed and the amount of ammunition fired during the open season.

We were matching dog stories when Dave Sword dropped in. He listened to our dogs' great qualifications. J. B. had just told us what his dogs had done. Mac owned a good one, and he considered that old Captain would hold his own with the best of them. I was about launching out to recite the praises of my old pet, McGriffin, when Dave apologized for intruding, "but," he said, "gentlemen, I canna bide yere an' listen to sic dowg stories, while I ken I've ane o' the best dowgs that ever wagged a tail over his hurdies." "What is he good for?" we all queried at once. "What is he good for? ye say." "What is he not good for? I say." "Well, one thing he canna be beaten on, and that is treeing paitricks; and he never was beaten yet as a coon dog. I tell ye sirs what I've seen that dowg do. I've seen him charm a coon doon out o' the tap of a elm tree fifty feet from the ground. Yes, it may sound rediculous, but he has done it and can do it again, an' I'll tell you how he does it. He wheels about and grabs his tail in his mouth and spin aboot like a pivot, and he will keep up that cantantrup until coon comes doon to see what's the matter with him."

"And he catches the coon," we suggested.

"Na, na, not so fast as a' that; he canna catch naething wi' his head in such a swirl, but he has Collie trained to run in on the coon as soon as he strikes the ground."

We all passed, and Dave made his point alone.

PANSY SOUND, ONT. CABERFEIGH

Sea and River Fishing.

ANGLING NOTES.

Having read the testimony of Old Sam concerning the color of black bass, their stationary habits, etc., I do not see that we differ materially.

It is true that I might have been more explicit, but on previous occasions I have written so at length upon this subject that I thought it all sufficient to say: "Black bass assume the color of the bottom over which they rest." It has long been known that the brook trout took on the general color of its surroundings, and that the change was made so quickly from light to dark, or vice versa, as to entitle the fish to be called a "lightning change artist."

Chase a trout in a brook from dark bottom to light and his color will fade while you are looking at him, if he remains stationary. I discovered this peculiarity in the black bass by putting them alive into the well of a boat. On the day in question my companion and I had talked of the various colors of the bass as we caught them. In one place the bass would be light, in another dark, still another barred, etc.

At the boat landing the coloring of the fish was referred to again, and as I took the bass from the well to kill them they were all of the same color.

In the case of the trout this peculiarity is said to be a provision of nature to enable the fish to hide, in a measure, from its enemies; but the bass does not need to hide for this reason, and it must chameleonize itself that it may the more easily prey upon other fish. So far as I have observed or know, the black bass may make the change in its livery as quickly as the brook trout. Reading over what I have written, I cannot see that I even intimated that daylight or darkness had anything to do with the change in the color of the bass, and I never remotely suspected that it had.

Old Sam quotes what I said about the bass coming on to the shoals at night to feed, and about waiting for them until long after dark, and then asks: "Does this indicate that the habits of the bass at night were stationary?"

I do not quite comprehend why, if I was to be quoted at all, I was not quoted in full, for I said further: "I did not attribute the stationary habit of the bass at night to faulty eyesight. I knew that the fish came on to the bars and shoals at night to feed, and supposed that when gorged they remained till morning."

I believe just that now. I waited for the bass to come in from deep water, where they were during the day, to the shoals to feed, and such as came in after feeding remained until morning. Naturally they took on the color of the white sand. Fish that came in to feed in the morning were darker in color, showing that they came from the weeds and grass and only recently arrived.

As a rule, during the month of August there are no bass on the shoals during the day, but they may be found there evening and morning.

The exceptions may or may not prove the rule, for bass have been taken at all hours of the night, as others have testified besides myself, and it would be consistent to say that this state of affairs offered the best possible evidence that the bass so biting had become gorged with food and therefore were not ready to settle down in one place for the night, or, in other words, to become stationary.

TIP-UP FISHING.

One of the most popular amendments to the Fish and Game Law of New York is that found in Section 141, which provides that "Pickerel, bullheads, catfish, eels, perch, and sunfish may be fished for through the ice with tip-ups in any waters of the State not inhabited by trout, lake trout, salmon trout, or land-locked salmon."

Fishing through the ice with tip-ups for pike and pickerel has been practiced so long by the country people that they came to look upon it as an inalienable right, and when the law forbade this style of fishing a howl went up that the game and fish laws were enacted for city sportsmen, and the country fishermen were ignored. Of course, there was no truth in this statement, but it caused a feeling of antagonism against all fish laws. Since the tip-up law has been restored, I have had more requests for information regarding its provisions than I have had in regard to any other one section of the game law, and this coupled with personal observation and conversation with fishermen generally has led me to express myself as in the first sentence of this note.

Game laws to be effective must, oftentimes, be framed to provide safeguards that seem at first thought rather unnecessary. For example, fishing through the ice in a certain lake was forbidden, because the lake contained trout, but it also contained yellow perch, and perch are an excellent pan fish, and there was really no good reason why they should not be caught as they supplied food to a community at a time when other food was not abundant. Perch fishing through the ice was permitted, and at once under cover of fishing for perch, the people for whom the law was passed began to fish for and catch lake trout. Perch and lake trout do not inhabit the same depth of water, or the same part of a lake in winter, and when a man was found with holes cut in the ice where the water was one hundred feet deep, those acquainted with the facts knew that he was fishing for trout, although he might declare he was fishing for perch, and the only way to convict him of law breaking was to catch him with trout in his possession, although the mere fact that he was fishing when it was known there were no perch, was moral evidence that his intent was to evade the law. This state of affairs made those who asked for the perch law clamorous for its repeal and the enactment of a law forbidding, all fishing through the ice in waters containing trout. The tip-up law as it now stands pleases a great number of people in the country, and others not of the country, and it can do no harm to the trout or salmon, but already it is sought to enlarge the privilege granted in Section 141, and no one knows where the end may be.

A bill has been introduced in the Assembly, its number is 349, amending Section 11 as follows: "Pickerel, bullheads, catfish, eels, perch, and sunfish may be fished for through the ice with tip-ups in the waters of Lake Kenka or Crooked Lake, and in any of the waters of the State not inhabited by trout, lake trout, salmon trout, or land-locked salmon."

Not much of a change from the present law to be sure but enough to admit—shall we call it the cloven hoof?

The change is indicated by the words underlined, and the waters so indicated are trout waters, and if these particular trout waters are excepted will any of the trout waters in the State escape. There must have been some good reason why fishing through the ice in trout waters has been forbidden, for such a law has been on the books for a number of years, and is there any good reason why any part of it should be repealed.

I heard this bill condemned most heartily by anglers in Albany a day or so ago, and one suggested that all ice fishing should be limited by the length of the line used; that no one should be allowed to use a line extending more than fifteen feet below the ice.

That is all right in theory, who is to measure the thousands of lines that will be used.

It is true that fifteen feet of line will be enough to catch all the pike and pickerel that swim at the season of tip-up fishing, and fifteen feet of line will not catch lake trout, neither will it catch perch. I have caught brook trout through the ice with less than fifteen feet of line, and I did it legally, too, but that was many years ago, although I suppose it may still be done. Limiting the length of line to be used will not answer, and the only way to save trout is to forbid all ice fishing in trout waters.

ADIRONDACK GUIDES.

The Adirondack Guides' Association, Hon. Verplanck Colvin, Honorary President; Senator F. D. Kilburn, Treasurer, and John H. Miller, Secretary, will hold their annual meeting in the Opera House at Saranac Lake, Wednesday evening, Feb. 27, to be followed by a banquet and camp-fire.

The secretary writes me that the association proposes to recommend certain changes in the Game Law. "The members of our association believe in supporting the Forest, Fish, and Game Laws of the State. We do not care for any particular change in the fish laws, but we do wish to have the deer season made shorter."

To become an active member of the Adirondack Guides' Association one must be a citizen of the United States, and have a permanent residence within the State of New York; to be at least twenty-one years old, and have been known as a resident of the Adirondacks for fifteen years, and an Adirondack guide having at least three years experience."

There are other requirements necessary to membership, but what I have given are sufficient to commend the association to sportsmen.

Too often one has to give himself over body and boots to the care of so-called guides who have not the least qualification for their alleged vocation, and who are utterly incompetent and irresponsible, and all who have had such experience and all who fear it, will uphold such organizations as the Adirondack Guides' Association, with an executive committee as a board of appeal, to adjust differences and protect employer and employee and create a feeling of security on the part of the employed, that must be of benefit to both.

PIKE, PERCH AND BLACK BASS.

Black bass have been charged with all sorts of destructiveness. It has been said that they destroy trout, exterminate pike, the so-called pickerel, and that they are scarcely fit associates for any other species of fish. It is true that the black bass is often accused unjustly, but the fish has acquired a reputation that it will take years to live down. The black bass now appears in a new role, as the oppressed and not the oppressor in the fish world.

Talking with Judge A. A. Yates, of Schenectady, recently, who is one of the most enthusiastic anglers of my acquaintance, he informed me that the introduction of pike-perch into certain waters had been opposed, because it was feared that they would destroy the black bass. Black bass and pike perch have lived together for ages, so far as we know, in the same lakes and rivers, and this is the first that I have heard of such a charge against the bass, and it is as groundless as some other and similar charges, with the bass as defendant. If one could hear Judge Yates expound upon the subject, drawing upon life-long experience with both fish, there would be no fear of introducing the pike-perch into any black bass waters, and from my own experience I can say such fears are entirely groundless.

BROWN AND RAINBOW TROUT.

A correspondent in Vermont writes: "Having noticed in Forest and Stream your readiness to give advice in angling matters, I write to ask your opinion on a matter in which a friend and myself are much interested. We propose making an attempt to restock a fine trout stream here which has been nearly fished out. The stream is large for Vermont, and has several good-sized tributary brooks and many small ones. There are but few brook trout remaining in the main stream compared with the number it once had, although quite a number are taken early in the season. We have the promise of about twenty-five thousand brown and rainbow trout, mostly this year's hatching, but a few larger ones as starters. Would you see any objection to putting these trout into the stream with what brook trout remain? That is, would the natives hold their own against the others? Also we wish to provide for some sort of fish food other than that already there. Would it be a good plan to obtain some shrimps, or could you suggest anything better? Shrimps are an unknown quality to us, all we know of them being what we have read in your columns in Forest and Stream."

There can be no reason whatever why the brown trout and rainbow trout should not be planted in such a stream as you describe. The rainbow trout will probably disappear after the second year, and that is the last you will hear of them, or be troubled with them, although of the two streams fresh in my mind where the rainbow have remained after being planted, one is in Vermont, and the other in Virginia. The rainbow is declared by Dr. Jordon to be the young of the steelhead, a Pacific Coast trout (once called a salmon), which runs down to the sea. Certainly in the majority of cases where the rainbow has been planted in Atlantic Coast waters it disappears forever after the second year, unless it is confined in ponds. The big stream will, in time, become the home of the big trout of native and brown species, and the smaller feeders will serves as nurseries for the smaller fish from which they will work down as they attain a size to fit them for it. Some years ago I sent a lot of brown trout to a stream in Vermont, similar to the one described. They have done well and there has not been a word of complaint about their destroying the native trout.

There can be no better food for the trout than the fresh-

water shrimp, as they are very prolific, and a shrimp diet gives a fine flavor to the fish which feed upon it. They may be obtained of James Annin, Jr., Caledonia, N. Y., whose advertisement will be found in this journal.

With the shrimp Mr. Annin will send water weeds from the streams furnishing the shrimps and all should be planted.

You might try also planting the May fly (green drake) as I have told in this column how to do it.

A. N. CHENEY.

FISHING IN NOVA SCOTIA.

It was a beautiful morning, about the middle of last May. The red birds were showing on the swamp maples, and one or two early robins were risking pneumonia by getting to the land of Evangeline so early, when the guides, moving quietly about the camp, around some disciples of old Izaak, who had already passed nearly two weeks at their favorite sport.

We had started in at the head of the Milfred River, and worked down it and crossed Cudgy McKedgie Lake, thence down the river of the same name, crossed both upper and lower Rossignal, and were now encamped at Indian Gardens, at the head of Sevenpool River, the outlet of the lower Rossignal, one of the n ost beautiful spots in Nova Scotia outside of the Annapolis Valley. On the easterly side of the river a gently rising knoll of clear green turf, with here and there a giant elm; on the west, the unbroken forest, there we camped. We had reached the end of our journey, not intending to go lower down, but to recross Rossignal and go out via Lows Landing. But finding the trout so large and so plentiful, we proposed a day's trip, two or three miles down through the rapids below the old dam, leaving the camp pitched at the Gardens and returning at night by the lumberman's path along the bank of the river, while the guides poled the boats up through the rapids.

We had been having splendid luck all the way down, more beauties than we wanted; in fact, all but the largest went back alive, if unhurt, into the water. We had even smoked a lot of them to bring home, until the colonel, who had fished almost everywhere, declared that he had never struck anything like it for spring fishing.

Below the old dam we saw water we could not leave without a try, hence this trip for the day was planned. After a good hearty breakfast of fried trout, ham, potatoes, buckwheat cakes, etc., which a good guide knows how to prepare, we packed a substantial lunch and started Isaak and I did not hurry. We let the other boats get a good start so as not to crowd each other in our fishing. I was in the stern with all my paraphernalia handy, and my trusty eight-ounce Leonard in my hand ready for business. Good old Isaak, of many years experience in the bow, his iron shod-pole in hand, and a good, big killig handy, ready to drop at a moment's notice—thus we dropped into the stream, stern first, and shot like a flash through the break in the old dam.

I could see the other boats some quarter of a mile below, and not wishing to crowd them, we dropped our killig, not a hundred feet below the dam, in boiling, rushing water that must have large trout surely in it.

We had been using rather small flies, number sixes and eights; but, in such heavy water, I thought I would try an experiment, so I took a new leader I always use, nine footers, and put on three smallish salmon flies. It worked like a charm. The first cast I made I hooked two beauties, and landed them both. Then for half an hour I had a bit of the best fly fishing I ever struck. Nearly every cast raised a fish. Without moving more than half a mile in the time named, I had filled my basket and not a small fish in the lot. As we had no need of any more, we pulled our killig and worked slowly down stream till we overtook Mr. P—— and his guide.

"What luck?" I asked.

"Not much," he replied.

"Try some larger flies," I said. "I have had great luck with them."

"This is as likely a spot as I ever saw," said he; "but I can't raise a fish. Make a cast while I am changing my flies and see what you can do."

And, in truth, it was a likely spot. The river at that point was some three hundred feet wide, rapid water, some six or seven feet deep, with here and there a bowlder, below which, of course, was an eddy. A large brook also entered here, forming quite a deep pool into which he had been casting.

We dropped our killig, and I made the cast. In an instant, Isaak jumped to his feet. "Hurrah, Mr. W——!" he shouted, "you have got three. Don't lose one, and we shall break the record for this trip." Meanwhile, my rod was doing nobly in a veritable rapid, with three heavy fish on my leader. It stood the test, and after some ten minutes of careful work, we landed them all. The two largest weighed two pounds each, and the third one and one-half pounds.

And so the early morning sped till 8.15 o'clock. As I noticed afterward the other boats were below us some distance. A full basket and ten or twelve besides, we pulled our killig and started after them.

We still had deep, heavy water, which carried us rapidly. Isaak stood in the bow and guided the boat with his pole. We had covered about half the distance, when, looking ahead, I saw a large log lodged on a rock across the stream. "Look out for that log, Isaak," I said.

"I see it," he replied, plying his pole vigorously, but an eddy caught us, and quicker than I can think of it now, we struck the log a little sideways, canted up stream, filled, and turned over. I went out head first, rod in hand. How Isaak went out, I didn't stop to see. As the boat went under, it raised the end of the log, and, when I came up, I was right under it. Throwing up both arms involuntarily, I got them around it, where I hung till I got my breath, then worked along till I could climb on the rock, where I found Isaak. Then the log floated off, to keep company, I suppose, with my fly look, leather jacket, landing net, etc., which had gone down stream. One of the other boats came to our assistance at once, and put us ashore. I started for camp on foot for dry clothes, while Isaak stayed to pick up what he could. But, excepting the boat, which was not badly injured, my leather jacket and the ax, we recovered nothing.

After getting some dry clothes, I returned to the scene of the accident and commenced fishing again, but, somehow, it spoiled the day. It certainly took some of the sand out of Isaak, and he didn't get it back for some days; but it was our first accident of any kind in many years' fishing, so we can't growl much.

But talking of large, gamey trout, that is the place to find them. W.

PALE CANADIAN FISH.

Mr. George H. Dana, a well-known landlocked salmon angler of Washington, is authority for the following curious phenomenon about the color of fish in Sandy Lake, Ontario. The lake is three miles from Hall's Bridge post-office, and lies nearly north of Peterboro.

In August, 1894, Captain C. M. Holloway, of Cincinnatti, while fishing in Sandy Lake caught nine bass (usually called black bass), weighing from 3 to 3 1-2 pounds. Every one of the fish was white, and so were the crawfish which he used for bait.

It is said that all the fish in the waters are white, even the bullheads. The water is so crystalline in its clearness that the bottom can be seen where it is fifteen feet deep, and every movement of the fish can be easily observed from the time it takes the bait until it is landed in the boat. Indeed, the fish scarcely seem to be swimming in water, but flying through the air.

The bottom is covered with a white deposit, but there is no information as to the character of the material. Whatever it may be all animal life found upon it partakes of the peculiar whiteness seen in the bass and the crawfish. T. H. B.

IN AROOSTOOK WILDS.

My first trip over the Bangor and Aroostook railroad this season was in the last of August. I met in Bangor a party from Boston, which wished to get some trout-fishing and bird-shooting. I engaged another guide, and we started.

We went over a hundred miles by railroad, thence some forty miles further by team, which carried our canoes and other equipment. We landed at a dead-water stream and pitched there our tents. By noon, the third day out from Bangor, everything was ready for fishing or for comfort. Dinner over, preparation were made for fishing. We started up stream. As I had never fished there, we had to seek the fishing pools; an easy search, for there were plenty of springy places making in from the shores, and wherever spring water came in, there were trout. But we only caught what we wanted for supper and breakfast. The small trout we returned to the water. The largest one weighed one and one-half pounds.

The shores were all trampled by moose, caribou and deer.

When we had caught what trout we needed, we paddled up stream, something like three miles from camp, as far as we could go in the shallow water. We saw one deer, and as we came round a turn in the stream near the head of the dead-water, we came across a big moose feeding on the lily pads and other water vegetation in the midde of the stream. He saw us, and thereupon walked lazily ashore, then turning around had looking at us for a few seconds before he struck a ten-mile gait, making the brush and dead limbs rattle. We then returned to camp.

The next day we went down the wide stream some three miles, winding through meadows and marshy land. Moose, deer and caribou signs were plentiful, but we saw none of these animals themselves, owing to the place having been fished and hunted a great deal. The deer, moose and caribou were working mostly by night, as is their habit in sections which are fished and hunted. We found one party of farmers near the stream, in a camp which was occupied by lumbermen the winter before. The farmers had with them a team, and were salting trout to take home. They had built a raft, the water being deep. On it they floated up and down stream and fished.

The water was deep, and fly-fishing was poor, but we caught what fish we wanted without using bait. We camped there a week, going betimes into the woods. There were fresh, hard-trodden deer trails, of which I never before saw the like.

On Sept. 1 we engaged a team to take our canoes and camp outfit to a lake about ten miles away. This lake is about six miles long. Other lakes were near by, and there also were several dead-water streams. It was a good locality for canoeing. Game was plentiful, but the trout fishing was poor, though there were lakes and streams about three miles distant where it was good. But we did not care for trout, as we could get all the ducks, partridges and pickerel we needed, and also wild cranberry sauce to go with them, though the latter tended to lower the weight of the sugar basket.

We camped at the narrows of the lake, a big hill on either side of us. It seemed to be a crossing place for the wild animals. We rarely went to the shores without seeing deer, and several times we saw them swimming across. One caribou came across and ashore near our canoes. The point on the opposite side below us we named Deertown.

We found plenty of moose signs. I had never called moose in the early part of September. I was at the head of the lake Sept. 6, just at night. I made a bark horn and called. Soon an answer came from a bog which led back nearly two miles among the hills. I called several times more, and perceived that the moose was coming. Then I started for camp and, when I reached the narrows I could hear the moose at the head of the lake at the place where I had called.

To see how a bull moose would perform when called out, two nights afterward, we went to some big bogs on another brook which was deep and about one hundred feet wide. We would not kill a moose in close time. We had merely a curiosity to see what one would do. I selected the mentioned place, so that, in the event of an attack, we could paddle out of the way. I called for nearly an hour, and was about giving up when I could faintly hear a reply. The sound grew plainer as the moose came over a high ride a mile away. He came nearer and nearer. The moon was shining bright. We went to the opposite shore and waited. I gave a call once in about five minutes. We could at length hear the rattle of antlers among the bushes and trees, and the breaking of big limbs until he reached the bog. We then could hear him walk. He would stop to listen we supposed. He came within sixty yards of us and stopped. He changed his grunting sound into a sort of louder bark, with a tone of anger in it. There he stood for nearly half an hour. He finally gave one of his barks or grunts from his throat and lungs, as if he were angry all through, and started away. We did not get a good view of him, as there was a steam rising from the water and drifting in his direction. He could scent us, which was probably the reason he would not come nearer. I did not dare to cross over to his side of the stream, having fears that he might charge, as sometimes has been the case. I never saw but one do so, and then he was in company with the cow. Had he been alone he probably would have retreated.

The next day we started for the settlement, leaving our canoes and camping outfit for parties who were coming later.

This party will lay its plans to return in the open season next year for big game. J. DARLING.

L. DANA CHAPMAN, Treas.

THE RAINY LAKE COUNTRY.

As the east, south and far west are often heard from as to great catches of finny felows, the western middle frontier is very seldom considered worth mentioning, yet I want to say that at this point—the junction of the Otter Tail, Bois de Sioux, and Red River of the North, there is in the spring an abundance of real good sport. The Red River teems with fish—Winnipeg bass, sheep head, pickerel, pike, skipjack, rock bass, red horse, buffalo and cat. Sturgeon weighing as high as 165 pounds have been caught at this place, coming probably from Hudson's Bay.

The Otter Tail, whose source is away east in the pineries which are covered with lakes, is a swift stream, always cold, and the pike and bass are always sound and gamey. The Bois de Sioux, the connecting stream between Lake Traverse and the Red, is a slow, weedy and shallow stream, just the place for spawning. Early in Spring I have caught a good string of black bass, rock bass and pike, using frogs and angle worms. They will not take a fly, though I have tried every kind. The water is clear and deep in the Otter Tail for one mile from its junction, and from the three bridges which span it from the Minnesota to the North Dakota bank it is alive during April and May with anglers. Later the fish from these waters are unfit to eat, the flesh tasting weedy and flat. But, the angler has recourse a few feet further north where pickerel and pike weighing from a pound to three pounds take bait eagerly. Then comes the channel cat—great big fellows, whose meat is as firm and toothsome as one could desire. In the deep holes along the Red one can, by using grub worms, catch five to seven pound sheep heads. These are the gamiest fish in the river and fight to the finish, and it takes a good rod and reel to land them. These fish turn sideways and act similar to tarpon. They are from Hudson Bay. The next game fish is the channel cat, and if the angler has no gaff hook he will surely lose him. The black cat is also plenty, but come so late they are seldom taken.

When June comes these waters are deserted for the lakes east of us on the Northern Pacific Railway—the favorite place being Clitheral. Several of our citizens have beautiful cottages along the shores of Clitheral Lake and excursion trains are run every Sunday during June, July, and August.

But the best place to fish in Minnesota is at Alexandria, a pleasure resort, famed throughout the United States.

The Rainy Lake country is an attractive place for sportsmen of all classes. Everything from a cotton tail to a bear, and from a quail to a swan can be found there. The region is a dismal wooded district abounding in lakes and swamps. No roads have yet been cut through the district—but the sportsman who can stand a cracker and cheese diet can find plenty of game. The Minnesota game law is practically a dead letter in this district—but the environments outside are such that it is risky to attempt to bring game out except in open season.

J. B. Bushnell, one of the best known sportsmen in Western Minnesota, has established a summer resort on ten-mile lake, south of Fergus Falls, and James Nolan, an 1860 sportsman, has just erected sportsmen's quarters on Lake Lida, north of Fergus Falls. Fishing is the principal attraction.

Hunting in Montana is practically at a standstill, though I have a letter dated Gilt Edge, Jan. 29 last, which tells of a party of four with only one good shot in the party, bagging seventy deer in ten days. This is piracy.

Chicken and grouse are plentiful, and are being protect-

ed by local gun clubs. In this, Wilkin County, last fall it was almost impossible to hunt without first obtaining permission of the owner of the land. The Wilkin County Game Protective Association last fall had scouts employed six weeks before the open season, and the effect of this on the chicken murderers was astonishing. One party attempted to establish a refrigerator to store this class of game for market, but was given to understand that if he attempted to kill for market he would find himself behind bars, and he didn't put his scheme into practice. That's the way to protect game. It beats laws, unless they are enforced by local sportsmen. F. J. S.

BRECKINRIDGE, Minn., Feb. 12.

GEN. SHERMAN'S WOODS LIFE.

From the Utica Herald.

During the session of 1876 General Sherman originated the idea of having a committee on game laws in the Assembly. Although his party was in a minority in that body, the committee was appointed with Mr. Sherman as its chairman. This is the only instance in which a member of an opposition party has been made chairman of an important committee in the New York Assembly.

On April 2, 1879, he was appointed one of the commissioners of fisheries of the State of New York in place of ex-Governor Seymour. The general held the position until 1890, when he resigned. As a member of the fish commission, General Sherman was certainly the right man in the right place. His long experience, gained while hunting and fishing in the Adirondacks, and his superior knowledge of the habits of fish and game admirably qualified him for the position. His peculiar fitness for the place and his active, zealous and intelligent labors speedily won for him the confidence and respect of his associates on the commission, and in their plans for work and in the management of affairs generally great reliance was placed on his judgment. He devoted a good share of his time to the duties of the office while he held it, and the commission and the force of State game protectors subordinate thereto never did more efficient work than during that period. General Sherman was considered authority on fish and game matters by all who knew him, and the State has produced few men whose opinion was entitled to greater respect.

He was an ardent lover of nature, and it had been his custom for many years to annually spend from one to three months in the Adirondacks, which he was wont to call "The Promised Land." Although familiar with all sections of the wilderness, his favorite resort was the Bisby Lake region, and he had a beautiful summer home on the First Bisby. He was one of the charter members of the Bisby Lake Club, and held the office of president from the date of its organization to the time of his death. This club was the first one in the Adirondacks to have a preserve of its own. He was also a member of the Adirondack League Club.

He enjoyed life in the woods exceedingly, and to him nature unfolded many interesting secrets which are revealed only to the keen and appreciative observer and the apt and sympathetic student. He loved the grand old mountains, the placid liquid gems with which the wilderness is so freely adorned, the rushing streams, the majestic forest trees, the red granite rocks and the ferns and sedges growing beside the solitary foot-path, over which he passed when following a blazed line from one favorite haunt to another. With child-like pleasure he noted the advent of the hepaticas and trilliums in the spring-time, admired the orchids and pond lilies of mid-summer, and the golden rods and asters of early fall. He watched with interest the development of the vernal foliage and loved to see the forest clad in tender green. The deeper hues of maturer months were equally pleasing to his eye, and he gloried in the gorgeous tints with which artistic autumn paints the later landscapes. He loved the birds, both large and small, the robins, white-throated sparrows, hermit thrushes, partridges, king fishers, loons and gulls and they never had a truer friend. He delighted to study the habits of the speckled trout, lake trout and other denizens of Adirondack waters, and it was largely through his personal efforts that the Bisbys and neighboring lakes were kept liberally stocked with fish. The hiding-places and favorite runways of the deer were known to him, and he was always a great admirer of this noble game and an earnest advocate of measures calculated for their protection. All other animals, which are not destructive, found in him a defender, and he knew their ways and habits better than most men. He was an enthusiastic angler, and could handle a trolling line when lake fishing or a fly rod when whipping a stream for brook trout with a dexterity equaled by few. He enjoyed the sport of hunting, and was formerly expert with both rifle and shot gun. In fact, he was a true woodsman in every sense of the term, and in his younger days could follow a line of marked trees, carry a pack, build a bark camp, cut wood for the fire, cook a meal, row or paddle a boat as occasion might require. He did not need the help of guides, although for convenience he employed them.

The subject of Adirondack forest protection was one in which he manifested a deep and abiding interest.

FRESH-WATER SHRIMP.

The sea horses and pipe fish in the Fish Commission Aquarium, in Washington, are fed upon river shrimp or water fleas. They have steadily refused all other food, but are very fond of the diet now provided for them.

Desiring to know the scientific name of the animal some specimens were sent to Mr. J. E. Benedict at the National Museum, who pronounced them probably the Gammarus fasciatus Say. That species is exceedingly abundant, and ranges in fresh waters from Virginia, northward and westward to Michigan.

It seems likely that the shrimp of Caledonia Creek, which is so famous as a natural food of trout, belongs to a different species, as it is much larger than the Potomac River fleas and more nearly red in color. These little animals are scarcely more than one-half inch long, but they constitute the best food for trout of suitable age.

If the proper examination were made in trout regions no doubt the water shrimp would be found present in abundance. A singular name for it comes from Bedford, Pa., the euphonious name of "curly jukes."

T. H. B.

Game and Fish Protection.

CHICAGO AND THE WEST.

FATAL ILLNESS OF THE BLOW BILL.

Chicago, Ill., Feb. 16.—For two weeks or more, Chicago and Illinois have been much torn up over the proposed measure known as the Blow Bill. Not much news is left of it all this week, and the gist of that is that the bill is doubtless dead. It will never get out of the House Committee, even if the Senate should pass it, and even should it ever come to a vote it would probably be killed in the House. A surprising development of affairs at Springfield is a growing sentiment among the legislators against longer seasons or an easier destruction of the game.

THE JOINT LEGISLATIVE COMMITTEE.

At the joint committee meeting of the legislators last Wednesday, there were present for the sportsmen Mr. R. S. Mott, of the law committee of the Illinois Association, Mr. W. L. Shepard, President, and Mr. H. M. Meyer, Secretary; Mr. L. MacFarlane, and Mr. C. S. Wilcox, of the Executive Committee also were of the party. Mr. J. S. Baird and Mr. M. R. Bortree represented "the citizens of Illinois." There were 7 South Water street representatives on hand, their spokesman being as usual Mr. G. W. Barnett. Warden Blow was also there. The joint committee arranged to hear the speeches of the representatives of the above interests, giving the leading speakers 15 minutes each.

It was at first arranged that the sportsmen should open the ball, but Mr. Mott, who has very ably all along handled the legal case for the sportsmen, shrewdly suggested that as the sportsmen had no measure to put or propose, but simply said they did not want a new law, the burden of proof lay with those who did want a new one, and that the latter should first state their case.

Mr. Barnett opened for the game dealers and made a good talk, dealing as much as possible in generalities, and using the same old specious argument about the right to handle game once killed. He kept very silent about the game shipments from other States, but offered the inestimable privilege to Illinois' shooters of making laws for Illinois, which has little game left. This little the dealers wanted the privilege of selling for four months.

Mr. Barnett was careful, but he had a bad quarter of an hour before he sat down. Senator Berry, of the committee, extracted from him many admissions as to the real workings of the Blow bill should it become a law. He forced Mr. Barnett to admit that the law would open the market for the sale of the game of other States the year round, that it would endanger Illinois game, which could not be detected from foreign game, and that it would throw the burden of proof on the State, whereas, under the old law, the burden of proof was on the dealer. Mr. Barnett's case was none the better for Senator Berry's questioning.

Mr. Mott took the floor for the sportsmen, and made a clean, telling speech, subjecting the Blow bill to the criticisms which have already appeared in Forest and Stream. He took up the question of the burden of proof, and showed what the change of this onus would mean. He showed how the Blow bill could be used to create a demand for summer sale of game to clubs, hotels etc., and pointed out what he called the natural selling season of game. He touched on the constitutionality of the laws lately construed as forbidding the importation of game from other States, citing the excellent recent cases of Ohio and Minnesota. He then showed many errors, omissions and cancelments of the Blow bill, and in fact in every word of his telling speech did valuable service to the cause of sportsmanship in Illinois. Mr. Mott's ideas are incisive and direct, and his method of presenting them clear and forcible. He took up nothing in the way of generalities, and attacked only the bill in hand, showing how sorry a substitute it was for the present law. Mr. Mott's speech was one of value to the Illinois Association, on whose law committee he serves.

Mr. F. S. Baird was then given the floor, and stated that he represented no body of sportsmen, but stood by the citizens and of his own right. Mr. Baird showed the inwardness and the animus of the Blow bill, and then launched into an arraignment of the record and the motives of Warden Blow, whom he ripped up the back in red hot shape. Probably no game warden ever before sat in front of a body gathered for such purposes and listened to such charges brought in such a manner.

Warden Blow was allowed the floor in reply. He said that he had framed the bill, "in the interest of the whole people," though it wasn't turning out just the way he thought it would. He replied as best he could to Mr. Baird's charges, and then swung into his same old speech, which some of us have heard before, how he was great and good as they made 'em; how he had slept under haystacks to arrest violators; how he had 1,207 or 1,213 letters of endorsement, which he would file with the committee.

Mr. Baird was given five minutes to rebut Mr. Blow, and he asked the latter some hard questions. Mr. Mott developed from Mr. Blow that under his bill there could exist in Illinois a traffic in the eggs of game birds. Mr. Mott got out of Mr. Sloane, the South Water street dealer, the information that Montreal, Can., was one of the greatest purchasers of Chicago game. Turning to the committee he said: "And by this law our game can go to Canada the year round. But how much game can be shipped from Canada here? They legislate against us, and tax us to shoot there. Shall we legislate in their especial benefit?" Mr. Blow stood cross-examination very badly.

Mr. M. R. Bortree, of the N. G. B. and F. P. Association, was then given 5 minutes to talk on game protection and legislation and filled the time well, devoting part of it to arguments in favor of the idea of a tax on guns for the purpose of creating a protective fund. Mr. Barnett followed this in a 5 minutes closing speech.

Members of both committees said after the adjournment, that neither this nor any other Blow bill could pass the committee rooms. The sportsmen have every reason to believe their work has been well done, and that the Blow bill is in its last and fatal illness. The sportsmen were gratified at the courteous treatment accorded them and at the unexpected and intelligent interest which seems to have arisen in game protective matters among the legislators from the lower part of the State.

A LUCKY BLUNDER.

Much has been said about the blunder made by the sportsmen in their quasi-endorsement of a Blow bill at an earlier date in these complications, and it is called to mind that the bill had been published long before. It may have been published, but it had no publicity. It came to the Executive Committee unheralded and unknown, but said to be endorsed by lawyers. If in their hurried action that committee made any blunder, it was the luckiest blunder ever made in the history of sportsmanship. The result has been the greatest stir over protective matters ever known in this country. The daily papers have been full of this fight, and the Legislature is full of it, and there has been more talk and more growth of good game sentiment over it than has occurred in the last ten years. The most fatal foes sportsmen meet in their efforts of legislation are indifference and ignorance on game matters. These have never broken down so fast and generally in Illinois as they have in the past two weeks. We are open for a few more blunders whose results shall be so valuable.

THE NOBLE ART OF HEDGING.

Seeing that its measure is all wrong and doomed to defeat, or perhaps realizing that defeat is the only possibility it can win in either event, the Chicago alleged sporting periodical now known as the Game Dealers' Friend, is trying to hedge and get back into line. Its cry is now for "compromise." I should think it had already compromised itself enough. Just now its idea of sportsmen's journalism is to hold conclaves with the game dealers and the renegade Warden Blow. It held one of these sessions last Saturday, and announced one for to-day. On the latter there was a sad, cold frost. The game dealers, realizing that their newspaper ally was no good, forgot to attend the meeting. Mr. R. S. Mott, attorney for the sportsmen, was on hand to see what was going on, and so was Warden Blow, and so was the representative of the Game Dealers' Friend, whose officiousness has just gotten him into such serious trouble, and who now is anxious to get back under cover. To Mr. Mott, the latter admitted, that its pet, the Blow bill, was dead.

BLOW'S FLOP.

Warden Blow also admitted that his bill could not pass, and admitted that he had made a mistake. The details of his private conversation with a certain gentleman come to me under the seal of confidence, and as such must be respected by this paper, as communications of like nature always are. The Game Dealers' Friend speaks untruthfully, or more plainly, lies when it states that any Forest and Stream representative ever said he would publish confidential matter. What was said was that if excluded from a committee meeting the newspaper men present "would get the news anyhow." Forest and Stream printed the committee's criticisms on the Blow bill a week ahead of the Game Dealers' Friend, and hence the latter sneaks behind the first possible coat tail. It need not worry over so small a "scoop" as that. Forest and Stream has beaten it worse in the past and will beat it worse in the future, and will beat it on the Blow bill issue, which is dead to-day.

I can, then, only say that I have the most damaging admissions from Blow. On my own responsibility, without giving any reasons for it, I can say that Blow has flopped. He realizes that his egotism and love of notoriety have misled him. To-day he wants to get back into line.

To Mr. Mott, Blow said that he would now try to get passed any bill that he, Mr. Mott, would draft. Mr. Mott at once framed a red hot sportsmen's bill, prohibiting the sale of any Illinois game at any season, limiting the sale of foreign game to Oct. 15 to Feb. 1, and providing for arrest without warrant and seizure of illegal game on sight. Blow meekly said he would try and get this bill passed. If he does, he will be a warden without a "theory," and will have to fight his old friends, the game dealers. If the Game Dealers' Friend supports this measure, there will be in evidence one of the most ludicrous instances of the crawfish act on record in the history of misguided journalism. This act is now due, and is foreshadowed in certain long and visionary utterances—which one finds oneself not quite able to read through—in this week's issue of the Game Dealers' Friend. It really makes small difference at any time, and no difference whatever now, what measure the unfortunate Chicago journal supports or does not support. The sportsmen's interests have proved too strong for it to kill. It is hardly likely, however, that any new bill will receive much consideration at Springfield. It could not pass the Senate committee at best. The likelihood now is that the old law will be left unchanged. If there be any change it will be in the interest of the sportsmen. Mr. Mott stated the case to me exactly this afternoon.

"'They asked me what I was willing to do 'by way of compromise?' 'Compromise?' I said, 'What have we to compromise on? We've got you fellows licked, and you know it. I don't believe in compromising with a man after I have got him licked.'"

THE DEALERS ET. AL. BEATEN.

The vote at Springfield is not yet in, but it certainly seems that the game dealers and their friends, who were so bumptious and eager to fight the sportsmen, have been "licked" in fair fight. The Blow bill is a dead bill. If he brings in a new bill, he may make a sounding of trumpets, and so may the Game Dealers' Friend; but it will be over a bill framed by Robins S. Mott, of the law committee of the Illinois State Sportsmen's Association. In view of Blow's record in the past, it will be very well to watch closely that he does not tamper or tinker with even a straight sportsmen's measure. Blow is a dangerous man to trust. If the sportsmen want to introduce a new measure, the best thing to do is to introduce it themselves. The last thing to do is to trust the man Blow, who has done all he could to sell out the sportsmen of the State.

At any rate, the fight is over and the flop of the opposition is over. The sportsmen have won. Let the renegade warden any the renegade dealers' organ hustle to get back into line. Thed have had a good drubbing, both of them.

In his speech at Springfield game dealer Barnett said that at the close of the selling season this winter, $30,000 of game went East from Chicago at one consignment, also 40,000 pounds of other game. At hearing these figures, which the dealers advanced as proof of the loss sustained by the Chicago trade, Col. C. E. Felton, of Chicago, a prominent sportsman who has had a leaning toward the idea of commercial property in game, legally acquired, was dumbfounded. "If that is so," said he, "if there was so much game in Chicago markets, then I must change my former beliefs. We must certainly limit this selling season."

At Springfield, the representative who has been getting the Chicago paper above referred to into such a tangle, went to Mr. M. R. Bortree, and said: "What am I going to do? I'm in trouble. On one side they are crying to close the markets, and on the other, to open them. What am I going to do?"

"Do!" said Mr. Bortree, "Why, do what any real sportsmen's paper ought to do. Come out and define yourself. Come out and declare yourself against the sale of game under any circumstances! If you don't, in five years there won't be any need for your paper."

Some day the Chicago paper will do this, perhaps. To me, Mr. Bortree said that in one year the Forest and Stream doctrine, "Stop the sale of game," would be acknowledged as the right doctrine, and in ten years it will be the accepted doctrine, if not the accomplished fact of the sportsmanship of America.

SUMMARY.

To-day, F. M. Smith, the heaviest game dealer in Chicaog, said that the Blow bill would not pass.

To-day the Game Dealers' Friend admitted its belief that the Blow bill was dead.

To-day, Warden Charles H. Blow admitted that the bill would not pass, said he wanted to get back with the sportsmen, and would now advocate any bill they would get up.

To-day Warden Blow and all those who aided him in his attempt to sell out and clean out this State deserve to be taken by the ear and gently led to the outside of the door of honest and rational sportsmanship.

Look out next week for a new Blow bill, not drafted by himself and colleagues.

Look out next week for a repentant whoop of "compromise."

Look out for the triumph in 1895 of the sportsmen of Illinois and the greatest victory they ever won.

Look out next week and all the time, every week, for Forest and Stream when it comes to a question of honest and genuine sportsmanship.

And incidentally, gentlemen, let us stop the sale of game. If not entirely, then every inch and iota that we can, in Illinois, Dakota, New York, everywhere.

909 Security Building, Chicago. E. HOUGH.

Advice is Cheap.

Touching the prospects and plans of the Connecticut Association of Farmers and Sportsmen for the protection of game and fish, the prospects are at present not of a remarkable brilliancy. The plans were for the vigorous enforcement of the game and fish laws—the plans remain the same. In the first place it will be well to remember that the Association is a voluntary one, and it moved along very nicely for a few years with funds. When the funds were exhausted the work stopped.

The farmers were admitted free, and the sportsmen were to furnish the funds, for work. I find, however, that the sportsmen, the ones mostly interested, are not willing to help financially to prosecute violators of game and fish laws. But help with advice, how to do the work, and how not to do the work, came pouring in (without the needed dollars) in such a manner that we have stored and on hand a large reserve fund of advise. This fund still increases, but as an asset it counts nothing. Our record is 175 successful prosecutions.

Giving advice is like the Western man's way who was afraid of bears. One night there came rushing into his cabin a very large and apparently vicious bear. The man quickly climbed the ladder leading to the loft above, and when there, in his usual cautious manner he pulled the ladder up, so the bear could not get at him.

The man's wife, being left on the first floor with bruin, the situation was critical, as the means for going higher was cut off by her loving husband's solicitude about himself. The woman seized a burning brand from the fire-place, and commenced to belabor bruin with it. Then the loving husband peered down and tendered his valuable advice as follows: "Hit 'im on this side, Mary; now hit 'im on 'tother side, Mary." The good woman succeeded in driving bruin from the cabin, and the cautious and discreet husband let the ladder down, and came down himself saying: "We licked 'im good, Mary, didn't we?" So much for advice.

Not long since, I received word that fish were being netted contrary to law in a lake, about forty miles from this city. I sent a detective there with instructions to catch any person violating the law. He caught a man taking up his net, and brought him before the party making the original complaint, this man objected to the netter being prosecuted, and prevailed on the detective to let him go. The party making the complaint said (naming certain parties) "are the ones to be caught." The dectective wired me what to do. I replied, "Stay and get evidence against the President of the United States or any others violating the law relating to fishing." The detective soon obtained evidence against several persons according to law. I then turned my attention to the first man, and brought him before another justice of the peace who fined the netter, much to the disgust of the prominent sportsman.

This is simply a sample case of the way sportsmen as a rule take hold of game and fish law prosecutions. They show unusual force and vigor and exceptional vitality, in wishing some poor "poacher" arrested, and signs of a rickety constitution when a prominent man is brought up with a round turn.

They remind me of the woman who had attended the ambulance classes and obtained the certificate. The street accident she had earnestly prayed for took place. A man had broken his leg. She confiscated the walking stick of a passer-by and broke it into three pieces for splints. She tore up her skirt for bandages. When all was completed, she summoned a cab and took her patient to the hospital.

"Who bandaged this limb so creditably?" inquired the surgeon.

"I did," she blushingly replied.

"Well, it is most beautifully done—most beautifully done; but you have made, I think, one little mistake. You have bandaged the wrong leg."

The prosecution of poor "poachers" and letting prominent persons go scot free is—"bandaging the wrong leg."

There are men who have a chameleon facility for assumin the guise of sportsmen, while sportsmen (as I understand the term) should be recognized with a pathetic certainty; they are men who are ever ready at all times to prosecute all wilful violators of the game and fish laws. This week I was approached by a gentleman connected with our present Legislature, who asked my opinion about taking the month of June out of our open season (now from April 1 to July 1). I asked the reason for the proposed change. He said, "In my county our streams are very low in the month of June, and the trout are netted." "Why do you not see that the persons netting trout are prosecuted, you are a lawyer," I replied. He said, "the persons that net the trout are friends of mine, and they would kill my business, they are lawyers and judges."

I then told him that, if "persons were mean enough to net trout in June, the mere matter of changing the date would not stop the work."

Such valuable information, tendered me by this sportsman, reminds me of the following story:

Daughter—"Mamma, that strange gentleman, who just got out, kissed me when we were going through the tunnel."

Mother—"Child, why didn't you tell me at once, so I could call him to account?"

Daughter—"Because, mamma, I—I thought we were coming to another tunnel." A. C. COLINS.

President Connecticut Association of Sportsmen and Farmers for the Protection of Fish and Game.

Michigan Game Laws.

Editor of Forest and Stream: The amendments to the existing game laws which the State Fish and Game League, at the recent meeting at Lansing, determined to ask from the Legislature, do not meet with the approval of certain parties in the State and out of it. Nor was it expected that they would please those who abominate any and all measures which look toward game protection. So long as men have porcine natures, just so long will they resist with porcine noises and porcine stubbornness any action which threatens to curtail the gratification of their porcine desires. This class is now talking loud, in the hope of influencing our legislators against the proposed amendments.

The proposition to make the open season for deer the same all through the State is open to some objections, but it is not without its advantages. As the seasons now are, two classes are especially the gainers. These are the wealthy who have time and means at command to enable them to spend three weeks in the Upper Peninsula and then come down and put in three more in the Lower Peninsula, and the market hunters, who invariably pursue the deer to the last legal minute and as much longer as it is safe to do so.

A season identical in both sections will cut their time down one half, the gain being on the side of the deer.

The proposed open time, Oct. 10 to 31, is rather too early for the Lower Peninsula, the weather at that time ordinarily being too warm for hunting. The leaves are still thick on the scrub oaks with which nearly all the old pine choppings are overgrown, and nobody but the man who has tried to stalk deer in scrub oak thickets, knows how those pesky leaves will rasp against his clothing in spite of all his care. Nothing takes them off until the snow comes and freezes to them, weighting them down so that the wind carries them to the ground. The still hunter, too, is always longing for snow to assist him in tracking the deer and an open season in October will certainly deprive the hunter of the Lower Peninsula of that aid. A better open season than that proposed would be Oct. 20 to Nov. 10, certainly not too early in the lower part of the State, nor, I think, too late in the upper Peninsula. However, if the Solons say Oct. 10 to 31, let it go. It will be so much the better for the deer. Driving deer with dogs—"a-haoundin' on 'em," in local parlance—has long been under the ban of the law, but the hound's mellow bay is still far too frequently heard on the trail of deer, in this neck o' the woods. And more deer are killed in the water—contrary to law—than out of it.

For my own part, I must confess that I prefer to hunt with dogs, and I am not a lazy hunter, either. I love to hear their faint, bell-like tones in the far distance, now swelling as the chase leads over some thinly clothed ridge, now dying away in the thick cover of some dense swamp until my strained senses lose it or mistake for it the beating of the hot blood in my ears. And then that grand burst of music, filling the air with maddening pulsations. When having aroused the quarry, they follow his flying footstep, straight toward the water which he knows will afford him safety—from them, at least—tearing the morning air with lusty mouthings at every bound! He who could listen unmoved by such music; whose pulses would not bound; whose eye would not flash lightning glances hither and yon in search of the coming deer; whose breath would not come quick and hard, whose very soul would not be moved within him, he indeed "would be fit for treason, stratagems and spoils!" I would not lend him my oldest gun, not to mention my dog.

As to the claim that driving deer with dogs tends to run them out of the country, I have my own opinion about that, and it is shared by no less an authority than Mr. S. S. Van Dyke, the author of that most excellent work, "The Still Hunter." So far as my own modest experience as a deer hunter goes—my hunting has been confined to Manistee County—I am satisfied that the dogs frighten the deer far less than the still hunters do. Every farmer keeps a dog, and the dog is constantly chasing the deer which feed, oftentimes with, or near the farmer's cattle, which browse at their own sweet will in the unfenced choppings. The deer easily shake the dog—seldom a good one—off, and soon learn to hold dogs in general in contempt.

I used to hunt for several years at a place that was not affected by any hunters except our own party. Three or four miles back of us there were always a plenty of still hunters. At the opening of the season we seldom had any success, but with each succeeding day the deer came into our section more and more, running away from the still hunters, and apparently untroubled by our morning run with our dogs. The last of the season was invariably the best for us, and as invariably the poorest for the still hunters back of us. Having stated my position and belief as to the dog question, I will now hasten to add that the law relating to the use of dogs in hunting deer should be more rigidly enforced. Why? Because those who use dogs will kill the deer in the water, law or no law. That is the trouble. The average hunter cannot kill a running deer once in four times, and he knows it; consequently, he posts himself near some lake or river, waits until the deer has entered the water, and then opens fire with his magazine rifle, which permits of such rapid shooting that he may miss half a dozen times and yet kill with a lucky shot. The deer must have a chance and the dog hunting must stop. But I do love to hear a good dog!

The proposed provision that deer shall not be transported by common carriers unless accompanied by the owner, is a good one. It can be got around by shipping under cover, but it will help. So will the provision to limit each man's bag to two deer. Two are enough for anybody, except the meat hunter. I would go another step, and prohibit the sale of game, especially deer. So long as an open market can be found for them, so long will the pot hunter have an incentive and an inducement to kill all he can. Take away his market and his occupation will be gone.

Go still another step, and prohibit the killing of does and fawns, at least for five years. Buck's meat, especially if the buck be old, is tough, but we can stand it for that length of time.

But what we need here in Michigan, far more than we need better game laws, is the better enforcement of the laws we now have. All the old denuded pine lands are wild and sparsely settled. The settlers, as a rule, are not in favor of game laws and violate them constantly. One warden, or two, in a county can do little or nothing in such a country and against such a sentiment. Every man's hand is opposed to him, and the only assistance he receives is from the Protective Associations in some of the larger cities. Convictions are hard to secure, and fines which country justices unwillingly assess are often ridiculously small. However, the protection idea is slowly gaining ground, and those who believe in it must keep up their courage and keep the protection snow-ball rolling. There are more deer now in Lower Michigan than there were five years ago, if common report is true, and there is no reason why they should not continue to increase. I hope that the amendments will be passed by the Legislature, and I hope that the State Game Warden will be more liberally treated in the matter of an allowance for prosecuting his work. F. A. MITCHELL.

Manistee, Mich.

New York Game Code.

The bill prepared by the Senate Committee of the New York Legislature to amend the game code has been submitted. The main provisions of the measure are here outlined. The close seasons named in the bill for the State at large are as follows, the present close seasons being given for purposes of comparison:

	Present Law.	Proposed Law.
Deer	Nov. 1 to Aug. 15.	Oct. 21 to Aug. 15.
Hounding	Oct. 11 to Sept. 10.	Oct. 16 to Aug. 31.
Squirrels	Jan. 1 to Sept. 1.	Dec. 1 to Aug. 31.
Hare	Jan. 1 to Sept. 1.	Dec. 1 to Aug. 31.
Wild fowl	March 1 to Sept. 1.	April 30 to Sept. 1.
Quail	Jan 1 to Nov. 1.	Jan. 1 to Oct. 31.
Woodcock	Jan. 1 to Aug. 15.	Jan. 1 to Aug. 15.
Grouse	Jan. 1 to Aug. 15.	Jan. 1 to Aug. 15.
Snipe	May 1 to Sept. 1.	May 1 to Aug. 31.
Meadow Lark	Jan. 1 to Nov. 1.	Jan. 1 to Sept. 30.
Trout	Sep. 1 to April 1.	Sept. 1 to April 15.
Salmon Trout	Oct. 1 to May 1.	Oct. 1 to April 30.
Land Locked Salmon.	Oct. 1 to May 1.	Oct. 1 to April 30.
Black Bass	Jan. 1 to May 30.	Jan. 1 to May 29.
Muskallonge	Jan. 1 to May 30.	Jan. 1 to May 29.
Salmon	Aug. 15 to March 1.	Aug. 15 to March 1
Pickerel	Not Protected.	Jan. 1 to May 29.
Pike	Not Protected.	Jan. 1 to May 29.
Wall Eyed Pike	Not Protected.	Jan. 1 to May 29.

Deer are protected for five years in Ulster, Greene, Sullivan and Delaware counties. One person may kill only two deer in a season. Transportation forbidden except of one carcass with owner. Sale forbidden from Oct. 31 to Nov. 10, except of venison killed out of State in open season. Hounding always forbidden in St. Lawrence, Delaware, Greene, Ulster, and Sullivan. Killing of fawns, working and yarding forbidden.

Ferrets for rabbit hunting forbidden. Rabbit close season in counties of St. Lawrence, Franklin, Essex, Clinton, Lewis, Warren, Hamilton, Herkimer, Richmond, except Aug. 16 to Dec. 31.

Bounty on for, $3, bear, $10, grown wolf, $30, pup wolf, $15, panther, $20.

Wild fowl shall not be pursued or killed between sunset and daylight, nor from "anyother than a boat propelled by hand or floating device," nor bough house more than 50 feet from shore. Boats propelled by hand may be used on the Hudson River below the Troy dam.

Quail shall not be killed in Genesee, Wyoming, Orleans, Livingston, Monroe, Cayuga, Seneca, Wayne, Tompkins, Tioga, Onondaga, Ontario, Steuben, Cortland and Otsego counties prior to Nov. 1, 1898.

Woodcock and grouse shall not be transported unless accompanied by owner.

Wild birds protected do not include English sparrow, crow, hawk, raven, crane, crow-black bird, common black bird, kingfisher.

Mongolian pheasants are protected to 1897.

Ice fishing is forbidden in waters inhabited by trout, salmon trout, or land locked salmon. Lake Ontario, Lake Erie, Hudson and Niagara Rivers, excepted.

Trout, land locked salmon, salmon trout, may not be taken of less than six inches. They may not be transported save when accompanied by owner.

Black bass may not be taken under eight inches. Close season for Lake George except from Aug. 1 to Dec. 31.

Salt water striped bass may not be taken under eight inches; nor shall striped bass be fished for between Jan. 1 and April 30.

All county supervisor's fish and game ordinances shall be repealed by this act and supervisors shall not be empowered to legislate on species of fish and game named in the act.

The Long Island close seasons named in the bill are: Wild fowl, May 1 to Sept. 30; Plover, snipe, shore brids, except from May 16 to Dec. 31; ruffed grouse, Jan. 1 to Oct. 31; woodcock, Jan. 1 to July 31; meadow hens, Aug. 16 to Dec. 31; hare, rabbit, Nov. 1 to Dec. 31; deer are protected for two years from passage of the act, and for every alternate two years thereafter. In the open years the close period is except from Nov. 10 to Nov. 16. Black and gray squirrels, except from Nov. 1 to Dec. 31; Trout, except from March 29 to July 31; salmon trout, land locked salmon, except from April 1 to Sept. 30; black bass except from May 30 to Dec. 31.

Floating devices, sail boat and boats propelled by hand may be used for wild fowl shooting in Long Island Sound, Great South Bay, West of Smith's Point, Shinnecock and Peconic Bay.

Maine Legislation.

Editor Forest and Stream: The work of the Legislature in Maine in passing game laws, shows a lively interest, and an appreciation of the benefits that come to the State. The Maine Sportsmen's Fish and Game Association are so far getting all legislation asked for. The general law asked for, which will put the control of fishing in the hands of the Fish and Game Commissioners, has received strenuous opposition from some leading members of the Legislature, the matter being presented in three different reports from the Judiciary Committee, to which the bill was referred—one report is that the legislation is inexpedient. Another is a bill, but gives no authority to the Commissioners to limit or control the taking of fish in waters where prohibition is needed. The other bill gives them this power, and will do away with special legislation, as has been recommended by the Governor. The Maine Sportsmen's Association favor the last bill, which is assigned for the 28th. If this bill is secured, then a large appropriation will be urged for the propagation and protection of fish and game. The outlook is good for securing these needed measures.

The opinion expressed in the Forest and Stream that the people of Maine wanted a law licensing sportsmen coming into the State, is not correct. This suggestion is made by only a very few, and does not represent the feeling in this State. The people are realizing the benefits that come to the State from sportsmen that come here, and the great aim and effort is to make it more pleasant for those coming, and have the fish and game increased. They do propose, as the increased penalties of laws passed, making imprisonment part of the penalty for such as come here and kill the game illegally; to make it exceedingly warm for such sportsmen. The whole warden system will be changed by the law now proposed, and an effort made to enforce the laws to the letter. CHANDLER.

FIXTURES.

BENCH SHOWS.

March 5 to 8—Chicago.—Mascoutah K. C., J. L. Lincoln, Sec'y.
March 12 to 15—Denver.—Western K. C. Co., E. T. Weiant, Sec'y
April 10 to 13.—Pittsburgh—Duquesne K.C. W. E. Littel, Sec'y.
April 16 to 19—Boston.—New England Kennel Club. D. E. Lovenand, Sec'y.
April 17 to 20. Los Angeles—Southern Cal. Kennel Club.
May 8 to 11—San Francisco, Cal.—Pacific Kennel Club.
Oct. 8 to 11.—Danbury, Conn.—Danbury Agricultural Society G. L. Rundle, Sec'y.

FIELD TRIALS.

Sept. 10—Morris, Man.—Manitoba F. T. C., John Woolton, Manitou, Sec'y.
Nov. 5.—Chatham, Ont.—International F. T. Club. W. B. Wells Sec'y.

NEW YORK DOG SHOW

Feb. 19-22. Entries, 1607. Dogs Benched, 1406.

A great success was the general verdict. And the nineteenth dog show, held by the Westminster Kennel Club, will pass into kennel history as a record event. With a larger entry than ever before, it became a question of no little importance how to provide benching for such a number of dogs on the limited space, comparatively, at command, but that Spratts Co. solved the problem satisfactorily everyone conceded, although to do it the aisles, among the larger dogs, had to be made a little narrower, and with the great crush at times, these passageways were almost impassable. The toy dogs were not placed in a very acceptable manner. They faced the wrong way in the passage, on the top row of the amphitheatre seats, and as there was little space between the cages and outside wall, the crush was terrific at times and many visitors could not get a glimpse at the little ones. Six rings on the main floor afforded ample room for judging. A new move on the part of the management was the employment of a batch of Italian attendants, a scheme that did not work very well. Although good and willing workers, their ignorance of the English language and aptitude for dog handling, provoked many an aggravated smile. The judging was in many classes considerably delayed and the Italian attendants with the crowded aisles may account for it. The judges on the whole got through their tasks acceptably, and compared to the entry and number of exhibitors, there was little hard feeling. Mr. James Taylor, the English judge, had the most arduous task probably of his varied experience; commencing on Tuesday at 10 A. M., he did not finish until Thursday morning, and he can perhaps tell his fellow countrymen how it is we do not clear up the judging of 1,000 dogs in a few hours. Having to take notes on the dogs he judged while in the ring, his classes were considerably delayed in consequence.

Mr. Mortimer managed the show in his usual able manner and the doing of it seems to come more pleasantly and naturally than in early years, still he labored under a heavy weight of sorrow in the very recent death of his eldest son and that he acquitted himself so well shows how thoroughly he is imbued with the kennel show executive ability. Mr. Terry was a busy coadjutor and kept a roving eye on all points; having recovered his health this year, he was able to enter into the full spirit of the affair. Mr. Cornell I also saw busy in the rings, but many of the former active members, while strolling through the aisles every day, confined their attention to sight seeing. The building was at all times sweet and clean, "Sanitas" controlling any odor that might arise. The catalogues were tastefully arranged, the border of the prize diplomas being used as a decoration and a very appropriate one, as the pointer is essentially the W. K. C.'s patron breed.

The quality of the different breeds is spoken of in the detailed report. The weather proved, with the exception of Thursday, which was a little threatening, all that could be desired, and the crowds on Friday must have gone far to fill up the exchequer. Every exhibitor of any note and many who saw their first show put in an appearance during the week, Philadelphia, Baltimore, Washington and Boston being fully represented and to give a tithe of the names would fill too much space. Society, as usual, was out in force, and contributed in no small degree to the brightness of the scene.

The dogs, as a whole, were shown in much better condition, a very gratifying fact, proving that Forest and Stream is read among men.

H. W. LACY.

POINTERS (Charles Heath, Judge).—The classes were quite well filled, and the quality of the dogs was good. Heavy weight dogs, 55 pounds and over, had five entries, of which Champion King of Kent and Robert le Diable were not for competition and the latter was absent. Lad of Kent, shown in excellent condition, won easily over Sanford Druid. Bitches, 50 pounds and over, had four entries. Woolton Game carried

off the honors over Lady Tammany, second, and Josie Bracket. Woolton Game shows age exceedingly and her eyes, too, have become impaired. She still shows, much quality, notwithstanding her aged appearance. Still, against younger and more vigorous bitches, it is doubtful as to her being victorious much longer. Lady Tammany, second, is heavy in shoulders, and her head is not well shaped. Josie Bracket, unnoticed, is better in neck, shoulders, quarters, thighs and general symmetry, and I thought her the better of the two. In respect to Woolton Game and Josie Bracket, it is a question whether the quality of the former is sufficient to offset her aged form and trim over the younger bitch. In open dogs, heavy weights, Sir Walter, an excellent, large pointer, won first over fifteen competitors. His forelegs might have a more even muscular development, but he stands squarely on them; his shoulders are well shaped, body smoothly turned, slightly throaty, good stern, quarters and general symmetry. Prince Regent, second, is a trifle heavy in shoulders, stands on good legs and feet, head not clean cut. Ridgeview Bow, third, is a small heavy weight, nicely shaped, light in muzzle and not shown in the best of condition. Lord Bracken, fourth, is chunky in head, throaty, good body and legs. The reserve, Ridgeview Regent, is ordinary. Twelve competed in the heavy weight bitch class. The quality of the competitors was fairly good. First went to Lass of Kent, plain and short in head, well ribbed body, good neck, legs and feet. Devonshire Pearl won second. She is somewhat too light in bone, narrow in muzzle and too light in back, still she is smoothly turned and has a deal of pointer character. Springside Nell, third, carries some lumber and her head is of the chunky sort. Kent's Belle, fourth, has a narrow muzzle, ears set too high and her shoulders are too heavy. In dogs 50 pounds and under, challenge class, Duke of Hessen, won over Arthur and Ridgeview Tenny, the latter taking second. Duke shows age and he was not in the best of condition. Three competed in the challenge bitch class, Miss Rumor taking the honors, Hempstead Pearl taking second. In light weight dogs, seven competitors, Ridgeview Comet, a good dog, showing some throatiness and lumber in his shoulders, won first. Chancellor, second, has symmetry of form, but is cheeky and throaty. Springside Tammany, third, stands on sound legs and feet, is loaded in shoulders. Ridgeview Prince, fourth, needed more flesh to round him out. He is high on legs, head a trifle narrow; he is a fairly good dog. The reserve, Hempstead Carlo, is long cast. There was quite a good number in the class for light bitches, 18 appearing for judgment, though the quality of the competitors was of the highest order. Springside Lady, first, is light in muzzle, throaty, rather heavy in shoulders. Second went to Springside Jill, well ribbed and well shaped body. Lady Bracken, third and Brighton Faustina, fourth, are fairly good bitches. The rest of the class was about an average lot. Puppies were out in fair numbers, of dogs there were eleven; bitches, ten. Young Americus, a good leggy puppy was first in dogs, second going to a long cast leggy brother, Prince's Boy. The bitches were very ordinary. First went to Phryne, cowhocked, poor in head and ordinary. In novice dogs, Sir Walter, Springside Tammany and Ridgeview Prince won in the order named. In novice bitches, Springside Lady, Springside Jill and Brighton Faustina won in the order named, the same as in light weight bitches. In the field trial class for dogs and bitches, placed in any public field trial in the United States and Canada, the dogs were, one, two, three in the following order, Sanford Druid, Duke of Hessen and Woolton Game. The kennel prize was won by Mr. Geo. J. Gould, with Josie Bracket, Ridgeview Comet, Marguerite Kent and Miss Rumor. His man in charge, A. Warner, had the dogs in fine condition. Lad of Kent won the pointer cup.

ENGLISH SETTERS (John Davidson, Judge).—The quality of the classes was good and the number of entries large, therefore the judging was not easy. Mr. Davidson took great pains with all his classes, but did not succeed quite so happily in pleasing the competitors as in times past. Two, Glendon and Cactus, were competitors in the challenge class. The former is somewhat throaty and lanky, a fairly good head and he has better symmetry and setter character. Cactus, first, is more muscular. His coat was not in first rate condition, he was not so good in head as Glendon, and is a bit heavy in shoulders. In challenge bitches, Spectre won first. She moves badly behind. She is a good looking bitch and was shown in good condition. Albert's Nelllie, second, has thickened in shoulders, and was not in good coat. The reserve, went to Victress Llewellin, shown in good condition, and Blue Nell was vhc. There were 24 competitors in the open dog class. The Earl took first. He is heavy in build, an indifferent mover, good legs and feet, short in neck and something too heavy in shoulders. Though heavy, he has symmetry and is a good setter. Second went to Dad Monarch, a really heavy style of dog though well turned; he is heavy in shoulders, head not clean cut and is somewhat coarse; rather wide in back; thin thigh, stands badly in front and is a poor mover, legs and feet good. He is too heavy in build for the best type of work or beauty. Albert Ranger, third, is a better dog in every respect than Dad, in my opinion. He stands better on his forelegs, has a fairly good head, lean neck well set on good shoulders, back strong and shapely, coat only fair, and he moves well. Harry L., fourth, was not in the best show condition. Body well ribbed, legs and feet well made, head well shaped, ears nicely set on, a sound good dog and a good mover. Roi d'Or, the reserve, is a bit light in muzzle, and heavy in shoulders and does not stand well in front. He is a workmanlike dog. Washtenaw Grouse, a vhc. dog, could closely contest first place with the winner. He was slightly out of coat, but is a symmetrical, sound dog of excellent activity, and has improved in form with age. There were 21 bitces. Countess Zoe took first. She is well known. She is somewhat light in bone and muzzle, though she has a good head, body well ribbed, good quarters and good legs and feet. Second went to Maid Marion, a very good bitch, head too full under eyes. She has a well shaped body and stands on good legs and feet. Furness Maid, third, is only a fairly good bitch. Her head has not sufficient stop. Fourth was won by Nellie Breeze, light in muzzle and heavy in shoulders, and a bit light in bone. She is a fairly good bitch, has symmetry above the average, and is a good mover. The reserve, Albert's Moll, was about average. Wild Rose, vhc., is a sound, active little bitch. There were 12 puppies in the dog class, an average lot. Larkspur, first, is plain in head. Allister MacAllister is coarse in head and has a tendency to coarseness in his makeup. Brighton Prince, third, is plain in head, good legs, feet and symmetry and he moves well. Pontiac, unnoticed, is quite a fair puppy, excepting a poor head and was worthy of notice. There were four puppies in the bitch class. First went to Albert's Daisy Queen, a trimly built bitch, light in bone and plain in head. Lady Platt, second, was thin in flesh, and Vic Hollymere, third, is long cast. In novice dogs, Count Beaufort, a stout built dog, plain in head, and Rockland, ordinary and flat in ribs, and Cincinnatus Pride, were placed in the order named. In novice bitches, the winners were Furness Maid, a fair bitch, thin in flesh, and Lady Gathway and Wild Rose. The Victoria Kennels took the special kennel prize. Roi d'Or had a walk over in the class for dogs which had been placed in any field trials in the United States or Canada.

IRISH SETTERS (J. Davidson Judge).—There was some falling off in the uniform good quality of these dogs, as compared with that of previous years. The challenge class was strong in numbers. Kildare taking first, Finglas second, and Inchiquin, third. The remaining four were Blarney, Jr., Montauk, Jr., Glenmore and Duke Elcho, all well known. There were four bitches in the challenge class, Queen Vic taking first easily, Norna, second, and Delphinne taking third. The open dog class had thirteen competitors. Shamrock O'More, an upstanding dog of superior symmetry, won first. He has good legs and feet, stands squarely on them, body well ribbed, strong quarters, good neck, head not quite clean cut, and he shows a little throatiness. Bob, Jr., second, is high on legs and long cast. The third prize winner, Henmore Shamrock, has a plain, ordinary head, and is an ordinary, good dog otherwise. The reserve went to Dick Finglas, an ordinary dog. The rest of the class was hardly above average. There were 12 bitches in the open class. The winner, Lady May Swiveller, has a poor head and heavy shoulders. Nona, second, has a light head. Eudora, third, is quite a good bitch, well shaped in shoulders, body, head, legs and neck; her coat was faded slightly from exposure. Rosamond, fourth, is light in muzzle and deficient in ribbing. There were 14 dog puppies. First went to Kenmore Shamrock, poor in head, legs and feet good; second, to Glenmore V., a good puppy. Third went to Brian and the reserve to Henmore Shamrock, Jr. Bitch puppies had 6 competitors. Miss Ruby was first, Eudora II., second, and Biddy Finglas was third. Shamrock O'More was an easy first in novice dogs. Chappoquin and Killane, second and third, both being vhc. in the open class. The reserve went to Burke. In novice bitches, Lady May Swiveller was first, River Joe, second and Nancy Finglas, third. In the class for field trial winners, Finglas, Edna H., and Bedford were one, two and three. The kennel prize was won by the Oak Grove Kennels.

GORDON SETTERS (John Davidson, Judge).—The classes were quite well filled. In quality, there was a perceptible falling off. There were 5 in the challenge dog class, and the same number in that for bitches. In dogs, Heather Lad was first, Leo B., second, and Heather York, reserve, the latter better in markings and Gordon Setter character than Leo. In bitches, Highland Vola was first, Heather Bee, second, and Fan, reserve. The open class, dogs, had 5 competitors, of which Highland Kent was first. He was thin in flesh and his tan markings were mixed with black. Dick Noble, second, is light in bone and muzzle, smudgy tan. Heather Bruce, third, is thin in flesh and light in barrel; plain head; ordinary quality. Prince D., fourth, is a coarse dog, still possessing fair setter character. There were 10 bitches in the open class. Dwight Pearl was first. She was closely pressed by Dwight Effie, vhc. Second went to Princess Bonnie, light in barrel, and third to Sally Beaumont, plain in head, pale tan and about average in quality. Maid of Waverly, fourth, is a fair, ordinary bitch. The puppies were a fairly good lot. There were 7 in the dog class, 5 in that for bitches. Many of them were undeveloped. Novice dogs had 4 entries. Dick Noble, Prince D., Nero II., and Duke B., were first, second, third and reserve, respectively. In the field trial class, Count Noble was first, Flomont, second, and Sally Beaumont, third.

CHESAPEAKE BAY DOGS (John Davidson, Judge).—This sterling breed of dogs was represented poorly in respect to numbers, there being but 6 all told, dogs and bitches. First was won easily by Deacon, second, by Pride, coarse in head, but fairly good otherwise, third, by Mary II., and reserve by Tuckermuck Favorite.

ENGLISH RETRIEVERS (John Davidson, Judge).—But two were shown, ordinary specimens. First prize was withheld. Hempstead Jet won second and Physician, third.

B. WATERS.

RUSSIAN WOLF HOUNDS (James Taylor, Judge).—There was a decided falling off in the entries in Russian wolf hounds, where there were but 21 against 30 of 1894. It is greatly to be deplored that such was the case, as I was in hopes of seeing this the banner year, and the fruits of last year's breeding prove to the doggy world we can raise specimens here as good as can be brought over from Russia. We certainly have the best blood attainable, but it is either due to the climatic changes, or the result of in-breeding, that staggers our breeders and prevents them from being able to raise their puppies and thus increase the number of exhibits. That the young ones are hard to raise is exemplified by the fact that the Duchess of Newcastle, with all the modern contrivances and kennel appurtenances, with experienced kennel men, and a celebrated "vet." almost at hand, has lost whole litters, one after the other, which unfortunate experience has fallen to our lot, on this side of the water. Once raised, however, to maturity, they are tougher than the proverbial pine knot and no amount of exposure, wet or rough usage seems to affect them, in the least. No new patrons have risen to bring this breed more prominently before the public, and I must still maintain that the cause is traceable to the ill advised statement made some time ago, and which was that the breed was unreliable, has done more than anything else to retard the advance and appreciation of the merits of the most beautiful and aristocratic breed of dogs, and rob it of the high esteem it should (and finally will) hold in the opinion of all who appreciate beauty of outline, poetry of motion and perfect sweetness of disposition. The absence of Champion Argoss, Leekhoi and Zerry, all in the challenge classes, reduced the entries here to only three for the two classes. Mr. Hanks opened the ball in challenge dogs with Col. Dietz, who, in the absence of Champion Argoss, had a "walk over." The Colonel has wonderfully improved since the last W. K. C. Show, having filled out considerably, and were he to be shown some 15 pounds heavier, the same being put on by good hard work, he would then be about the best dog (barring Champion Argoss) that is now before the public. However, his want of length on his extreme legginess will always prevent him from being a clinker, yet properly shown, he should give many of them a great deal of bother to beat him. Challenge bitches brought together Vinga and Princess Irma. The former met with a mishap on the way to the show, which destroyed all her possible chances of winning, but in whatever condition she might have been before starting, it is very doubtful if she could have beaten Princess Irma, who was shown in the very pink of condition, hard, well rounded, in beautiful coat and full of life and vigor. She has never been shown in such beautiful condition before, and will in the absence of Zerry be a hard nut for any of them to crack, if ever again exhibited as at this show. Ataman IV., a new comer, made here his debut in the open dog class, and while he had the easiest of an easy win, it was due entirely to the fact that he virtually had no competition, scarcely a dog in the class being in condition fit to show at a country fair. Ataman IV. is a memento from Mr. Rousseau, who sent out a consignment of Russian wolf hounds to Mr. Hacke, some years ago, in the entire lot of which there was but one good one, (and she a clinker), the beautiful Armada. Ataman IV. is a big, powerful white dog, with dark orange markings, a fair good head, and of the right length, but possessed of a very short neck, furnished with the most profuse and beautiful ruff I have ever seen on a dog of this breed. He has front length of great strength, bone and straightness, but so heavy are his shoulders and so straight set on, that the usefulness of his legs is greatly impaired. Obliquely set on shoulders, with a free and easy action of the legs, is as essential in a dog who has to depend much upon speed, as on good feet. Being always in favor of first-class feet, Ataman here received my undivided admiration. His ribs are good and well placed, but he is not as strong in back nor as powerful in hind quarters as a dog of his great size should be. His tail is not by any means a typical one, being decidedly marred by a decided upward curve at its base, whereas it should set close and not destroy the cimeter appearance we look for in specimens of this breed. One feature was very noticeable and that, that his hind quarters were not of sufficient power to counteract the fault of the front legs, in fact he seems to have the propelling power at the wrong end of him. Well bent stifles are an essential element in the ultimate success of any specimens of the hound type, yet so straight are Ataman's that his hind legs are almost straight and set very far under the body, thus robbing him of the proper power of propulsion. Little less of leg or more length of body would improve him, and build him on lines we wish to see in a hound, who is expected to do a bit of running on his own account. Sorvanets an old time face, and frequently described in these columns, won the second prize. He has not improved even a little bit in front, since last we saw him, nor is he likely to with age, which fact will always prevent him being in the front row of good ones. Had Trojan been a larger dog, and been shown in better shape, he would have rendered a much better account of himself. I like his type and outline immensely, far better than those of the second prize winner. Odrooski (reserve) was not in it, being shown in wretched condition, and unlike Colonel Dietz, has not improved in form since shown here last time. He is a dog of large frame, excellent type, but cannot win in good company except when properly shown. Zlobeliis, who started the ball rolling in the open bitch class, is somewhat plain in head, has good neck, legs and feet, but is only fair in ribs, back and loin. Her hind legs are set entirely too far under her body to be of proper use to her. Coat of only moderate quality and quantity, to which added her poor condition, did not make her a star of the first magnitude. Zmeika, second, fairly well shown, and heretofore described, deserved the prize she won Her glaring faults, so often commented on, will always prevent her winning premier honors in good company. Mr. Gould's Dagmar had to be content with third place, which might have gone to Lobedga without depreciating the value of the third prize winner. Puppies were four in number only, yet some were of such exquisite quality and outline, that they compensated for the fewness of entries. Leekhoi the Great could easily have given way to Alma for first prize, while Inkerman, third, should have been second, with Leekhoi in his place. There was far more quality and beauty of type in this class than in the open bitches, and had the pups been properly shown, they would have greatly enhanced the value of the exhibit. It has always appeared to me to be almost a fatal error to exhibit dogs out of condition, and to be far wiser to keep at home those that are not fit, than to tote them off to a show, thin and out of coat, devoid of life and spirits simply in the hopes that the competing ones shall be in even worse condition and so win a prize or two. However conscientious a judge may be, his first or previous impression of a dog may and is likely to be most lasting, and when one is brought out of coat, he remembers it in spite of himself, which militates against the dog's success or redounds to the advantage of his competitor. With the exception of Princess Irma, there was not one Russian wolfhound which could be said to have been shown in fine form. Certainly not in form consistent with the magnitude of such a grand show as the W. K. C. of 1895. Mr. Hanks had no trouble to carry off the W. K. C.'s special for the best kennel of Russian wolfhounds.

DEER HOUNDS (James Taylor, Judge).—The absence of Mr. Thayer's kennel of grand dogs reduced the entries in the four classes to a paltry three. Mr. Page's Lochiel had an easy win over Stag. Lochiel was well shown, and is a dog that will take some beating. First prize was withheld, and properly, too, in the bitch class, the second prize being awarded to a poor specimen.

GREYHOUNDS (James Taylor, Judge).—The entries here fell off from 42 of last year to 37 for this year, and while we note a decrease in numbers, the quality seemed to be much better, due largely to the recent importations. However much a judge may try, he cannot please everyone, yet it strikes me most forcibly, that however hard Mr. Taylor could have tried, he could not possibly have given less satisfaction to the "talent," and the laity as well. He jumped from one extreme decision to another, with such rapid movement that it made one fairly dizzy and thus set each exhibitor on tenter hooks to know what next to expect. Having heard Mr. Taylor was emphatically "a greyhound man," I looked with amazement on some of his awards. Some good specimens were sent off without even a c. card, much to the discomfort of the exhibitors. Gem of the Season was awarded first prize in the challenge class of dogs, a decision I do not think a single greyhound man could endorse. He has deteriorated greatly since the W. K. C. of 1894, having grown decidedly heavy in shoulders, while he appears to be more shoveled off back of the ribs than ever. Added to these, his left hind foot is in very bad shape, so I cannot bring myself to indorse the award; third prize would have been about the right thing for him in the condition in which he was shown. The second prize should have rested between Imperator and Lord Neverstill, and had the latter taken the blue ribbon, no harm would have been done. Imperator was shown in beautiful form, and as sleek as a mole, his black coat shining like satin, yet on account of his smallness as well as being so short coupled, I hardly see how he could have beaten the brindle with anything to spare. Lord Neverstill is a big, upstanding dog, with a very gamey appearance, grand legs and feet, but whose neck might be a bit longer to enable him all the easier to pick up a jack rabbit, a trifle straight in shoulders, nor does he cover as much ground as I look for, yet he has wonderful loin, back and quarters, essential qualities in a good greyhound. Both Imperator and Lord Neverstill are young and sound, neither of which cardinal virtues are possessed by Gem.

In challenge class bitches the judge awarded the blue ribbon to Bestwood Daisy, an award which I consider the least consistent of any made by Mr. Taylor, one also which I cannot bring myself to believe the owner of the bitch could himself endorse, considering he was once possessed of Southern Beauty. That Bestwood Daisy is a bitch of beautiful outline and rare quality no one will deny, but she is such a wee thing that her chances to win over such a peerless beauty as Southern Beauty are virtually nil. Beauty was very well shown, and her quality and general "goodness," all over should have given her the easiest sort of a victory, instead of having to be content with second place, to which the judge relegated her. It is very discouraging and extremely disheartening to an exhibitor to accept such awards, and a few such others would take the heart out of any man, however enthusiastic he might be. Spinaway was hard used by the judge. Like all of Mr. Lowe's dogs, she does not cover quite as much ground as desired, but is possessed of most excellent feet, legs, back, loin and beautiful hind quarters, showing great power, one of the essential elements so needed in a dog to do the work a greyhound is called upon to perform. Considering the judge's expressed opinions, in some of the other classes, this last award was not a surprise, though I must admit her condition was not equal to her kennel companion's, Lord Neverstill. In open class dogs, Southern Rhymes had it all his own way, and won handsomely. He is a big dog, a bit on the coarse side all over, has good legs, feet, back, hind quarters, but his loin is not all to my fancy, still he should do a lot of winning in the company of dogs we now have here. Considering the little mite of Bestwood Daisy to be justly entitled to first prize, in challenge bitches, the award of first to this big dog Rhymes was a poser to the "talent," considering, too, that there were several small ones in this class that were not half bad. Norway Star again got a slice of good fortune here, and was "a lucky dog" to get second. He is not a nice one in head or neck, has very heavy shoulders, which defects, however, are in a degree counterbalanced by his having good back and hind quarters. Jack of Clubs, a very plain looking dog, heavy in head, is common place, and is not possessed of the very best qualities back of the shoulders. Dakota was not in the money, but should have taken second prize without trouble. The judge was not very happy in the bitch class. Bed of Stone should have carried off the blue ribbon instead of being pegged back to third place. She is a daughter of Herschel and Green Fly, has a good head, though a bit weak before the eyes, good feet, legs and neck, fine shoulders, good strong back and loin, second thighs excellent, looks a goer and a stayer, besides having lots of quality. While not in tip top condition, I did not see one in better shape. Southern Gay Girl, second prize, has something wrong with her left eye, perceptibly so, which should have thrown her entirely out of com-

petition. White Lily, instead of receiving first prize, should have been content with second, being a bit heavy in head, only fair legs and feet, somewhat flat in ribs, and deficient in lung and heart room, radical defects in a dog, who, like the greyhound, is required to stand long and punishing courses, as are our Western dogs. In order to give a good account of himself, a greyhound must have so much heart and lung room, that no casue of failure to win in the field shall be attributable to this quarter. The Woodhaven Kennels won the coveted National Greyhound Challenge Cup, with their Spinaway and Ton and Thomas took the W. K. C's special prize for the best kennel.

HIGHLAND.

MASTIFFS (James Taylor, Judge).—That a grand old breed like the mastiff, with a specialty club at the back of it, should, at a show like this, poll no larger entry than fourteen, is most inexplicable. While we know that the best mastiffs are widely scattered, and that it is difficult to bring them all together, still one would think that there are more one-dog owners who would care to show, and thus increase the entry, even if the quality did not keep pace. The Mastiff Club specials were not awarded, owing to the rule requiring three dogs to compete for each special before it can be awarded, and the necessary number was not forthcoming in any division. In challenge dogs, Beaufort's Black Prince, seemingly in elegant condition, and as active as a two year old, had a walkover, Ingleside Minting not fulfilling his engagement. The sweet headed Lady Diana was also treated to a bloodless victory; she was nicely shown; if her head was larger it would be improved. Open dogs saw Emperor William an easy winner over Webster's Caesar, who lost to the other in volume of skull, wrinkle, shortness of muzzle, bone and especially body, though he is by no means a second rater; third to Hans Sachs who has a fair head if it were not so high in brow and skull; Prince Edward II., reserve, has a good type of head, short and well wrinkled, but not massive enough, and he should be better in ribs. The bitch class introduced us to Dr. Lougest's new bitch, Lady Cameron, a very short headed one, with beautiful wrinkle and ears, the latter, if I might be allowed to hazard an opinion on this delicate subject, being just small enough; to be smaller would be to make them ridiculous as aural appendages to a head the size of a mastiff's. Maggie Murphy, second, is a fair brindle, her head is depreciated by faultily carried ears, and she is light in rib, but has a rather nice front; Princess Leta, third, is plain faced and also wrong in ear carriage. The puppy class introduced to us Young Prince, another of the Fair Haven dogs, that gives promise of being a winner. The first out of the Beaufort's Black Prince—Brampton Beauty union. His muzzle is very deep and head well formed. Though perhaps too deep in stop the second winner is also a promising sort with well formed muzzle and skull.

ST. BERNARDS (Miss A. H. Whitney, Judge).—That the St. Bernard still holds its own as a popular breed is proved by the interest centered in the judging, though this may in part be accounted for by the presence of our only lady judge. The quality I thought, taken all round, showed improvement on last year, many of the home bred ones having better muzzles and better quality and better coloring. In the open classes there were some very richly colored animals, and those who are interested in the breed should feel encouraged from this fact—at one time it appeared as if the excess of white bodied St. Bernards would have a detrimental effect. The challenge rough dog class was a sight for "sore een," with Sir Bedivere. Altoneer, Otos and Roland, Jr. The first named I never saw in better flesh, and while short of coat, what he had showed evidence of Arthur's strict attention to the crack. The old dog looked even better than ever in head, and moved with great freedom. Altoneer proved the lucky one out of the three left to take second place, he loses in back and ribs principally, but there is no getting away from his quality; Otos, the richly colored son of Ben Lomond, took reserve, losing in head properties, eye, etc., to Altoneer; Roland, Jr., good, well-formed little dog that he is, is still far behind the three in quality and "gentlemanliness," if such a term may be used. Rustic beauty just won in the challenge bitch class, pushed very close by our old friend, Lady Livingston, who certainly need never be ashamed of her age. Beauty was scarcely in good coat and flesh as one could wish, this, as far as coat is concerned applies to her Ladyship, who also loses to the winner in massiveness of head, but nothing in quality; Miss Anna loses to both in size, but her superb quality makes up for any deficiency in that direction. Open dogs brought out thirty-five and proved a difficult lot to separate. Miss Whitney this time kept her ring clear by weeding out till the eventual winners were left in. Additional interest was lent to the occasion by the appearance of Le Prince and Duke of Lincoln, who had come to us with much reputation. And this the former fully justified. First went to Le Prince, who as far as coat went, was well shown, but could do with more flesh; he shows great quality; his head is a trifle long but very deep, and this may make his skull and muzzle appear narrower than they really are. He is flat-sided, but deep, and should be more rounded out in thighs and quarters, an active mover and well off for bone; he is a richly colored dog, that should prove valuable to our breeders. Second to Demetrius a dog of very opposite type, rather short in head, and showing too much wrinkle to our fancy, eyes too deeply set or else it is the excessive wrinkles make them appear so, short in neck, great bone, rich body color, and well formed: a small dog showing lots of quality and a likeness to his illustrious sire. Wach Erdman is a dog of different type still, having a very broad blaze that spoils his appearance; his head is very massive but there is something about it that is not just right, the shape being peculiar: not very good in front, though heavily boned; fourth to Duke of Lincoln, who, if he had not been so fat and had had time to get his land legs, having come off the vessel the same morning, would have been second, as he is really a capital dog, very large, active on his legs, nice markings, rich body color, and skull deep and massive; but his weak point is before the eye; if a little better filled up there his expression would be greatly improved, in pasterns he might also be a little thicker; he should have been second. A sterling good dog in Ashland Jumbo, took reserve, his light color is against him; lots of bone and substance, and massive head. There were several good vhc. dogs, such as Lord Wilton, who well deserved his letters; Ardmore, whose hind parts are his weak point, but capital in head and front; Nero D., a dog with a rather wedgy head, great bone, and deep, well formed body; Mauprat, a very large, richly colored dog in excellent condition, whose good points lie behind his ears. A crowd of very fair dogs followed these, among them Zampa, a very neat little dog, that might have had another letter, though washy in color, still shows lots of quality and is well shaped in head. In rough bitches, La Princess made her debut, a good headed one, whose lack of distinct blaze makes her black marked face appear rather hard in expression, a capital bodied one, and when in better flesh and coat, she will make the best hustle, in fact she pushed Rustic Beauty close for the special. Second fell to Kingstonian Beauty, a good colored and well formed bitch behind the head; third to Huddersfield Belle, a bitch of nice quality, who might be deeper in muzzle, and broader between the ears; El Oro should be shorter in head, but shows some quality; Otto Ruth, reserve, was first at Danbury; Countess Madge deserved more attention, although not in best of condition, in shape of head and volume she excels anything in the class, but of course her white face made her chance for recognition almost hopeless. Royal Duchess occupied a very inferior position this year, was not in shape. Rough dog pups were a distinctly poor lot. Adam's Jupiter, the winner, is not massive enough in head, but of good color; all were snipy. American Belle, a daughter of Otos', is a richly colored one, showing some promise. Challenge smooth dogs furnished a hard struggle between Alton II. and Melrose King, the brothers. There is little between them, Alton II. getting it a trifle in size and hind legs, and is truer in coat, but losing in color and face markings. Empress of Contoocock again furnished defeat for Melrose Belle, and the old bitch looked exceedingly well. Open smooth dogs were a poor lot compared to former years. Of course Alton, Jr., stands so superior to the class he was in we do not identify him with it. He was put down in elegant form and is still improving. What a dog he would be if rough coated, with the same frame! Plinimmon V. occupied the same position as at the Specialty Show, he was simply smothered by the winner—too long faced. Counch, third, should carry his ears closer, but has quite a fair head, better than Plim's; good legs, but needs more rib. Leicester, Jr., has a rather poor expression and is faulty behind, a good skull adds to his appearance, but he falls far short of his sire's good form. The others call for no particular mention except Clovis, a little one showing much quality, but lacking coloring. A capital class was that for bitches (10), and the winner is a very taking sort, cram full of quality, stands on good legs, though feet could be improved, neatly turned in body and has good action. Has improved on early form. Pandora well known, came second; she is a bit houndy in head, but a good upstanding bitch; Charmion is another that has a familiar name, she loses in size and general quality; Julia, a daughter of Kingston Regent, has good color and a fair head, but is a little off hind and fore. The well-known Melrose Judith in better condition than at Providence, took reserve, she is still light in body. Nothing of great promise was shown in dog pups, a son of Alton, Jr., and Lady Hannay proving about the best; more muzzle would improve him. A sister of his, with much the same characteristics, won in the corresponding class. Novice roughs or smooth dogs, held but two of the latter type. The rough dog Kingstonian Guide won nicely; just off the steamer he was not in the best fettle, but shows a good deal of quality, if broken up with more white his head would be still improved, a well made, active dog, all round, that only requires more flesh; East River Prince is a bit plain in muzzle, though deep and square, fair body, in fact a pretty one all round; Wach Erdman was rightly placed third and Nero D. fourth, mentioned above. The others were rather ordinary, excepting Ardmore, who certainly should have had more than vhc. Lady Hannay had no difficulty in winning from Princess Eulalie, last year's puppy winner, and a rather long faced bitch with good legs and body, Faint Heart should be broader and deeper in head. Alton, Jr., won the Westminster Challenge Cup outright for best American bred. Sir Bedivere took the special for best in the show, and the stud dog medal.

BLOODHOUNDS (James Taylor, Judge).—A very nice collection, as good as anything yet put forward in the breed. Champion Victor tied another win over Belhus to his collar, beating the old dog in length and depth of head, leather and condition. Another capital pair were Ch. Judith and Kaween, and though the latter has filled out on last year's form and deepened in head considerably, the winner's length and quality of head excels, also is better in body. Open dogs proved a canter home for the pup Jason, the new English dog, a regular model all over, though there is a trifle of coarseness about him, arising from his great substance and sturdiness, feet might be better, but has grand legs and body, while he boasts a head of good length, with plenty of loose skin and wrinkle, and capital earage; second to Alchymist, who should not have been shown, having a severe cold in eyes, and otherwise not in good shape; Berry's Bradshaw is a well put up hound, but loses so much in expression and true shape of head, that the decision must be considered just; reserve to Brough, a rather plain hound, inclined to coarseness. A sweet trio of bitches came forward in the next class, and really there is little to choose between them in head; Delfan, the winner, is faulty behind, but fore part is good, nice long, deep head, and good earage; Stella III. also has a good, well wrinkled, deep head, but I think Lady Marjorie excels both in earage and length; they are three that show lots of quality and should do good to the breed. Jason was alone in puppies. J. L. Winchell took the kennel prize.

GREAT DANES (James Taylor, Judge).—Outside of the challenge dogs there was really not what may be termed a good one in the lot. This is a sad commentary to make when we remember that there are two great Dane clubs in the country. Happily there are some good dogs in this country, but they stayed in their kennels this time. Major McKinley, looking as large as a horse, and was shown too fat, disposed of Stanley, though the latter has the better and more typical head and was superbly shown. Open dogs were a motley crew, butcher dogs, harlequins, blues, etc., etc., with no two alike except in the fact that they were no good. Faust IV. is plain in head and expression wrong, too much stop; Honeybowl, is snipy; and Pasha, third, has the best head in the class, but should arch more in loin. Bismarck D, reserve, is a coarse black dog. In bitches (10), Juno with a nice clean cut type of head, good front, won nicely, she would do with more rib. Cyrene, another fair headed one, would be better if not so high in brow, and is not clean enough in throat; Phryne, second, last year, has a very poor head; so has Malta, reserve, her faults being too short and weak in muzzle. A very promising pup won in that class; by Major McKinley, he has his sire's rich color, and will be better in body if he makes up right, good legs and arch of loin and at present good in head.

NEWFOUNDLANDS (Miss A. H. Whitney, Judge).—The supposed specimens of this grand breed must have impressed our English judge, when he took his notes, with the fact that Newfoundlands are not one of our strong breeds. As usual they were very poor, even more so than in former years. Princess Flora, the winner, has a rather typical head, short, with small, smooth ear, and her coat is flat—what there is of it; Black Prince, second, had the best head in the lot, and only correct sunken eye, good bone, but coat too curly; Rover is a small animal, light in eye, nice coat, showing evidence of care. Gyp is entirely too long faced and ear should be small and smooth of hair.

SPANIELS (E. M. Oldham, Judge).—As in former years the spaniel benches formed no considerable attraction for visitors and the enthusiastic element which grinds out prize winners with commendable regularity every year more than deserve the honors they won. While cocker spaniels about hold their own, an improvement is apparent in field spaniels, and the Clumbers seemed to have a new lease of life; but it must be said that the quality, with a couple of exceptions, was not very prominent. Irish water spaniels saw Dennis and Musha in open dogs; Dennis, though out of curl, excels his competitor so much in head, body and stern that the issue was not in doubt. In bitches, last year's Toronto winner, Marguerite, again furnished the winner, a little more curl and she will do; Belva, second, is not long enough in head, otherwise I think in curl and other characteristics, she beats the others. In Clumber spaniels, two kennels, New castle's and Geo. R. Preston, Jr's., supplied the entries. In dogs the nearly white dog Friar Boss, scored, although in anything but good skin condition; Glencoe, has a short, good head, not so good in body and length as the winner; Albert, third, is faulty in muzzle; in fact has a weak face. In bitches (7), first went to the typical well marked Glenwood Greeting, nice body and bone and good short deep head and correct Clumber benignant expression; Susie is too prominent in brow and base of skull falls away, good body and legs; Meta, third, has a typical good head, and is not so prominent in brow; reserve, to Rover Hepsey, of poor type; Vandah has a faulty light muzzle; Friar White has a weak colored eye, expression consequently poor, nice coat but her body should be longer. In challenge field bitches—no dogs being entered—Bridfood Ruby excelling in head, scored over Rosedale Bess. The open dog class had a surprise in store in the form of the new dog, Royal Monarch, Mr. Preston's latest importation through George Thomas. He is a dog of capital length and general make; an excellent, strong head, good bone and action, is a distinct acquisition to the breed, and he had little difficulty in wresting the prize from the hitherto invincible Staley Baron, whom he excels so much in points named; Drayton Warwick, third, is faulty in front, but rather good in head and length; Fashion, reserve, is too Roman nosed; Endcliffe Ebony, shown in good coat, hc. A good lot of bitches (8), came next. The well-known Midnight III., proving too much for Gossip in head, front and rib, nice bitch as the latter is. Maid has a rather nice head, but body should be longer for height; Princess Bolns is short of coat and light in bone; Dame Trot could not travel with the company, so dropped to vhc., her worst features are her weak, plain head and muzzle; another winner was Night, who has not improved on her puppy form. Open dogs any other color proved a good thing for Coleshill Rufus, he getting the verdict over the Drayton Shrewder. The winner is not in the best of condition, but scores in head properties and in body; third to King Don, who is too high in the legs; Romeo, vhc., had a dull lifeless coat, but is of better type than third. In bitches (2), Drayton the Shrew, had a walk over, in Diana's absence. Toby, the winning pup, has a capital head and nice long body that merely requires time to furnish; Drayton Shrewder came next, a liver and tan, a trifle plain in head—have more stop—is a little high on leg. Hindoo, reserve, I did not find in. Cocker spaniels. In challenge black or liver dogs, Black Duke scored once more over the cobby little one Pickpania. Both were well shown. The corresponding bitch class proved blank. In any other color challenge, Red Roland, a bit coarse in skull, and quite long enough in body, pulled off premier honors from Bambo, whose plain head makes him wonder how he got there. Open black dogs (12), was not a very difficult lot to get around, and Woodland Prince, active, well made dog that he is, and well shown, took the blue, followed by Bell Boy, who loses a trifle in front and head to winner, but I like his body; Chief, is light in body, in other respects he will do; the well-known Commodore was reserve—plain muzzle and full eye. Woodland Clipper among the mentioned ones was the best, good in legs and body, short enough in muzzle, and brow should not be so prominent. Brock is on the field order. In bitches, the Farm Show winner, Baby Ruth, who does not improve in body scored again, but Woodland Prince must have pushed her close; a little behind in head properties and quality, but better in other respects; the old winner, Rideau Reine, came next, reserve going to Cora II., faulty in head and front; Fashion was one of the best vhc dogs, and St. Lawrence Princess well deserved her letters; a little more rib would improve her; Topsy is too full and round in skull. Open red or liver dogs had the winner in Red Robin, with whom little fault can be found outside of a slackness in back; Derby, second, loses to him in head and front; Cardinal, third, has too much stop. Red Jocko, reserve, is a little short of rib. In the corresponding class, Fannie, a very pretty sort won nicely, though in head her stop should be more gradual and not so abrupt: Red Beauty, second, is another well made little bitch, faulty before the eye, but good legs and body and action; Edgewood Hebe has a sweet head, body would be improved by more depth of back ribs; Russette, reserve, should slope up better between the eyes, and be better in forelegs, but is a very nice little sort; a rich colored one is Red Rose, a trifle full in skull; Why Not well deserved her letters, more depth of rib would improve her, nice head. Any other colors proved another snap for Tonita, well shown; Woodland Bessie, second, is a rather plain headed liver and tan that should be straighter in front; Mrs. Bow-wow, a very pretty headed one, good bone and front, excellent features, should have been higher. Brantford Snap's good skull is qualified by a mean muzzle. Belle Boy and Woodland Princess were the best puppies, the latter also taking the novice prize. A lot of promising youngsters were shown, and doubtless many of them will be seen again. Royd Monarch won the field spaniel special and his owner took the kennel prize for best kennel of field, Clumber or Irish waters, a very commendable win; Geo. Douglas scooped the cocker spaniel prize.

COLLIES (James Taylor Judge).—A grand collection and in some respects even better than last year, and it is to be regretted that Dr. Sandeur was prevented from fulfilling his judicial appointments. Mr. Taylor in addition to his other arduous duties, had to assume an even harder task, and on the whole acquitted himself well. Challenge dogs had Sefton Hero, Wellesbourne Charlie, and Roslyn Wilkes, the latter has gone off, and competition lay between the two former, Sefton in great shape winning nicely, Charlie not being in his usual bloom. In bitches Charlton Phyllis held her own followed by Highland Floss, put down in beautiful shape and one that pushed them close, was old Flurry III., who holds herself like a maiden; Jakyr Dean was outclassed here. Veteran dogs had four, the prizes falling to Wellesbourne Charlie, Hempstead Zulu, and Christopher, though in the condition the latter was shown he should easily have beaten Zulu, so much better is he in head, coat and body. Open dogs had 13, not an unlucky number for Rufford Ormonde, who made his American debut—a grand dog, and considering the pain he must lately have suffered—was put down in excellent shape. In jumping out of a window he is said to have sprained his forefoot and ankle and could not put the foot to the ground. Domino II., is the debutant from Chestnut Hill, a big, slashing dog, rather pig jawed, but has great length of head, good coat, needs more time for body development, feet could be better, and ears are in the ultra fashion. Woodmansterne Trefoil, a good all round dog, must have run him close and Mr. Robinson had him in rare coat; Woodlawn Trefoil, a dog of good bone and substance, also well shown, deserved his fourth place; Hempstead Chief was a little short of coat; Hempstead Zulu looked a bit ragged; Hempstead Rex has not improved on puppy form, being still a trifle full in brow, excellent coat; Don Giovani is pretty, but scarcely of the type of these; Marvel was nfc. Open bitches showed a lot of quality, Woodlawn Sunset, the Providence winner, scoring again, dips a bit behind the shoulder but is a sweet quality bitch, more coat would improve her. Flora May was a little short and open in coat; Cragston Dulcet has a dense coat, faulty in front, and ears could be carried better; Ormskirk Susie, who should be a little flatter in skull, and harder in coat, well deserved her position. Woodmansterne Deborah and Cragston Pearl got three letters. In dogs under two years of age Domino II. and Woodlawn Trefoil won again with a good young dog, Cragston Wallace, third, a little short coupled, nice coat, head and ears. In the corresponding bitch class, previously mentioned ones took the prize. Domino II. repeated his victory in the puppy dog class, followed by a rather nice one, Cragston Douglas; a very pretty blue merle won in the bitch class in fact, with Cragston Pansy and Dulcet, Mr. Morgan took the prizes. H. Jarrett showed the reserve in Prude, a nice headed daughter of W. Charlie. The novice awards followed in order of the open in dogs and Flora May had a chance to win first in bitches. In smooths, Hempstead Maid followed the English dog, Sedgemere Piebald, a fair headed one with too much coat; Hempstead Maid beats him in head and coat; Blue Light, well known, was third. A fine lot of woolly soft coated old English sheepdogs that looked like exaggerated poodles, were shown, and Mr. Mayhew awarded the prizes, but our idea of a bobtail is evidently far behind the date and therefore we are at a loss to criticize them. They seem all coat and curly locks, and wholly different from the bobtails of fifteen years ago. Rufford Ormonde won the cup for best collie and Domino that for best American bred, an honor very soothing to his plucky breeder, who also took the sweepstakes, and the Stud Dog prize, and Mr. Morgan's special. He should be happy.

FOX HOUNDS (John Davidson, Judge).—The exhibit was not large, but it was fairly good. Two competed in the challenge class for English hounds, Vexation, first, was not in the best of condition. Rosemary, well known, won second.

Songster, a large specimen, had a walk over in the open dog class. The challenge for American hounds had three entries, Bowsprit, first, Commodore, second, and Ranger II., the reserve. Four faced the judge in the open dog class. Duke, first, is good in legs, feet, body, neck and head, but is short in leather. Clay, second, has a plain head and is light in bone. Zack, third, is a good average in quality. There were 4 bitches. Flirt, first, is quite a good all round bitch. Second went to a small bitch, Glenwood Bell, light in bone. Sunmaid, third, is long cast, flat in ribs yet good in hound character. The reserve, Mt. Vernon Fly, is rather coarse. B. WATERS.

BASSET HOUNDS (James Taylor, Judge).—Four very fair specimens were shown, that is for this country, where little attention is paid to the breed. The winner was Royal Hector, who beats Turk, second, in head, chest and slightly in body and lowness to ground; the well-known Drayman was third, there is little to choose between them, a little more quality perhaps is desirable; Rocky was reserve, another fair dog, but higher on the leg.

DACHSHUNDS (James Taylor, Judge).—There was a little mix up here in the judging. The Woodwiss dogs from England arrived just in time to compete, and were placed in proper order, but afterwards it was said that a protest had been filed on account of late arrival, but who entered it or any particulars in regard to it could not be ascertained beyond the fact that after the prizes were taken from them, the W. K. C. awarded extra prizes according to their standing in the classes. If a protest was filed it was not a very sportsmanlike action, as the delay was not avoidable, and after coming across the ocean the dogs should have been allowed any honors they could win. In challenge dogs Jay beat Don Quixote II., which he can do in head and front. Janet had to lower her colors to Jargonelle, from the same kennel in the corresponding class; the latter excels a little in muzzle, length of body, but not in quality and texture of coat and skin. Open dogs was a large class for New York (16). First went to the English dog, King Sol, a long fine headed one, with good, long body, excellent crook, one of the best seen here; Tack, second, or rather first, when the record was finally adjusted is rather coarse in comparison; Pedro a promising youngster, was second to Tack or third, really; with Leviathan, third, a nice, long headed one, with good length of body, but faulty in legs and feet, should be firmer in pasterns; Wamba, vhc., is a trifle coarse in head, but good body, legs and crook; Pretzel is going off in head, thickening in skull, but still is well made from there back. In bitches the liver, tan and white Princetta took the blue, a well formed bitch, with good chest, deep and low set, and plenty of loose skin, the winner in her class at the N. E. B. C. trials last fall; Weasel, a very appropriate name, came second, a bitch of good length and loin; E. S. Woodiwiss' Widgeon and Dinah Belle were given extra first and second and Jane Austen, reserve; they are all of nice hound stamp, show lots of quality and could they remain in this country, would help the breed. Pedro won in puppies. This short criticism does not represent the entry by any means, but a number of them were of the terrier or German type, and the judge passed them without a mention, at which there was considerable outcry, still he was consistent and followed his own type. For the Manice Dachshund Cup, Princetta scored, followed by her kennel mate, Pedro, the winner last year being left to congratulate only. Mr. Woodiwiss took the kennel prize.

BEAGLES (Jos. Lewis, Judge).—As usual there was a good gathering, both of the "merrie lytle hounde," and its owners. In challenge dogs the old champion had to give way to the more agile Sherry, who, while losing in head somewhat and in carriage of brush scores in front and hind action; Royal Kruger did not face the music but was benched. In bitches, Lonely, cleaner neck and front and more jaunty carriage, sufficed to beat our old favorite, Elf. In dogs over 13 inches, a class of ten turned out and the Providence winner again proved his merit and was in much better shape; second to Furrier, rather coarse in head, should have a little more rib, but good on his pins and in carriage of stern; Lee III., third, is a good bodied dog, but a little plain in muzzle. In the bitch pack, Daisy Corbett proved the winner, well-known as a good one if a little shorter in body; Oracle beat her last year, and it is just a toss up between them; Popsey, third, is too full and round in skull and her stop is too deep. Emeline II. is a well built bitch with unexcelled muzzle and skull and should have done better; vhc. went to Minnie L., whose muzzle is faulty and is too full in skull, but a nicely built little hound in other parts. Dogs under 13 inches proved a walk in for Razzle and Little Wonder, often described in these columns; the latter has the best head of the two, but is not so good in bone and front; Laick's Roy, while a little faulty in head is well put together behind the ear, and shows some type and quality; Laddie, the fielder, is best in body and expression; Young Royal, vhc., is too full and broad in skull. In bitches a whole color headed one in Lonely II. won from two better headed bitches in Evangeline and Dazzle, but is well off in body, bone and legs; both the others are well known; Kitty Clover, reserve, is too long faced and a trifle thick in shoulders; Spider, vhc., is very much too full in eye, which spoils her expression, a nice one otherwise. A nice pup in Alice won in the next class, a little long cast, perhaps, but will fill out; she also took the novice prize and the field trialers were headed by Frank Forest, the little sweet morsel of hound flesh Ava W., coming next. Hornell-Harmony took the prize for best four, but I must say the Rockland lot was a more level one.

FOX TERRIERS (R. F. Mayhew, Judge).—Of course we always expect to see the best at this show, but there was lacking a good deal of the interest that absorbed our attention at the late Terrier show. In the first place, Mr. Thayer's kennel was absent and that did not seem right somehow, and then the Rutherford and Blemton Kennels seemed to scoop up everything. Challenge smooth dogs had four—Blemton Victor II., the winner, Warren Safeguard, Ripon Stormer and Blemton Rasper. The feature of the class was Ripon Stormer's vast improvement; it is several years since he looked so well, as hard as nails and though a trifle thick in neck and shoulder, still bore little likeness to his late form. Safeguard seems to be thickening a little, but Gentleman Victor appears as clean as ever, and behaves like the veriest puppy on the bench, he certainly is a wonderful terrier. Warren Captious had her class to herself and looked very well. Old Raffle, just ten years old, shows age but can still hold a few of the rising generation. Open dogs (13), was a smart lot, and Blemton Stickler came to the front once more, a trifle more back rib would suit him, should be stronger in pasterns and carry his ears better, in other respects he keeps himself in good form; Warren Daybreak, second, is also well-known, and improving on his Providence form. Beverwyck Royalists is thickening a bit in head and neck, but is a well built terrier all over with lots of style; Warren Captor, fourth, is a bit coarse in head, but good in front, body and coat, Raby Rival, reserve, is one of the English dogs, fairly good in head and front, a little light in body a nice headed youngster is Sentinel, vhc. In bitches (12), first went to Warren Capture, a good headed one with clean front; second to Cowthorpe Jem, a trifle full in skull, but clean and straight in front, shoulders nicely set and good body and coat, Warren Sentence, third, another daughter of Safeguard's, needs time in body, but capital head and front; Richmond Victory, fourth, is a nice topped one with excellent coat, ears should be carried closer; Richmond Pearl, reserve, shows an excellent front, and fairly good head if stop was less defined; a nice, stylish bitch is Ray of Light, skull and front should be narrower, good legs but coat rather soft. Dudley Nettle, has a good front, nice small ear, but is rather plain in head. The puppies as a whole were not very promising, and Warren Daybreak and Sentence were the principal winners in dogs. In bitches, Warren Capture and Sentence and Leaflet took the honors, all from the Rutherford Kennels; a nice style of youngster in Mere Juliesta showed what Ripon Stormer can do; should be stronger in muzzle. Novice awards principally followed the puppies order. In wire hairs the Hill Hurst Kennels pulled off most of the ribbons. Challenge dogs saw Cribbage and Oakleigh Bruiser placed in the order named, both looked very well, and Surrey Janet was alone in her class and never looked better though a trifle out of coat. A rattling good terreir came forward in Endcliffe Banker, just over from England. He seemed to stand out a bit in front, but has a capital clean head and ears should lie closer, and coat fairly stiff; Marden, second, a trifle long perhaps, but if capital in front with a good long head and right wire coat, he ran the other more than close; Yale Tramp should be shorter in body, but will do in other respects; White Topper is much improved and was well shown, skull is his worst point. Mister Great Snap, a dog of excellent coat and character, must have pushed the others close, Dark Eye, should be longer in head, but was better shown than before; Brittle Beaut, loses in muzzle to a good one. Hill Hurst Trick is improving, has a capital head and is making up nicely in body. The well-known Bushey Bramble won in bitches and looked better than at Providence; Brittany, second, is good in front, ears well carried, but skull should be flatter; Brittanic is faulty in body but head well shaped and in coat is just fair; Hill Hurst Brunette should have more rib, a shorter body, but is well formed in other respects; Roath Rennie, a nice sort, might be narrower in skull. A good headed pup is Endcliffe Brisk, who won in dog pups with H. H. Trick, second. The bitch class was not so good, first going to Butterflies, and second to H. H. Bud. Endcliffe Banker, and Marden, repeated their open victories in the novice class. Mister Great Snap won well in hand in the sweepstakes for wires born previous to Jan. 1, 1894, and the building was too small for his owner; while Hill Hurst Trick added a well deserved laurel to the H. H. Kennels by his win in the class for those born after Jan. 1, 1894, followed by his kennel mate, Piquet. The Rutherford Kennel took the smooth prize, and Hill Hurst Kennels that for wires and Blemton Victor II. redeemed his laurels lost last year to Cribbage, by winning the grand challenge cup. Which will stay the longest?

IRISH TERRIERS (James Taylor, Judge).—The "dare devil" brigade made a capital display, several imported dogs and the best of the home talent being in keen competition, besides several good youngsters that made their debut. Jackanapes, Jack Briggs and Boxer IV., was the order in challenge class dogs; "Jack" was short of coat. In bitches, Dunmerry, getting gray, but holding her form in rare style, scored over Candor in front, ear carriage and coat, as shown. Judy was outclassed here. In open dogs, Brian O. 'K., a good, colored game sort, neat all round, with plenty of character, excellent in front, and good coat, and nicely carried button ears, won well, but Briggs' Best, when filled out in body will push the best; one of the best home bred ones seen out; Marton Shamrock looked well, but is inclined to coarseness. So is his Honor, reserve; Shamus is not true in color; Fenian Boy and Brick Bat, Bruiser and Briggs Bar, None the puppies, deserved their cards The bitch class scarcely proved so good. Deramore Biddy was the winner, excellent in ear carriage, a little shorter in pasterns and she will do, a bitch of good style and coat; Brickbat Brickle is a little full in skull yet, good coat, but ears have not come to their proper hang yet, a promising sort; Milton Droleen, third, was short of coat and patchy in color, but a very promising terrier, standing on good fore legs and feet and head is of correct shape. Most of the puppy winners were in the open and the same may be said of the novices, showing that their owners knew what they were doing to put up ten dollars on each. Toon and Thomas won the kennel prize.

BLACK AND TAN TERRIERS (James Taylor, Judge).—The best we have were on the benches, but the old cracks are going off somewhat, and there seems nothing to take their places. In challenge dogs, Broomfield Sultan just scored over the rather leggy Glenwood, getting it in head and quality a bit and color; though Glenwood beats in pasterns and bone. Four matrons came forward in the next class and Ch. Meersbrook Maiden, gone off somewhat, had to succumb to Ch. Gypsey Girl from the same kennel. Broomfield Madge and Queen III. have both gone off considerably, especially the latter, who has gone quite gray, and wide in front. Open dogs were a poor lot, Chicago Spider winning, a fairly marked one, with the best head and front; Rochelle Rush is dark in markings; Sully has bad ears and mixed tan, good in body and coat; Rochelle Master, reserve, is very dark in markings. Surrey Gem was the winner in bitches, very nice markings, well shown, but a bit pinched in muzzle; Gypsey Queen, second, is a little too full in eye, thumb marks run in, rich head tan; Chicago Maiden, third, has good legs and body, but stop too defined, ears clumsy and uncropped; Canada Queen has gone off in head.

WHITE ENGLISH TERRIERS (James Taylor, Judge).—There was really nothing startling here. Eyes and skulls wrong and not clean and long enough in heads.

DANDIE DINMONT TERRIERS (James Taylor, Judge).—Mr. Ed. Brrooks, in his love for this breed, shows all the gameness of the terrier he fancies, and it is a matter for regret that the breed is not more considered—gamer, better terriers do not live. With two exceptions, Mr. Brooks supplied all the entries. In challenge class they were placed right at last, Amphion getting his deserts and he was well shown. We have always contended that he is the best Dandie on the bench; King of the Heather, second, and Amistey Daisy, reserve, both close to the winner in head, coat and body. Unfortunately the young stock shown in the open classes does not come up to the parents. Heather Deacon, in dogs, scores over Rhoderick Dhu, in head, especially in muzzle. In bitches, Lothian Judy, just over from the other side, won nicely though a little weak and short in muzzle, good length and coat. Heather Daffodil, second, should be better in bone and front, has a better head than H. Darling, but that is no great compliment.

BEDLINGTON TERRIERS (James Taylor, Judge).—Really there was nothing first-class on the benches. We want stronger heads, a bigger type of dog and the correct texture of coat is very rarely found. In challenge class, Mount Vernon Tibbie scored, but in head only, for while of good size, her loinu is too flat and coat soft, besides she was not in condition; Qui Vive, while losing in head somewhat, scores in outline and coat; Chemist loses in muzzle, but has the best and most distinctive texture of coat, which should feel at the same time both crisp and soft, if such can be understood. In open dogs, The Professor won from Financier, the former scoring in head, front, top knot and ears; Postmaster has a rather good head, with nice top knot, but he is soft in coat. Beechgrove Blue Nell, scored once more in the ladies' division, but she showed no tips and is soft in coat; Endcliffe Wasp has a better coat, and a nice head, if flatter in skull; Polly Workworth is faulty in the muzzle and skull, and was short of coat. Financier won in pups, followed by Beauvisage and Yauticaw, who should be better in bone, fairly good in coats and will doubtless improve yet.

SCOTTISH TERRIERS (James Taylor, Judge).—One of the grandest displays ever seen in New York, but not superior to that at the Terrier Show last fall, where practically the same dogs were exhibited. The ball opened with challenge dogs, in which Kilroy, looking more like himself, scored over Tree and Rhudaman, an upset for the talent, but not more than the owners expected when the winner is in proper shape. Culbean again defeated Dankie Diana. In open dogs Bellingham Bailiff turned the tables on Wankie Tam, both have good, long keen heads, but the former scores in front and that only; Bailiff has improved in body, especially in loin; third to the new dog, Kilstree, whose rather nice head, excellent front and fair coat, deserved the attention; Dumbarton, reserve, is too large in ear; Wankie Dandie loses in muzzle, scarcely strong enough. The others, most of them well-known, deserved their cards. In bitches, Zembra, Vorda and Wankie Janet, took the money—all from the Wankie Kennels; the winner is rather coarse in head; Ranee, reserve, is also coarse headed and was shown fat; Cluthar, Wankie Daisy and Wankie Cambria have been out before and deserve their cards, and so did Newcastle Rona, for her nice head, should be harder in coat. In American bred dogs, Wankie Tam won well in hand, and Wankie Janet, Diana and Miss Ted divided the money for their sex. They have all been described at past shows. Dunbarton was the best dog pup, and a nice one Highlanda Fling scored in bitches with out trouble. Wankie Kennels took the kennel prize.

SKYE TERRIERS (James Taylor, Judge).—There was nothing new in this breed, the old winners, Sir Thomas and Barnaby Rudge and Elphinstone being placed as named, and all looked well; Queen of Skyes and Endcliffe Maggie fought their troubles over again, the latter losing in head and body, but both are very good. Rhoderic Dhu had the open dog class to himself, and Wheel of Fortune was out of luck to run second to Princess Mary, whom she beats very much in head, coat and style. Whippets had no entries, strange to say.

YORKSHIRE TERRIERS (James Taylor, Judge).—A capital entry, but the quality was not up to the standard, though in many exhibits better than our shows have seen lately. Minnie York, light in tan and body color, was alone in challenge class. Open dogs saw Bradford Rejected take the blue, a nice coated, correctly colored little dog; just arrived, Harboro Swell II., has a very nice coat and is clean in tan; Prince loses in these attributes; Toots must have been overlooked, one of the best, though light in tan. Pride of New York won in bitches, a good colored one, in profuse coat, and Duchess is not much inferior; Nell loses in coloring. The others were chiefly faulty in clearness of tan and body color, though generally in good coat.

The toys were the usual sort.

PUGS (Miss A. H. Whitney, Judge).—For some unaccountable reason this breed fell off alarmingly. There was really not a good one to be seen. Pomona Fritz, the winning dog, being the best, and he is mixed in color and long faced.

POODLES (James Taylor, Judge).—A high class of poodles was shown, but if we are to have classes for curlies let them be curlies and not brushed out corded dogs, with soft fluffy coats like the average Maltese kitten. Lion was alone in corded challenge class, and was nicely shown. In the corresponding curly class Diamand's colors were lowered by Rajah, but I think that though beaten in head, Diamond is so much more symmetrical and is better formed in quarters and set on stern. Two stylish Parisians came forward in bitches, Ch. Chloe getting the verdict over Vivette, the latter losing in muzzle, but was beautifully shown. In open cordeds Tell I. is an old face, a trifle cloddy, but nice length of cords. Lady Marquise should be stronger in muzzle, was shown too fleshy, nice cords; Flora I. is snipy in muzzle, Czar has the longest cords, but was too fat. In open curly dogs (black), Emperor, Mr. Trevor's new dog importation, scored nicely, crisp in curl, he is every inch a caniche, a sprightly, well formed chap; his kennel mate, Caesar, is a trifle woolly in coat, and not so good in hind legs; Carnot, another from this kennel, was in his right place; faulty behind; Carlos, reserve, is a trifle long in coat. These were all owned by Mr. Trevor. In the female division, Josephine, a little light in loin and stern rather low set on, but excellent in formation otherwise, and well curled, won nicely from Leah, who, perhaps, excels in head, especially in muzzle, coat and symmetry; Coquette II. was third, a trifle woolly in coat. In other than blacks, Mrs. Benedict scored with Zip and Marron, but we scarcely saw how it was done, for neither they nor Patsy were real curlies, just woolly coated dog brushed out; first should have fallen to Poobah, who is really what the class calls for, and was the only correct one in the lot. In bitches, the Hill Hurst Kennels redeemed themselves with H. H. Dinah and Posey as winners, both are too well-known to occupy more space. If these were good enough to win, then Poobah's placing was dead wrong. Yum Yum is faulty behind, drops away too much. Some promising puppies were shown but more attention must be paid to coats. Leah was the best youngster, winning in puppy and novice classes.

BULL DOGS (John H. Matthews, Judge).—As the judge has promised to publish some notes on these classes, together with his opinion of the club's efforts, our notes on this breed will be limited. His Lordship, well shown, beat King Lud once more, and afterward took the special for best in show, when he contended with King Orry and others, while the King excels in some essential points, considering taking the two all round, the decision was correct. Old Saleni scored once more over Graven Image. In open dogs King Orry won well in hand, his greatest claims to recognition are depth of foreface, breadth of under jaw, ears, length of skull, chest and swing of elbow; he is a bit on the leg and body and eye could be better, in color he is white and black, with either tan or light brindle on chops and cheek. Handsome Dan, neat dog as he is, should scarcely beat Sheriff, whose head is so superior, but the latter has not been well of late, and could have carried five pounds more of flesh, but was well shown; his down ear is also against him; Rustic Sovereign is plain. A great lot of bitches came forward and White Venn repeated last year's victory followed by Katisha, third going to Hucknal Gypsy, a very nice headed bitch, shown very fit, a little more out of elbow would improve her; she should have had second, I thought; Queen, reserve, is a Dudley, but well formed; Miss Venn was third last year, a good headed brindle. In light weights first went to Damon, good in muzzle and wrinkle, but would be better with a little more depth of stop; the neat headed Nugget came second, and Baron Killarney, third, good skull, a little deeper in muzzle, and more broken up. Captain B's. ears should be carried better. In bitches, Mr. Austen's Princess Venn won nicely, her face would be better if more broken up, and she is a little slack in back. Juno II. needs more breaking up, and loose skin, but is a very good sort. Some very fair pups were exhibited, and in novice dogs, King Orry and Sheriff filled first and second places; in bitches, Hucknall Gypsy and Primrose (formerly Princess Nan), that was at Providence, took the money. Woodlawn Park Kennels deservedly won the kennel prize.

BULL TERRIERS (James Taylor, Judge).—A capital lot, both in entries and quality. The breeders are producing home dogs that can more than hold their own, and the judge must have been surprised to meet such a collection after the sparsely filled classes he finds in England. Carney, a little above himself, was beaten by Cardona, who was very fit, and afterward beat Duke of Rochester for the special, winning in front and behind the shoulder; Duke getting a little bossy there. In bitches a grand class came forward, but the decision that placed Edgewood Tipsey first can scarcely be endorsed, either Castle's Kit, from the same kennel, or Attraction, might have had the verdict. Although the former was a trifle fat. In many open dogs, Duke of Rochester won well in hand from Diamond King, who, though he keeps himself well, loses in eye and front; Topsparkle, well known, came third, he loses in front and head to a real good one; White King, reserve, has a short cheeky head; Jack the Great, vhc., is coarse in head and light of eye; Count of Oaks should also be darker in eye and flatter in cheeks; Gully Boy has an excellent dark, small eye, and good head, but needs time to furnish yet; Greenhill Nunthorpe should have been near the top of the tree, his head is good, though getting a little cheeky, and shoulder might be better but he is a grand terrier all over. Frank Dole made up for this disappointment by winning first and second in the bitch class, with Edgewoods Flossie and Trilby—good heads, excellent in eye; the winner is ticked in body, it is close between them; third to Bonnie Kate a little long cast; reserve to the well-known Maggie Cline. Light weight dogs was a hot class, Rookery Boy winning, but his light eye, short face and rather coarse head, could not entitle him to honors over Little Flyer or Tarquin, the former has a much better head and front, losing perhaps a trifle in ribs; Tarquin was third, good eye, skull a

trifle round and one ear droops over, caused by a fight. Ted Pritchard deserved his place and a nice little dog all round was Little Ben, good fore and aft, should have a little more rib. Edgewood Matchless, the good headed patched bitch won in the next class; patched ones seemed to be allowed, and if so then the decision was right; second to Sabutia, a very nice headed one that might have won; Bess of Rochester is faulty in front and head is too round. In the class for under 20 pounds, Edgewoods Rose and Sport scored nicely and were well placed, Nellie Harper, getting thick in head, coming in between them. Edgewood Trilby, won in puppies, followed by Sully's Boy, two very nice ones, and Flossie and Trilby repeated their open class victory in the novice class. Frank F. Dole took the kennel prize, and Geo. P. Runton the special for best brace and Dr. Huidekoper for best in show.

TOY SPANIELS (James Taylor, Judge).—In challenge class, Romeo still held his own, followed by Exeter Earl, but poor King of the Charlies ran both very close if he did not beat them. He was one of the poisoned ones. In open King Charles dogs, first was secured by Duke of Chester, a capital headed one and good in coat, but rather light in tan; Tutti Frutti, second, a bit gray on muzzle, but has an excellent short face and high skull, with good stop; third to Romeo II., whose short, deep face and rich tan entitled him to it; Modern Charlie, reserve, is longer in muzzle. In bitches, Pet, a small sized one with a very short face, well marked, won nicely, followed by Sweet Marie, who, though good in shape of head, is smutty in markings; St. Joe's Myrtle is also quite a good one, excelling second in tan. These King Charlies were an excellent lot. In Blenheim's, first went to Murilla, an excellent skulled one; well known; Golden Prince, second, loses in skull and foreface; Young Duke is not high enough in skull, nice ears and coat; Chiselhurst Hero is not deep enough in stop and coat too curly, besides being a size too large. Rubies were not so good, if we except Marguerite, whose face could scarcely be shorter; Yetsan Chief won last year. Prince Charlies were fairly good, Bell, the winner, was one of the unfortunates; Betsey Trotman is lacking in tan and muzzle is snipy. Japanese spaniels were very choice, and here Mrs. Senn had a regular field day. The class was divided. In dogs, at least we suppose so, Mrs. Webster's short faced little darling scored, a most dainty piece of caninity. Mikado, poor fellow, is dead, and so is Kiku. In bitches Yatsu, good, short head and nice size, won, with Yokie second, and Kuma, a very pretty shaped one third. Most of these Japs were, as they should be, small in size and very short faced, with excellent coats and feathering.

The Italian greyhounds were really so mixed up in their pens it was useless to try and separate them. Ch. Spring again beat Ch. Sprite in challenge division, and the same owner was first in dogs with Prince and first in bitches with Jennie II., two very dainty, small little animals, and this is what they should be, most of them as shown are far too large, and whippety. An excellent show of Schipperkes, but the best by far was Ch. Stoots, from England, whose mane and culotte are much more conspicuous than in our home dogs. Mr Connolly, as usual, made a very pretty display. He practically has the breed to himself, and does not seem to tire of it.

The Miscellaneous class had a little of everything, the Esquimo Kimo winning, followed by a pretty Maltese terrier, that has scored before, another Maltese getting third, and an excellent coated one.

H. W. LACY.

LIST OF AWARDS.

MASTIFFS.—Challenge—Dogs: 1st J L Winchell's Beaufort's Black Prince. Bitches: 1st, Dr C A Longest's Lady Diana. Open—Dogs: 1st, Dr. C. A. Longest's Emperor William: 2d, L. A Armsden's Webster's Caesar; 3d, H S Clark's Hans Sachs. Reserve, W P Smith's Prince Edward II. Bitches: 1st and 2d, Dr C A Longest's Lady Cameron and Maggie Murphy; 3d, W P Smith's Princess Lita. Puppies: 1st, J L Winchell's Young Prince; 2d, Dr C A. Longest's Nellie Bly.

St Bernards.—Rough-coated—Challenge—Dogs: 1st, C A Pratt's Sir Bedivere; 2d, E H Moore's Altoneer. Reserve, F Schmitt's Otos. Bitches: 1st, C A Pratt's Rustic Beauty; 2d, E H Moore's Lady Livingston. Reserve, J Rupert, Jr.'s Miss Annie.

Open Rough-coated Dogs.—1st, C A Pratt's Le Prince; 2d, Gramercy Kennels' Demetrius; 3d, Jacob F Lutz's Wach Erdmna: 4th, Edward Booth's Duke of Lincoln. Reserve.—Very High Com.—Frank Linck's Ashland Jumbo; A L Martin's Nero D; Tracy Gould's Mauprat; Bargess & Hall's Ardmore; Mrs Alexander McKenzie's Hughes's Lord Wilton. High Com.—

GREYHOUNDS.—Challenge Dogs—1st, Terra Cotta Kennels' Gem of the Season. 2d, Woodhaven Kennels' Lord Neverstill. 3d, D B Lemley's Imperator. Bitches-1st, Toon & Thomas' Bestwood Daisy. 2d, Terra Cotta Kennels' Southern Beauty. 3d, Terra Cotta Kennels' Wild Rose, V H C Res, Woodhaven Kennels' Spinaway. Open—Dogs—1st, Toon & Thomas' Southern Rhymes. 2d, W S. Gilson's Norway Star. 3d, J H Winslow's Jack of Clubs. Res, A C Bradbury's Dakota. V h c, White Oak Kennels' Oldstone. Dr S D Barr's Duke of Morningquest. C R H Wolf's Chester. J Kernochan's Hornpipe. F H Seitz's Spring of the Valley. Bitches-1st, Toon & Thomas' Wild Lily. 2d, Toon & Thomas' Southern Gay Girl. 3d, A C Bradbury's Bed of Stone. Res, White Oak Hill Kennels' Best of Fashion. H C J Hutchinson's Leila. J L Kernochan's Lady Herschel. Terra Cotta Kennels' Chips. C, Dr S D Barr's Duchess of Morningquest. J L Kernochan's Lady Ascot. Puppies, Dogs and Bitches—1st, Mrs E B Elliott's Lucy.

ENGLISH FOXHOUNDS.—Challenge Dogs and Bitches -1st, J Smith's Vexation. 2d, H Janett's Rosemary. Open—Dogs—1st, N Money's Songster.

POINTERS.—Challenge Dogs, 55 lbs and over—1st, G Jarvis' Lad of Kent. 2d, Hempstead Farm's Sandford Druid. Bitches, 50 lbs and over—1st, Hempstead Farm's Woolton Game. 2d, Springside Kennels' Lady Tammany. Open—Dogs, 55 lbs and over—1st, G S Mott's Sir Walter. 2d, Rinada Pointer Kennels' Prince Regent. 3d, Springside Kennels' Ridgeview Bow. 4th, G M Arnolt's Lord Bracken. Res, F A Hodgman's Ridgeview Regent. V h c, J E Bergen's Princess Lad. V h c, F H Feer's Gamester. V h c, A C Wheeler's Naso Bang. V h c, Rinada Pointer Kennels' Hempstead Prince. Bitches, 50 lbs and over—1st, G Jarvis' Lass of Kent. 2d, C D Roberts' Devonshire Pearl. 3d, Springside Kennels' Springside Nell. 4th, Springside Kennels' Kent's Belle. Res, S Tripp's Renie II. V h c, R. H. Robertson's Lass of Tammany. T G Davey's Brighton Leda. Spring & Lenoir's Urada.

ENGLISH SETTERS.—Challenge Dogs—1st, Henry Pape, Jr's Cactus. 2d, Rosecroft Kennels' Glendon. Bitches—1st, Bryce, Jr's Spectre. 2d, Washtenaw Kennels' Albert's Nellie. Res, Joe Lewis' Victress Llewellyn. Open—Dogs—1st, Victoria Kennels' The Earl. 2d, Samuel B Allen's Dad Monarch. 3d, Warwick Kennels' Albert Ranger. 4th, Clarence E Lewis' Harry L. Res, F R Huch's Roi d'Or. W S Diffendurffer's Count Beaufort. Frederick A Hodgman's English Jack. Netherwood Kennels' Netherwood Nimrod. Washtenaw Kennels' Washtenaw Grouse. John Duncan's Gamester. (To be concluded next week.)

The Eastern Field Trial Club.

The meeting of this club was held on Thursday afternoon in Madison Square Garden. The reading of the minutes of the previous meeting was dispensed with. Prof. Edm. H. Osthaus and Mr. F. A. Hodgman were elected to membership. The resignation of Mr. P. H. O'Bannon was accepted. The Secretary-Treasurer's report was not read, owing to his papers being absent.

The same stakes as those of last year were established, excepting the selling stake, which was abolished. The Members' Stake entry fee is $10, the prizes to be 60, 25 and 15 per cent. of entrance. The entries in this stake close the night before the running. Winners of open field trials are barred. The trials will commence with the Members' Stake on the third Monday in November. The Derby has $600, divided into $300, $200 and $100. All Age Stake the same. The Subscription Stake is open to all setters and pointers. The prizes are $300, $150 and $50. Each subscription entitles the owner to start any dog he pleases, whether it is his property or not. It is transferable to any man who is not objectionable to the club. Each heat is to be two hours long. It was carried that the initiation fee be suspended until further notice. A special meeting was called for the last Monday in March, 1.30 P. M., at the office of Mr. F. R. Hitchcock, 67 Wall street, New York. Notice of contemplated changes in the constitution was given.

The American Mastiff Club.

The club held its annual meeting on Feb. 20, in Madison Square Garden. Mr. Richard H. Derby in the chair. There were present Messrs. Stephenson, Winchell and Mead. The business of the last meeting and of the executive committee meeting was read and approved. The report of the committee on pedigrees was read and accepted, with the usual appropriation for clerk hire. The officers for the ensuing year are: President, Richard H. Derby; Vice-Presidents, Robert Lenox Belknap, F. T. Underhill and George G. Stephenson; Executive Committee, R. H. Derby, R. L. Belknap, F. T. Underhill, Geo. G. Stephenson, Edw. Dudley, J. L. Belknap, W. P. Stephenson, Herbert Mead, C. C. Marshal and J. L. Winchell; Delegate to A. K. C., Geo. G. Stephenson. The delegate to the A. K. C. was instructed to ask the indorsement of the A. K. C. in its action toward vindicating Dr. Lougest in a new action toward the vindication of Dr. Lougest.

The Collie Club of America.

The annual meeting of the club was held in Madison Square Garden, on Wednesday, Feb. 20. The seventh annual report of the treasurer showed the encouraging balance of $699.49 in the treasury. Among other matters, Mr. Shotwell in his report said: "More time and attention should be given to developing a greater interest than is at present shown in competing for the various stakes and prizes. There has been a great falling off in this respect, which with proper care might be regained. I feel, however, that it is impossible for me to give the time necessary to carry on this work, and the interest of the club requires that you should select some one to take my place. I cannot omit referring to Mr. John L. Lincoln, one of our Executive Committee residing in Chicago; he has obtained, during the past year, three life and five annual members." The secretaries report was accepted. Following is the list of officers elected: President. Jenkins Van Schaick; Vice-Presidents, Thos. H. Terry and J. Pierpont Morgan; Executive Committee, Jenkins Van Schaick, J. Pierpont Morgan, Martin Dennis, Thos. H. Terry, A. D. Lewis, J. D. Shotwell, Robert McEwen, James Watson, Dr. L. C. Sauveur, J. L. Lincoln, Jr., and Henry B. Cromwell; Secretary, A. D. Lewis, 44 Broadway; Treasurer, J. D. Shotwell.

The Irish Setter Club.

The annual meeting of the Irish Setter Club of America was held at the Madison Square Garden, on Thursday, Feb. 21, 1895. Mr. W. L. Washington in the chair. Present, Messrs. W. L. Washington, G. Langran, J. B. Blossom, Dr. G. G. Davis, and Geo. H. Thomson, and by proxy, Ray Tompkins and J. B. McKay. The reading of the minutes of the previous meeting was dispensed with. The treasurer's report was approved. Dr. G. G. Davis and Geo. H. Thomson were appointed a committee of two to revise the constitution and by-laws, subject to the approval of the club. The following officers were elected: President, G. G. Davis; Vice-President, James B. Blossom; Secretary and Treasurer, Geo. H. Thomson; Executive Committee, C. T. Thompson, F. L. Cheney, G. Langran, B. L. Clements, W. L. Washington, Ray Tompkins.

St. Bernard Club of America.

The annual meeting of the St. Bernard Club of America was held on Tuesday, Feb. 19, at 8 P. M., at the Westminster Kennel Club Show. Present, Edward Booth, Miss A. G. Chandler, Miss C. A. Goodenow, Mrs. A. Mackenzie-Hughes, W. H. Joekel, Jr., J. F. Lutz, D. Mann, A. L. Martin, C. A. Pratt, Col. J. Ruppert, Jr., H. D. Johnson, and Miss Whitney.

The minutes of the previous meeting were approved.

Miss Whitney reported having examined about 300 pedigrees of St. Bernards sent to the club for approval, and found evidence of gross carelessness in many of them. Mr. Pratt was appointed to confer with the American Kennel Club to ascertain what could be done to secure greater accuracy and lighten the labor of examination. The treasurer's report showed a balance of $313.30 in the treasury. Mr. Joeckel stated that at the Farm Show in 1894, it had been decided to start a sweepstakes to be competed for at the show which was expected to take place in May, 1895, and that the blanks for it had been mailed to the members and only one entry had been received. He also reported that Mr. Terry stated that the Farm Show would not be held in May as at first proposed, but in November, during Thanksgiving week.

On learning that Mr. Hopf had not received one of the club medals, it was resolved to present a medal to him and to have it inscribed so as to express the respect and esteem entertained for him by the club.

The following officers were elected for 1895: President, W. H. Joeckel, Jr.; Vice-Presidents, Miss A. H. Whitney, R. J. Sawyer, Col. Jacob Ruppert, Jr.; Treasurer, J. S. Hoyt; Governors, W. C. Reick, C. A. Pratt, A. C. Shallenberger, E. H. Moore, H. D. Johnson, K. E. Hopf, C. J. Bousfield, E. Sauerhering and Henry B. Turner.

DOG CHAT

One of the most shocking and diabolical acts ever perpetrated at a dog show was the poisoning, on Friday morning, of Mrs. Senn's kennel of crack toy spaniels, eight of which subsequently died. When Mr. and Mrs. Senn arrived about ten A. M., they at once opened the baskets in which they had put the dogs the previous evening, and found eight of their dogs dying and others dead. King of the Charlies, the crack King Charles, could just stand up, but died before an emetic could be administered. The names of the dead are: King of the Charlies; Japanese, Mikado, Chin, Kiku and Tamah; Lady De Lena, due to whelp in two weeks; the King Charles Yorkshire terrier, Brandy, and Prince Charlie Bell. Romeo, fortunately, had been taken home. The affair created great excitement and sympathy for Mr. and Mrs. Senn, and a subscription was set afoot at once, and $255 were collected during the day, all but five dollars being poured in at Spratt's stand, in charge of Mr. Banks.

BOSTON TERTIERS TOPSEY AND COMMISSIONER II.

The W. K. C. and S. C. P. C. A. each at once offered $500 reward for the detection of the criminals, but there is little chance of the perpetrator ever being found out. Suspicions are rife, but no proof is forthcoming. It was evidently intended to poison all of Mrs. Senn's dogs, as some bits of meat covered with powder were found in the baskets, and these some of the animals likely refused. Mr. Webster will mount the poisoned dogs. The daily papers were greatly excited over the affair, some of the evening papers bringing out extras.

Sales at New York were scarcely so numerous this year as last, though there was some activity in the pointer circles.

The Morey Kennels sold their poodle Tribune to Mr. D. Hall Butler, for $80. The Meadowmere Poodle Kennels disposed of Dandy to a gentleman of Belleville, Ont. Carnot, one of the best, goes to Philadelphia at a long figure; Carlos, Judy and Rose to New York parties at good figures.

Mr. Geo. J. Gould bought the noted pointer, Chancellor from the Rinada Kennels.

Mr. Sam. Mann sold the winning Smooth St. Bernard bitch, Princess Eulalie, by Kingston Regent---Cleopatra, to Mr. C. A. Pratt, proprietor of the Argyle Kennels, Little Rock, Ark.

Dr. Foote now has the black-and-tan terrier bitch, Ch. Gypsey Girl, having exchanged his wire Brittle Bright and "some more" for her.

A Dachshund Club is to be formed with the idea of coming to some definite type to breed to and judge by.

The Metropolitan Kennel Club was started on Friday evening, the following gentlemen taking part: Dr. Foote, Temporary Chairman; E. M. Oldham, Secretary pro tem.; Thos. H. Terry, A. C. Pickhardt, C. F. Lewis, F. S. Webster, Geo. Jarvis, James Watson, James Robinson, Dr. Glover, A. D. Lewis, D. Purroy, C. M. Kernochan, Dr. H. W. Lincoln, Ed. F. Croker, E. C. Ray, J. W. Brittain, Jas. Patterson, James Mortimer, M. A. Thelbery, H. L. Kreuder, G. W. H. Pritchie and F. A. Hodgman. Several gentlemen spoke enthusiastically on the subject of a kennel club which should be social in its nature, have club rooms and otherwise advance the interests of kennel affairs in this city. Dr. Foote was instructed to select a committee of five whose duty it would be to arrange for the proper organization of the club at a future meeting to be called by them. This is something we have been suggesting for years, and the project should not be allowed to fail.

The Canadians have organized the Eastern Townships Kennel Club at Sherbrooke, another has been organized at Quebec, and with the one started in Montreal they will try to hold a circuit of shows after Toronto this fall. Enthusiasm runs high and there are many members in the clubs.

Fred Schmidt's St. Bernard, Kingstonian Count, died three weeks since from kidney complaint. This is a great loss to Mr. Schmidt, as he was a more than ordinarily good getter.

Mr. Jarrett's arrived just in time for the show on the Servia, from England, having gone over to purchase the crack hackney stallion Wildfire for Mr. Mitchell Harrison.

Messrs. J. P. Morgan and Geo. J. Gould have chartered a special car for the Chicago show, and thus have they solved their side of the transportation problem.

We were sorry to hear of Mr. Henry Brook's recent severe illness. He is on the road to recovery, fortunately, but was unable to attend the N. Y. show, not being alllowed to leave the house.

The American Spaniel Club held its annual dinner at Zanghern's on Wednesday night of the show. The affair was a very enjoyable one, and speeches more or less dignified and instructive were made by James Watson, who responded well for the American Spaniel Club; Geo. R. Preston, Jr., for the Clumber Spaniel and good fellows in general; A. Laidlaw, for the Irish Water Spaniel, remarking that the only place this dog got tight was in his rules; S. J. Bradbury, for The Field Spaniel; W. T. Payne, for the Cocker; C. M. Nelles, Our Canadian Brothers; H. W. Lacy, The Press. Mr. B. F. Miller and Mr. M. Oldham enlivened the proceedings with several excellent songs. Mr. Oldham, as the new president, made a very efficient chairman. In addition to those named above there were present: Rowland P. Keaseby, Ewin W. Fiske, Marcel A. Viti, "Uncle Dick," Geo. Douglas, Frank R. Carsdell, Henry Jarrett, W. A. Brook, P. F. Mead-

A message from Mr. Stafford, secretary of the U. S. F. T. Club, says that they will probably hold a field trial at Newton, N. C., immediately after the conclusion of the Eastern field trials next fall.

The annual dog show auction sale of H. Rutherford fox-terriers did not bring as good prices as usual. Prices ranged from $2.50 to $27.50 for a Safeguard-Warren Captious pup.

The Tracy sale of dog pictures proved an unexpected success, over $11,000 being realized from the two nights' sale. Particulars will be given next week.

Owing to the space required for the report of the New York show, a number of communications are crowded out this week.

ANSWERS TO CORRESPONDENTS.

Y. Z., Baltimore, Md.---The only office of the Fox-terrier Chronicle is at 77 Fleet street, London, England. Subscription price is $2.85. The price of the Fox-terrier Club Stud Book is $1.25. We do not know where you can purchase pictures of the leading fox-terriers in America and England. The Fox-terrier Chronicle supplies pictures of the noted English dogs that have been published monthly in that journal, on special paper for framing, at 6d. each (12 cents).

T. W. H., Big Timber, Mont.---My setter spaniel puppy, nine months old, was taken with distemper six weeks ago, and had a pretty hard time of it. He is feeling fairly well now, but his eyes are sore, look red and somewhat swollen and bloodshot. Pus is constantly forming and running out at corners. I feed him mostly bread and milk. What can I do for him? What is the best wash for sore eyes in dogs?---Ans.: Give the dog a dessertspoonful of syrup of hypophosphites and a teaspoonful of cod-liver oil twice a day. Bathe the eyes with the following lotion: Acid Boracic, 1 gr.; zinc sulph., 1 gr.; tr. opii, ii. gr.; aq. a viii. oz. Apply to eyes three or four times a day.

Subscriber, Brooklyn, N. Y.---I am the owner of a fox-terrier pup five months old, who eats everything he comes across---coal, wood, rags, etc. He has had one fit from eating rags.---Ans.: Treat for worms, using any of our advertised remedies. Most puppies have this annoying habit, unless their privileges are curtailed. Give your dog a good knuckle-bone to exercise his teeth upon, and put a little flour of sulphur in his food now and then.

Answers to Correspondents.

E G. C., Syracuse, N. Y.---During the early part of December last, a bird was brought to me to be mounted, which seems to be an entire stranger to all of us. In Jasper's works on "Birds of North America," the nearest illustration given, with description, seems to be that of the guillemot, although, judging from its plumage, it must be a young bird. As its back and head are of a dark slate or lead color, instead of jet black, as in the illustration. Its throat is mottled with stray white and lead color down to the breast, the rest is entirely white, like the illustration. The bird was shot on Oneida Lake by one of the local sportsmen; there was a mate with it which escaped.---Ans.: The description is too vague for a positive identification, and nothing is said about size. It may very likely be a guillemot, as these are sometimes found as stragglers on our inland waters, e. g., recently on Lake Champlain, etc.

A. G B., Holland, Mich.---Where can Dr. Shufeldt's "Scientific Taxidermy" be had? Where can Dr. Eliott's monograph of the Tetraonidal be obtained, and its size and price?---Ans. 1. Apply to the Smithsonian Institution; 2. A copy was catalogued by D. G. Frances, East Sixteenth street, New York, the other day, at $50.

J. A. E., Hackensack, N J.---Ans.: It is probable that the bird is a road-runner or ground cuckoo (Grococyx californianus), a well-known bird of California and the Southwest. Your description is very vague, but this is probably the bird. 2. We do not know the weight of the largest fish in the sea, but we trust that we may some time. 3. The trout or Long Island streams, which flow into the great South Bay, go down into the salt water.

S. B., St. Paul.---Can wild celery be sown among wild rice without choking the rice?---Ans. The two would not grow well in conjunction.

BLUE HARE.---A correspondent wants information respecting the introduction of the blue hare, or Scotch hare, into this country. If it has been attempted, what success attended the enterprise?

G. C. P., Aberdeen, Miss.---1. I own in this State a large shallow lake, say not exceeding three feet in depth. The mud in the lake is deep and sticky. I desire to know if wild rice will grow in this lake, and attract wild duck in the winter? 2. Will the planting of wild rice interfere with the fishing? 3. Where can I get wild rice, and at what price? 4. When ought it to be planted, and how?---Ans. 1. Probably, yes. 2. If your lake is nowhere deeper than three feet, the rice would probably spread pretty well over it. 3. Write to the advertisers whose announcement you will find in our columns next fall. The seed soon loses its vitality and is only good a few months after it is gathered. 4. As soon as you can procure the fresh seed, or about the last of August. The seedsman will give you particulars.

R. C. S.---You failed to give your post-office address. We would like the suggested description.

C. V. B., Chicago.---Will not the drainage from three good-sized hotels be injurious to the fish of a lake of about six or eight square miles area, whose inlet and outlet are at the same end? Are there any regulations in regard to this, and if there are to whom must one look for their enforcement? We people who have our summer homes at the lake do quite a bit of fishing, and are desirous of protecting the fish as much as possible.---Ans. 1. We think not. 2. You did not tell us what State the waters are in.

R. A. B., Rockville.—1. The sportsmen of this city have contributed $150 to buy some quail to re-stock our depleted covers, but some of our oldest shooters claim re-stocked birds will not stay, but will migrate in the fall, likely taking our home birds with them. Is there any truth in that? 2. Which of the many advertised birds would be the best kind to buy for re-stocking in this vicinity? 3. What is the best time and method to let them go? Ans.: 1. Imported birds undoubtedly occasionally leave the localities where they have been put out in re-stocking, but such cases are rare, and we do not think there would be any danger in your case of such an occurrence. 2. Birds from as far north as can be procured. 3. May. See answer to W. H. V.

J. W. B., Danvers, Mass.—Bendore gives the southern range as bounded by "the mountainous regions of Arkansas, Eastern Tennessee, Western North Carolina, Northeastern Alabama, Northwestern Georgia and Northern South Carolina. Throughout its southern range the ruffed grouse is mostly confined to the mountain regions, and is seldom if ever found in the lowlands during the breeding season."

W. H. V., Cincinnati, O.—1. Where can I buy live quail for stocking purposes, best acclimated to this section? 2. When is the best time to stock? 3. How shall I do it?—Ans.: 1. See our advertising columns. 2. About April or May for your locality. 3. See our issue of May 5, 1894, and article in last week's issue.

Trap-Shooting.

FIXTURES.

All ties divided unless otherwise reported.

Send notice of your shoot like the following:

March 5-7.—RUTHERFORD, N. J.—Three-days' tournament of the Boiling Springs Gun Club; first two days targets, last day live birds. Wm. H. Huck, Sec.

March 6.—PORT DOVER, Ont.—First annual tournament of the Phoenix Gun Club.

March 13 to 14.—HOT SPRINGS, Ark.—First annual live bird tournament of the Southern Gun Club at Whittington Park; 50 live birds, $25 entrance, four moneys, $500 guaranteed in this event. Entries close March 9 to H. O. Price, Southern Club, Hot Springs, Ark.

March 26-27.—ROCKFORD, Ill.—Live bird tournament of the Rockford Gun Club.

March 27.—SPRINGFIELD, N. J.—Tournament of the New Jersey Trap-Shooters' League, under the auspices of the Union Gun Club, of Springfield, N. J. E. D. Miller, Sec.

March 28.—NEWARK, N. J.—Live bird handicap at Erb's grounds, under the auspices of the Newark Gun Club; 25 birds, $10 entrance, birds extra, handicaps from 33 to 26 yards, class shooting, four moneys. W. H. Green, Sec.

April 3-5.—WILLARD PARK, Paterson, N. J.—Interstate Manufacturers' and Dealers' Association's third annual Grand American Handicap at live birds, at New York; $1,000 guaranteed, all surplus added. All ties in Grand American Handicap must be shot off; three moneys, three high guns.

April 3.—ASTOR HOUSE, New York.—Trapshooters' Convention, adjourned meeting; 8:30 P. M.

April 8-10.—HOT SPRINGS, Ark.—Fifth annual tournament of the Arkansas State Sportsmen's Association; targets. Programmes ready March 1. John J. Sumpter, Jr., Sec.

April 9-11.—BURLINGTON, Ia.—Tournament of the Big Four Gun Club.

April 9-11.—WELLINGTON, Mass.—Three days' tournament of the Boston Shooting Association; targets. O. R. Dickey, Manager.

April 12.—HARTFORD, Conn.—All day shoot of the Hartford Gun Club; targets. D. S. Wadsworth, Sec.

April 16-18.—PITTSBURG, Pa.—Tournament of the Interstate Association, at Pittsburg, Pa., under the auspices of the Pittsburg Gun Club, $200 added money.

April 15-18.—ATCHISON, Kas.—Twelfth annual tournament of the Atchison Gun Club. Lou Erhardt Sec. and Manager.

April 17-19.—CANTON, Ill.—Annual spring tournament of the Canton Shooting Club.

April 22-27.—KANSAS CITY, Mo.—Eighteenth annual tournament of the Missouri State Game and Fish Protective Association. W. V. Rieger, Sec.

April 23-26.—GALESBURG, Ill.—Tournament of the Galesburg Shooting Club.

April 24-26.—PEEKSKILL, N. Y.—Annual tournament of the Peekskill Gun Club; first two days, targets; third day live birds. Orrin J. Loder, Sec.

May 2.—ELIZABETH, N. J.—All day tournament of the Elizabeth Gun Club; New Jersey Trap Shooters' League events commence at 2 P. M. Rob't. E. Chetwood, Prest.

May 7-10.—CINCINNATI, Ohio.—Dupont tournament at Cincinnati. Liberal cash prizes added to the purses. R. S. Waddell, agent.

May 9-10.—WILMINGTON, N. C.—Tournament of the Interstate Association, under the auspices of the Eastern Dog and Game Protective Association.

May 9-11.—NEWBURG, N. Y.—West Newburg G. and P. Association tournament. W. C. Gibb, Sec.

May 10.—WEIR CITY, Kan.—Ninth annual owl shoot of the Amateur Trap-Shooters' Association of Missouri and Kansas; $300 in cash added. W. W. McIlhany, Sec.

May 14-16.—DAYTON, O.—Ohio Trap-Shooters' League annual meeting and tournament, under the ausnices of the Buckeye Gun Club, of Dayton, O. Ed. Taylor, Sec., 8 West Third street, Cincinnati.

May 17-18.—LYNCHBURG, Va.—Tournament of the Interstate Association, under the auspices of the Lynchburg Gun Club, $200 added money.

May 21-23.—KANSAS CITY, Kan.—Annual tournament of the Kansas State Sportsmen's Association. A. W. Peck, Sec., Kansas City.

May 21-24.—KNOXVILLE, Tenn., Gun Club's fourteenth annual tournament; $1,500 added to the purses.

May 20-30.—CANAJOHARIE, N. Y.—Two-days' tournament of the Canajoharie Gun Club; targets. Chas. Weeks, Sec.

May 30-31.—GRAND RAPIDS, Mich.—Valley City Gun Club's annual tournament under the auspices of the Interstate Association; targets; added money announced later. C. F. Rood, Sec.

June 3-8.—CHICAGO, Ill.—Illinois State Sportsmen's Association annual tournament. Convention at Sherman House, June 4.

June 11-14.—MEMPHIS, Tenn.—Memphis Gun Club's annual tournament; $2,000 added money.

June 13-15—OMAHA, Neb.—Annual tournament of the Nebraska State Sportsmen's Association; $500 added money. F. S. Parmelee Sec.

June 19-21.—CLEVELAND, O.—Chamberlain Cartridge and Target Company's second annual tournament; $1,200 in cash added.

June 24-28.—SARATOGA, N. Y.—Annual tournament of the New York State Sportsmen's Association, under the auspices of the Saratoga Gun Club. H. M. Levengston, Sec.

July 11-12.—ALTOONA, Pa.—Third annual tournament of the Altoona Rod and Gun Club at Wopsononock; targets. W. G. Clark, Sec.

Aug. 20-24.—HOLMESBURG, Pa.—Pennsylvania State Sportsmen's fifth annual tournament, under the auspices of the Keystone Shooting League, of Philadelphia. John C. Shallcross, Sec., Frankford, Pa.

Aug. 29-31.—HOT SPRINGS, S. D.—Hot Springs Gun Club's second annual tournament.

Oct. 9-11.—NEWBURG, N. Y.—West Newburg G. and R. Association tournament. W. C. Gibb, Sec.

The Control of Trap-Shooting.

The committee appointed by the Trap Shooters' Convention, held in the Astor House, this city, on Jan. 24, has finished its labors so far as the drafting of a constitution for presentation at the next meeting, April 3, is concerned. The text of that constitution is given below in order that trap shooters, and others interested in the art and sport of wing shooting, may have a chance to study it at their leisure, prior to its consideration at the adjourned meeting in the Astor House set for the above date of April 3.

The South and the West have now an opportunity to see what the proposed association may be expected to accomplish. It was felt by those present at the meeting on Jan. 24 that too short a notice of the meeting had been given if proper representation was to be secured. It was also felt that the objects of a national organization should be laid before the public in order that trap shooters and others might learn the intentions of the promoters of the plan for the control and purification of trap shooting. With that idea in view, the delegates at the meeting in January passed a resolution empowering the chairman, Major R. Heber Breintnall, to appoint a committee of five, whose duty it should be to prepare a constitution and by-laws to be presented for adoption at the meeting on April 3, adding a proviso that the text of the constitution should be ready for publication, and should be published, four weeks prior to that meeting.

In accordance with that resolution, the chairman appointed as such committee: J. A. H. Dressel, chairman; W. H. Wolstencroft, B. C. Everingham, L. H. Schortemeier, and Edward Banks. The efforts of that committee in accordance with the instructions of the meeting, are therefore given in full below.

American Trap-Shooters' League.

PROPOSED CONSTITUTION.

Article I.—Name. The name of this Association shall be The American Trap-Shooters' League.

Article II.—Objects. The objects of this Association shall be, to act as a regulating body for the control of trap-shooting and the government of the same in the United States; to inquire into and decide upon all questions connected with trap-shooting in dispute between clubs or individuals; to apportion penalties for breaches of the rules of this Association; to assign dates for tournaments, with a view to avoiding a clashing of the same; to obtain, as far as possible, the adoption of uniform rules for trap-shooting; to assist in the enforcement of the game and fish laws, and to secure legislation to the same end, and to distribute information in relation to the game and fish laws of the various States; to further the best interests of the sport of trap-shooting, and to promote kindly intercourse and generous emulation among all classes of sportsmen.

Article III.—Membership: Sec. 1. This Association shall be composed of clubs and individuals. The term "club," when used in this Constitution, shall be construed to mean any society, league or association organized for the furtherance of trap-shooting or for the protection of fish and game.

Sec. 2. Any club duly organized for the furtherance of trap-shooting or for the protection of fish and game, shall be eligible to membership in this Association. Any person more than eighteen years of age, a resident of the United States, shall be eligible to associate membership.

Sec. 3. A club or individual seeking membership shall mail to the Secretary of this Association an application, on an application blank, to be obtained from the Secretary, together with the dues for the current fiscal year. Such application shall be acted upon by the Executive Committee. It shall require a majority vote of the Executive Committee to elect.

Sec. 4. Every club a member of this Association shall be entitled to one vote at any meeting of this Association. Associate members shall be entitled to all the privileges of the Association, but no associate member shall be entitled to vote, unless he be a delegate from a club of which he is a member.

Sec. 5. Membership in the American Trap-Shooters' League shall carry with it an obligation to encourage, by personal conduct and influence, a public interest in trap-shooting and also a public regard for the observance of the game and fish laws. All members shall be pledged to a hearty support of any and all legislation, approved by this Association, for the benefit of trap-shooting or for the protection of game and fish.

Sec. 6. Honorary members may be elected at any annual meeting. These members shall be exempt from the payment of dues and shall have no vote.

Sec. 7. The term "Executive Committee" used herein, shall be construed to mean the Executive Committee of the Board of Governors.

Article IV.—Meetings. Sec. 1. The annual meeting of this Association shall be held on or about May 15 of each year, in some city to be designated at the preceding annual meeting. No two annual meetings shall be held in consecutive years in the same State. The first annual meeting of the Association shall be held on April 3, 1895, in the city of New York.

Sec. 2. Special meetings shall be called by the President, upon the unanimous vote of the Executiev Committee or a majority of the entire Board of Governors. The object of such meeting shall be stated in the call, and at least four weeks' notice thereof must be given to every member, by mail, or publication in one or more of the recognized representative sportsmen's papers.

Sec. 3. At all meetings of the Association a club may be represented by proxy, provided that no member shall hold a proxy for more than one club.

Sec. 4. Fifteen members personally present shall constitute a quorum for the transaction of business.

Article V.—Officers. Sec. 1. The officers of this Association shall be a President, First Vice-President, Second Vice-President, Third Vice-President and a Secretary-Treasurer.

Sec. 2. Immediately upon the adoption of this constitution, a board of fifteen governors shall be elected by ballot. These fifteen governors shall classify themselves by lot into one year, two year, and three year terms. At each succeeding annual meeting, five governors shall be elected by ballot to take the places of those whose terms of office are expiring. These governors shall elect the officers of the Association from their own body. An exception may be made in the case of the Secretary-Treasurer, who may be appointed by the Executive Committee from the members of the Association; they shall also appoint all necessary committees; the Chairman of all such committees shall be selected from the Board of Governors.

Sec. 3. All officers except the Secretary-Treasurer shall serve without pay. The salary of the Secretary-Treasurer shall be fixed by the Executive Committee, but shall not exceed $—— per annum.

Sec. 4. Vacancy in any office may be filled at any meeting of the Executive Committee. A vacancy in the Board of Governors may be filled by the Board for the unexpired term.

Article VI.—Duties of Officers. Sec. 1. President. It shall be the duty of the President to preside at the annual meeting.

Sec. 2. Vice-Presidents. In the absence of the President the Vice-Presidents shall perform all his duties in the order of their rank.

Sec. 3. Secretary-Treasurer. The Secretary-Treasurer shall issue calls for all meetings of the Association and of the Executive Committee, when so ordered, and he shall keep a record of all such meetings. He shall keep a roll of membership and take charge of all papers belonging to the Association. He shall collect all moneys belonging to the Association and disburse the same under the direction of the Executive Committee. He shall transact such other business, and fulfill such further duties, as may be directed by the Executive Committee. All moneys collected shall be deposited in a bank to be designated by the Executive Committee and in the name of the Association. All payments of money shall be made by check only; and all checks shall be signed by the President and by the Secretary-Treasurer. He shall give a bond for the faithful performance of his duty, in favor of and satisfactory to the Chairman of the Executive Committee, to an amount not less than $—— before assuming office.

Article VII.—Executive Committee. Sec. 1. How Constituted. The Executive Committee shall be selected by the Governors from their own body; the term of office of the members of the Executive Committee shall be for one year.

Sec. 2. Duties. The Executive Committee shall have general charge of the interests of the Association, and shall select a Chairman from its number. It shall consider and report to the Association all proposed changes in legislation regarding trap-shooting; it shall represent to the different legislatures in which any such proposed change may be pending the sentiment and action of this Association respecting the enactment of such measures, and urge their adoption or rejection; it shall aid as far as possible in securing the enforcement of the game and fish laws in the different States of the Union; disseminate literature relating to trap-shooting and game protection, and adopt such other means as it may deem expedient to further the objects of the Association.

Sec. 3. Sub-committees. The Exeeutive Committee may appoint such Committees as it shall deem expedient.

Sec. 4. Financial Control. The Executive Committee shall have full charge of the funds of this Association and power to expend the same, but shall not make any expenditures nor create any liabilities for objects not named in Article 2, without a concurrent vote of the Board of Governors. The Executive Committee shall at the commencement of every fiscal year make appropriations for the ensuing year, not to exceed the receipts of the Association for the same period; and no liability shall be incurred unless a sum of money sufficient to liquidate the same is in hand, except as above provided.

Sec. 5. Meetings. The meetings of the Executive Committee shall be held at the call of its Chairman, and on not less than four days' notice thereof, by mail.

Sec. 6. Cost of Transportation of Members. The transportation of the members of the Board of Governors, together with the legitimate expenses of the same, contingent upon their attendance at the annual meetings of the Association shall be defrayed out of the funds of the Association. The transportation shall be furnished each member of the Board by the Executive Committee who shall obtain lowest possible rates for the same.

Sec. 7. Reports. The Executive Committee shall report to the Association annually at its annual meeting.

Article VIII.—Dues. Sec. 1. Clubs. The annual dues to the Association from each club to entitle it to the privileges and benefits of the Association and to vote at the annual meeting, shall be three ($3) dollars, payable on or before May 15, which shall be the beginning of the fiscal year.

Sec. 2. Associate Members. The annual dues to the Association from each associate member shall be fifty (50) cents, payable as stated in Sec. 1 of this article.

Sec. 3. State Associations may become Advisory Members of this Association by the payment of five ($5) dollars, payable annually as above stated, and on such payment shall be entitled to the rights and privileges set forth in the By-Laws.

Article IX.—Sec. 1. Tournament Board. The Tournament Board shall be appointed by the Executive Committee immediately after its election. To this Board shall be referred all questions connected with trap-shooting in dispute between clubs and individuals. It shall investigate and take action thereon, and the decision and penalty imposed shall be final, unless an appeal shall be taken thereon to the Executive Committee within thirty days thereafter. In cases occurring in a State when the State Association is a member of this body, the President of such State Association may act with the Tournament Board and have a vote therein.

Sec. 2. For special cause and on recommendation of the Chairman of the Tournament Board, the Executive Committee may suspend any person against whom charges shall have been made, from all right of competition at tournaments, pending his trial.

Sec. 3. Any person knowingly competing with a person under the suspension as herein provided or upon the decision of the Tournament Committee, shall be liable to suspension by the Executive Committee.

Article X.—Amendments. All proposed amendments to the Constitution shall be filed with the Secretary-Treasurer, and published in one or more of the representative sportsmen's papers at least one month before the annual meeting, and no amendment shall be adopted unless it shall have been so filed and published, and approved by a two-thirds vote of the members present at such annual meting.

Larchmont's Washington's Birthday Sweeps.

Both before and after the match several events were decided. No. 1 was 5 birds, $5, handicap rise; No. 2 was a miss and out, $5 entrance, 27 yards men and under allowance one miss as a kill. No. 3 was an extra under the same conditions as No. 2. No. 4, 10 birds, $10, 27 yards men and under allowed one miss as a kill; first round all shot at 22 yards, going back a yard each round, shooting the 10th round from the 31 yards mark. No. 5, 6 birds, Star sweepstakes of $5 entrance; $1 to star in rounds 1 and 2; $2 to star in rounds 3 and 4; $3 to star in rounds 5 and 6; miss and out after the sixth round. No. 6, battery shooting, all at 28 yards mark; 3 birds, $5. Nos. 7 and 8 were miss and outs, $5 entrance. Event No. 6, the "battery" event needs some explanation as it will be a novelty to most shooters. It is carried out as follows: The traps are supposed to be decoys with a flock of ducks "stooling" to them. The shooter lies on his back with his heels at the 28 yards mark, his head resting on a pillow, with his gun grasped in both hands but lying across his breast. (The shooter is now in his battery awaiting the arrival of the ducks!) These ducks are next supposed to have alighted among the decoys with which they are making friends; the sudden uprising of the shooter would naturally send them splashing and quacking away. To produce the same effect, the shooter in an event like No. 6 referred to, gives the usual caution, "Are you ready?" He gets the answer, "Ready," and then calls, "Pull." As he says the latter word the trap is sprung and a hand, that has been holding his head down to prevent him from rising until the word is given, is withdrawn from his head. The shooter then sits up and plugs away at the escaping bird while he himself is still in a sitting position. This sort of an event makes lots of fun, and, on this occasion, developed the fact that there are some dangerous battery shots in the ranks of the Larchmont Club. Scores:

No. 6 was won by Moore, Harold and Knapp dividing second; No. 7 was divided between Harold and Knapp; No. 8 was divided between Moore and Harold. EDWARD BANKS.

Has its Disadvantages.

Mr. E. H. Madison, 79 Flatbush avenue, Brooklyn, N. Y., writes under date Feb. 13, as follows: "As a pigeon shooter for over 25 years, I will give you a wrinkle used by the Long Island Club which put a stop to dropping for place most effectually, but also helped to kill the club. The plan was this: Every crack shot was put in class A; the next in class B; the poorest ones in class C. The men in each class were only allowed to compete for the prize offered in their class, making it practically a case of dog eat dog. As regards the kick against the professional who shoots and wins nearly all the money given at the tournament, that is easily fixed; as the experts are paid to show up the wares of the various houses they work for, let them shoot in all matches for a record only, waiving all right to any prizes. It will take time, perhaps, to classify the shooters, but this scheme, if carried out rightly, will stop all dropping, etc. What the future result would be, I know not."

Shooting Crows at Allentown.

Allentown, Pa., Feb. 21.—Gib Geiberson having over 100 crows on hand, Charlie Zwirlein, of Yardville, N. J., and Miles Johnson, of Newtown, N. J., came over to have some sweepstake shooting to-day. The first five events were at 5 crows, $2 entrance; one money. The last event was at 8 crows; $5 entrance. This last event could not be finally settled, each man scoring 7 out of 8, when the supply of crows came to an end. Scores:

*Divided, as there were no more birds on hand.

Shooting Pigeons at Stroudsburg.

Stroudsburg, Pa., Feb. 21.—At a live bird shoot held at East Stroudsburg, Pa., on Feb. 20th, under the management of John M. Hill, 21yds rise, both barrels, 80yds boundary, gun held under the elbow, the following gentlemen from out of town were present: John Broadhead, Joseph H. Graves, A. J. Smith, of Delaware water Gap, Henry T. Frankenfield & Son of Resca, Pa., 10 guage guns were not handicapped, three of them were in use, those who shot them being Messrs. Hill, Eilenberger and Van Why. The birds were a fair lot of flyers. M. E. Miller was referee, James L. Purington, scorer. Score:

John M. Hill	0212121*1*11— 9	C M Brownell	010112100101— 7

ASA WHITEHEAD, Sec'y.

Live Birds at Yardville.

Yardville, N, J., Feb. 20.—Miles Johnson, of Newtown, N. J., and George R. Givens, of Easton, Pa., shot a match here to-day, on Charlie Zwirlein's grounds, Givens winning by one bird. The conditions were 25 birds, $50 a side. The day was clear and cold with no wind, but the birds were good, only two needing to be flushed out of all the birds shot at during the day; match and sweepstakes continued. There was a good attendance of local shooters, the result being an enjoyable day. Sores:

Miles Johnson.....1021002012200021222120212—17
G R Givens.....0111121110011101101010111—18

The following sweeps were also shot—Nos. 1, 2 and 6 were miss-and-outs, $2 entrance; Nos. 3, 4 and 5 were Jersey sweeps, 4 birds, $3 entrance:

No. 5—Geiberson and Camp 4, Givens, Hill, Grant, Johnson and Zwirlein 3.
No. 6—Hill, Grant, Johnson and Zwirlein 2, Givens and Geiberson 1, Camp 0.

Mountville Gun Club.

Mountville, Pa., Feb. 15.—This afternoon we had a small shoot at 10 live birds per man, 30yds. rise, and 50yds boundary. The result was as follows:

Lefever	1111*21110—8	Harsh	0200122212—7
Kready	0012121210—7	Myers	2220120221—8
Taylor	2120120111—8	Clark	1121121011—9

This week we are going to have a tournament Match between two teams of two men each for a purse of $100. Each man shooting at 15 birds. The contest is exciting no little interest.
TELL.

Live Birds in Canada.

Lacolle, Canada, Feb. 2.—The opening shoot at St. John's, Quebec, Canada, took place this afternoon. It was an impromptu trial of skill among the Province of Quebec live bird shots; among them were Wallace, McPherson and McKenzie, of Montreal; McDonald and Roy, of St. Johns; Barton, of Toronto, and Brownley, of Lacolle. The event was a race at 15 live birds, 28yds. rise, 80yds boundary. The dead birds were given to the hospital at St. Johns for the benefit of the patients. Score:

Wallace	111111111101111—14	Barton	101111111111111—14
Brownley	111111111111111—15	McKenzie	111111111111110—14
McDonald	111110010111111—12	Roy	101111011111001—11
McPherson	110011000111001— 8		

THOS. BROWNLEY.

Freehold—Brunswick—Dayton.

Freehold, N. J., Feb. 22.—The scores given below were shot this afternoon on the Freehold grounds, the home team winning easily. It was nip and tuck between those old antagonists, the men from Dayton, N. J., and the team of the Brunswick Gun Club, of New Brunswick, N. J., the former winning second place by a single break. The high wind made very difficult shooting, hence the majority of the scores are far below par. Scores:

Boiling Springs Club In the Lead.

Rutherford, N. J., Feb. 22.—The Boiling Springs Gun Club is now one ahead in the series of team races between that club and the Passaic City Gun Club, of Passaic, N. J., having won two out of three matches that have been shot so far. The third one of the series was decided to-day on the Boiling Springs Club grounds, the home team winning by ten breaks, scoring 209 out of a possible 300, an average of nearly 70 per cent.; Passaic average 67 per cent. The races are at 25 targets per man, unknown angles. Score:

Yonkers Gun Club.

Yonkers, N. Y., Feb. 22.—Members of the Yonkers Gun Club engaged in several sweepstakes this afternoon, which came off on their own grounds. The shooting was confined to live birds, under Hurlingham rules. The birds were a good lot and a strong breeze materially aided them. Although the weather was cold the sport was excellent, a number of fine kills being made by the participants in the different events. Scores:

	No. 1.	No. 2.	No. 3.

A Meyers		001111—4	

Nos. 1 and 2 were sweeps at 6 birds; No 3 was a miss and out.
J. T. WARING, JR.

Elliott Took Three Straight.

By dint of good shooting, Jas. A. R. Elliott, of Kansas City, took three straight matches from E. D. Fulford, of Utica, N. Y., on Feb. 19, 20 and 21. In these three matches, which took place at Marion, N. J., Elliott showed his superiority over his opponent at every point in the game. He was quicker, surer, killed his birds in a cleaner fashion, and used better judgment than Fulford did. The latter's shooting was a great disappointment to his friends and to the spectators. Those among the latter who were Elliott's admirers, and who had money on him, were for the most part surprised at the result of the races so far as the actual figures went. They had looked for Fulford to give their man a close rub but, save in a single instance, he was never really dangerous. That single instance was on Wednesday, Feb. 20, when he was ahead up to the 53d round. Elliott's average for the 300 birds was a good one; he killed 91, 95 and 96 out of the respective hundreds, totalling 282 out of the 300 shot at, averaging 94 per cent. Fulford's average was 88, his total for the 300 being 264, his three separate scores being 88, 87 and 89.

FIRST MATCH.

Feb. 19. Over 100 persons paid admission to see the first match of the series. The day was pleasant, and there being little wind to aid the birds, high scores appeared a certainty. There was plenty of Elliott money in the crowd, which the Fulford crowd were not slow to pick up. In fact, there was quite a little wagering done before the match was shot. The birds were only a medium lot, and the prediction of high scoring seemed likely to be fulfilled; in fact, money was bet that 94 would be beaten by one or other of the shooters. When Elliott had finished his third string, with a total of 72 out of 75, those bets looked like finding money. His loss of five birds, all dead out of bounds, out of his next 12, knocked those calculations silly. The scores given in detail below tell the rest of the story:

SECOND MATCH.

Feb. 20. Notwithstanding the almost amateurish showing made by both men on the previous day, a good sized crowd of representative pigeon shooters was on hand to see the second match of the series. The day was bright and clear, with a breeze from the West, that was cold enough to chill the spectators long before the match was over. The birds were better than in the first match, but still not what they should have been considering the standing of the two men. Elliott again shot well, especially towards the end of the match, winding up with a run of 39. On the first string of 25, Fulford led him two birds, but in the next string, Elliott picked up one, making the score 47-46 in Fulford's favor at the halfway notch. At the 32d round, Fulford had a lead of three birds, and his prospects were exceedingly rosy. Elliott's greatest work on his last 80 birds was enough to beat anybody; of that number he lost but two, making runs of 11, 28 and 39! Fulford's best run was 20. Towards the close of the race it looked as if Elliott couldn't miss; he brought down some corking good birds, as easily as if they were the veriest duffers, and time and again he received hearty applause. Many of Fulford's shots, too, produced a good deal of hand clapping.

The most notable feature of the race occurred in the 66th round. The score was a tie; Elliott killed his bird; Fulford drew a low flying driver from No. 2 trap, that carried both charges of shot to a patch of ice on the right boundary, where it fell dead. The boundary was only marked by small stakes, and a dispute occurred as to whether the bird was in or out. Milt. Lindsley, the referee, after a good deal of argument had been heard on both sides, decided to have a stake driven in at the spot where the bird fell for the purpose of measuring the exact distance if that bird was the deciding one of the match; he stated all along that he thought it was outside the line, but withheld his decision as it was a close thing. At the conclusion of the match, there being no further question, and the bird not being as important as it might have been, Mr. Lindsley announced that he gave it as a lost bird without any measuring being resorted to. The decision was, according to general report, quite a proper one. This was about the only excitement of the whole match, which must, however, be classed as an excellent race up to that round. All interest was lost, save as to Elliott's total, when Fulford was unlucky enough to lose his 70th, 73d and 75th birds in quick succession, all dead out of bounds. Elliott had three dead out of bounds, and Fulford six. Scores of the second match:

THIRD MATCH.

Feb. 21. On this day both men improved the totals made by them on the previous day, Elliott scoring 96 to Fulford's 89. Elliott's work was again marked by clear shooting and a steadiness that proved that he is at the top of the tree among professionals of the country. There may be some who are just as good, but they are remarkably scarce, as Elliott is shooting in wonderful form just now. This afternoon he braced up after his 20th, 21st and 23d birds and killed clear to the end of his 100, barring his 44th bird, which like his 20th and 23d birds dropped dead out of bounds. The only bird of the whole match which he did not account for was his 21st bird, thus actually killing 99 out of his 100! Fulford's best runs were, 19, 16 and 11; Elliott's 19, 20 and 56. The birds were the same as those trapped on Wednesday; that is, they were a good lot, with plenty of extra good ones among them. Scores:

Knapp Won by Three Birds.

The holiday programme at the shooting grounds of the Larchmont Yacht Club was a very varied one and included among its items, a 100 bird race between those two rivals, George Work and J. P. Knapp. This even was No. 3 on the programme, and was commenced on the arrival of the 11 o'clock train from New York. For the two hours and five minutes that it took to decide the match, the interest never abated. Both men shot well, Knapp being particularly brilliant with his second brarrel; Work acted at times as if he was a trifle stale, missing some of his birds in a most unaccountable manner; his timing and placing of his first barrel, however, was much superior to that of his opponent, Knapp throwing away his first shell time and again, only to redeem the mistake in the majority of instances by some really wonderful kills. The attendance of club members, who were not shooting, was good and the interest they took in every shot was very marked, applause from the gallery being very generous. It is impossible, owing to the pressure on the columns of Forest and Stream this week, to give as extended a notice of this match as it deserves. It would also be nearly an impossibility to particularize, as so many excellent shots were recorded, still Knapp's kill of his 40th bird with his second barrel aroused the spectators to a pitch of excitement seldom seen at a shooting match. The details of the score are told below:

Trap score type, copyright by Forest and Stream, 1895.

Death of C. H. Townsend.

The death of C. H. Townsend, which occurred at his home in Newark, N. J., on Thursday afternoon last, Feb. 21, although not altogether unexpected, was none the less sad. At an age when he should have been doing his very best work—he was only 39 years of age—he has fallen a victim to consumption. As trap editor of Forest and Stream for several years, he came in contact with all classes of sportsmen, and "Charlie" Townsend, as soon as men got to know him, was deservedly popular. By his reports of shoots, and by his handling of other matters intimately connected with trap shooting, he did excellent work in these columns. When, owing to the ravages of the disease from which he has since died, he found he was unable

to do his work as he felt it should be done, he handed in his resignation, retiring from his position of trap editor as recently as Sept. 1, 1894.

Perhaps mercifully, his end came very suddenly. His intention had been to winter among the pine forests of Georgia, a region where he had many friends and some relatives, and where he had always found the air of great benefit to him. He had obtained a good position there, and was to have left for the South, and so wrote to Forest and Stream, just when the blizzard struck this country. The severity of the weather prevented his departure at that time. He had finally decided to leave Newark the latter part of last week, and was, preparatory to his departure, in the act of packing his trunk, when he was seized with a hemorrhage of so violent a nature that he died almost immediately. A peculiarly sad feature of his death is that the articles he was placing in his trunk at the time when death overtook him, were articles for use on hunting and fishing excursions. The last public shoot he attended was the Newark Handicap at Erb's grounds on Jan. 24 and 25 of this year.

The following obituary notice is taken from the Newark, N. J., Sunday Call, of Feb. 23: "Mr. Townsend was born in Orange thirty-nine years ago. He learned the trade of a printer, and afterward became a reporter of military and sporting matters, especially bicycling and trap shooting, for the Sunday Call. Several years ago he published in this city a paper devoted almost exclusively to the wheel. During the two years ending last fall he edited the trap shooting department of Forest and Stream, of New York, and traveled all over the East and South for that journal. He soon won a wide reputation as an expert in his work, and scarcely a month ago a similar position on the staff of a large Philadelphia paper was offered to him. For many years he was a lieutenant of Company G, of the old Fifth Regiment, of this city, and his intimate knowledge of military matters enabled him to publish for several summers a little pamphlet called "The Guardsman on Duty," for the instruction of the soldiery of the State, when in camp at Sea Girt. He was of a frank and manly disposition and he had many warm friends. He leaves a widow and three small children."

Rifle Range and Gallery.

New York Rifle Club.

Feb. 6.—This club held its regular shoot to-day at Zettler's. The following scores were made by the members present. Off-hand. German ring target. Distance 75ft. Any rifle, sights and trigger-pull. Two best scores counted.

A. H. Isbell, 65	248	248
M. Herrington, 0	244	245
C. E. Gensch, 69	244	245
R. J. Young, 66	240	243
E. B. Barker, 62	235	240
C. C. King, 59	236	237
F. Walters, 0	234	236

Feb. 20.—The regular shoot under the above conditions decided to-day resulted as follows:

A. H. Isbell, 72	248	249
M. Herrington, 69	247	248
C. E. Gensch, 69	241	247
R. J. Young, 68	243	243
D. Crocker, 68	240	243
C. C. King, 67	240	243
E. B. Barker, 57	237	238
T. Monahan, 29	212	212

R. J. YOUNG.

Hartford Rifle Club.

Hartford, Conn., Feb 24.—Inclosed are the scores of the last two shoots of the Hartford Rifle Club, both shot under poor weather conditions of strong, gusty wind, and a harsh light with shadows on the target.

Feb. 9.—Medal Match (Single Entry).

H. M POPE, Sec.

Missouri Rifle Notes.

St. Louis, Feb. 8.—A bitter cold wave, and consequent low temperature in the gallery, interfered with the weekly shoot of the Missouri Rifle and Pistol Club, but a few of the regulars turned out and faced the targets. The following scores were made: Zukoski, 234; Schaff, 231; Kephart, 223; Buchanan, 222; Wright, 220; Herold, 217; Krah, 217; Vogt, 215; Knapp, 213; Dunn, 211; Zink, 190; Lingenbrink, 183.

St. Louis, Feb. 22.—At the weekly medal shoot of the Missouri Rifle and Pistol Club yesterday, the following scores were made: R. W. Staley, 241; J. H. Krah, 234; W. P. Schaaf, 233; G. T. Dunn, 232; A. Gfeller, 232; H. Kephart, 231; R. Buchanan, 229; E. Kaiser, 228; P. Kling, 228; C. Vogt, Jr., 224; M. Summerfield, 220; R. Herold, 219; S. B. Stannard, 217; E. Zukoski, 216; H. L. Lortz, 207.

The second telegraph match with the Columbia Rifle and Pistol Club of Rochester will be shot Thursday night, Feb. 14, on the Columbia's target.

HORACE KEPHART, Sec.

From the Pacific Slope.

San Francisco, Jan. 27.—The marksmen at Shell Mound to-day had to face a fierce north wind, and the muzzles of their rifles did some lively waltzing at times. Pistol shooting was especially difficult as the range is practically an open one. The scores made by the members of the Columbia Pistol and Rifle Club in the contests for medals, open to the world, were as follows:

Target rifle, Kuhne medal—S. I. Kellogg, 87; Dr. Rodgers, 86; F. O. Young, 85; F. Schuster, 84.

Military rifle, Glindermann medal, 8-inch bull's-eye—H. R. Brown, 46; F. O. Young, 45; Col. Kellogg, 45; J. Utschig, 45; Dr. Rodgers, 42; P. Bohr, 41; A. Heenan, 40.

Pistol, Blanding medal—F. O. Young, 94; S. Carr, 93; J. E. Gorman, 86; Dr. Rodgers, 88.

Twenty-two calibre rifle for ladies, 50 yards. Rogers medal—Mrs. Nichols, 95, 97, 98.

ROCEL.

Feb. 10.—Notwithstanding a glowering, drizzly day, Shell Mound Range was a scene of activity, the various shooting clubs, civil and military, turning out in goodly numbers.

The Schuetzen Verein, champion class. Medal was won by Andrew Mocker, 420; first class, not won; 2nd class, J. Peterson; 3rd class, not won; Germania Schuetzen Club, champion class, Medal won by Dr. P. O. Rodgers, with 428 rings; 1st class, not won; 2nd class, not won; 3rd class, F. Schuster, 419. Militiamen, C. F. Waltham, 47; W. L. Pun, 45; C. Myer, 44; J. R. Barricklo, 44; P. Bohr, 43; P. M. Diers, 43.

The Columbia Pistol and Rifle Club turned out with their nerves and eyes in fine shape. Smith Carr, E. Hovey, C. M. Daiss, and F. O. Young distinguished themselves at the 50 yard pistol range, followed by good scores from some of the lesser lights. At the 200 yard target rifle range, Dr. L. O. Rodgers was facile princeps, his score of 94 tying the highest yet made in the club. A. H. Pape fired one score on the 8-in. Creedmoor, rolling up the fine total of 47.

The numerous elegant medals offered by this club have had a highly stimulating effect upon its friends and members. Scores were as follows:

Target rifle, 200 yards, re-entry, Kuhne medal—Dr. L. O. Rodgers, 94; D. McLaughlin, 87; A. Gebret, 85; F. O. Young, 84.

In the contest for members only, no re-entry, the scores were: Champion class—Dr. Rodgers, 91; McLaughlin, 84; Young, 81; A. H. Pape, 80; Col. S. I. Kellogg, 80. First class—Phil. Bohr, 81; C. M. Daiss, 80; A. Gehret, 78; Charles Perry, 77; F. Baumgartner, 67. Second class—F. Dennis, 71; A. H. Kennedy, 69; Lieut. Davis, 67; J. E. Gorman, 63; H. J. Thompson, 62; G. Manuel, 62; H. R. Crane, 61; W. Umfred, 61; A. Fetz, 61; L. Zimmerman, 56; H. Foster, 55.

The pistol scores at 50 yards for members, no re-entry, were as follows: Champion class—F. O. Young, 93; Ed. Hovey, 91; S. I. Kellogg, 88; S. Carr, 86. First class—Dr. Rodgers, 88; A Gehret, 82; Gorman, 80; Davis, 79; Baumgartner, 78; McLaughlin, 77; Phil Bohr, 64. Second class—L. Zimmerman, 80; A Fetz, 73; H. Folster, 70; C. Perry, 70; H. R. Crane, 63; R. W. Forrest, 57; Kennedy, 55; W. Umfred, 53.

Open to all comers, pistol, Blanding medal, no re-entry—S. Carr, 97; Ed. Hovey, 96; F. O. Young, 94; C. M. Daiss, 94; Dr. Rodgers, 92; A. Gehret, 91; S. I. Kellogg, 88; J. E. Gorman, 86; F. Baumgartner, 82.

ROCEL.

Schlicht Rifle Club.

The Schlicht Rifle Club held its class medal shoot on Feb. 4, with the result that the following gentlemen were medal winners: Geo. Dorr, championship medal; C. Meyer, first class medal; George Lauterberger, second class, and H. Auf der Heide, third class. The following are the scores: J. Diehl, 230; Geo. Schlicht, 241; C. Meyer, 236; J. Schlicht, 232; H. Aup der Heide, 220; Geo. Dorr, 233; Geo. Reichert, 225; August Tribout, 215; C. Schlicht, 219;; W. Schlicht, 227; Geo. Lauterberger, 233; Aug. Meyer, 220.

New York Rifle Club.

New York Feb. 13.—This club held its regular shoot to-day at Zettler's. The following scores were made by the members present. Off-hand, German ring target. Distance 75 feet. Any rifle, sights and trigger-pull. Two best scores counted:

	Honor Target.		
A. H. Isbell	69	248	284
M. Herrington	65	247	248
Geo. Sharkley	65	243	244
C. E. Gensch	71	236	240
E. B. Barker	67	237	239

R. S. YOUNG, Sec. N. Y. R. C.

Seventh Regiment Marksen.

New York, Feb. 16.—The Seventh Regiment (N. G. S. N. Y.) team race, postponed from January, was decided this afternoon on the regiment's range. The conditions governing the team race are: Open to teams of three men from each company, except those with armory records of 65 or better, or who have shot on a regimental team at Creedmoor; no member allowed to shoot in more than one match; five shots standing and five prone; the Covell trophy to go to the winning team, to be held by them until the first competition in the succeeding year. Company A won, with a score of 130, Companies B and G being close up, with 128 and 126 respectively. Scores made were as follows:

COMPANY A.

	200 Yards.	500 Yards.	Total.
Private T. E. Stewart	17	24	41
Private H. E. Mann	21	22	43
Sergeant G. W. Rosevelt	21	25	46
Totals	59	71	130
Company B	60	68	128
Company G	61	65	126
Company K	61	61	122
Company E	61	60	121
Company H	58	60	118
Company I	52	60	118
Company C	59	57	116

Cincinnati Rifle Association.

Cincinnati, O., Feb. 10.—The following scores were made by members of the Cincinnati Rifle Association to-day at their range. Conditions: 200 yards, off-hand, at the Standard target. Weather cold and clear, and a white blanket of snow covering the ground, making a blinding glare, which annoyed the shooters considerably. The event of the day was the shooting of a match between 13 members of this association and 12 members of the St. Louis Rifle and Pistol Club, the result of which will be given next week.

7. America's Cup, first race. New York.
7. Revere, open.
7. Larchmont, cabin cats, L. I. Sound.
12. Sea Cliff, L. I. Sound.
14. Larchmont schooner race, L. I. Sound.

In casting about for grounds of objection to the new classification of the New York Y. C., the Boston Herald brings to light the important facts that the new change is "English," that four of the committe which recommended it are non-owners, and that three of them are members of another yacht club. The idea of classifying by all instead of one of the elements of measurement is not only English, but it is right, which is of much more importance. At the same time the classification by racing length under the Seawanhaka formula is not English, but something radically different from the multiplication of the two factors and the division by a constant, as in the English rule; and with very different results in the proportions of length and sail area.

The objection that the proposal has been advanced by non-owners, and inferentially that it is against the interests of racing yachtsmen, is made in this as in scores of cases in the past, regardless of the fact that improvements in rules do not invariably originate with the owners of large yachts, but much more frequently with men who are not yacht owners, but whose love of the sport in all its phases has led them to make a life study of it, both in practice and theory.

One of the non-owners on the committee has served the club for more years, probably, than he would care to own up to, in many capacities, and on its most important committees; another is recognized as a mathematician of exceptional ability, as well as a practical yachtsman, who not only sailed but designed his own yacht, one of the largest. A third has placed all designers under lasting obligations by his original investigations of the wave form theory, the basis of modern designing; while he is a practical sailor and expert amateur designer. That all of these gentlemen are active and honored members of another yacht club, as well as the New York, is nothing to their discredit.

The methods of the writer who seeks to play upon any possible jealousy or hostile feeling between two clubs in order to hinder the adoption of the proposed change speak of themselves in the absence of any sound and honorable grounds of objection. As opposed to the idea sometimes advanced, that all of the wisdom and knowledge of yachting is confined to yacht owners, and mainly to those owning large boats, and that the non-owner who devotes the leisure of a lifetime to an intelligent study of yachting is but a mischievous theorist, we would point to the new deed of gift. Apart from all charges of unfairness, that instrument is now generally recognized as the worst piece of bungling work known to yachtsmen, requiring constant interpretation and explanation to help out its absurd and faulty wording. This new deed was the especial work of practical yacht owners, five of the six members of the committee which framed it being owners. After this piece of practical work had stopped international racing for five or six years, the New York Y. C. was very glad to call to its aid on the America's Cup committee two of the gentlemen whom the Herald objects to as non-owners and members of another club.

Two reports which were current last week, to the effect that Jubilee had been chartered by a syndicate of New York yachtsmen for the trial races, and that Colonia had been chartered by Mr. Iselin for training the crew of the new boat, are positively denied; the former by Gen. Paine. It is stated, however, that Mr. John B. Paine has made plans and obtained estimates for lengthening the yacht forward, to make her 90ft., in case anyone should want to purchase or charter her.

The offer of a prize of $100 through the New York Herald has brought in thousands of names for the new syndicate defender; adding to, rather than relieving, the labor of the owners in chosing a suitable name. There is one name which, from its associations, has every claim upon the New York Y. C., the new defender being practically a club boat. The club was organized 51 years ago on board of Com. Stevens' schooner Gimcrack, and no better name is likely to be found at this time, the beginning of the club's second half-century

The America's Cup Committee.

A meeting of the America's Cup Committee was held on Feb. 25, there being present Commodore Smith and Messrs. Canfield, Tams and Fish. A letter was read from Mr. Iselin, tendering his resignation from the committee, owing to his position as managing owner of the new boat, and the resignation was accepted. The following letters were read, action on the subject of crew limitation, as referred to in the first one being postponed to the next meeting of the committee.

Dunraven Castle. Bridgend, Glamorgan, Jan. 31, 1895. Dear Sir: I have the honor to acknowledge the receipt of your letter of the 14th inst., and received with pleasure the formal notification of the acceptance by the New York Yacht Club of the challenge forwarded for me by the Royal Yacht Squadron.

I shall consider the first race as provisionally fixed---as stated in your letter---for Sept. 7, and shall use my best endeavors to get across in time.

I do not know of any question which requires speedy settlement except that of the number of crew which the vessels may carry, or rather of the number of persons all told to be on board when the vessels are measured.

I have given Mr. Kersey authority to act for me in all such matters, an authority which he has been kind enough to accpt; and it would save time and trouble if your committee would settle this matter with him.

I have the honor to remain yours very faithfully,
JAMES D. SMITH, Esq. DUNRAVEN.

New York, Feb. 19, 1895.

Dear Commodore Smith: Referring to the question of the Vigilant, the time is approaching when we should decide definitely what is to be done with her and what measures are to be taken to bring her to the starting line to meet the new Herreshoff boat in a condition to show her greatest speed.

I am going abroad this spring, but expect to be home in August. If it is agreeable to your committee, I will take the boat, and promise that she will be at the starting line (of course, barring accidents) in the best of condition to show her full speed. With kind regards, sincerely yours,
Commodore JAMES D. SMITH. GEORGE J. GOULD.

The following reply was framed:

Feb. 20, 1895.

Dear Commodore Gould: I have yours of the 19th, and note what you say regarding the Vigilant and bringing her to the starting line in condition to meet the new Herreshoff boat. This confirms your verbal statement to me, which I submitted to the America's Cup Committee. Your action in the matter is quite agreeable to them, and they will be glad to have your proposition consummated. Yours truly,
JAMES D. SMITH.
To GEORGE J. GOULD, Esq.

The New York Y. C. Racing Rules.

The work of the special committee of the New York Y. C., appointed sometime since to consider and prepare amendments to the racing rules of the club, is shown in the report which we publish this week. The committee was composed of five of the ablest and most competent men in the club, men of long practical experience in racing, and at the same time fully conversant with the theories and formulas on which racing laws are largely founded. In carrying out their work, one difficulty has been to frame certain rules not merely to attain the best results, but to meet the views of the members of the club, some of whom are opposed to what they deem too radical innovations. It is quite certain that before it can attain its old-time popularity under the existing conditions of expensive construction and maintenance, yacht racing must be very thoroughly reorganized in its methods, with material improvements in details of classification, measurement, courses, starting, etc., all tending to make more exciting races and closer finishes; but such changes cannot be made in a day or a year, and many yachtsmen are still loth to give up the old easy-going ways.

The most important change recommended by the committee was that in Rule I., by which the basis of classification was changed from load water sline to racing length. This measure has long been advocated by the Forest and Stream, the reasons for it being given at length. In the present depressed state of building and racing, with just one new boat, a 70ft. schooner, on the stocks, it cannot be said that classification is a vital issue; but it has long been evident that, failing the discovery of some entirely new system of yacht measurement, the next step in this country was to classify as well as measure the yachts by the Seawanhaka rule; and, this being the case, no better time than the present could be had for the change. In saying this we do not overlook the fact that all changes of rules should be made in November, and not in February; but, this apart, there are really no racing clases at present, and consequently no vested interests within the club fleet. The table accompanying the report shows that no serious disturbance of existing classmates need result; the boats racing together about the same as of old.

While the classes as arranged are all right as far as the New York Y. C. is concerned, they at the same time conflict with the classes existing for five years in the Larchmont Y. C; a cause of trouble in the event of any general building to class in two clubs. The work of changing to the new classification cannot, however, be considered as complete until the other large clubs, the Seawanhaka, Atlantic and Eastern, shall unite with the New York and Larchmont, as in 1889, in the adoption of one standard classification. This work might well be undertaken now, with a view to the formulation and adoption of such a classification in the fall.

The other changes in Rules I. and II. are merely matters of detail, taking the measurement rule and list of club courses from the By-Laws, where they never belonged, and transferring them to the Racing Rules, as in other yacht clubs.

Rule VIII., now VII., has been re-written, but with no material change, no attempt being made to place a minimum limit on bulkheads and fittings, or to prohibit the use of stage scenery instead of solid wood in the construction of partitions and bulkheads.

The new Rule VIII. deals very ineffectively with an important matter; as proposed by the committee it would have been equivalent to the English method, of measuring with crews on board, the only fair way; but as finally passed after much discussion, it amounts to merely a limitation of crew, all hands included, to be carried in each class. The table shows a liberal limit, 60 men for Vigilant and 57 for Valkyrie II., the latter having carried less than 0 in her races in this country.

The changes in Rule X. are merely nominal, but Rule XVI. has been improved by the addition of the word "first," thus removing all grounds of dispute as to the right of a yacht to start as many times as she may please to, being timed only on the final start. Such starts have at times been allowed in other clubs, and there are some who contend that they have such a right, but the rule as it now stands settles the matter within the New York Y. C.

The most radical proposal in the entire report is that relating to Rule XVII., Section 14, which, we are glad to say, was rejected by the meeting; the committee, while introducing it, making no efforts toward its adoption. Under the proposed wording, the fact that the outer one of two yachts at a mark tacked, would be presumptive evidence for the disqualification of the inner yacht. It is claimed that by the introduction of the positive fact of a tack, the rule is made more positive and definite, but there would still remain the conflicting evidence as to whether a tack was really necessary; and the testimony of impartial witnesses would be essential to the satisfactory settlement of the dispute, just at present. In the case of the more likely contingency under this section of the rule, of a little judicious "hogging" on the part of the outer boat, she might clear herself of blame in the event of a foul by filling away on the other side, and claiming to have been forced about by the inner boat. Under the present reading, no such claim is possible, the sole point to be decided being whether the inner boat could have weathered the mark without tacking had the outer boat been entirely absent from the mark. In practice this is usually difficult of proof, but it is evident that it is the true point of the question: whether the outer boat tacks or not in giving way has nothing to do with the case. The adoption of the proposed amendment by the New York Y. C. would have made a serious conflict of rules, the present wording being now recognized by all yacht clubs; and in this respect would have been open to strong objection.

In Section 6 the words "(not a mark)" which were needlessly inserted in 1893 are very properly dropped.

Rule XVIII., relating to the departure from the rules in cases of special danger, is dropped entirely.

In the body of the report will be found the actual wording of the amendment in the few cases where that of the committee was not adopted verbatim.

Larchmont Y. C.

The annual meeting of the Larchmont Y. C. was held on Feb. 20 with Mr. A. Bryon Alley in the chair, Com. Huested being absent; while Mr. T. D. Rich acted as secretary in the absence of Secretary Little. The following officers were elected: Com., Henry M. Gillig, schr. Ramona; Vice-Com., George Work, slp. Katrina; Rear Com., Henry M. Bucknall, cutter Minerva; Sec., Charles C. Little; Treas., William Murray. Trustees, to serve three years—Charles McK. Leoser and William B. Jenkins.

The following appointments were announced: George A. Cormack, fleet captain, and Dr. C. F. Roberts, fleet surgeon. Regatta Committee, John F. Lovejoy, Otto Sarony and Alfred Marshall.

The treasurer's report was very satisfactory, showing that the club is at last clear of the financial difficulties consequent on the very large outlay in purchasing and improving the property. The secretary's report shows the following fleet: Schooners, 34; auxiliary schooners, 3; cabin sloops, cutters and yawls, 94; mainsail cabin boats, 14; jib and mainsail open boats, 22; mainsail open boats, 26; steamers, 52, and launches, steam or naphtha, 33; total fleet, 274.

According to the report of the library committee, the value of the pictures and books donated to the club within two years is over $12,000.

Mrs. Elizabeth H. J. Beach, of Hartford, Conn., presented to the club through Mr. George A. Cormack a silver trophy in memory of the late Com. Colt, to be sailed for by the schooners of the club.

Royal St. Lawrence Y. C.

The annual general meeting of the Royal St. Lawrence Y. C. was held at the Windsor Hotel on Sat., Feb. 2. The secretary's report showed the year just completed to have been most important in the way of additions to property, membership, fleet, general interest as well as importance, that the club has yet enjoyed. This, with the financial statement, which proved most favorable, was unanimously adopted.

The election of officers resulted as follows: Hon. Com., Sir Donald A. Smith, K. C. M. G., M. P.; Com., George W. Hamilton, cutter Coquette; Vice-Com., Lionel J. Smith, cutter Viking; Rear Com., Stonewall Jackson, sloop Soubrette; Sec.-Treas., James G. Monk; Meas., J. C. C. Almon, F. P. Shearwood, R. Fitzgibbon. Committee: Wm. Davidson, George H. Labbe, John F. Mackie, F. G. Beverly Hamilton, Gershom de Sola, A. Guy Ross, G. Herrick Duggan, W. McLea Walbank.

A motion allowing a yacht, if under charter to a member or members, for three yachting months to compete for a club prize was voted on and carried. A notice of motion was made that the annual general meeting be held on the first Monday (in place of Saturday, as now), in February. Winter sports being at their height in February, and Saturdays none too many, the yachtsmen considered they would be more in their element on the universal "washing day; so, no doubt, the next general meeting will approve of this change and a full house will be more readily obtained for '96 and after. Few other minor matters were attended to, when the meeting adjourned with a hearty vote of thanks to the retiring officers, to whom the club's present good standing is due.

New Yachting Term.

Editor Forest and Stream: I am disappointed in you. I asked you last week as prettily as I could to define the newly imported yachting phrase "a narrowing wind," and you don't do it. You say that you believe it is "comparatively new." Honor bright, now, did you ever see or hear of it before the case cited in my former note? Then you actually descend to mere commonplace journalism and seek to befog your innocent readers by a discourse on the paucity of expressive yachting terms.

Evidently your conscience troubled you a bit, for you "harked back" further on the term "narrowing" was undoubtedly suggestey by the word "broad." Now, if you had said "broadening," you would have had a better case; but I don't believe that you ever heard of a "broadening wind." Personally I like the term (narrowing wind." I mean), though being only an amateur, I shall not venture to define it, and I am quite willing to abandon "widening" in favor of "broadening." But please, Mr. Editor, tell us what they mean, or we shall suspect you of being doubtful about it yourself.

"Floaty," when I first saw it used in some English paper last year, struck me as a clever invention. To my mind, it immediately conveyed the idea of buoyancy with an indefinable something superadded. It seems to me that your condemnation of it as "less definite and explicit" is not well taken. If you rule out such words, your accounts of next summer's races will be very dull reading. I should really like to see a list of a few "definite and explicit" adverbs applicable to yachting.

While we are on the subject I may as well cite another term which was new to me last year, namely, "sweet curves." It was used, if I remember rightly, in some English description of the new cutters before launching. Since then it has become quite common, and it is pretty sure to be used by somebody regarding every notable yacht that is built. I do not altogether fancy it, used in this connection; yet I am very sure that there hinges in my memory something that some poet has said about "the sweet curves of neck and chin," or words to that effect.

Be that as it may, I defy you or any other fellow to define what a "sweet curve" is in terms that will enable an ordinary mortal to know one when he sees it, let us say, on a rival's boat or on the cheek of another fellow's best girl. AMATEUR.

The adjective "broad" has long been used by sailormen to indicate a wide angle, as in the case of a boom "broad off" at a considerable angle with the line of keel, or an object 'broad open," or bearing at a wide angle from another.

The term "narrowing," so far as we can recollect, we have seen only in the recent writings of a Glasgow correspondent of an American paper; as we understand it, the meaning is a wind which draws ahead, at a very small angle with the vessel's keel, exactly the reverse of broad; and presumably suggested by the common use of the latter term. We never have heard of a "broadening wind," and probably never shall, when afloat; but sailormen are not over-critical in matters of this sort, if a word serves its purpose and expresses to them a definite meaning, as does "broad" in seaparlance, that is enough. If our correspondent will only define the "indefinite something" conveyed to him by the other term, "floating," it may help us to a clearer idea than we now possess of its real meaning. The word "sweet" is in quite common use among boat-builders to denote a curved line or surface which is "fair" and true, and pleasing to the eye. Should we be fortunate enough to witness and report the races of next season, we shall try to find terms to do justice to them, and to make our reports both lievly and interesting.

The New Cup Defender.

The operation of casting the 70-ton keel of the new Herreshoff 90-footer was successfully accomplished on Feb. 21. The wood mould was laid on the slipway in the south shop, and well shored and bedded in earth. The new melting furnaces were built just outside the shop, with troughs leading to the mould. The pile of lead pigs was prepared for melting by covering with heavy canvas and steaming thoroughly until it was well heated. A large force of men was on hand, under the personal direction of N. G. Herreshoff, and very careful preparations were made to guard against possible mishaps. Everything passed off successfully, and though the keel is still in the mould, there is no reason to suppose that it is other than sound. Nothing more is known of the models or construction of the boat, but the indications are all in favor of composite build. No provision for a centerboard was made in the mould.

Tarpon Springs. Y. C.

The annual election of the Tarpon Springs Y. C. was held in the Town Hall on Feb. 6, and the following officers were elected: Com., James P. Phinney; Vice-Com., G. E. Noblitt; Rear Com., John F. Barney; Meas., John G. Boyer. Membership Com.: W. A. Richey, G. E. Noblitt, W. A. Badgeley, and Com., Vice and Rear Com., ex-officio. Regatta Com.: Jacob S. Disston, G. E. Noblitt, Frank M. Webster, R. W Clemson, M. E. Gregg. Trustees: M. E. Gregg, Joseph Griffin. Com. Phinney takes great interest in the club, having served in this office since it was formed, Feb. 28, 1887. He proposed the following names for membership at this meeting: P. L Webster, F. M. Webster, W. A. Badgeley, H. F. Drake, F. F. Marsh, Harry G. Marvin, Joseph Burby, John F. Barney, Merritt Clark, George N. Truax, editor Florida West Coast Truth; T. O. Marvin, Dr. H. B. Douglass, Edwin F. Douglass, C. H. Bigalow, Chas. E. Hyde, R. G. Fowler, W. H. Bigelow. This makes forty-six members proposed by him within one year, and he has twelve more to propose at the next meeting. If each member would do so well, it would be the largest club in this country.

The club is in a very flourishing condition, has a fine property, and is the only club that has two regattas every week through the winter, with members from every State, from Massachusetts to California and Minnesota to Florida. Commodore Phinney has two racing yachts designed by the justly celebrated Geo. F. Lawley Co., South Boston, that are ready to race against anything on the Gulf of Mexico, for money or marbles. Come on, out of the cold to the Land of Flowers and Sunshine; our fine hotel is crowded.

PAYSON.

New York Y. C. Racing Rules.

REPORT OF SPECIAL COMMITTEE, 1895.

Your committee appointed to revise the racing rules of the club recommend the following changes which they submit in the form of suggested amendments, as follows:

Rule I.—Classification. (As in 5th column of appended table.) Sec. 4. Strike out this section, as the so-called Class 8 is not one of the official classes of the club.

Sec. 5. Add this section to Chapter XVI. of the By-Laws; amend Chapter XIV. of the By-Laws by striking out "any change in these measurements to be reported by the owners, as customary, to the measurer," and substituting the following: "if any yacht, by alteration of trim or immersion, by dead weight, increase her l. w. l. length, or in any way increase her spar measurements, as officially taken, she must obtain a re-measurement," and then transfer Chapters XIV. and XVI. of the By-Laws to the Racing Rules.

Rule II.—Strike out this rule as it is only a reference to Chapte XIV. of the By-Laws.

Make Rules III., IV., V., VI. to read II., III., IV., V. and VI., respectively.

Rule VIII.—To be numbered Rule VII. To read as follows:

Section 1. Floors must be left down and bulkheads and doors left standing; water tanks kept in place, and at least one bower anchor and cable kept on board. Trimming by dead weight shall not be allowed after the preparatory signal. Neither ballast nor water shall be taken in or discharged after 9 P. M. of the day before a race, but the above restriction may be waived as to water only by permission of the Regatta Committee.

COMPARATIVE TABLE SHOWING PRESENT AND PROPOSED CLASSIFICATION AND RULE AS TO MAXIMUM NUMBER ALLOWED DURING RACES AS EXEMPLIFIED BY THE YACHTS AT PRESENT IN THE BOOK OF OFFICIAL MEASUREMENTS.

SCHOONERS.

Present Classification.	L. W. L.	NAME.	Racing Length.	Proposed Classification.	Rule as to persons on board during races.	Number of persons allowed by rule.
Class I. Over 100ft. L. W. L.	123 60	Coronet	114.84	Class I Over 95 ft. R. L.	1 man for every 2 ft. of R. L. or fraction.	54

	30 32	Bonnie Kate	36 39			8
	30 40	Gladys	36 68			8

Insert a new rule to read:

Rule VIII.—Crew. A yacht shall be permitted to have on board in races only as many persons as she shall have on board when officially measured, but this number shall not exceed that given by the following formula (Column 6 of appended table. Passed in this form):

"The number of men to be carried in races shall not exceed that given by the following formula."

Rule X.—Section 1. Insert the word "racing" before the word "rules."

Section 9 to read as follows:

Every yacht shall render all possible assistance to any vessel or person in peril, and if in the judgment of the Regatta Committee she shall have thereby impaired her chance of wining, they shall order the race re-sailed between such yacht and the winner in her class.

Rule XVI.—To read as follows:

Section 1 The time at the start and finish shall he taken when the foremast in schooners and the mainmast in single-masted vessels and yawls first crosses the line, after the starting signal has been given.

Rule XVII.–Section 14. First sentence to read as follows:

If an overlap exists between two yachts when both of them, without tacking, are about to pass a mark on the required side, then the outside yacht must, as far as possible, short of tacking, give the inside yacht room to pass clear of the mark. (Not passed.)

Sec. 15. Strike out "and does not involve any question of sea room."

Sec. 16. Insert "vessel" after "rock," "dangerous" before "obstruction," omit the words "not a mark," and add new paragraph to read as follows:

But should such obstruction be a designated mark of the course, a yacht forcing another to tack or bear away under the provisions of this section shall be disqualified.

Rule XVIII.—Strike out.

Rule XIX.—Sections 1 and 2. To read in one section as follows:

Every yacht must go fairly around the course and must not touch a mark or force a mark boat to shift its position but shall not be disqualified if wrongfully compelled to do so in order to avoid fouling or being fouled by another yacht.

With the exception of the changes in the classification and the substitution of racing length for l. w. l. length as the basis and the addition of the rule limiting crews the amendments the adoption of which is recommended by your committee are for the purpose of adding clearness and of collecting under the head of Racing Rules all that pertains to racing.

Your committee were unanimous in their opinion that the time had arrived when the club should adopt as the basis of its system of classification racing length in place of l. w. l. length.

The present basis of l.w.l. length apart from other reasons pre-

sents the inconsistency of using one factor for determining the classification and another for determining the time allowance that is the classification is based on the l. w. l. and the time allowance on the racing length.

Among other points in favor of this method of classification it may be said that it will give to the owner a much greater liberty in choosing the dimensions and proportions of his vessel. As the class into which any vessel would fit would be determined not by length of water line nor yet by sail area but by the divided sum of factors representative of these two features; so that it would practically make sail and length exchangeable—a part of one for the part of the other.

It would follow that an owner whose purpose and convenience would be met by having a vessel of somewhat greater length than others could have that kind of yacht if content with the amount of sail which corresponded to the length and which would keep his vessel within the limits of his class. The contrary of this would hold good also and by giving up some length a greater amount of sail—equivalent to the length given up—could be gained. Further than this the addition of length to a yacht to improve her speed or accommodations would not necessarily result in her leaving the class she had previously belonged to.

Whatever further advance may be made in future in a knowledge of matters and proportions which govern speed it would seem that nothing could to this end be more helpful and hopeful than the enactment of such a rule as is suggested with the enlargement of experience and opportunities for comparison which it would give in any class were it operated.

Your committee were also unanimous in their opinion that a limit should be placed to the number of persons a yacht might carry in a race so as to prevent the use of men as ballast and after consulting with a number of the leading racing men in the club the formula as recommended was adopted.

In order to place before the owners of yachts the bearing of the recommended re-classification and of the formula for determining the allowance for crew your committee have appended hereto a statement showing the present classification the proposed classification and the limit of crew applied to every sailing vessel on the list of recorded measurements at the date when this report was prepared.

J. FREDERIC TAMS.

New York, January 29, 1895.

(The amendments were adopted as recommended, with the exceptions noted, to Rules VIII. and XVII.)

Steam Yachts at the Seabury Works.

Probably one of the busiest yacht building concerns in the country to-day is the firm of Charles L. Seabury & Co., at Nyack, N. Y. While half of the people in the country are worrying about the gold bonds, credit, etc., there are yet many left who have confidence enough to go ahead and enjoy themselves and take advantage of what they have, believing that the United States will come out on top, as it always has. Seabury & Co. have under course of construction six yachts and launches, from 35 up to 120 feet. They also have prospects of several other good sized ones. They are now building one 35 feet long for Mr. H. G. Seguine, of Rossville, S. I., a very complete little launch. The 50-ft. mahogany "flyer," for Mr. Alfred Marshall, of the Larchmont Y. C., will be planked and finished throughout in solid mahogany, the wood to be finished in natural color, thoroughly rubbed down and polished, and when completed will be almost too nice to be placed in the water; in fact, she will look more like a piece of house furniture in finish than a launch that is to stand the rough-and-tumble of the sea. This yacht is to have a speed of 20 miles per hour; thoroughly equipped with the latest design triple expansion engine and water tube boiler.

The next boat in construction is a 60-ft. yacht for Dr. W. A. Haskell, of Alton, Ill., a most beautiful craft. She is arranged practically as a day boat, but the transoms are also constructed so that the forward and after saloon can easily be changed into very airy and commodious taterooms. This yacht is of what is called the high trunk cabin type, and is of the very nicest design for inside work, and also for trips of a few day on the bays and Sound; they are also very good sea boats, as some of the yachts of the type built by Seabury have made numerous trips to Southern ports for winter cruising. The yacht is finished throughout in polished mahogany, fitted with proper toilet service and a large galley completely equipped. The furnishings will be of the finest silks and plushes throughout. A large pilot house is constructed forward, forming a delightful place to lay off for afternoon sailing. She will have a speed of about 14 1-2 to 15 miles per hour, and is fitted with a very fine triple expansion engine of the latest design, and a "Seabury" safety water tube boiler.

The next yacht under process of construction is a 65-ft. schooner rigged half trunk cabin craft with long overhangs forward and aft, for a prominent N. Y. yachtsman, who formerly owned a smaller yacht of Seabury's build. This is a more beamy yacht, and is built with a deck all around the trunk cabin, making her of a more seaworthy type, and capable of going anywhere along the coasst in the weather which generally prevails in summer. She will be thoroughly equipped from stem to stern, in the most approved modern style. The furnishings throughout will be of silk and plush, toned to match all the finish in the different saloons. There will be a large saloon arranged forward and also one aft. The after one will be used as a dining-room, and is in close connection with the galley. These saloons will be finished in ivory and gold, and will also be tinted partially in old rose; there will be a large pilot house and social hall constructed forward, pleasantly arranged for easy chairs. The social hall will be finished in polished mahogany, as will also be the toilet room, galley and wine locker. This yacht will be rigged with sails, awning, etc., and will make a perfect little home for cruising. She will be used mostly on L. I. Sound, around the prominent yacht clubs.

Last week the firm received an order from a veteran N. Y. yachtsman for a 100-ft. flush deck steam yacht, schooner rigged, of the very latest design, to be constructed with a large social hall on deck forward, with a bridge over same, brass rail all around the bridge and top of social hall, forming one of the pleasantest kind of yachts for extensive cruising during the yacht races. This yacht will be built with very good freeboard. Her deck equipment will be the most completed she will carry two boats; one to be a gig, the other one of the latest type launches about 17 ft. long. She will be rigged complete with sails of good weight suitable to do good service at sea, and will carry a jib, foresail and mainsail. A large social hall will be constructed on the forward deck, finished complete in solid mahogany, natural color, rubbed down and polished throughout.

A large buffet will be arranged in the after end of the social hall, of a very pretty and artistic design; this social hall will be arranged as a dining saloon, and a dumb-waiter will be connected with the galley arranged below. The main saloon and owner's stateroom will be arranged aft; thi ssaloon will be finished in ivory and gold. The owner's staterooms, two in number, will be arranged with two wide berths in each, also with large dressing-cases, with mirrors, etc. These rooms will be connected by sliding doors between same; this door will really be two large long mirrors, one on each side showing in each stateroom, which will be very much appreciated by the ladies. The finish of these saloons will be in maple, and the hangings will be of soft tones to match. A bathroom will be arranged, finished in cherry and plumbed in a most complete manner. On the opposite side of the yacht will be arranged the toilet room, which will be finished in cedar. All the hangings of the saloon will be in silks and plush of the very finest quality. The yacht will be lighted throughout with a large electric light plant, and a very powerful search light arranged on top of the social hall forward. In fact, she will be as complete and desirable a yacht as one could ask for.

The work on the Huntress, Mr. F. C. Fowler's yacht, is progressing very rapidly, she is nearly all planked, with double skin throughout. The decks are on, and all caulked and puttied. The saloon on deck is now being placed in position, also the joiner work for the main saloon and stateroom. The machinery is progressing very rapidly. The boiler is being set up in position in the boiler room of the yacht, and is progressing as fast as could be desired. This firm hope to launch the Huntress in the latter part of April, and from the way the work is now progressing there is every prospect that they will do so. No finer yacht for general cruising can be built; she will be thoroughly complete throughout in deck equipment, furnishings, electric light, search light, etc. The work of making the alterations to the steam yacht Silva, owned by Mr. Jesse Metcalf, of Providence, is progressing rapidly, and she will be ready in the early spring.

The firm has also a number of other yachts undergoing alterations and repairs; they are also building all the cutters and gigs to be used on the above-mentioned yachts; as well as several boilers and engines for yachts of other construction outside of their own.

YACHT NEWS NOTES.

The Mediterranean regattas began at Cannes on Feb. 23, Britannia having no competitor but Valkyrie I., of 70ft. l. w. l., and disposing of her by some 16 min. On Feb. 24 the Prince of Wales arrived at Cannes. Ailsa has not yet reached the Mediterranean. Dacotah has been sent out, and will be raced against several French and English yachts.

Rex, steam yacht, formerly Dandy, has been sold by E. D. Fox to W. B. Tyler, of Fredericksburg, Va.

A new yacht club, named the Pleasant Point Y. C., was organized on Feb. 19, with the following officers: Com., Thos. O'Neil; Vice-Com., V. S. Henderson; Rec. Sec., Frank Smits; Fin. Sec., Chas. Raynor; Treas., W. B. Howard, Jr. Trustees: M. S. Hollis, Frank Francis, H. Planth, W. B. Howard, Jr.; Peter Lartmann, W. F. Kelly, V. S. Henderson, Charles Raynor, Thomas O'Neil, E. Kuhn and John Shearson. Regatta Committee: William B. Howard, Jr., V. S. Henderson and Frank Francis. The club has 25 members, and will be located at Pleasant Point, Jamaica Bay.

Wanda, steam yacht, H. S. Henry, reached Jacksonville from Havana on Feb. 9.

The building committee of the Huguenot Y. C. have commenced the erection of the club's new house at New Rochelle. The plans are quite elaborate, and provide for a workshop and locker-room, spar and sail loft, assembly room, library, janitor's rooms, and lavatories. The club has secured a lease of the plot of ground at the foot of Neptune Road, and will have splendid facilities for the landing of boats.

The Roberts Safety Water Tube Boiler Co., of New York and Red Bank, N. J., has lately increased its cash capital and extended its plant to meet orders, being busier this year than ever before in the winter season. The boilers are now built on royalty by the Union Iron Works in San Francisco, and the Bertram Engine Works in Toronto. The company claims that it has the oldest pipe boiler in the market, and that in building nearly eight hundred boilers the only improvements have been in details of construction and the use of better material, the essential features of the design being unchanged.

Messrs. George F. and Jas. G. Bishop, sons of the late Wm. Bishop, are now carrying on the business of yacht plumbing, in which Mr. Bishop was so well known, under the name of Wm. Bishop's Sons, their main office in New York being supplemented by a branch in Brooklyn, near Tebo's. The firm has long been noted for the excellence of its work in all branches of yacht and ship plumbing and barss-work.

Canoeing.

In Fly Time.

The West Branch from North East Carry to Chesuncook Lake, is a strong river flowing between heavily wooded banks at a width of forty yards, its dark waters broken only by numberless miniature whirlpools. Sout woods predominate along the shores, which are impenetrable to any distance. One finds, however, many excellent camp sites, selected and cleared by skilled guides.

Late on the afternoon of June 21, 1894, Steve and I drove our canoe into a small creek above Moosehorn Stream. There was just time to swing the tent and carry three hundred pounds of "stuff" up a steep bank. Then came darkness, rain and mosquitoes. This was our "coming out" in Maine woods and we were objects of much attention. Forcing down a couple of sardine sandwiches and liberally sampling our several fly-creams, we fled to the tent, there to swelter under heavy blankets till sleep put an end to our misery.

The following morning we had our first taste of "quick" water in Rocky Rips and Pine Stream Falls. The former, a mile stretch of fairly heavy rapids, we ran without any trouble, painting all rocks of any size along our course. The latter consists of three distinct pitches, followed by a mile of still rapids. This is a favorite spot for inexperienced canoeists, as the guides would say, "to make holes in the water." We were fortunate in having a good pitch of water, and ran through safely on the paddle, taking the right at first, crossing and shooting the third pitch close to the left bank.

From the Carry to "Suncock" we saw seven deer, six of them does. They were quite tame, allowing us to paddle up within twenty-five yards. We had great hopes of one group, a buck, doe and fawn, "taken" near Fox Hole. In the negative, however, only the buck showed, and he so small that we call this our puzzle picture; the puzzle being to find the buck.

A strong north wind, not appreciated on the river, had blown up a nasty sea on the lake. Fierce waves struck the boom at the mouth of the river. Whitecaps extended as far as eye could reach, and a considerable surf broke over the marshy shores.

Making everything fast and spreading rubber blankets, we rashly set out for the mouth of Cancomgomoc Stream, a mile across the most exposed part of the lake. That we had underestimated the force of the waves was apparent on reaching the open. Huge yellow rollers swept clear over the stern, drenching Steve and fast settling the canoe, already loaded nearly to the gunwales. There was no turning back; it was a case of beat the waves or swim for it. The bow would run up on the crest of a big wave, then slump down into the trough, sending spray on either side and into my faces and over my knees. One minute my paddle would be wildly fanning the air, the next completely buried in the muddy waters of the bay. Steve in the stern fared little better. Desperate paddling, however, won the day and an hour later as we discussed a supper of fried bacon and potatoes, bread and coffee, in a cosy little camp just off the lake we blessed this same north wind for the most comfortable night of the trip.

It had been our intention to take only the regular Allagash trip, but we were so charmed by the Cancomgomoc that we could not leave it so soon for the slow, sluggish Umbazookskus.

Paddling through a pretty lakelet to the first falls, small patches three and four feet, respectively, we landed and pointed our rods for the first time. Chubb were plenty, but no trout, and making two short carries on the left, we pushed on two miles past Brandy Brook, to second falls, a single pitch of seven feet. Some large logs had hung up on the brink of the falls and from them I got our first trout, a beauty, weighing two and a quarter pounds. The carry here, a short one, lies also on the left.

In extensive marshes at the head of Black Pond, a bulge in the stream two miles long, we saw several deer and a caribou. The latter took alarm first and bounded away, his branching antlers laid far over his back. It was a pretty sight, and made Steve in the bow gaze wistfully at his 45:90, lying across the "grub bag."

Beyond Black Pond the stream narrows and the current increases. We were paddling leisurely along, enjoying the cool of early evening, when Steve suddenly dropped his paddle, and seized the rubber bag holding the camera. "What is it?" I whispered "A moose, see!" And, sure enough, wading along by the shady shore, was a large cow moose, the first we had ever seen. Such a homely, dirty beast. Several times she swung her great head toward us, then splashed along nibbling the green twigs. At one hundred feet Steve took up and pressed the button. The metallic click, when winding for a second shot, startled the moose and she shambled up the bank and away.

We had expected to see game, of course, but were hardly prepared to find deer, moose and caribou in such abundance, and tame enough almost to be caught with the proverbial salt.

Above Little Scott Brook, our hearts rejoiced to see just peeping over a high bank, where the trees had been felled, the roof of a logger's cabin. Quickly landing, we carried all necessary stuff up a thirty-foot bank to the cabin, a low unfinished affair, standing on the edge of some very swampy woods. It contained a small stove, and we celebrated the event by a supper of buckwheat cakes and maple syrup. When overcome by heat or smoke, we had but to stand erect and our heads reached through a partially sheathed roof.

I fain would pass over the next few hours. The memory even is painful. Steve remarked on the absence of mosquitoes as we spread our blankets on the cabin floor. "What a snap," he grunted, refusing my cream and crawling into his blanket bag. Fifteen minutes later he broke a painful silence. "Midges! do you feel them?" Did I feel them? They filled that cabin in clouds. They filled our blankets. Any part of the body exposed for an instant burned as if by fire. No connected account of that night appears in our log. There are brief references and resolutions concerning logger's cabins in general.

The first gray dawn saw two miserable objects, each chewing a cold griddle cake, crawl down the bank and paddle silently away.

We had intended to breakfast at the lake, but had reckoned without the "Horse race." Here the stream for a mile literally tumbles down hill at a depth of from six inches to three feet. Our skill with a setting pole not being equal to the occasion, we simply dragged through. Now from the "Horse race" to the lake there are two miles more of heavy rapids. Dragging at best is hard work, and we, under the circumstances, found it doubly so. The longer we dragged, the less grew our interest in the lake, and at five o'clock we were glad enough to camp in a pretty spot a half mile below Cancomgomoc Lake. Here we stayed through the day and night, walking up to the lake, a beautiful sheet of water, seven miles long, and fishing with little success in nearby pools.

We passed yet another day on the stream at second falls. There are several good trout pools just below the falls. Toward evening we shouldered our rifles and took a stroll up the tote road. We saw no deer, but got a pair of red-eyed grouse, and ran across several coveys of partridges. The grouse were tough and tasted strongly of hemlock, but of course they went.

For several miles the Umbazookskus is a sluggish, winding river, its shores strewn with dead trees, a most unpleasant contrast to the pretty Cancomgomoc. Making fast to a stump, in midstream, we ate a cold lunch and pushed on to a lagoon where we had to get out and cut our way out through several rods of partially submerged tree trunks. Two miles of poling and dragging brought us to Umbazookskus Lake. One mile across the southeast corner is the beginning of the famous Mud Pond carry, announced by a tall pole topped with old pails and cans.

Mr. Smith, the proprietor of a substantial cabin just off the lake, being absent, we escaped a nasty night outside under his roof. Everything inside was as neat as wax. On the double husk bed was a barrel of hard tack for the fall campaign. Behind the range was a good pile of dry wood. Bringing up all our goods, we had a fine supper, and were soon glad enough to blow out our candle and lantern.

The next morning we walked over to Mud Pond in a vain hope of finding means of transportation across the carry. Only a dismal looking pond, some two miles across and dotted with muddy islands, rewarded our efforts. We evidently had struck the carry at high tide. From a couple of springs near the middle, streams of yellow water flowed in either direction in places deep enough to float a canoe. Tall spruce and hemlock woods through which the carry lies, were full of spruce partridges, and we ran across many fresh deer and moose tracks.

Seeing a shingle sign, "To C. Murphy's Camp and Chamberlain Farm around the Mud Holes," and trusting to find somebody at the former place, we started up the blazed trail. Shingles every few rods reminded us that we were near our route for the Farm "around the Mud Holes." As a matter of fact, for five miles we were constantly wallowing through very muddy holes, at times above our knees. A short distance from the lake we passed on the left, several large unroofed log cabins, presumably C. Murphy's. The association connected with log cabins being so unpleasant, we did not linger, but hurried on, and were soon seated on a large rock gazing across two miles of white-capped water, at Chamberlain Farm. How attractive the white unpainted buildings looked, standing out against a green hillside, glistening in the afternoon sunlight.

It was quite dark when we stumbled into one cabin, a pretty well done up pair. A brief interview with our "Saratoga," a small hand-bag containing fly cream, medicines, etc., gave us strength and courage. A good supper and pipe and we had forsaken our resolutions made in the depths, to camp where we spent a few days, then drop back to Kineo.

PHILIP A. FOWLER.

(CONTINUED NEXT WEEK.)

Sailing Under A. C. A. Rules.

(From the Field.)

The scene is ever changing in canoeing, whether it be to the river paddler subduedly screaming with rapture at the panorama of "pretty bits" unfolding constantly before him as he shoots the rapid, scrapes over the shallow, or glides down the silent, deep, black pool; or to the winter-bound sailing racing man eagerly contemplating the prospects of the coming season's sport. But the scene is, indeed, changing in the racing sphere, not only here in England, but also with our cousins in America. Racing in small canoes has, we have known for a long time, been on the ebb, and measures were at last accepted by some of our clubs to attempt to stop the downward ebb by the constitution of a relaxed racing class and a substantial cruising class. But, of course, it is not a mere definition or class creation that will of itself bring men and boats in to make a fleet. We have acted in England, and there can be little doubt that such action will generally tend to a better state of canoe sailing, and, in a larger class, to a more useful type and size of canoe.

On the other hand, in America, where canoe-racing is suffering much in the same line as ours is, no steps have been taken to alter the A. C. Association rules of regular classification, but all is being left to the chance of freaks and pranks of local legislation in clubs, and thus, with irresponsible critics and advisers hailing from various isolated parts of the country, peculiar developments may be expected in the clubs, if, in fact, they move; but, as a rule, they mostly race entirely under A. C. A. rules; if so, nothing will be done. However this may be, there are proposals before the American canoeists which may be acted upon, and even adopted, at the annual meet.

Some of the proposals are likely to "raise the dust," even though on the water, especially the suggestion to abolish the sliding deck seat; and that, too, is in America, under a rule giving unlimited sail, but at the same time limiting beam to 30 in.; it won't go yet awhile, at least, we see no valid reason. If the sliding seat were to be cut out of the English rule, the immediate result would be heavy bulb-keels. However, we years ago advocated the sliding seat as a most powerful and enjoyable fitting for any sailing canoe, but that has always been in conjunction with a modern limited sail area; but the American suggestion under unlimited sail area and very limited beam would put canoe sailing in no better position, even if extremely deep dagger plates, bulb ballasted, were at the same time allowed.

The evil which we in England have now legislated against is rampant in America at the present moment, and is well summed up by "Guyascutus" in Forest and Stream thus: "The rules have allowed the modern canoe to develop into an extreme racing machine, carrying too much sail and too long a sliding seat, and thus making it so much work, and also so dangerous, that most people, and good canoeists, too, don't care to keep it up. . . . A man has got to be an expert gymnast, above the average, to sail a racing canoe in a race."

The ridiculous enforcement of monkey gymnastics into what should be simply pure sailing was amply before the eyes of English canoemen all last year in the butterfly performances of the American canoe Yankee. But the rules have been materially changed since then, and a new comfortable cruiser class has been created in addition to the racing machine class; and it only remains to be seen whether, with a reasonable amount of prizes put to such a new class, the old-time comfortable sailing may not be revived this year. Already, before the programme for the season has been made, a £10 prize has been given into the Royal Canoe Club for the new class, and no doubt others will follow. It is the nearest approach to the "one class one design" scheme, which is so popular in some quarters for small yacht racing. It has all the good of that scheme without the evils. The sweets of sailing one's own design, both of hull and rig, are left to the owner, and he is not forced to own a poorly built cheap boat; and yet he can have such if he likes, and in any case he knows that other competitors, owing to the definition rule, cannot far outbuild or outrig him in the racing machine direction, and, if fail he does at racing, he knows he has anyway a comfortable, useful knockabout craft left for other purposes.

A Challenge from William Willard Howard.

The Yachting World of Feb. 15 publishes the following challenge from Mr. William Willard Howard, the American canoeist:

Hotel de Londres, Tiflis, Russia.
January 20, 1895.

F. G. F. Weiner, Esq., Sec. Royal Canoe Club.

Dear Sir: I beg leave to make entry for the challenge cup race of the Royal Canoe Club for 1895. The entrance fee will be handed to you by J. Arthur Brand, Esq., whom I have authorized to receive receipt and acceptance of entry. The particulars of my entry are as follows: Name, Wm. Willard Howard; canoe, Yankee; dimensions and rating of canoe, length over all 16ft, beam 30ins., rating 0.3 Royal C. C. rules; flag, stars and stripes; club, New York C. C. Yours respectfully,

WILLIAM WILLARD HOWARD.
N. Y. C. C., A. C. A., B. C. A.

Mr. Howard's canoe has just been shipped from London to New York for alterations, her forefoot being cut away. Mr. Howard is now in Turkey, engaged in the search for Lentz, the lost bicyclist.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, MARCH 9, 1895.

VOL. XLIV.—No. 10. No. 318 BROADWAY, NEW YORK.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order Make orders payable to

FOREST AND STREAM PUB. CO., New York.

PROMPTINGS TO PRIDE.

The advertising manager has confided to us that he is moved to a distinct sense of pride in certain characteristics of the Forest and Stream's advertising.

First.—Its large amount.

Second.—Its high quality.

Third.—Its value to advertisers.

The large amount of advertising in this week's issue is an index, we are glad to believe, of the growth of business confidence. Advertisers do not advertise unless they expect to sell goods.

The trade representation contained in these announcements is such as for quality might well afford gratification to a publisher. The high grade of the Forest and Stream's advertising constituency comports in every respect with the established high grade of the paper itself.

As the favorite medium for sagacious and experienced advertisers, the Forest and Stream gives a service unequalled, and one which it is beyond the power of any other agency to supply. This is because it affords the most direct means of communication between the largest number of producers and the largest number of consumers, for all classes of goods that come within the scope of a sportsman's requirements, necessities or luxuries.

An understanding of these conditions will make perfectly clear the reasonableness of the advertising manager's pride in those pages of the paper which are set in display type.

MONGOOSE OYSTERS.

This appears to be a case for the illumination of which may be cited the story of the man, the basket, the mongoose and the snakes.

On a ferry boat plying between Sacramento and Oakland, or New York and Brooklyn, as the story is told in the West or the East, a passenger holding a carefully-covered basket was seen to peep into it with manifest concern for the safety of whatever was inside. Asked by a curious observer what he had, he said that it was a mongoose, and explained that he was taking it home to kill the snakes seen by his brother, who was suffering from delirium tremens. "But those snakes are only imaginary ones," objected the inquirer. "And it is only an imaginary mongoose," said the man, throwing open the empty basket.

Secretary Doyle, of the New York Fish Commission, assures us that the purposes for which he has been said to have sent oysters to members of the Legislature this winter, and the oysters themselves, are both purely mythical. They are figments of somebody's fecund fancy, altogether as imaginary as the mongoose and the snakes. He asserts that he has sent just one barrel of oysters to Albany this year; that this went to a personal friend, Senator Kilbourn, and was regarded by both parties as a friendly treat; that it was not intended to affect action on the Donaldson bill, nor on any other bill; that he was not interested in the passage of that measure; that he did not suggest nor approve of the extravagance embodied in its items; that he did not expect to hold any office under it, nor to reap any benefit from it, if it should become a law; and that, in short, neither had he sent barrels of oysters to the Legislature, nor, if he had sent them, would they have been designed for any questionable purpose.

One barrel of oysters is not to be considered as a substantial foundation for the stories which have grown out of this one. Mr. Doyle's statement is so comprehensive and unequivocal that it may be taken as a sufficient contradiction of the reports it denies. Speculations having to do with the relation between measures in which Mr. Doyle was said to have been interested and the barrels of oysters which Mr. Doyle was said to have sent for the promotion of such measures are thus shown to have a close affinity to ratiocinations respecting what may have happened to the brother's imaginary snakes when the man got home with the imaginary mongoose.

The oyster hypothesis no longer being available as a working theory, will some one explain what else it could have been upon which the promoter of that $23,500 fish commission scheme based their confidence that the Legislature would approve the job?

Since our comments upon the bill last week, the measure has been so amended as to reduce the total of the salary expenditures, but the amount still called for is altogether out of proportion to public policy. The bill is bad in principle; its manifest design is not to reform the constitution of the Fish Commission by putting it on a business basis, but to increase the number of offices and places for political ends. It is not a measure which, if enacted, could do credit to Governor Morton's administration, for it is not a measure which is in the interest of the public. We had hoped, with the changes to come in Mr. Morton's term, to see the Fish Commission reconstructed on a business basis, composed of men of ability, public spirit and interest in the work, and distinguished among all like commissions the world over for its efficiency, usefulness and economy. This may still be achieved if the Fish and Forest Commission Consolidation bill shall be abandoned, as it should be, for the plan proposed in the game law code revision. This provides for a commission of three members, one of them to be designated by the Governor as the president, with a salary of $5,000, he to pay his own traveling expenses. The others receive their expenses, but no salary. There is a secretary with salary of $2,000. The commissioners appoint the game protectors. This is not a desirable feature of the bill, but the same provision is found in the other measure.

POLLUTION OF WATERS.

The problem of protecting fishing waters from pollution by factory waste and other detelerious substances is one of the most perplexing with which fish protection has to deal. The question is one of comparatively recent recognition. Until a late period in this country a stream that could be made to furnish water power, or that could be utilized as a sewer to carry off sawdust or tannery flow or the waste from factories was taken advantage of for such purposes, with never a thought of the fish supply. Even now, though we have laws for the protection of the purity of such waters, the statutes are frequently and flagrantly disregarded; and those whose duty it is to enforce the laws are practically powerless to do anything. One obstacle to accomplishing their purpose is the lax construction of the average laws respecting pollution; they are so worded that their exact meaning is in doubt; and whenever there is a possibility that their intent may safely be evaded full advantage of the defect is taken by manufacturers and mill owners.

This topic of fishing water pollution is one which might well engage the attention of the American Fishery Society. The Fish Commissioners of the several States have had many perplexing experiences in this field, and a general discussion of the subject could not fail to be of value. What are the conditions to be overcome? What methods have failed to provide the remedy, and what others have accomplished the end sought?

One reason why tannery and factory waste is permitted to destroy the fish of a stream is found in the fact that the mill interest against the fish interest involves the direct personal interests of the individual mill owner against the general interests of the community. The mill man recognizes his own personal interests, and fights for them; the public does not comprehend what it has at stake, until some individual wiser than his fellows raises the alarm, and then it is too late. The mill man goes on destroying fish, and claims a right to do so because his father and his grandfather did it before him. Fish water pollution is as old as the century, fish protection is a new idea; there are thousands of communities in this country to-day that know practically nothing of it.]

SNAP SHOTS.

We announced last week the favorable report in the Senate on that body's amendment to the item in the Sundry Civil Service bill for the improvement of the National Park. This amendment changed the title of the item so that the appropriation, instead of being only for the improvement of the National Park, read for its improvement and protection. It also increased the amount appropriated by $10,000, and in direct terms authorized the employment of extra scouts in the protection of the Park. In conference committee, however, the amount was again cut down to $30,000, and all mention of scouts was omitted. However, since the title of the item still reads "For the improvement and protection of the National Park," instead of for its improvement alone, there remains ample authority to use the small sum of money required to pay a few scouts in addition to the single one now employed. Thus by slow degrees very gradually progress is being made in protecting the National Park.

Every once in a while there comes into city offices a young fellow of swarthy face and the dress of a sailor, who avers in broken English and Spanish that the mysterious package he bears contains cigars of rare quality, which he has smuggled and wants to dispose of at a bargain. He must find a market for his wares, or he would not stay in the business; but the smuggled goods are reputed to be of domestic manufacture, or a regularly imported article not worth the price asked by the "smuggler." Like tricks are played every day by purveyors of game out of season upon the smart folks who think it the correct thing to order birds out of season. A neat story from Boise, Idaho, reports an incident of this character in that city. The tale is of a hunter dressed in buckskin suit, who came into town with a load of meat, which he said was antelope, and for which he found ready sale at fancy prices. His stock quickly sold out, the man of the mountains took his departure, then the buyers smacked their lips, looked queer, and decided that they had been buying mutton at gamy prices.

The recent extremely severe weather has caused a great destruction of game birds, particularly in the Southern States. Something of the mortality among the quail in the latitude of Virginia is hinted in the communication from our correspondent who relates a mission of relief to the surviving flocks. President Polk Miller, of the Virginia Field Sports Association, has repeated his appeals of two years ago to the farmers, to feed the birds; and it is extremely gratifying to know that his action has now, as then, been the means of preserving large numbers of quail.

Congress having adjourned, President Cleveland will go duck shooting. If a party were made up of President Cleveland of the United States, President Faure of France and President Kruger, of the South African Republic, there would be three good shots.

THE ILLINOIS MARKETS.

The Blow bill having been sent to limbo, the Illinois Sportsmen's Association has prepared a measure for consideration at Springfield, which embodies, in a more wholesome, but we think still inadequate, degree prohibition of the sale of game. Here is the text in full of the sale section:

Section 4.—When Unlawful to Sell or Have in Possession.—It shall be unlawful for any person, firm or corporation at any time to sell, expose for sale or have in possession for the purpose of sale or transporting for sale any of the game birds, fowl or animals or song and insectivorous birds mentioned in Sections 1 and 2 of this Act and killed within this State, or to sell or have in possession for any purpose any of such birds or animals which have been illegally killed in or transported illegally from any other State, and it shall be unlawful between the 1st day of February and the 1st day of October of each and every year for any person, firm or corporation to sell, expose for sale, ship to any point within or without this State, or have in possession for any purpose any of the game birds or animals mentioned in Section 1 of this Act, lawfully killed and transported from any other State Any person, firm or corporation guilty of violating any of the provisions of this section shall on conviction be fined not less than $25 nor more than $50 and costs for each offense, and stand committed to the county jail until such fine and costs are paid, provided that such imprisonment shall not exceed thirty days and provided further that each and every bird or animal unlawfully sold, exposed for sale, in possession for purpose of sale of transportation thereof for such purpose shall constitute a separate offense.

The Sportsman Tourist.

BOAT HOOKS AND HEROES.

At the club, one dreary afternoon in winter, we were scattered about the reading room smoking, or drowsing over the papers, while we waited for dinner.

Finally one of the loungers beckoned to a window overlooking Puget Sound, and as though afraid speech would dispel the charm, by a sign diverted the attention of those who developed sufficient energy to join him, to the gorgeous picture formed by the haze of many tints that rested on the snowy crest of the Olympic Mountains; the rolling, leaping, foam-lashed waves spending their fury on the beach below; a passing ship with sails unfurled that sped before the semi-gale that seemed to gather fury with each succeeding gust, and the Indians in their frail canoes, that like the circling, screaming gulls, are most to be admired when floating on a raging sea beneath a threatening sky.

While we gazed enraptured upon the scene, in something changing with every instant, a shout from off the pier, a gathering crowd, a human form that madly plunged into the waves despite the hundred hands that sought to stay the act, made us forget the beautiful and grand arrayed by thought divine for our delight, to view the hideous contretemps, born from the misery of a man to mar for us an hour of peace, for other such, maybe, a life.

"He is lost!" some one whispered. "None but a Siwash could brave such waves and live."

Providence was kinder than we thought—an Italian fisherman just then had lashed his sloop securely to the pier, and interposed his boat-hook between the maniac and eternity. With vast relief we saw him, cold and dripping, yanked upon the land, where, for an instant, dazed and trembling, he submitted unresisting to restraint, and then, with mighty unsuspected effort wrenched away and plunged again into the water. Again the friendly boat-hook played its part, defeating watery death; and now the late policeman took the cue and lodged the madman in the station-house to answer to the law upon the ignominious charge of "attempting suicide."

"A gallant rescue!" cried our legal light, "Oh, worthy copper; how much I honor thee." And then he smiled to think that now he, or some more lucky brother at the bar would seize the chance to mulct the poor man's friends, if such he had that cared for his release from chain-gang durance on the city streets.

"Such shames are common," replied the doctor. "Pneumonia follows such a ducking. The hospital, not the lock-up, is the place most mete for that prospective patient. I will seek the Mayor so soon as I have dined."

"That boat-hook will figure as a hero in to-morrow's dailies," said the man who shoved a pencil at so much cash per mile.

"Alas! too true," chimed in the cynic, "of just such stuff our heroes are, in these degenerate days."

"What's this unseemly interest, this plebeian animation in a social club?" exclaimed a cheerful comer-in, whose unkempt hair and beard unshorn bespoke a traveler just returned from some unbroken wild.

"Why, Charley, Charley!" replied the chorus, "where have you been this fortnight? We have missed you from your favorite corner, and not a man could tell your whereabouts"

"Oh, just a little journey down the Sound."

"Horrible weather for your trip, old man!" exclaimed the lawyer. "Some client that was worth the fee?"

"No, not that."

"A timber-claim; going for a song, perhaps; asked the silent lumberman, who thought the world was saved by saw-mills.

"No."

"If you were a doctor, Charley," said he of pills and poison," I should say a wealthy patient that never growled at triple charges had lured you to the wilderness. Tell us where and why you went."

"I hardly know, boys, where I went, or what to tell you; but you shall have the story---what there is to tell.

"You see this little pin? Yellow and red and blue—an emblem of some order, is it not? That tells you all I know.

"I was on the wharf one night about ten days ago, idly waiting for the steamer from Victoria, hoping thus to kill a little time—you know I have too much of that. Well, the boat was late, and after a while I drifted into the 'Sailors' Rest,' a drinking place of mean repute, and there I overheard a man before the mast telling how, that day, an Indian came aboard his ship at Townsend, and told the captain that in the forest, fifty miles away, and just as far from any habitation, a white man lay unattended in his cabin, dying of cold, disease and hunger.

'At first the story did not impress me very much. I felt sorry for the poor unfortunate in a vaguely careless fashion, and wondered who he was,and how he came to be alone, or thus deserted.

"After I had gone to bed the story occurred to me again; and with it came the thought that I had nothing else to do but gratify my curiosity upon the subject, so I dressed and filled a bag with necessaries for the trip, caught the midnight steamer down the Sound, and ate my breakfast at Port Townsend.

"With but little trouble I found the Siwash who told the story, and by using much persuasion, a little money and a deal of whiskey induced him to take me in his dug-out to the nearest point attainable by water and guide me overland the remaining distance.

"As I told you, it was only fifty miles, and only five of these to foot, but so cold and fierce the wind, and so few the hours of day, that the second night came down before we reached the cabin. The man was still alive, but reason was dethroned, and not a word of all his ravings gave me any clue to, what his name or whence he came.

"The Indian helped me gather wood and minister to the poor man's comfort as best I knew, and then he left me with returning daylight, promising to come again within a week.

"Before another day had dawned my patient paid the debt to nature, and in my turn I was left alone in the forest. Not until then did it occur to me that not a man in all the world knew my whereabouts except that treacherous Siwash; and, should he deceive me, that it was impossible for me to make my way alone to the world of civilization.

"It would weary you to listen to the mental suffering I endured during the days I waited there alone with the dead, uncertain of the living; or with what relief I hailed the liberating red skin, who appeared promptly as appointed. Suffice it to say we wrapped the body in a blanket, and, at Port Townsend gave it Christian burial.

"My trip was all in vain, not a line, not a scrap of anything did the man have about him, to tell even his his name. Beside his gun and traps, this little pin, fastened on his pillow, was all he had of value. My curiosity is still ungratified, and—I am hungry as a bear."

"All that goes in the paper to-morrow," said the man of the pencil.

"Not a word; not a word,' an you love me,'" replied Charley, laughing, as he turned to go up to his room. "I do not like to advertise my failure to the world."

"Boat hooks and heroes! There are heroes after all," said the cynic softly.

WILL SCRIBBLER.

GREENBRIER, ALA.

FROM A FAMILIAR LETTER.

PITTSBURG, Pa.—I have just received another long letter from my old-time friend and companion of many a memorable outing, L. P. A., of Portland, Oregon. He is one of the retinue of Judge S. H. Green, as, in fact, I used to be myself, and many's the time we have dropped into the judge's office together for a few minutes chat about bass and pickerel vs. "the bloody carp" that are eating all the widgeon grass and wapitos, and ruining the once famous duck shooting of the Columbia River.

Lon has just returned from a two month's stay at his camp, "Bleak Hall," at Lake Merrill, up near Mt. St. Helens in the Cascade Range, where he and John Davis, veteran guide and trapper, went for a personal interview with the white goat. They were not so fortunate with the goats as on previous occasions, but bagged several deer and caught enough of the beautiful cut-throat trout, for which the lake is famous, to keep the spacious chimney of Bleak Hall filled with their smoking remains.

Artist, poet, philosopher and true lover of nature would that I might prevail upon him to lay aside his modesty, take time, and give Forest and Stream a worthy account of many adventures in that wild region. He has half-promised that he will do so, and in the meantime I can do no better than to make a brief extract from his letter:

"I suppose," he writes, "I would drop a job at a thousand a month and go to the mountains, if I became imbued with the desire as strongly as I have been at times; and, in fact, I know I would, for I would estimate that a month's salary would buy enough grub to last two or three years and I might not live that long, so it would be foolish not to take my opportunity at once. We have had more snow than usual here, and there seems to be considerable in the mountains. You ought to see the pair of antlers I traded John out of. They are only two-point horns, but are larger at the base than any eight-point horns you ever saw. Each branch is twenty inches from base to tip of longest point, and they are completely covered to five or six inches from the base with abnormally large and numerous "warts" of all forms. They are as symmetrical as could be made and are altogether as hand some a set as I ever saw. A good match for yours. They were upon the "biggest buck" John ever killed; and he was certainly over two years old. He has also killed small and apparently young deer with many points, and scoffs at the theory of telling age by the points. I presume that the rule is all right, but certainly has exceptions, as most rules have. Monstrosities are bound to occur almost in any place and without visible reasons.

"I also have the skin of that deer soaking in the cellar, and am going to make a rug of it.

"Say, you just take pains to cultivate that turkey man. Such chances only come once in a life-time, and people have been known to turn to salt while hesitating when an opportunity was before them. I would rather kill a wild turkey than an elephant.

"You remarked that the love of nature and wild life is born in us. You are correct, for I stand before you a living example. Among some old letters in my possession, written by my mother before my birth, I found one from which I make this extract: 'When all is quiet in the house I can listen to the roar of Mary's River (which is in sight of the house), and it reminds me of being at my old mountain home and listening to the roar of the water in the ravine, for it makes a noise almost equal to that, especially after a heavy rain, and you may be sure this is the kind of life that suits me.' The place they were living at was near Corvallis, in Benton County, and is where I was born, within sight and sound of the mountain stream. So it is no wonder that there are charms for me where I can listen to the music so much like my earliest lullaby.

"I commend you for your expressed hopes for the lad's interest in such things and feel sure that there is no cause for uneasiness on your part, for I know you can't help but impart to him a full share of your own nature and that is enough. I am just as sure as you are that such a good time will come when we shall have the opportunity to start the youngsters right, and I am sure it will be as full of pleasure to us as I hope it will be to them. Your devoted mate must not be forgotten either—along this line—for I believe a woman can find just as much enjoyment in whipping a stream and stalking a deer and following a pair of well-trained dogs over sweet fields, as can a man; and I believe it is the duty of a man who loves such things to provide all the means possible with such an end in view, of course providing she is able to enjoy it and cares to. Some women could never do it. Of course, few could go where a man generally goes, but a loving husband can find a way where both can go. Only think of the more than doubled enjoyment he could get out of his trips with rod, gun and camera, could they be shared by the one nearest and dearest to his heart. The camera offers a very interesting field for women if they do not take to rod and gun, and will afford as much pleasure in all probability.

"I don't think I mentioned my new tobacco pouch. I made one from the pericardium, or heart skin of the little doe we killed. It makes transparent parchment like skin. I lined it and sewed on black velvet around the top, and put in a puckering string of silk cord (an eye-glass cord), and at the loose end of the strings I fastened on one a bear's claw, and on the other the big bear's tooth, which formerly graced the latch string of Bleak Hall. It is very neat and serviceable. The old one you gave me at McKenzie Springs has seen its best days, and will now remain an ornament and a souvenir forever.

"Well so long—write as often as you can. Your letters are to me like a gushing spring half-way up Totman Hill on a hot day, and with a big bush of ripe brown huckelberries on one side and a plate of seedless oranges on the other."

You will recognize in the names "Bleak Hall" and "Totham Hill" a tribute to the gentle patron saint of all anglers, and any one who has ever toiled up the long trail over the backbone of that hill, sometimes facetiously called "Topnone," will appreciate the reference to a gushing spring with huckelberries and seedless oranges on the side.

R. L W.

PERE MARQUETTE FISHING CLUB.

If you will take a map of Michigan and follow the line of the F. & P. M. R. R., northwest from Saginaw, a little over a hundred miles, crossing the G. R. & I. road at Reed City, the C. & W. M., at Baldwin, you will notice in Lake County, about four miles west of Baldwin, a spot on the map designated by the unusual name, Wingleton. Wingleton is a pretty long name to use, and whenever any of the Saginaw crowd start out on a fishing trip, they generally say they are going up to "Kinne."

This little place was formerly the center of a lumbering operation, carried on by our good friend, W. D. Wing. For years the busy hum of industry enlivened the sand plains at this point. A logging railroad extending some miles to the north brought in the saw logs from the surrounding pinery, and an active saw-mill turned the logs into boards. A planing-mill, too, stood there in the palmy days of this now deserted hamlet, a relic of which remains in the shape of an enormous stack of pine shavings that the boys always want to touch a match to when they are passing it; but the busy ax of the lumbermen soon brought an end to the pine forests, and like many of our North Michigan towns that thrived on the lumbering industry, it reached its limit and death.

The mill was moved away; the houses became vacant and nothing of life remained but the dozen or so of domestic cats that did not move when the inhabitants of Wingleton left, and the shriek of the whistle was replaced by the shrill cry of the blue jay, busy gathering acorns from the scrub-oaks that grew here in abundance. Many and many a time have we in the past partaken of the hospitality of our good friend Dermont or Wing, and either made up a party for fishing the Little River, the grayling stream that was so aptly described by our friend Mitchell not long ago in Forest and Stream, or fished for trout in "Kinne Creek."

This creek was not naturally a trout stream, but had been planted years before by officials of the F. & P. M. R. R., who have done much to develop trout fishing along the line of that road. Originally it was full of grayling, but with the coming of the trout the grayling disappeared, although even to this day one is occasionally taken. The boys never thought of fishing with a fly when the stream was in its primitive state. It ran through Cedar swamps, and was fringed with overhanging boughs to such an extent that it was almost impossible to cast a fly. Besides, the big trout lurked underneath the roots and logs, and it was supposed that the only way to get them was to drop a seductive worm placed on a good, strong hook, and attached to a still stronger pole (not rod), and yank them out with one supreme effort. We always looked with envy on the basketful that Poquette, Wing's sawyer, was sure to have every Sunday night during the season, and, in fact, it was sometimes hinted that he had about the same basketful out of season. Great stories were told of the three-pounders, four-pounders, and even imagination would stretch to the five-pound limit. There is no question, though, but that the little stream has produced and does produce some very large trout, but I doubt whether the scales would ever come down good and strong over any of them beyond the three-pound mark.

At the opening of the season, May 1, three or four of us would borrow from the railroad superintendent his car "Peggy," being a combination of engine and car that would take care of three or four people very well, and could run like a scared dog a mile a minute or more, and after a late game of pede at the club would pull out for Wingleton. As the morning was getting gray we would fly by Dermont's house, and salute him with a shriek from the "Peggy," that let him know at once that the boys from Saginaw were on hand for the opening of the season.

Sometimes the worms would spoil by being placed too near the steam-pipes in the car, or Jack would forget to put them aboard. This we never discovered until the rods were put together (beg pardon, I mean poles), and some one would run back with the "Peggy" and borrow a few from Dermont from his little hoard that he had boxed up in the garden. Angle worms will not thrive here for there is nothing but sand, sand, sand, hundreds of feet deep. The coffee was usually made by Jack on a kerosene stove with a very pungent odor of the stove and coffee, and then we would sail in for the day's fishing.

All this, though, has passed and gone. What has taken its place is more sportsmanlike, is easier fishing, but I wonder if it is more fun. We always look back on our boyhood days as the most pleasant of our lives, and I think retrospect in this case loses none of its force.

In 1892 a few of us concluded a trade with Mr. Wing for several of the houses still standing and seventeen hundred acres of land, giving us the ownership of the stream and the land on each side of it from where it headed in a spring-fed lake of five acres in extent, that we call Spring Lake, to where it empties into the Pere Marquette River, nearly three miles farther on. Dermont's residence we fitted up for the club house, which was put in charge of Mr. and Mrs. Bates, both telegraph operators. Mrs. Bates, one of the best housekeepers in the world, and her husband, just the chap to look after the trout stream. To the right of the club house we moved another one of the vacant buildings, built a large fire-place in it, and partitioned it off into one large room, where we could all sit round the open fire, prevaricate, dry our feet, smoke, and spit on the sizzling hearth. The rear of this room is a locker-room and bath-room. Up stairs several extra sleeping-rooms were provided.

Now, suppose you follow the board walk back of the house for about a quarter of a mile; you come to Spring Lake, clear as crystal, from which runs a little stream

about ten feet wide and about one foot deep, increasing in depth and width as it runs along, for this stream is fed from its source to its mouth with colds prings, so it never freezes, rarely gets above sixty-two degrees temperature, is never affected by rains, for the rise and fall does not vary four inches, and no matter how hard it may pour for days the water is never discolored as the soil is all that white sand of unknown depth, so well known in the pine

THE KINNE NEAR THE GLORY HOLE.

barrens of Northern Michigan. Not far from Spring Lake is Mill Lake, about half a mile in diameter, well stocked with muskalonge and black bass. We follow the stream through its many twists and curves that an angler loves so well, running between high banks, cold and swift, until you come to where it pitches under the road above the Austin House. Here it widens, for, in olden days, a dam was built below to run a primitive saw-mill. This dam has been washed away partially, but it still makes quite a pond, and is literally alive with trout, some of them big ones, too. Just at the dam stands our hatchery that we built in 1893, taking the first year ninety-two thousand eggs and hatching eighty-five per cent. of them. These were planted not only in our own streams, but in other streams tributary to the Pere Marquette. This year we have taken over two hundred thousand eggs that are hatching nicely at the time this is being written. We received from the State over three hundred thousand fry last year that we distributed in the lakes and streams in Lake County; but let's follow the stream and see what we can see.

Below the rush of the water through the Austin dam is a grand hole where always lurks the big fellows, and from there to the railroad, careful and cautious fishing always produces a well-filled creel.

Under the high bank carrying the railroad, the stream discharges through two large iron culvert pipes. It is always a question debated around the fire, whether or not the trout run up or down through these dark pipes. It does not seem to make much differences whether they do or do not; there are lots of fish both sides of the track.

The photograph taken just below the railroad track gives you an idea of the stream, which here widens to about twenty feet, running from shallows to deep pools. The underbrush has been taken out; the Cedar swamps are now drier, and no bait fishing is allowed, and unless one is skillful with the fly, you will catch no fish in Kinne.

Sweeping around many bends, the next picture is taken just above Glory Hole. This is a beautiful spot. A big spring rushes in from under the bank, and in its eddy the big trout congregate. Cautiously peering over, one can always count from a dozen to five times that number of trout anywhere from ten feet long, well to say some of them two feet long. The water, may be, magnifies them, but just how large they are no one will ever know as they never take the fly, and no matter how carefully you approach the spot or how seductive the bait, nary a one will you land, for these fellows of the Glory Hole are educated. Here is where we usually meet for luncheon. We have erected a little shelter for rain or sunshine; Bates brings the luncheon here at noon, and here is where we meet, compare catches, and tell yarns about the big one that we have lost.

What a beautiful stream it is! Was there ever a prettier one? The moss-covered logs and patches of moss that collect here and there are literally alive with shrimp. The abundance of food in the stream accounts for its great fertility. Without further artificial stocking, I think it could never be fished out, and I do not believe there is a stream in the world of its size that produces trout of as large an average. Our limit is eight oz.; anything below that must be returned, and a basket of fifteen pounds is all any of us are expected to catch, according to club rules, in a single day. Several dams have been constructed to widen and deepen the water here and there, and to make rushing pools below.

How well I remember one June evening standing at the foot of the old Cartier dam after an unsuccessful afternoon's angling. Suddenly the vast pool seemed to be alive with spreading rings. A cloud of insects, May flies, are hovering over the water. It is dusk, and the trout are beginning to jump, first the little fellows on the shoals, then where the pool is deeper the big fellows make a splurge. In an instant I forget my fatigue, and putting on a winged May fly, make a cast where a large ripple denotes a big fish. Great Heavens! What a strike. Instantly there is music. This pool is the largest on the brook, is six or eight feet deep for a space in its center, probably twenty feet square, and as the pool is nearly a hundred feet long and probably forty feet wide, it provides ample sea-room to play large fish, and large fish there were there that night. I had no landing-net, and played my fish as hard as I could. Several I lost, one with broken tackle, and, for about half an hour I never had better sport. My large creel was filled, so that the lid bulged. After dressing them I had thirteen and one-half pounds and just seventeen fish.

Of course, I lost the largest one, which I know was over three pounds, but one that I weighed after getting to the club house that night pulled down the scales at a good, strong two and one-half pounds.

I have had good fishing there since, late at evening, but never has this basketful been equaled.

Below the Cartier dam the character of the stream changes somewhat. There is very little moss or gravel, but instead that loose, sandy bottom so well known in all our Michigan grayling streams. The trout, too, instead of being dark, hard and metallic looking fellows, are lighter, and seem softer when you run a knife through them to clean them. Still, we find large ones here, and many of them, but the choicest bit of fishing, and that for which we all strive is from Glory Hole to the Cartier dam.

Our club consists of twenty members, about half of whom are residents of Saginaw, and the Saginaw crowd is well represented in this membership.

Over across the hill is the nursery, a little stream about a mile long, originating in a spring and dying out in the sand, running nowhere. Here it is we deposit our fry for the first year. They do not have to be fed artificially and thrive wonderfully.

The record kept of fish the last three seasons shows that we have taken about eleven thousand trout. We have a third lake on the property, not connected at all with the stream, and in this we have put some brown trout.

With our hatchery, as it is arranged, and our means of taking care of the breeding trout and fry, think we will have annually from three hundred to five hundred thousand fry from this on.

A jolly party last fall went up to see the operation of stripping the fish. It was a cold day, and the ladies rigged up in all the old coats they could find in the club room. The picture herewith shows they were not a serious crowd. In the stream below Spring Lake we have partitioned a part for the breeding trout, some ten or twelve hundred, and many of them big fellows. The netting is to keep out the kingfishers and heron. First we had this netting down close to the water, and we found many of the trout killed themselves by jumping against it. Now, with it raised up, we rarely lose a fish.

A great future is in store for us. Every year we expect great dividends from the Pere Marquette Club in the shape of fish, outings and fresh air. It is a rest from business that we all need and can get near home, for we take the afternoon train at four o'clock and are at the club grounds that evening for a late supper, and back to business after a day's fishing; so we feel we have lost no time.

Several of the club members have erected summer cottages around Mill Lake, which is, indeed, a picturesque and pleasant spot.

After all Northern Michigan is not waste land. Is not the present product of Wingleton of as much and more lasting value to mankind than in the days of the saw-mill?

W. B. MERSHON.

SAGINAW, Mich.

DO-KA-BATL THE CHANGER.

Now while the long evenings are here and the "fraternity" have a little time to spare, I'll tell them whom to thank for the privilege of living in a country that has game to shoot at and fish to toss a fly to. I know this must be the right story of how these things came about, for Iwana John, who is very, very old, told me all about it this summer, while we sat by the remnants of the singgamble fire on the Skokomish river, which is born near the Thunderbird's nest away back in the Olympic mountains. At least John says it is born there, and I guess he knows.

After I saw the singgamble I got the old man to talking, and this is what he said:

"A-a-h snugwillimie, has de-la-a-a-te ahncutty——" Oh, yes; I forgot; you don't understand Chinook, so I'll translate it. A long, long time ago," said he "many snows before I was a little boy, a great man whom the Siawash call Do-ka-batl, the Changer, came riding out of the sea on a big cloud and came here by this river.

You know the Siawash then did not know how to catch salmon with the willow trap, and Do-ka-batl soon showed them, and they catch many salmon that way now. Then, for it was very, very long ago, there were many bad Indians, so Do-ka-batl changed things this way. One bad Indian sat making a stone knife sharp and Do-ka-batl knew it was to kill him, so he said: 'Why do you sharpen the knife?' The man did not answer, so Do-ka-batl said: 'Give me that knife; you want to kill me!' The Indian was much afraid and started to run, but left his knife, which Do-ka-batl picked up and threw into the man's heel, making him jump much; and then he changed him into a deer, and he jumps much yet. That is why a deer has two toes, and the little toes that stick out behind the foot are all that is left of the knife.

THE KINNE BELOW THE RAILROAD.

Do-ka-batl went on and soon saw a medicine man who had his hair tied in bunch on top of his head and was dancing around much. Do-ka-batl thought this man would look better some other way, so he changed him into a blue jay, and he flew away in the woods.'' That is why the blue jay weats his hair pompadour and jumps around so much yet.

Old John was started, and that meant talk until the fire went out, so he told me about the humming bird. ''Do-ka-batl went on until he saw a Siawash who was out in the rain, and throwing his hands about his head to keep the rain from falling on him. He thought that a Siawash who was afraid of getting wet was very foolish, so he changed him into a humming bird, and he still throws his wings about very fast and is afraid of the rain. That taught all Indians not to be afraid of rain; and now they don't care a bit whether they get wet or not.

''Now, a little boy had heard of Do-ka-batl and was afraid of him, but he left his mother's house a little ways and Do-ka-batl came along. When the boy saw him he was badly scared and called, 'Boo! boo!' to his mother. Do-ka-batl got angry and changed him into a dove and sent him into the woods to call for his mother all the rest of his life.''

The old man went on to tell me how Too-lux, the South wind, and Quoots-hoi, a witch, were responsible for the birth of the thunderbird, who makes the rain, the lightning and the thunder, and by the time the tale was finished, for it was a long story, the fire was down to a bed of coals, and I knew the old man was through for that night, so I gave him a bit of tobacco, said ''Klook-wa, tilicum'' and rolled up in my blanket to dream of all sorts of Skal-lal-aye.

EL COMANCHO.

Seattle, Washington.

A WASATCH BUDGET.

The year just closed has been illustrious to the sportsmen of Utah from the fact that it marks the first strong and successful effort to enforce local game laws. This happy result has been effected, not by the farmers and land owners—they have not yet imbibed the protective spirit, except for home industry. It has been brought about by a unity of action on the part of sportsmen's clubs and by the trying of cases for violation before magistrates who cared more for the law than for the good will of the offender.

Utah Lake, concerning which I have often written Forest and Stream, is a body of fresh water, 30 miles in length by 12 miles in width and fringed by numerous shallow bays and indentations. It is fed by cold mountain streams, all of which are famous for their trout. The lake trout, too, are large and gamey.

All of the bays of Utah Lake are shallow and overgrown with tules. Feed is excellent—or was before the confounded carp commenced to clean it out—consequently we have enjoyed excellent duck shooting. Surrounding the lake are six large settlements, Provo with a population of 5,000 and the others averaging 2,000 each. Add to the sportsmen of these towns the sportsmen of Salt Lake and the rural population immediately adjacent to the lake, and you can see that a continuance of good shooting and fishing depends upon rigid protection. I have taken pains to examine the records of the justice of the peace for Provo precinct for the past six months, and find the following case of game law violation with the disposition made of the same:

Aug. 21, P. P. Hindmarsh, illegal possession of trout, fined $25; Aug. 21, B. Madsen et al, illegal possession of trout, fined $50; Sept. 6, Chris. Jensen, seining, fined $15; Sept. 6, Kelsey Bird, seining, fined $15; Sept. 10, G. W. Tibbets, shooting ducks after sunset, fined $1; Oct. 12, Parley Swenson, shooting ducks after sunset, fined $15; Oct. 12, Walter Smith, shooting ducks after sunset, fined $5; Oct. 12, Hymen Jensen, shooting ducks after sunset, pending; Oct. 12, Neils Hanson et al, shooting sea-gulls, pending; Oct. 27, P. P. Hindmarsh, shooting ducks after hours, fined $51.80; Oct. 27, John Clark, shooting ducks after hours, fined $5; Oct. 27, John Taylor, shooting birds after hours, acquitted; Oct. 27, ------ Barker, shooting ducks after hours, pending; Oct. 29, Jos. Springer, shooting ducks after hours, pending; Dec. 11, Wm. Rothwell, shooting ducks after hours, fined $5; Dec. 11, J. H. Evart, shooting ducks after hours, fined $5; Dec. 11, Chester Hutchings, shooting ducks after hours, fined $5; Dec. 11, Truman Hutchings, shooting ducks after hours, fined $5. Total fines, $202.80.

In addition a number of cases have been tried, with similar results before the U. S. Commissioners at Provo and before each of the other seven precinct justices that have jurisdiction about the lake.

The introduced fish in Utah Lake are carp, striped bass and black bass. Their introduction has been detrimental to the increase of trout, and as a game fish the black bass has already taken the place of the lake trout. The carp are an unmitigated nuisance save as the small fry serve as food for their more worthy competitors. It would almost rival brother Greene's bull dog story if I told of the way in which those overgrown carp, that have fattened on good duck feed, lie in the shallow bays, too lazy to move out of the way of the boat and suffer themselves to be prodded with our oars before they will allow us to pass out to our blinds.

The black bass is beginning to beautifully adapt itself to its environment. The streams that empty into the lake bring from the Wasatch an immense amount of detritus and are constantly delta forming. It is where these delta streams, with a comparatively rapid current, cut their channels through the stagnant water of the tules that the black bass lie. They are as greedy as they are obstinate, and our local fishermen have great sport with the fly. To be candid, I have not yet caught on to what I consider the correct bass fly for these waters, so I use a spoon with entirely satisfactory results.

Anent this subject I learn that the lake white fish (coregonus clupeiformis) is to be placed in Utah Lake within a short time. The following letter is self-explanatory: ''Washington, D. C., Jan. 22, 1895. A. Milton Musser, Esq., Fish and Game Commissioner, Salt Lake City, Utah: Dear Sir—Replying to your letter of the 14th inst., I think it will be practicable to send you a carload of white fish fry or eggs to be hatched on the car en route if you can arrange the transportation from Chicago to the destination. It will be best to place the fry into Utah Lake as it would not be advisable to attempt transporting the fry eighteen miles by wagon after so long a trip. It is impossible to say definitely when the shipment can be made, but I suppose it will leave Alpena or Sandusky in February or March. The car has a regular crew of five men including the cook. Yours truly,

W. DE C'RAVENEL.''

Through the courtesy of local railway authorities, free transportation for car and crew has, at the request of Commissioner Musser, been secured from Chicago to Utah. It was originally intended to plant a part of the fry in Bear Lake, and to that the ''eighteen miles by wagon'' refers. As a food fish there is no doubt of the value of this species, but I am ignorant of its game qualities and shall watch with interest the fight for life and the survival of the fittest in the contest that is bound to take place in Utah Lake.

In October I reported at some length the violations of law at Fish Lake. It was the opinion of the people about the lake that the Fish and Game Commissioner of Sevier county was culpably negligent or else personally interested in the matter of trout-catching. I made a stay of one week at Fish Lake, and that week commenced on the day that the law was off (June 15.) I saw, before ten o'clock on the morning of June 15 a large farm wagon leave the lake, loaded as full as the bed would hold with trout. I knew of trout being peddled in Sevier county for a week before this time. I saw three fish traps (each used before the 15th) and each surrounded by piles of roes and offal. I saw boards removed from the dam of the Rabbit Valley Irrigation Company and woolsacks held beneath the flow until they were filled with trout. When I expostulated, I was informed that the commissioner (B. Carter) dare not arrest them, as he indulged in the same practice himself. In view of these facts, let me insert Mr. Carter's own report of the season's work:

''There is little to look after in this county in the way of fish and game. As to fish, I will say the Sevier River is converted into canals. There are eight ditches taken out of the river in this county. Fish Lake is the main fishing place, and the Rabbit Valley Irrigation Company has that shut off all winter and until June, when they open the lake and destroy large numbers of fish. Fish Lake is about thirty-seven miles from here, and it would take one man all his time to look after that part of the county alone. The county only allows $75 per year to its fish and game commissioner. There were two arrests made at the lake last summer. We don't have many deer to look after and there is not much hunting going on as far as I am able to learn.''

I did not have much sympathy for Mr. Carter until I learned the amount of his salary. Seventy-five dollars for the work that should be done would make a preacher turn poacher. Concerning the deer, I shall have more to say later on, having had some sport with them just over the line from Sevier county, in the new county of Wayne. A number of our local market hunters (natives not sportsmen) have made their annual trip into the White River region and report deer as being unusually abundant. As they shipped their game to Salt Lake by the carload, I am bound to believe their reports. The Indians about Provo have brought in less venison this winter than ever before, but from other parts of the territory reports are excellent. The grouse and chicken shooting during the fall was fully up to the average. As yet, no Mongolian pheasants have wandered hither from those wonderful Oregon preserves. When they get here, the sportsman's cup of happiness will certainly overflow.

SHOSHONE.

PROVO, Utah, Feb. 7, 1895.

THE SUNNY SOUTH.—III.

IN THE CANE BRAKES.

CHICAGO, Ill., Jan. 31.—On the morning after our arrival at the timber camp on the Sunflower, we made an early start on the hunt, and the sun was hardly over the edge of the earth before our cavalcade was winding out over the fowl trail, the mellow voices of the horns calling the pack together. I found that the horn of the humble cow constitutes a large factor in the science of bear-hunting. By its means the woods may have a language, so that the master of the hunt can tell what is going on at a distance of half a mile or more. The notes of the horn could be heard a mile, no doubt, in open country, but so dense and stiffling is the cover of a heavy cane-brake that a horn is faint at half a mile, and often at a range of 200 or 300 yds. seems half a mile away. As the skilled hunter knows the voice of each member of his pack, so the dogs know the sound of each horn of the hunters. Mr. Bobo's dogs would come only to his horn. All the hunters know the note of each hunter's horn, and could tell who was calling when the sound of a horn came. All were advised to use the horn as little as possible, that being left to the master of the hunt, who called together or laid on the dogs. A brief code of signals was used. Thus, two short and a long note of the horn was the call to bring the dogs together. A single loud and long note indicated a query, ''where are you?'' Three long notes at intervals, meant, ''come to me.'' Continued blowing of the horn meant a kill and assemblage after the chase.

Our hunt of the day was to be toward the breast of Surveyor's lake, over in the thick cane country, and to reach our point we had to travel over what was called ''Tom's hack,'' meaning a trail cut through the cane by Tom, the negro. A section of this country was then provided with these ''hacks'' for the convenience of the hunters, a success in the hunt meant an intimate acquaintance with all these trails, so that we could ride in ahead of the dogs. To ride ''cross country'' to the dogs was an impossibility. The strongest horse could not force his way fifty-feet into the heaviest cane, and a man on foot would be helpless. To be lost in a cane-brake is a thousand times more awful than to be lost in the mountains One might know his direction perfectly, but not knowing the trail cut to it would be as badly off as though he were utterly at fault. I made careful estimates of one's ability to get through such brake on foot, and I do not think a man could go over a mile in a whole day of hard work, unless he had a cane-knife (a heavy-bladed knife, about 2 ft. long and weight 3 lbs., used by all brake hunters). I made up my mind that if I should be cut off from the others in any way, I should leave the matter of getting home entirely to Coleman, my horse, which I discovered to be a trained bear hunter and an expert at taking cane. Even in riding along the ''hacks'', the brake-hunter needs all his pluck and patience, for the hack is merely a slit in the wall of green, which closes and pinches in on the hunter. A thousand malicious fingers pluck at the horsemen. His horse rises and leaps under him, to take a log the rider can not see, and at the leap the out-reached arm of a tree also unseen may crush his shoulder seriously. The shaking and switching and cutting of the cane on the face and body is continuous and painful, and one's legs soon get badly bruised by frequent grinding against the trees and shrubs that grow in the heart of the luxuriant green. It is impossible to see twenty feet ahead, even on the line of the ''hack.'' One follows his leader closely, his horse, from long experience, knows it useless to breast the cane. He ducks his head and crawls under the overhanging cane. The rider, almost swept from his saddle by the rush of interlocked stems, bends low on his horse's neck, keeps his rifle low down and endwise with the path, and plunges through the best he can. This is how you ride to hounds—until you hear the strike and the fighting roar of the dogs. Then you just ride—you forget how. The magnificence of the game is its atonement.

ACCIDENT IN THE CANE.

In one of these narrow, choked-up hacks, Horace Bobo was riding ahead, and all at once we saw him stop and dismount, holding his hand to his head.

''Tell Papa to come here,'' he said, and we all pulled out the best we could to let Mr. Bobo by.

''What is it, son?'' he asked. ''Have you got a cane in your nose?''

''Yes, said Horace.''

''Have you got the piece out?''

''I don't know, but I think it's all out. Here's quite a piece of it.'' His nose was running blood.

''Well, jump up and go ahead, son,'' said his father. ''I've had a hundred canes in my nose I expect.'' And this was all that was done, except that Horace got a roll of leaf tobacco from Mr. Payne, and plugged up his nose with it. The next day the boy coughed up out of his throat, a piece of cane nearly as large as a lead pencil, and about half an inch long. It had been driven entirely through the nasal passages into the throat. Such may be one of the incidents of this rather stern sort of sport.

It is a rule of the hunt that no man shall carry his rifle loaded, that is, well—a shell in the chamber of the gun, because that would be highly dangerous in such riding. Short Winchester carbines, .44 and .38, are the guns used. Of course a rifle must be short and light to be used in such riding, where it is carried over the saddle in a broad path, in the hand at the side or before the face in close cover. Mr. Bobo had a trick of carrying his rifle stock upward in his bridle hand in riding through vines and bushes. Usually he could break through a tangle, but if it was too tough the pull on the rifle stock would stop the horse by pulling on the bridle, before the vines got back so far as his face. In the cane riding, experience is everything of course. Mr. Bobo told me that most new men that he took in hunting were unable to keep up, but were continually getting lost and requiring a search party, to the delay of the hunt. He was good to compliment me on my deviation from the usual rule in this matter, but I never told him why I kept so close up—I was afraid of getting lost if I didn't! I wouldn't be lost in that country for a hundred dollars a minute. And beside, I always thought my horse had a great deal more to do with it than I had. I just staid with the horse.

BEAR, THIS TIME.

Well, we went on about a mile from the camp, past an old beaver-dam which lay up in the dry ground in the woods, and followed Tom's track into the thick cane about half a mile or so, trying all the time to keep the young dogs together till we got a bear trail. There was a great deal of other game in that country, and several times the youngsters opened and a number of them passed out of hearing in the distance. Still, we had no word from the old bear dogs.

At length one of the foxhounds ran up on top of a log, snuffed, whimpered and gave voices to a loud, deep cry. Old Henry jumped also, and at once added the approbation of his gruff bark. Then every dog left near us broke in, swarmed around the spot and at once began to give tongue. The chorus became a savage, roaring chaos of fierce and angry voices, more thrilling than any music of hounds I had ever heard. The notes of a pack trailing bear is more one of anger and ferocity—than the musical call of dogs running a smaller animal. The man can not hear it and sit still. The dogs of war are loose in the air and he must ride, he must act.

The pack gathered and lead out and swept away, the sound coming back loud, then faint, fainter, very faint.

''That's bear, this time, for a thousand dollars!'' said Mr. Bobo. ''Get back to the cross trail and walk over to the right!'' As he spoke he crashed through the cane and back he went over the trail, every horse following, as eager as the dogs.

I will not weary readers with the story of the rest of the hunt. It was wait, and ride and wait again, and listen and call, and all the while there were three distinct chases on, only one of which was bear. For once in a way Mr. Bobo was at fault, and was puzzled to know why the bear dogs didn't come the way he had figured. He and I kept close together, and I suppose traveled several miles through the cane, unable to make out where the bear had gone or what had become of all the other hunters. Puzzled and perplexed, after a long listening wait in the heart of a dense brake. Mr. Bobo at length crowded through the cane at the end of the faint ''hack'' we were following, and we came out on the banks of a shallow dry bayou. Here we sent a lusty blast of the horn out through the woods, and at length fancied there was a distant answer. Toward this we crowded, and soon caught the horn's note more clearly, and finally heard the shouts of other hunters coming toward us.

''Come this way,'' called Mr. Bobo, and in answer some one called, apparently asking: ''Did you see the bear?''

BRINGING IN THE BEARS.

In the dense cane the voices seemed to be three hundred yards away, but almost before we knew it, a little procession came filing out of the brake, Horace Bobo, Frank Harris and the colored boys Tom and Peter. And behind the saddle of the last, flopping and swaying, and dangling far down on either side, was a limp, black, furry object.

We had our bear. Only a cub, of about one hundred

and fifty pounds weight, it is true, but with jet black, long, soft, glossy fur—as pretty material for a rug as one ever saw, this I can testify; for the hunters insisted on my taking the skins we got.

In the little open glade we paused and took stock, and blew the return call for the absent, who soon joined us. It transpired that the bear had been killed less than half a mile from us, and that the hunters had afterward fired a dozen shots to call in the dogs, but we had not heard a sound of it, the wind being against us. There were only five dogs in at the death, but every one of these was game to take hold of a bear. The bear had treed in a vast white oak, in the middle of a strip of the heaviest cane. Horace and Frank and the two colored boys heard the bay, and crept in through the cane. The bear saw them, and at once let go all holds, apparently, and dropped down out of the tree almost as fast as if it were taking a straight drop through the air. Horace took a snap shot at it, and so did Frank, but neither could say he hit it, the fall of the creature was so swift as it backed down the tree trunk. As soon as it struck the ground the five dogs seized it, and strung it out. Mr. Bobo said he would have taken the cub alive, but the colored boys had a dog or two in that fight that they didn't want to have hurt. Tom rushed in among the dogs, and sent a couple of bullets straight down through the bear's head, bursting open the whole back part of the skull, and ending the fight at once.

It was a bit disappointing that the rest of us had not seen the finish, or heard the fight, but at any rate we had our bear, and there was rejoicing accordingly. Mr. Bobo and Mr. Payne both thought there had been two starts, an old bear and her cub, and that the main pack had gone off with the old bear, the few dogs in at the death with the cub having jumped it and treed after a short run. Yet by some way of their own the rest of the pack seemed to know a kill had been made, for in twos and threes they began to straggle in; at the grallochingthere were dozens of hounds to fight over the tidbits most prized in a bear dog's gastronomy. Then the bear was again lashed behind the saddle of Bill's mule. I noticed that the front paws were cut across and unjointed, and was told this was done to keep the claws from digging into the sides of the mule as the body swayed about. Surely the art of bear hunting was done fine here.

We finally took saddle again, and made off down the Black Bayou, a vast dry bed of the river, filled with cypress tress and hedged in with giant oaks and gum trees. It was only a trifle past noon, and we wanted another bear. The dogs were trailing at one time, but the day was so dry and the wind disturbed the dry leaves so much that no pack on earth could do much with a cold trail, so we got no other start, or at least got no other bear, though at one time we expected a shot as a large section of the pack came sweeping up in full cry. There was a fire in the cane brake, between us and the Sunflower, and we could hear the loud popping of the cane, and smell the smoke very plainly. This disturbed the hunt, and before night we hurried back and went to camp.

DRESSING THE BEAR HIDE.

"Well, you didn't get your shot, did you?" said Mr. Bobo, as we sat around the fire. "But you keep close to me to-morrow, and you won't be far off at the finish. I want you to kill the bear to-morrow."

"To-morrow?" I said. "Why, I thought I was going to take the train south to-night, somewhere down in here."

"Well, you're not," said Mr. Bobo. "You'd have to ride fifteen miles through the dark now by way of the upper ford to get to the nearest station, and if you swam the Sunflower here you'd have to go ten miles, and you'd have to hurry then, for the train is due there about nine o'clock. You are going to stay right here and go bear hunting some more."

So I was a prisoner, and a very philosophical one, for I reasoned that Mr. Divine and his friends would not wait for me at New Orleans now anyhow, and so concluded to take the world as it came; which is a pretty good way to do. if you can only do it.

That night we skinned the young bear carefully, leaving on his feet and head and fleshing off the hide as well as we could. Mr. Bobo showed me that by using cornmeal with the salt the flesh on the inside of the hide could be stripped off much more easily, the meal drying up the greasy flesh so it could be pulled off in flakes and strips. This "wrinkle" is valuable in preserving green skins, and to it I attribute much of the excellent condition of the skins I sent North, which did not suffer in the least, though the weather in the South was then quite warm. There is no part of hunting I like better than fooling over a hide, so I sat up late rubbing and scraping this skin, at length rolling it up in salt and meal in the certainty that it would never spoil. All of this seemed to interest the others, who couldn't see what there was about a bear hide to be worth bothering over. They did not know how prized such a gift is to one who doesn't live in a bear country. I noticed that all the horses and mules about the camp seemed perfectly indifferent to the bear or the skin and paid no attention. The ordinary horse is deathly afraid of the mere smell of bear. These horses must have had many a bear about them. On my last day out I made a saddle blanket out of the cub skin, as Coleman had a sorish back, but Coleman didn't mind the odor of the skin, nor the swinging of the bear's legs along his sides.

OFF FOR ANOTHER BEAR.

On the morning following we were up early, and had a breakfast of bear liver and bear steak, and each man made himself a bear sandwich for lunch. This made our hearts strong, but it was hard on the bear. After breakfast the dogs had a turn at what was left, andby noon the one hundred and twenty-five or one hundred and fifty pound carcass was gone. When you have along a pack of fifty-three bear dogs, there is little danger of any meat going to waste.

By this time the dogs had some of the wire edge taken off from them, and were much more manageable, so that we kept the pack pretty well together. As we were starting out for the hunt, one of the men employed at the camp called to us from a path in the woods to come over to him, as there was a panther in the brake near by him. He said it had called out several times while he was at the spring near by and had followed along in the cane for a distance. I thought this was a pretty good chance for a run, but Mr. Bobo kept right on, saying he thought the man had heard the old she bear whose cub we had killed the day before. "We'll get a bear easy enough where we are going," said he.

THE STRIKE.

The plan for the day's hunt was to skirt along some pools in old bayou beds, where we had seen tracks of bear the day before, in hopes that we could get on the trail of one that had been in to water the night previous, or in the morning. To make it short, we did before very long find fresh tracks in the mud at a little water-hole, and while we were figuring on these the dogs broke away in full cry—and what a magnificently savage music they did make. This is the best of this sort of bear hunting—the music of the pack. No man living can sit in his saddle unmoved by it. It thrills and tingles and insists that we yell and ride.

We yelled and rode. The pack split. Mr. Bobo, Mr. Payne and myself took the left-hand trail, which Mr. Bobo said was the natural course of the bear. Now, it did look a bear hunt, and we rode hard. I began to see where Mr. Bobo got his reputation as a hard rider. He went ahead for nearly a quarter of a mile riding at the bottom of a dry ravine or water-course. This was full of trees, vines and saplings and a million keen-tipped switches cut the hands and face continually, while one's legs were bruised by the elastic saplings and the tree trunks against which they were constantly scraping. I thought this even more punishing to ride through than the cane. It was no walking or even trotting, but full gallop, which one must do here to keep in sight of the leader. The hunting horses, under spur, plunged at the thicket full speed, and we had to sit fast and fight the vines and branches as best we could at full speed. At last we rode out of the gully to a hillock in the cane, to find that we had not headed the pack. There had been a turn, and we were at fault. Crack! smash! slam! we went through the cane for a way and then again paused to listen. Faint voices of the pack came from below us.

THE START.

"The bear has smelled the burning cane and headed back from it," said Mr. Bobo. "We must get back." So back we went down that awful ravine, full gallop, smashing and tearing through the vine-knit, tough young trees, getting as much as we gave in punishment, I imagine. I know my legs were black and blue after it. Yet again we rode up on high ground to listen. One part of the pack was now trailing back of us, across the ravine. "Some one ought to go over that way," said Mr. Bobo. "The bear is up now." Mr. Payne volunteered to go.

"Come on with me, now," cried Mr. Bobo to me. And I went in after him the best I could, through an hour or more of the worst riding I ever had in my life. Up and down that awful ravine, Bobo the bear hunter raged unsatisfied. We went to the open glade at the lower end of the ravine where the bear should have crossed, but could not find any sign that the chase had passed. We rode over to the banks of the Black Bayou four different times and back, but no dogs did we hear.

"Great governor!" said Mr. Bobo, "can it be that I've lost the pack again to-day, right when I want you to be in at the fight. And so he raged and fumed and rode and blew loud upon his horn; but the wilderness replied not.

I suppose we had spent two hours thus, thrown entirely out of the chase, when we heard the faint voice of a horn. "That's Horace's horn," said Mr. Bobo, and he's coming up the Black Bayou. "So back to the Black Bayou we sped again. There at length we met Horace and Frank and the colored boy Bill. They had no more idea where the hunt had gone than we had."

"Well, you're a good lot," said Mr. Bobo, to let the dogs run plum away from you. Where are all the dogs, anyhow?"

The boys said they had met two dogs coming back, half a mile below and showed the direction from which the dogs came. Mr. Bobo carefully asked the names of the dogs they had met coming back. "Why didn't you shoot them?" said he. "I don't want any dogs that leave the trail when it gets hot."

"Now, I know all about this hunt." said he, "as well as if I had seen it. The dogs that Mr. Payne went back to were the dogs that had the bear. The others were runing the back track. The dogs that you saw coming back came from over there, in that thick cane, and that's right where the bear went, too. It's very likely he's a dead bear by this time, too, for those two niggers, Pete and Tom, would get him if Mr. Payne didn't. Come ahead, I know right where to go now."

THE KILL.

So off we went at a gallop, making through the open glades at the head of the bayou, and at length striking a great body of very heavy cane. Here we heard a horn, and answering got reply in a repeated sounding which made my heart sink, for I knew then the bear was dead, and that it had been impossible to hold it for me to shoot, as it was the understanding among these generous hunters should be done if possible. We answered and pushed on into the brake. Mr. Bobo took one course to the horn, and in trying to follow him I took the wrong glade, and got in with the negro Bill, who confidently led me into the worst cane brake I ever saw. The voices of the hunters with the horn seemed two hundred yards away, but when the hardy Coleman burst through the last of the cane I found they had not been forty yards away.

And there was a picture for you. Horses standing about in the little open space at the foot of a giant white oak. Dogs lying panting, or fighting or sneaking about, apparently a hundred of them. Mr. Payne, tall, quiet, and slow of speech, leaning against the tree. The negro boys, Tom and Pete, bending over a vast object on the ground. Which object was the bear.

"Well, there's your bear," said Mr. Bobo, discontentedly, throwing one leg over his saddle horn, "and I reckon you got a rug this time, but I would have given twenty dollars for you to have had the shot."

Yes; there was the bear, about three hundred and fifty pounds or more of him lying red and white on the leaves, and his jetty robe already lying under him, for the boys had him nearly butchered. This same robe, thanks to the generosity of Mr. Bobo, now rests in the Western office of Forest and Stream, along with the skull of the same bear. This was the bear I should have killed, which everybody wanted me to kill, and which it was a ten to one wager I would kill if I kept close to Mr. Bobo. But on this particular day luck was against me. Had we turned back with Mr. Payne, we would have had the shot. The dogs bayed the bear in this brake, and it went up this big white-oak tree—something which I would have bet all my worldly goods it couldn't have done, so big and fat was it—and the two negro partners sneaked in just ahead of Mr. Payne. They weren't taking many chances about that bear's coming down among the dogs, but promptly shot him where he was, about sixty feet above the ground.

"We double-fired him, sah," said Tom, meaning by that that they had both shot at the same time. The bear was shot through the heart and fell to the ground dead. I should have thought it would have broken every bone in its body. There were fifteen dogs in at the death.

It seemed that the Afro-American was getting to be a good deal in evidence as bear hunter in our crowd, but all the rest of us could do was to go in and stand it and hope for better luck. So we cut up the bear, put the pieces in sacks brought along for the purpose, distributed the burden among all the horses, fastened the skin behind a saddle and set out for camp, which was only about a mile away. Until till very late that night we ate bear meat, and told bear stories, and boiled bear heads, and scraped bear hides, and were perfectly, childlessly happy, at least I was. And once more the New Orleans express went south through the brakes and forests of the Delta, and I let it go. And Providence alone knew where Tom Divine and the others were by that time.

"We'll kill another bear to-morrow," said Mr. Bobo.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

A REMINISCENCE.

I have never considered it necessary for a man nearly to drown, to appreciate what it is to live. Nor do I think it essential for a man to work himself almost to death, in order to fully realize the blessings and benefits of recreation and a change. Yet I do believe that he rests better who deserves a rest, and I pity the man who has nothing to rest from but himself. In seeking this deserved diversion, some chose one thing, some another. As for me, the gun and dogs, and the freedom of the fields and woods with well-chosen companions, are the days that when the body is tired and the spirit heavy, can be recalled with a pleasant and refreshing benefit. The soul straining times of 1893 and '94 have to me had their bright days as well as dark ones, and what I owe to my guns and my (brothers') dogs, I can never repay. The times have not been of the debt paying sort, and while Donald is the smartest dog on earth and Ben Hadad the most sensible, both of them have been so smothered with kindness they won't miss my donation of gratitude. The man who thinks a Rev'd Dr. is only a handy institution in a sick room or the pulpit, has had little experience with men of the cloth. Just before Thanksgiving the Dr. wrote me that he had an order to stop a big vestibuled New York and New Orleans express train at Reidsville, N. C., to let us off, and stop a few days later at the same place again to take us on, and that he would join us for dinner on the train at Philadelphia. And what for? The Dr., George and myself were off for a hunting trip in North Carolina. The student had laid aside his books for a well-deserved outing, taking nothing with him but his pure broad Christian manhood, a good gun and most promising young dog. George had said good-by to the tiers and tiers of religious and country newspapers and type-writers, and soon forgot whether the balance in bank belonged to him or his creditors; but out of consideration for the Dr. and myself he didn't forget to take Donald. And I—well, the man who has held his job down, and drawn his full salary these last two years in a big mercantile house, knows pretty well that there has been some work and a heap of anxiety connected with it, and a change at this time was most welcome.

We reached Reidsville Thanksgiving morning, before the cock had the heart to crow, and that in North Carolina is early. A rap on the hotel door soon brought down a native darker than the night, but in those black hands there was light, and that light soon extended to the big fire-place, and soon we were warming by a cheerful log fire, watching a typical late November morning break into day, while the appetizing aroma of an early breakfast cooking penetrated every nook and corner of our nostrils.

At breakfast we were notified that one, Mr. Hicks, had called for us on schedule time, having received instructions to do so from Mr. Lewis, who was expecting us. Mr. Hicks was to drive us, and in this case us, meant a lot, to Monroeton eight miles away. My years of experience in the drygoods business came in handy in loading that wagon. Mr. Hicks is a small man, and has small feet, but he never got them in the wagon, there wasn't room. I hope that my memory will never fail me, for Mr. Hicks and the five-year old gray horse and the twenty-one year old black one will always remain a bright spot with me as long as memory lasts. Mr. Hicks said he was forty-six years old, barring the three months of a hard winter to come, and had never had money enoughat one time to travel beyond the county line, and had never missed a day's work since he had the measels. The black horse had in years gone by won every race in every county in the State, and was no slouch of a critter yet. The gray one had done considerable traveling by running away at each and every opportunity. What else he said during that eight miles drive would make a book, and an interesting one, too, could it be written as related. Aside from the rural gossip we heard, the only incident that occurred was our stopping to secure the small end of a fence rail to thrash Donald with, because he wouldn't lie down and be comfortable on the rear spring of the wagon. Arriving at our destination we were soon changing clothes before another one of those glowing log fires, which our host had so thoughtfully prepared for us, and in less than an hour, divided into two parties; we were in the field and our guns cracking, and with a fresh pair of thoroughbred dogs every hour or two.

The sport was simply intense. Lewis had a fine lot of youngsters, among them my own dog Mont, an Antonia puppy that he had been handling for four months. The

marvelous work of these young dogs was the most interesting thing in the way of field sport I have ever seen. First down was Rim, George's young Breeze-Gladstone pup, with Sandy Gladstone as guide and running mate. Then Mont and Mecca, and so on down the string, all showing a speed and quality truly remarkable, and a glowing tribute to John N. Lewis as a handler and braker of dogs. I can see Sandy yet, as he drew himself by an embankment by the road-side near a short growth of timber, with four crooks in his back and five in his tail (my apologies to Mr. Mitchell, but this point was truly sensational), with a covey well marked ju t ahead of him. Rim circles to the rear, sees Sandy and with head and tail well up turns rigid. Dear friends, you have all seen this same thing many a time, and who among you has ever tired of it? I did step in to flush, and did kill a bird; but I should value that bird very little, if those two dogs hadn't been instrumental in finding it for me to shoot.

Another day Mont comes across a field at a tremendous gait, finds himself at the top of a steep embankment, never hesitates, makes the leap, lands below in the red sand, sticks forward in a rigid position, and the trembling under lip and fast beating heart are the only things that move. Just ahead of him in the weeds is another covey. Mecca comes along the bottom, takes the scent and straightens. My blood tingles and my nerves are strained. But I must kill a bird this time, or never look that dog in the face again. Well, I can look at him, even if my first barrel didn't count.

And so one day was a repetition of the other, and it came time to pack that same wagon behind that same team and drive back with the same Mr. Hicks. Our string of game was not large, nothing like the size I so often read about. We don't boast of exterminating a single covey, and while we were a party of three, with considerable gun experience, there will be good shooting where we were in another year. We left plenty for breeding and for Lewis to teach his young hopefuls with for all time to come. The recollections of those evening meals where our pure minded host would request the Doctor to ask a blessing, the plenteous food, the good fellowship, the chat by the log fire in the old-fashioned log house, the warm comfortable beds in the cozy little room, the crude side of the native negro servants, the pure-minded, simple country folks, whose integrity is native born and unimpeachable, the hospitality and ccourtesy that are so truly natural, having escaped the adulteration of a modern society are all refreshing at the time, and leave an impression that is healthy and lasting.

The return from one of these trips is so much like parting with a dear old friend that I will say little of it. The fast train stopped for the Doctor, and we all got on, and the middle of the next day saw us once more installed in our separate homes, doubly ready for the many and accumulated duties awaiting us. The guns have been well rubbed down and carefully put away. The dogs lie around the place getting fat and out of condition. Yet I never look at Mont without pleasure. I love talent even in a dog.

And now a parting word of those big generous field companions. The dogs delight me; the birds are interesting and essential to field sport; but be it in their libraries, or on the top rail of a North Carolina worm fence, in the smoking compartment of the sleeper, or on a buckboard steered by a lantern through the mountains of Monroe or Pike counties, on a Cheseapeake Bay steamboat. or lost in the slough of a goose pond. or on the barren in a fog, by the babbling brook, or in the hot, dry field, chasing an unruly dog, or a winged bird, always the same, faithful brothers and true sportsman and a pleasure forever, until now this hunting trip is just like the others with the exception of the change of place and scenery, only a pleasant reminiscence, a time to be recalled with refreshing results. THOMAS GILMER.

NEW YORK.

Natural History.

THE POCKET GOPHERS.

We have recently received from the division of Ornithology and Mammalogy of the Department of Agriculture, Number 8 of the series of bulletins entitled North American Fauna. It consists of a monographic revision by Dr. C. Hart Merriam of the pocket gopher family, Geomyidae, exclusive of the species of Thomomys. The monograph is a work of 258 pages illustrated by 19 full page plates and 71 cuts in the text, besides 4 colored maps. It is strictly technical.

The area inhabited by this family extends from British Columbia and the plains of the Saskatchewan on the north, south to Mexico, and yet notwithstanding this wide distribution and the very great abundance of individuals in many regions, there is perhaps no family of North American mammals which, up to the present time, has been less known. In preparing a bulletin on the economic relations of the pocket gophers, it became necessary for Dr. Merriam to determine the standing and the geographical distribution of the different forms. This study led to the present paper, which at length assumed such proportions that it was necessary to omit from it a consideration of the large thomomys, which itself has a very extended range.

No biologist has ever had an opportunity to examine anything like the amount of material that was at the disposal of Dr. Merriam. He had before him about a thousand specimens, among which are found by far the greater number of the actual types known to exist. The result of his studies is the establishment of seven new genera belonging to this family and of more than twenty new species and sub-species belonging to these new genera and to the old Geomyos of Rafinesque.

The pocket gophers are well recognized by farmers in the West as among their most injurious enemies. Livingas they do almost entirely on roots and tubers, they are highly injurious, and they also do much damage in fields of grain and fodder, not so much by what they eat as by the amount of surface which they cover with fresh earth from their burrows. Dr. Merriam corrects a widespread erroneous belief when he tells us that the cheek pouches, or pockets, are used exclusively for carrying food. It is the general impression that these pouches are used also for carrying dirt in its removal from their burrows. An interesting account is given of the actions of a tame pocket gopher, which was for some time kept in confinement, and carefully observed in order to learn how food is placed in the cheek pouches. Dr. Merriam says: "The animal soon became sufficiently tame to eat freely from the hand, and was commonly fed bits of potato, of which he was particularly fond. The manner of eating was peculiar and interesting, and showed an ability to use the huge fore feet and claws in a way previously unsuspected. After satisfying the immediate demands of hunger, it was his practice to fill one or both cheek pouches. His motions were so swift that it was exceedingly difficult to follow them with sufficient exactness to see just how the operation was performed. If a whole potato was given him, or a piece too large to go into the pouch, he invariably grasped it between the fore paws and proceeded to pry off a small piece with the long lower incisors. He would then raise himself slightly on his hind legs, and hold the fragments between his fore paws while eating; for he usually ate a certain quantity before putting any into his pouches. If a small piece were given him, he took it promptly and passed it quickly into the pouch. Some pieces were thus disposed of at once; others were first trimmed by biting off projecting angles. As a rule, one pouch was filled at a time, though not always, and the hand of the same side was used to push the food in. The usual course is as follows: A piece of potato, root, or other food is seized between the incisor teeth, and is immediately transferred to the fore paws, which are held in a horizontal position, the tips of the claws curving toward one another. If the food requires reduction in size, the trimming is done while held in this position. The piece is then passed rapidly across the side of the face with a sort of wiping motion which forces it into the open mouth of the pouch. Sometimes a single rapid stroke with one hand is sufficient; at other times both hands are used, particularly if the piece is large. In such, cases the long claws of one hand are used to draw down the lower side of the opening, while the food is poked in with the other. It is obviously impossible for the animal to pass fodder from the mouth to the pouches without the aid of its fore paws.

"The most remarkable thing connected with the use of the pouches is the way they are emptied. The fore feet are brought back simultaneously along the sides of the head until they reach a point opposite the hinder end of the pouches; they are then pressed firmly against the head and carried rapidly forward. In this way the contents of the pouches are promptly dumped in front of the animal. Sometimes several strokes are necessary. I am not prepared to say that the animal cannot empty the pouches by means of the delicate investing muscles, but I have never seen them emptied in any other way than here described."

While the present paper is almost exclusively technical, its preparation was an indispensable antecedent to a study of the life histories of this group. The results of such a study having a special relation to the injury done by these animals is promised as a separate bulletin of this division. It will be prepared by Dr. Merriam's assistant, Mr. Vernon Bailey.

Birds of Pennsylvania and New Jersey.

While it may truthfully be said that all local bird lists if honestly prepared by a competent person are useful, it is very seldom that we meet with one so complete and so valuable as that compiled by Mr. Witmer Stone under the direction of the Delaware Valley Ornithological Club.

This club was organized in 1890, and soon afterward measures were taken to compile from the field notes of its members a list of the birds known to occur in the vicinity of Philadelphia. Early in 1890, a committee composed of Mr. Geo. Spencer Morris, Mr. Samuel N. Rhoads and Mr. Witmer Stone was appointed to take charge of this matter, and to prepare a work which should embody the results of the club's ornithological investigations in the Delaware Valley and along the New Jersey seacoast. The work of preparing and editing the accumulated material was entrusted to Mr. Stone. The final report was submitted to the club in May 1894 and the results are now before us.

The work consists of two parts, part I, including chapters on the Geographical Distribution of Birds, Faunal Areas of Eastern Pennsylvania and New Jersey, Winter Birds, Bird Migration, Migration in the Vicinity of Philadelphia, and Birds found within ten miles of Philadelphia. This part occupies 25 pages of the work. Part II, includes Introductory explanations, and Annotated List of the Birds of Eastern Pennsylvania and New Jersey, Addenda and Bibliography, this part occupying 142 pages, of which the list takes up 115.

The chapters included in Part I are interesting and suggestive, and indeed essential to a thorough comprehension of Part II, but it is after all in the annotated list that we find the greatest interest. No attempt is made to describe the birds or to treat of their habits. The names and breeding ranges and areas of winter distribution are given together with the record of captures ancient and recent.

As the region treated of consists of mountains, valley, low land, and seashore, and covers territory portions of which are within the Canadian, Alleghenian and Carolinian faunal areas, we find that this list includes a very large number of birds, no less than 352 being given. Among these are many which were formerly very common along the New Jersey coast, but which have now become practically extinct there and occur only as rare stragglers.

An interesting and valuable part of this work which it must be remembered covers ground that is historic for the ornithologist — is its bibliography which occupies 21 pages, being divided in two parts the first arranged chronologically, the second alphabetically by the authors.

The ornithologist can hardly be without Mr Stone's valuable list. It is most interesting reading. The mechanical part of the work is well done, the book being handsomely printed and bound. We notice only one typographical error.

A Flock of Starlings.

Editor Forest and Stream:

BROOKLYN, Feb. 25.—Yesterday, Feb. 24, on Lincoln Road, Flatbush, L. I., I saw a flock of starlings (sturnus vulgaris) of about thirty in number. Having lived on Long Island for over twenty years, and being fond of out-door life, it has yet never been my good luck to see these birds here before. I would like to know through you or your paper if they are to be found breeding here.

While a boy in Denmark I became very familiar with these birds, owing to their domestic habits. They breed their young in boxes put up on gables of houses and in fruit trees. Their eggs are a pale blue, and generally number from five to seven. They would return each spring, delighting us with their song, and were considered of great benefit to orchards by killing insects. Their arrival was looked upon as sure sign of spring.

Having got within fifty feet of the birds yesterday, and heard them singing as only a starling can, and seeing that their flight was the same as that of our American meadow lark, I know I made no mistake, but hope to hear these birds may become better known here.

Perhaps they were only traveling to a foreign land.

BERTRAM FICH.

[Starlings have been introduced in this vicinity several times. Once, we believe, in Prospect Park, Brooklyn, by the late Colonel Pike, and once, at least, in Central Park about 1890. From either of these points they might have reached Flatbush. The species is frequently reported to Mr. Frank M. Chapman, of the American Museum of Natural History, from various points about the city, but especially from the upper part of the island. A flock of about fifty has been recorded near Spuyten Duyvil. Two pairs bred last year in the roof of the museum. In Sept., 1889, Mr. William Dutcher received a specimen, shot near South Oyster Bay, L. I. The bird is resident here, and as it is has steadily increased and shown that it can resist our severest winters, it may fairly be regarded as permanently established.

Importation of Hares.

The English hare is not identical with the Scotch or mountain hare. The former is considerably the larger, as the Scotch is to the Irish variety. The English hare never changes its color. The Scotch hare does so as winter approaches, the fur bleaching from the feet up, not by gaining a new coat, though in the spring the change is effected by moulting, or better, by shedding the old fur.

I have just imported a lot of ordinary hares with fair success, and no doubt the Scotch hare would also do well, but they being smaller. I see no advantage in introducing them. I have had good accounts of those which have been here any length of time.

I cannot see why there should be an import duty of 20 per cent. on furred game and none on feathered. Who can give the pedigree of hares or deer? All game should enter duty free. VERNER DE GUISE.

The Climate of Washington.

SEATTLE, Wash., Feb. 18.—Late reports from the wire seem to indicate that you are going in for bearskin coats, etc., on account of a frosty feeling generated by the air. I read them, put on my straw hat and go fishing. You know we brag about the climate out here to a certain extent! We have had one light snowfall this winter, but it fell slowly and was gone next day, and I had the pleasure of shaking the snow from a superb tea rose, growing in my front yard before fastening it in the lapel of my coat. This was about Christmas. I have pansies and daisies in bloom in the yard now, while you are nearly frozen because you (poor man!) live on "the other side of the mountains!" But then, as Judge Green will probably tell you, it does "mist" here some in the winter.

EL COMANCHO.

Linnæan Society of New York.

The third lecture of the Public Lecture Course for 1895, "Hawaii, the Paradise of the Pacific," by William Libbey, Jr., will be given on Tuesday evening, March 12, at 8 o'clock, at the American Museum of Natural History.

Game Bag and Gun.

Sportsmen's Exposition.

May 13 to 18. Madison Square Garden, New York.—First annual Sportsmen's Exposition.

WILD PIGEON DAYS.

My friend, J. A. H. Esq., of Pittsburgh, occasionally sends me a number of the Forest and Stream, knowing that once I was something of a local sportsman. In the number of Feb. 16, 1895, I read an article entitled, "In Wild Pigeon Days." It reminded me of my own youth in Pittsburgh in the decennial 1820-1830. I am 86 years old, so that you will perceive the possibility of the time. Then Pittsburg was a small place, its population in 1820 being under 8,000. Boyd's Hill stood a high naked promontory overlooking the city northwardly, and bounded on its westerly side by the country road alongside of the Monongahela River. Little of that is now seen, the hill, then bare on top, is now built up for miles, overlooking what is Fifth Avenue on the northeasterly side, and the Monongahela on the westerly.

I describe this hill because it was a noted wild pigeon resort. About three hundred yards from the northerly overlooking point, a large group of native trees, chiefly oak, stood with many dead tops, on which pigeons are accustomed to light in the morning. In September, the small, broken up flocks of pigeons on their flight southward would light on these trees. On the bare hill and beside the woods the hunters stood in the morning waiting for the coming flights. The approach of a flock every few minutes was the signal for a fusilade of guns, and as the pigeons fell, the claimants often exceeded the birds in number.

In this section of country the pigeons fed chiefly on the oak mast. A white oak frequently would be alive with them. Yet when feeding on the tall trees among the thick leaves, it would be difficult to see two or more in range. I remember once, later in life, when looking for pigeons, noticing a large flock lighting on a very large white oak, but on going to it I found it difficult to see two birds in a range. Finally, firing at two, to my astonishment I gathered up eight besides noticing wounded ones flying away.

The number of flocks may be judged of by this fact. In the fall of 1826 or '27 I was hunting for pigeons on the

north side of the Alleghany River, on what was then known as Smoky Island. A high, naked, narrow hill, known as Hogback, (now Monument Hill) overlooked the Aleghany River on one side, and the "common," now the West Park of Alleghany City, on the other. A young man named Frank Byrne, stood on the river side of Hogsback and in one morning shot 96 pigeons by shooting at the flocks flying past him.

In the spring of the year, generally in March, the pigeons flew over to their nesting ground in Northern New York, in immense flocks numbering millions. I have seen a single flock stretching from horizon to horizon. I have also seen them lighting on the woods, covering the ground by thousands, advancing in rows as it were, stirring up the leaves in search of the fallen mast, chiefly acorns, dogwood berries, and sassafras berries. Pigeons have been shot in the spring with rice in their crops, showing long flights, though this is not wonderful, as the wild pigeon's flight is about ninety miles an hour.

In the thirties the pigeons began to be scarce and continued in the forties to grow fewer, owing, it was said, to the breaking up of their nesting grounds in Northern New York. It is now many years since any have been seen in this section

In the early time I have referred to, game was plentiful in the vicinity of Pittsburgh. About 1823 or '24 I saw a large flock of wild turkey in the heart of what is now Alleghany City. There were then a very few houses in that city. Below the Penitentiary on West Common, now the Park, there were but a fewfarm houses, and all that region to the Ohio River and to Woods Run, about two miles below, was excellent quail ground. I remember once flushing fourteen bevies of quail between the common and the Woods Run. All this ground is now built up, and for half a mile below Woods Run. It was once Manchester, and now a part of Alleghany City.

Squirrels were numerous. I remember about 1822 seeing John Sheriff walking up Wood street, in Pittsburgh, with his rifle over his shoulder, carrying on it a bundle of probably fifty squirrels. Then all rifles were flint locks, and I think men were as good marksmen as they are now. I followed a hunter one day on Hones Hill, now Troy Hill, Alleghany City while he killed seventeen or eighteen squirrels without missing a shot, and shooting all in the head.

About 1824, an Englishman brought the first percussion lock shotgun to Pittsburgh. It was not fired by a cap, but by a fine powder carried in a pocket primer poured into a small cup on the barrel.

As the time is way past and the scene is afar and the face of the country wholly changed, I have thought these early pigeon and game times might be interesting to some of your readers. DANIEL AGNEW.

BEAVER, Pa.

ACCEPTING AN INVITATION.

Granby, P. Q.—Newt and I were up on Shefford Mountain one afternoon last October after grey squirrels. As we entered the woods Newt saw several running and claimed he saw six go up one tree, a very high maple with a hole way up near the top.

I went up over the mountain, watching and looking everywhere, while Newt remained to watch the tree and wait till those six came out. All at once I saw what I thought was a tail disappear around the other side of the tree, and after careful reconnoitering I saw him lying flat on a limb and took a snap shot at him. He fell, but in coming down caught on and ran round the trunk. I threw a stick on that side on the impulse of the moment and he came back to my side, when I picked him off.

I went back to find Newt, who had some time before abandoned the tree, as he saw numbers of them in a butternut grove below him; but when he got there they had disappeared.

We continued the hunt without any success till about 5 o'clock, when we got around again to the original tree, and saw two more disappear up it. Newt said he would wait again and I also posted myself lower down and watched for some time. Finally I saw one making his way down the draw toward us, but in place of coming he went over a hill and disappeared. I stole cautiously his way, and saw him disappear in another tree.

I went up to the head of the draw and watched for some time and at last heard a shot, followed very closely by another. On going down I found that Newt had one grey. It was nearly dusk, and believing that there were more up the tree I told Newt he could go down to the grove and intercept any coming up, and possibly the noise of his going away would make any in the tree think we had gone.

I watched for about five minutes, when one ran down from a top limb, and as he was coming out to jump to another tree I took a quick aim and dropped him.

We then went to the farmer's, and there found that a man with a load of sheep had just come in from near Boscobel, who seemed very sorry for us that our result was only three squirrels.

"Why, come out our way," he said, "squirrels are plentiful. Down in MacFarlane's sugar bush they are there by the hundreds. If you want any hunting come and spend a couple of days with me. I have a fine dog that will run foxes, tree partridges and give you plenty of sport. I have a regular game pocket. It was only last Sunday that as we were coming back from church a big moose crossed the road in front of us. Two years ago we killed a deer; also have seen bears, while ducks are in plenty on the flats. I never crossed the bridge but that several flocks could be seen around the bend. Trout? Yes, why, the Indians camp on the flats every year and live on trout, and lots of camping parties come there every summer."

"Do they catch any big ones?" asked Newt.

"Oh, yes, they run from two to five pounds."

"Have you only one dog?" I asked.

"Yes, but he's a daisy."

"I should think that when you wanted him to hunt partridges he would get on a fox scent and leave you?"

"No, he knows when it's partridges you're after. He'll hunt them up, put them to tree and then sit and bark at them till you come up and shoot them. It is dead easy, and you can get 25 birds in a day easily."

"Will you sell that dog?" asked Newt.

"No, sir, money can't buy that dog. I am going to Farnham with those sheep, will be back on Monday and you come up Tuesday and we will go out and give you some sport, and show you what kind of a dog I have. It won't cost you a cent; stop at my place. I'm just dying for a good hunt and will be delighted to go out with you."

With the promise that we would drive over there on Tuesday if the weather held good, and thanking him for his kind invitation we started home. We talked the matter over It meant a drive of thirty miles. Newt thought he talked too big, while I thought that there was so much game represented, surely we would find enough to satisfy us, as half a dozen partridges at most would be enough for us. As the weather continued fair we started on our thirty mile drive on Tuesday over very rough roads. The country being new, we had to make many inquiries, but finally descended a very steep hill, which showed at the foot a small river, that we took to be the flats aforesaid. In crossing the bridge we looked anxiously up and down the river for the ducks, but we could not see a sign of one.

A little farther on we came to the house. An old man was in the yard, from whom we inquired if our newly made friend lived there.

"That's my boy. Yes, sir, he lives here when he is at home."

"He is not at home, then? When do you expect him back?"

"Oh, the Lord only knows. He left here Saturday with a load of sheep and was going on to Farnham. Said he would be home last night, but I didn't believe him. Why, he went down there last year, and was to be home in two days, and never came back for two weeks. He has some relations down there, and they have apple parings, corn huskings and parties, and he gets in with the girls, and the fool never knows when to come home."

We had been driving all forenoon; it was then 2 o'clock. We had had a cold lunch and the horses had not been fed, and the old man did not seem anxious to invite us in. We explained how we had met this young man, who had invited us over, but he didn't take the hint.

"Is there much game around here?" asked Newt.

"No, not much. Quite a few foxes, but then it's too early for them."

"Any partridges?"

"Yes, quite a lot, but it's too early for them; have to wait till the snow comes; then go out at sundown, when you will find them budding, often a whole covey in a tree. All you have to do is to shoot the lowest one, and the rest will stay there till you kill them all. Just now they are very wild; would have to have a dog to tree them."

"Won't that dog of yours tree them?"

"Yes, I guess so. Never tried him. He'd be no good for them if a fox was around. He's a dandy for foxes."

The dog was making friends with me. I thought he had been sheared, as the hair was all gone smooth to the skin all over his face; there was a tuft of hair back of his ears and a little on the under part of his tail, but from his shoulders back it was smooth and fuzzy and very short, while what little there was on his neck showed that in normal condition he would have been a long-haired dog, evidently a breed between a collie and a fox hound. He was very thin in flesh.

"What is the matter with that dog?" asked Newt.

"Noth'n, except that he don't eat enough—isn't reg'lar at his meals," as an after thought.

"Has he had the distemper?"

"Not as I knows on."

"Well, what makes his hair so short? Did you shear him?"

"Oh, no. He's worn that all off chasing foxes through the brush. He is after them most of the time. You might come here every day for a week and not find him at home. Might hear him after the foxes back in the woods. He is often two days at a time chasing them.

"I shouldn't think he would be of any use to you," said Newt. "Don't you want to sell him?"

"No, sir. He's the finest cattle dog I ever owned. I have no fences to speak of, but the neighbors' cattle don't bother me, nor do my own break in. I can send that dog away down to the lower end of the lot after cattle, and if there are any strange cattle there, he will drive them away, and bring my own home, and when he chases them out of a field a couple of times they don't come back. Besides, when I once set him on to drive them out of a field he watches till he learns them that he is guardian over it, without any further orders from me."

We had no opportunity to try the dog in any way, but he is the first one I ever saw or heard of that wore his hair all off chasing foxes through the brush. I wonder if any of your readers ever saw a similar case?

"How about the fishing?" asked Newt. "Do they catch many trout down on the flats?"

"Occasionally they will catch a trout. The Frenchmen fish nights down there after pouts, of which there are lots, but trout are mighty scarce"

"How about ducks?"

"Well, ducks don't amount to much. There used to be quite a few here at times, principally in the fall and early winter. You see the water is warm down there and the current pretty swift in places, so that when the ice first takes in other streams around here the ducks make for this place, as it is open till very late. Why, two years ago there was a flock down there that got caught in a snowstorm and seemed to be pretty well used up. I went down, had only one charge, walked right up to them and got four with the one shot. They didn't seem to be able to move much. No, I never go hunting after them. Ain't got time."

After a little further conversation we inquired the road to Valcourt and went over to pass the night, reaching there a little after 6 o'clock.

When the hotel loungers saw our guns they came around and commenced telling us stories about the game. A deer had been seen there the past summer. One man a few years ago had caught eight fishes down on the brook. One old fellow pretty well corned with "whisky blanc" said he had a friend in the barroom who had been a hunter for forty years, and who could tell us all about it. He tried to talk English, and seemed quite offended that I should want to carry on the conversation in French He produced his friend forthwith and introduced us as English gentlemen to a friend of forty years' experience. Newt immediately nicknamed him "Old Forty." His statement of present game supply showed very poor, the principal game to be foxes, of which he had taken about fifty the past season.

He gave us one wrinkle in trapping them that I never heard of before. Down on the flats, or beaver meadow, or on a shallow brook he places his trap in the water, takes a sod and puts it on the pan and jaws, completely covering the trap, but necessarily thin. He then takes two other sods, placing one about stepping distance from the trap on either side, and if necessary to give dry footing from the edge of the water places other sods. The bait, a head of a chicken, or piece of meat, is stuck on the end of a bent sapling to hang over the trap. The fox, wishing to avoid the water, will step from sod to sod, and to reach the bait must step on the sod on the trap, which, of course, springs it. He trapped them in the fall, till snow came, then he caught the rest with "bullets," which, being translated, means "pills."

The next morning we started back home, but on the road stopped at a place we thought was good partridge ground and worked it. We went down to the old wood road a piece, Newt ahead, when two partridges went up off the brush fence, Newt calling to me to fire at them on the wing, or to fire, anyway, which I did when he explained that he had been told that when two or more partridges went up always to fire anyway, as some of them would go to tree. It didn't work this time, and we did not get the birds.

At another place in the woods Newt raised five, but forgot to fire to tree them till too late. They were marked down pretty well. I went over a hill, and standing on the top looked around among the brush to discover them if possible. Suddenly one broke cover from almost under my feet and scared me so that I forgot my gun. I pulled up, however, when she was about out of sight, and as I did so, two more went up. One of these I fired at and missed. At the discharge up went three more. I used the other barrel and had the satisfaction of seeing one of them fall. I shoved in two more shells, and still standing in my tracks I looked through the brush for more. I heard a "purt purt," and looking around in time to see one start up, tried for her but missed. Up went two more, at which I tried again and missed. I loaded again, and started to move down to retrieve, when up went some more. I tried again and missed. In moving down where my bird fell I found she was only wounded and had to take another shot, as she was running with a broken wing. I secured her, however, which was the first bird I had ever touched on the wing. We hunted after the others, but I did not see a sign of them. Newt said that two of them looked down at him out of a tree till they were tired, and he only discovered it as they flew away. I raised two more coming out of the woods and tried for them, but missed, and also another on the road, a nice birch tree taking the charge of shot in place of the bird.

I heard Newt fire once down in the swamp, but when I got down there he said there was a fine rabbit looking at him off the end of a log, he drew a bead on him, but seemed to be seized with remorse as he pressed the trigger, because the rabbit ran away.

We got home that night in a storm, the results of the two days' trip of about seventy miles driving being one partridge, but then we had learned a lot about different things, had the pleasure of meeting "Old Forty," saw a new specimen of a dog and came to the conclusion in future to take enthusiasts' big stories with a grain of salt. It was a wild goose chase, but my touching a bird on the wing was as much satisfaction to me as if I had shot a dozen out of a tree, besides I had found that one could shoot at a partridge on the wing much quicker than I had any idea of, but I have yet to learn how to shoot straight. J. BRUCE PAYNE.

An Armless Shooter.

Editor Forest and Stream:

RALEIGH, N. C., Feb. 14.—We have had in Raleigh an armless shooter, Rev. R. T. Vann, a Baptist preacher, of whom to-day's Evening Visitor tells the story: "Rev. R. T. Vann performed a wonderful feat near Scotland Lake. It is remarkable that he can hunt and shoot so well, not having any hands and only one arm, from a little above the wrist. Mr. J. P. Futrell made Mr. Vann a turkey-caller with a rough cigar box and slate. Mr. Vann practised with the caller one night, and went out with Mr. Futrell next day to hunt turkeys. They scattered the turkeys and made a blind apiece, some hundreds of yards apart. Mr. Vann occupied one blind and Futrell the other They both called for turkeys. Mr. Vann, having no hands, had to lay his gun down and take his caller between his knees, and use his slate as best he could with his teeth and stub of an arm. He succeeded in calling well. He laid down his caller, took up his gun some way, rose up, and shot and brought down a 19-pound gobbler. Mr. Futrell came, out of curiosity, to see what Mr. Vann had done, when, to his great surprise, Mr. Vann had killed the turkey, gathered him up with his teeth and piece of an arm, and had deposited him in the blind, and was ready to sit for another. Mr. Futrell is an old and experienced hunter, and thinks Mr. Vann's the best and most wonderful turkey record he has ever known."

When a boy, he lost both hands in an accident with a sorghum mill, one being gone just above the wrist and the other above the elbow. Notwithstanding his crippled condition he managed to do some shooting, of which he is very fond, and is said to be a good wing shot.

With his stumps of arms he raises his gun to his shoulder and pulls the trigger with his teeth. To do this he has fixed a twine string from the trigger, passing around the grip of the stock and attached to a bit of wood, in a position where his teeth will easily take hold while the gun is at his shoulder. Verily, the Nimrod in some men is hard to subdue. T. C. H.

Lost Ten Years.

MARYLAND.—I certainly do enjoy your paper; sorry I have missed such interesting reading for the past ten years; at least, had all of last year's bound. HARRY W. BOWERS.

THE CEDAR POINT DUCKING CLUB.

A glance at the map of Maryland will show that the southern end of the county of Kent is washed by the waters of the Chesapeake in the west and by those of the broad mouth of the Chester River on the East. The last square mile of this county is an island, known as East Neck Island, and on the river side of it, a mile or so in from the bay, is a triangular point of land bounded by the river's numerous bends; and by a large creek, which in the north or west would be at once dignified as a river. This point is named Cedar Point, and here are the headquarters of the Cedar Point Ducking Club, famous for its fine shooting of ducks, geese, and swan; and equally famous in being composed of gentlemen of the county, true knights of the trigger.

On Tuesday morning, Feb. 5, of the late memorable blizzard week, it was my happy privilege to leave the county town, for the twenty-three miles drive down to the club; with my host, William S. Walker, Esq., the Nimrod of the club, and a gentleman of the old school. It's a well-known adage that "a Marylander is born in the saddle;" and from the way they handle them I strongly suspect they are given miniature shot-guns for rattles in their cradles. My host was no exception, for though the frosts of sixty winters have whitened his generous locks; woe betide the luckless canvasback that draws in to try her flirtatious wiles on some old drake decoy; the result is: "Here, Toller! bring her here, sir! Good dog!" and the club's idol, the best dog in the Chesapeake, drops the still warm bird at your feet, giving you an impromptu shower bath in return for your welcome pat on his broad, massive head.

Scarcely had we reached the end of our journey and transferred our traps and provisions from the buggy to the club house, when we heard the welcome voice of another member; and soon the door-way was filled up with the full six feet two of Walter Strong, Esq., a splendid specimen of the bone and sinew of old Maryland. Delightedly we grasped his hand, for we well know that his enterprising spirit, fertile resources and inimitable duck and swan calls; coupled with his ever-readiness to do the work of two, would make the trip a success. Hastily eating a "native" biscuit or two, with a slice of cold chine—my mouth waters as I write—we grasped our ten-bores and made for the Cedar Point blind to see how the land lay. Our trip had been planned for "sod" shooting, especially at black ducks that are driven out of the marshes by the ice, and linger around the shores for a day or two following the first tight freeze. On reaching the blind we found the river nearly solid with ice, there being only a few air holes here and there, with their welcome black dots; while off in the distance toward Kent Island a line of black, and a longer line of white, proclaimed geese and swan respectively; whom we hoped "to see later."

After an hour or so in the blind and nothing flying, about 2.30 P. M., we determined to return to the house for an early supper and thus be in condition to pay our proper respects to the black ducks when they came in at night. Ah! ye pampered sons of luxury and other dyspeptics! What wouldn't ye have given for our appetites! Shades of the Roman gourmand! the asbestos roofing of your mouth would have been warped and blistered by the dishes of hot coffee we quaffed; while a bull boom was threatened in Chicago by the amount of provisions consumed. All good things come to an end only too soon; and as our pipes did the same we prepared ourselves for the Arctic blasts outside and were soon on our way back to the same blind. Despite our care and caution in approaching we put up a flock of twenty black ducks near shore, which nearly caused us to set fire to the marsh by our remarks.

Walter now crept out carefully to reconnoiter and soon we see him sink down slowly and come crawling back to us. "Holy Moses! there's a bunch of about thirty black ducks huddled up on the ice around near the point, not ten yards from shore, and we'll whale 'em." "Will you two go after them," said Mr. Walker, "and I'll stay here for a possible point shot."

Out we go on a detour through the marsh; the wind blowing a gentle breeze of forty miles to the hour, in a direction fortunately between us and the ducks; and the mercury making faces at zero. I must say I had enjoyed many pleasanter weeks. "Treading on eggs" as we approach their immediate vicinity, Walter at length straightened himself up as one lets out an old-fashioned telescope to locate them. "There they are," he whispers, and as I raise my head up from between my knees, he points them out to my eager gaze not thirty yards off. Moving a little to the right for a more raking shot at a given signal we let them "have it," and as they rise encore them again. Off they go as only a black duck can do it, but, unfortunately, not in Mr. Walker's direction. We picked up seven black ducks, two sprigtails and one bald-pate; and if we had shot No. 4s instead of Bs anticipating having to shoot them further off, we would have bagged half instead of a third of the bunch. Gathering them up we placed them, and some sods, out on the ice to decoy; and did it only too well, as will appear later.

Night was rapidly coming on, and nothing coming in to us, we thought we would go over and see how Mr. Walker was doing; especially as we had seen the flash of his gun three or four times, and though only a hundred yards or so from us, so strong was the wind that not a sound of the report could we hear. Sure enough, there in the ice around him lay three black ducks, single shots. "Just look at that," says Walter, pointing to our sods, and in the dusk we could see a big bunch settle into them; "don't that beat the devil." It certainly did. Out we go anticipating another ten strike, and safely reach the place where we "whaled 'em" before. For the life of us we could not make out which were live and which were dead ducks. And while trying to determine, their keen eyes must have seen us silhouetted against the rising moon, for our next look showed they were gone. Fearing that more night shooting might drive them away, thus spoiling next morning's sport, all hands now left for the house; where, after cleaning up guns, we settle down to pipes and pleasant reminiscences; turning in at 9.30.

"Five o'clock, gentlemen!" calls out Sam, the club's factotum, as he builds the morning fire. Thunder and Mars! how cold it was, and what wouldn't one give for an hour's more snooze. However, it must be done, and out we climb. A hot breakfast dispatched, the first streaks of a bitter dawn find us on our way to the mouth of the creek behind.

"There they are!" whispers Walter, pointing to the edge of yesterday's air hole, now hard ice. "No! that's not ducks," I whisper back. "Yes it is, hush! be careful," he exclaims, as his quick ear caught a sound mine did not, "I heard a goose honk right around the bend here, and he must be sitting on the ice up the creek, near the middle blind." Just then, honk! honk! honk! as if all the geese in all the farmers yards of the county were gathered in our immediate vicinity. "By Jove, there's a flock of them; run quick or they will be off," says Walter, setting us an example to the word. Right here we made the mistake of our lives, in the shooting line, by not stopping an instant and determining what we should do when they came in sight. On we ran on our way to the middle blind, as far as it was safe to do, when down we got and crawled out to the edge of the marsh, fringed with tall bay bushes and flags. There on the ice, not thirty yards from us, as close together as the fingers on your hands, sat over a hundred geese, all honking, and pluming themselves, previous to their morning's flight. I'll bet the camera then would have shown my eyes as big as saucers, and big saucers at that. There we were crouching; a cocked gun in our hands; and 5 drs. back of 1 1-4 oz. of three Bs—waiting to be let loose. Where, oh, where, was Mr. Walker? Back thirty yards on the marsh crouching at "Mark." What evil genius possessed that bunch of black ducks to go out of the creek at this instant; and caused him, in the dull gray of the morning, to mistake them for the geese on the wing. Still the geese sat on. Catching his eye, we nearly threw our arms out of their sockets in beckoning him on. After what seemed an age he reached us. And still the geese sat on. Instead of shooting them through the bushes and thus making sure of at least a pair apiece, we moved out toward the open path, Walter, I and Mr. Walker. The first square inch of the head man had not appeared in the path before the air was full of the worst scared flock of geese the State held. What was the result? Let me tell it gently. I can (italicize can) hit a flock of barns, even when on the wing; and I stoutly deny having the buck-ague; but do you know, looking at that flock of geese so long made my eyes diseased; they were covered with goose-flesh; I couldn't see 'em, so I didn't hit a feather. I spoiled Mr. Walker's shot by being in front of him. Walter had his old muzzle-loading 8 ga. along with him carrying a flask of powder and a half-bag of buck shot. He brought down two with the first barrel, and forgot to shoot the second in laughing at me. There was no use crying. Explanations availed not. The opportunity was gone but it was the golden one in the fifteen years' history of the club.

Toller quickly brought the two Canada's in off the ice; and we sadly wended our way out, bound for the Cedar Point blind for any shooting that might be had at ducks trading up and down the river. We put out sods; the two dead geese; also a couple of swan decoys and resumed our stations in the blind; still talking of "the might have been."

May be it wasn't cold that morning. Our mustaches were soon a solid mass of ice; and it felt generally as if it might be four thousand degrees below zero. In fact, it was below zero. At nine o'clock my two companions left to get thawed out at the house. On their return Walter suggested that he and I should break a hole in the ice up the creek and put out a few decoys for "brass eyes." "All right! but it's my turn for a thaw out." So leaving Mr. Walker on guard, we tramped back to the house. Discussing the hole in the ice question on our arrival at the creek, we concluded to wait until evening for black ducks; and walked around on the ice toward Mr. Walker. Coming within hailing distance of him, he shouted: "Look here!" as he proudly held a swan up by its neck, its head being on a level with his own and its tail touching the ground. "By thunder!" exclaims W., "he's got a swan, bet he killed him with my big gun." "No, I didn't, either," he answered, overhearing him; "I killed him with mine, it's good enough," as he patted his trusty old ten-bore—and then for particulars.

It appears we had not reached the house before he saw the swan coming right on to him over Hail Point, only twenty yards high. On it came, and noticing the swan decoys, and geese drew in beautifully, and when abreast of him about forty yards out, he rose on it, and—his gun capped. One chance left, thought the imperturbable old veteran, as he carefully sighted the bird's craw for his second barrel. The winged arrow of Fate flew not straighter than did the double T's from his steady shoulder; and down dropped the bird sixty-five yards off. What a magnificent creature it was! White as the driven snow, with scarcely a tinge of orange in the eye corner, proclaiming it a young bird. The weight was twenty pounds. Heartily we congratulated him, and set the swan out on the ice with the other decoys.

"Mark!" I cried, "up the river." "What is it?" "Geese I think?" as the distant line came slowly onward. "No, they are swan," says Walter, as they approach nearer; and faster our pulses beat in consequence. On they come, their long necks stretched out straight as yard sticks; and their immense wings flapping in regular cadence. Out from Walter's throat comes the low, soft, sweet call to them, and back come their answering notes. Call and answer, call and answer, until a blind man might have thought a swan was beside him; so perfectly did he imitate them. Suddenly they swerve off (too many sods we think), and held their course down the river, still answering W.'s call until the distance drowns it. Rising from our knees we sadly watch them fade out of sight.

Apropos of swan calling, while we were alone in the blind that afternoon, a bunch of nine swan came down the river within two hundred yards of me. Rendered desperate by seeing them not inclined to decoy; and knowing my stiff, pasteboard throat never could get out their note, I gave them the "loon call" used in sea fowl shooting "down East." The effect was ludicrous; for the hind swan was so badly scared he instantly took the lead of the flock, and they had a "go-as-you-please" in getting off.

The day passed with no further incident. Thursday, the blizzard day, found us at dawn in the mouth of the creek blind. We had broken a hole in the ice the night previous, but the heavy frost had closed it tight. Reopening it and shoving the broken cakes of ice under the solid ice we threw out a few blackhead decoys and took our places in the blind, I in the center. "Mark! a little bunch of four brass eye blackheads," and as they drew in nicely over the decoys, I, as center gun, promptly cut down the middle pair with my first barrel, thus vindicating my assertion regarding the barns. In about an hour or so we had bagged fourteen or fifteen ducks, when the snow set in in such a determined manner that we decided to give it up. A very judicious move it proved, or we might have been there yet. Regretfully we returned to the house, originally intending to stay until the following Saturday. After a hasty luncheon we gathered our traps and game together; the latter making a brave show, and draining a stirrup cup to the long life and prosperity of the Cedar Point Ducking Club, turned our horses heads homeward.

J. L. B.

RESCUING THE PERISHING.

Not since the terrible winter of 1857 has Central Virginia been visited by such continuously severe weather, as that which prevailed during the first weeks of February. It culminated on the 7th and 8th in one of the deepest snows and bitterest cold-spells which ever blighted the "Sunny South." The suffering and destruction of wild birds and animals has been pitiful to behold, and long will it be before they can recover from its effects. The chief sufferers have been the mocking bird, cardinal red bird, lark, white-throated sparrow, blue bird, swamp sparrow, wood lark, and last, but not least, the wild turkey and "Bob White."

It is strange, Mr. Editor, that as many people as there are who are delighted at the notes of these sweet songsters, which add so much to the charm of our homes, and afford us so much pleasure as sportsmen, there are so few who have the will and energy, or compassion for animal suffering, to induce them to take the small pains necessary to prevent these little creatures from perishing. Fortunately for me, my brother lives near, on one of the old "plantations," and in him I found an able and willing hand to join in humane efforts to save the birds.

As soon as the great storm was over, we went out on horseback, each with a bag of wheat, to carry food to the poor freezing and starving "Bob White" and upon this errand of mercy we spent the entire of that and subsequent days. We rode over a large district of country and saw, on all sides, the fatal effects of the storm and cold. We found thirteen coveys, many of them containing a dozen or more individuals, but all in a more or less deplorable condition. Many were so chilled through that they could not fly; and some we brought home, but all such died. Wherever we could place the wheat so that they could get food at once, they would revive to a remarkable degree, but most frequently they would fly at our approach and scatter, and many perished before they could get together again and find the food. A few flocks, however, soon found the grain, and many of these we have saved.

We found many of the flocks by hearing their whistle. At first we supposed they were separated, and were endeavoring to get together; but, when found, they would be all huddled together in the deep snow. Their plaintive note was a cry of distress. They were freezing and starving; and as, when in their brief experience, they had been separated by hawks and huntsmen, and their relentless enemies, Nature had taught them to utter that call which would bring to them the old henmother to get them food and shelter, so now, in their dire distress, it was their appeal for help. Oh, that they could have known that we were friends coming to them to help and feed them in their sore distress, and so calm the fresh fears which the very sight of us awakened in their timid little hearts, that they might see and run to the food before it should be covered up by the drifting snow! But no, their experience told them that man was the most cruel and pitiless of all their foes. The hawk would swoop down upon them, but when its hunger was appeased would not molest them. Man kills and cripples and finds pleasure in the infinite misery he inflicts upon the innocent and helpless, and his cruelty is never satisfied. And so they saw but the climax of their woes in our presence, and would flutter away to die.

No day's sport, on which we have returned home with well-filled game bags, have ever given as much gratification as the time we spent in our endeavors to carry relief to these among the gentlest and most harmless of God's creation. And it is sad to think that when spring and summer shall come again, the balmy air, and flowers and verdure shall take the place of frost and snows, we will surely miss their cheery notes in many a shady nook, where they were wont, from morning until night, to gladden our hearts.

M, OF NORTHSIDE.

I have just got in from New Orleans, having been gone several weeks there and beyond. Where I went, out in the Teche country, were thousands of our northern birds awaiting their time to come home and breed, robins, bluebirds, blackbirds or purple grakcles and others, and one could but notice a certain homesick feeling in them. The robins did not sing; and the blackbirds had a little melancholy chattering warble, but no clear whistle like with us. All were very tame, so much so we could almost handle them. Perhaps the cold weather and snow causing lack of food was the cause. The poor wild cattle lay in bunches, and singly along the prairie, dead, for it takes but slight cold weather to kill these half-starved creatures. It was a pitiful sight. I happened to be in New Orleans when they had the ten inches of snow and business and traffic were completely paralyzed. The streets were almost impassable and every one became a child and snowballed. I got my first cold of the winter there, for no fires could be had to avail anything even at the hotel.

REIGNOLDS.

BALTIMORE, Md., Feb. 22.—The hard winter has ruined duck-shooting in this State, as the rivers are still full of ice. At Havre de Grace there is a great ice gorge and it will take a long warm spell to start it moving. Even after the ice goes out the melting snow from the mountains will run into the river and make such a current that it will be late in the spring before we will have any shooting. Reports from all parts of the State show that the quail have suffered terribly and in many places coveys of twelve and fifteen have been found frozen to death. Many clubs are now purchasing coops of birds from the South and turning them loose to replenish the stock.

WILLIAM L. STILES.

Massachusetts Game.

DANVERS, Mass.—This has been a most severe winter, and I am fearful, a destructive one on our quail. Two years ago the quail were killed and our Legislature enacted a law prohibiting the killing of them last year.

On Jan. 1 they were very plenty, with prospect of a good crop for this fall's shooting; but alas! several weeks of zero weather, and instances of twenty below, with deep crust snows and every sign of their extermination is enough to wake a man feel meary of this country as far as game shooting is concerned. Under favorable conditions, one can, perhaps, find a flock of quail and flush two or three grouse in a hard day's hunt. There is good, natural cover about here for game, but of late the game has been trapped by a few worthless characters in Middleton, who are too lazy to do anything else. They have families depending on them, and for this reason no arrests have been made. J. W. B.

Combination Guns.

Concerning an idea for a combination rifle and shotgun, Mr. I. S. Edge writes us as follows: "It occurred to the writer many years ago that a three-barreled gun could be made in such a way that the rifle would be detachable, so that a person could have a light, double shotgun, or a three-barrelled gun at a few secon's notice. The double gun could have pipes for the rifle as a muzzleloader has for the ramrod, only the rifle would be pushed in from behind. Rifles of different calibers could be made to fit the same gun, so that it would be an accommodation gun, suitable for any kind of game from jack-snipe to bears or moose."

An Irish Woodcock Bag.

The following remarkable bag of woodcock is recorded in the London (England) Field of Feb. 9:—"Lord Ardilaun shot his coverts at Ashford, Co. Galway, recently, and 508 woodcock, besides pheasants, snipe, and duck, were killed in six days. On the 25th, 205 woodcock were bagged; on the 6th, 68 woodcock; on the 28th, 130 woodcock; on the 29th, 53 woodcock. Weather fine. Guns, the Earl of Bandon, Viscount Monck, Lord Cloncurry, Right Hon. David Plunket, Col. the Hon. Robert Dillon, Capt. Arthur Hood, Mr. Edgerton Leigh."

Sea and River Fishing.

SALMON CHATS.—III.

I need not say that in our large rivers we have different stages of water, salmon run up at all of them. If the run is early, and river quite full, the angler can get him often with a half-line from the shore or bank as the fish dodges along in the discolored water, resting where he wishes in the eddy of a rock, around which the water rushes. Needless to try for him on a straight shore where the current runs heavy and the water is deep. He may be there, but has no time to look at your fly. You must seek him on a pebbly shore facing the early sun, and in three or four feet of water. At this time a large hook is needed, with bright feathers, and a couple of large shot on your leader are an improvement, as he is most sure to take under water; and in all probability you will never see him until gaffed. Never mind, he will fight hard enough, and your arm will feel the steady strain before you get him, as he will be a heavy fish (all first run fish are). Not likely he will try to cross the river. If he does, and you are not prepared to follow him in your canoe, and he gets forty or fifty yards of your line out in the strong water, you may bid him farewell. Your only chance is to keep below your fish, and make him fight the current, at the same time he is fighting you. No doubt, he will try after a few passes to get below you; but don't let him. And here I would caution you in all cases to have your canoe close so you can jump in quick, if it is necessary. I consider it one of the pleasures of angling that you don't know what the next move is to be. The expectation of the rise or strike is particularly pleasing when your fish does it handsomely; particularly so when he rises a few feet below your fly and coming at it with his mouth open. Still it is not in my estimation equal to the fight. Here is where the practical experience comes in. Any novice can hook a fish; but the landing safely is the point. No salmon, unless foul hooked should, if properly handled, on good tackle last over fifteen minutes without exhaustion, and be gaffed from the canoe, instead of from the bank or shore. But you cannot do in high water. This feat also requires experience, and I would not advise the novice to try it.

The next stage of water is, perhaps, two feet lower toward June 10 or 15; and the rapids have developed; the current is now stronger in them, but there is easier or still water between them; and here the fish take a rest, after coming through a series of those rapids. Fish are steadily on the move, and plentier, and are lying out more to the middle of the river. The best sport is to be had at this stage of water. The fish are livelier, rise better, and fight harder. Sometimes he is off like a flash up across or down stream, and very likely after running at full speed eighty yards, jumps clear of the water perhaps falling over your leader. This is a critical moment and many a fish parts company with the angler, the hook tearing out the hold, sometimes breaking it or the leader. This is very apt to occur, should the fish have run up and across the current with so much heavy line out. The current having such a heavy drag upon it, it is too much for the leader and the line cannot respond in time to the leap of the fish. All the angler can do in this case is to give free line and follow his fish as quick as possible. Your men should have their anchor aboard the instant the fish strikes for two reasons; first, to be ready for all eventualities; secondly, the fish may foul the anchor line. Now, never go ashore or leave your boat until you find you can lead your fish. But the great point is never give him a moment's peace. Always give him butt, that means keep your rod well up, and point the butt at the fish, not the point.

If he sulks, go below him at once, and give him all your tackle will stand. If your leader will stand a ten-pound pull, and a real good one should do so; remember a three-pound pull will bring nearly any rod into a perfect arch, so don't be afraid, give it to him. The fish is, when sulking, as it is called, rubbing his mouth or head on the bottom, when you put the proper strain and in the proper position, he will soon leave. Sometimes the fish, when hooked, will quietly drop to the bottom, and come within a few feet of the boat. He has not fully realized what is wrong. After a quick, hard run he may do the same thing, coming so close to the canoe as to be gaffed. I once did this in Patapedia Pool, Lady Patrick McDongald having on her first salmon (twenty-six pounds), and it was the hardest struggle I ever had with a fish to get him into the boat.

I need not tell you never give your fish an inch of slack line, if possible, to prevent it. When you are reeling in line rapidly, see that it goes on the reel properly; should it foul, away goes your fish on his next run. Another point is, when your fish is fighting hard, and you have a little the best of the battle getting him closer foot by foot, don't you draw him by the reel; if you do, it may jam your line. The proper way is to lift your fish with the rod, quickly dropping the point, at the same time reeling in your line as it slackens.

The next stage of water is when the river has fallen to its normal condition, not the low stage. Fish then lie closer to the fall or head of rapids, unless it be too shoal. If a depression or hole has been excavated by the ice or water, so much the better; sometimes mid-way in a rapid provided there may be a break in the current. At this stage the fish run by night, as the water is too clear and low for day work, so they rest in some favorite spot, perhaps in a good ripple where there is ten feet or so of water; and he is a lucky fellow who owns such a one.

Later in July, or it may be August, the river may have gone to the low stage. A stranger might now think the river was barren, with not a salmon to be seen, unless you know just where to look for them. They are lying in a few deep pools into which heavy rapids fall. The rapids now are much steeper, and fall heavier with more broken water. Salmon are changing in color, the females getting heavier, males getting poor, their hooks growing rapidly, red spots quite prominent. Now, the fish has two reasons for staying here. The deep pool is a sure retreat in case of danger, and the supply of well aerated water coming in the broken water is just what is wanted. Hundreds of fish are in those pools. They keep continuously leaping out of water, often, within a few feet of the boat, and it is only an odd fish, morning or evening, that falls to the angler's lot. As the season advances on the first rise of water in the latter part of September or early in October they leave for the different spawning bars, spreading all over the river, each fish (in my opinion) getting as near as possible to the ground or place where he passed his infancy and spent the first twenty months of his schoolboy days. JNO. MOWAT.

NEW BRUNSWICK.

FIRE-FISHING FOR BASS.

NEW ALBANY, Miss.—I have read with great interest Mr. A. N. Cheney's articles on the coloring and habits of the black bass. And also "Old Sam's article in your issue of Feb. 2, on his experience with the bass family. As they both tend to confirm me in conclusions I had arrived at as to the habits of the bass, especially as to night-feeding, I am tempted to relate an experience of mine upon the St. Francis River in the sunk lands of Arkansas, which was at least to my mind, satisfactory proof that the black bass do not remain stationary at night, but put in their nights as well as a large part of their days in their predatory excursions.

One September found me with a choice party of good fellows, all ardent devotees of the rod and gun, camped on the bank of the St. Francis River, about twelve miles west of Marked Tree, in Arkansas. The river at the point upon which our camp was located, widens for a distance of eight or ten miles to a width of from a half to a quarter of a mile, and is locally called a lake, through which the channel of the river moves in a devious uncertain way, encumbered with fallen logs and numerous sandbars. Over the entire space of this "lake" many partially submerged logs are scattered, while upright snags and stumps of giant size show where, in the days before the great convulsion of nature that gave that territory the name of "the Sunk Lands" occurred, stood a mighty forest. Under these logs and around these giant snags and stumps is the home of myriads of giant bass, while the waters teem with fish life of a dozen different kinds as well—a fisherman's paradise, indeed.

The moon was nearly full, and the nights were very bright and clear. We had been very successful in our pursuit of all fish except the bass. This was rendered the more tantalizing because in the clearer waters of the river out of the current we could see countless numbers of them resting in sequestered nooks and under the sunken logs, which with few exceptions refused our most seductive lures persistently. One night as my friend, Mr. Edward C., and I were returning from a sociable visit to the Friends Club House, just across the river from our camp, our boatman, a denizen of the marshy depths of the Sunken Lands, remarked: "This would be a good night for the bass to jump." "Jump where?" was our inquiry. "Some of them into the boat," was his response. Whereupon we proceeded to add another laurel to his brow, as the champion fisherman of the St. Francis. But a little later after having furnished refreshments to a few hundred apparently insatiable mosquitoes which had patiently awaited our return, ignoring our sleeping companions, I stepped out of the tent to find our Arkansas fisherman sitting contentedly in the boat, enjoying the company of his inseparable companion—a pipe. Whereupon, struck with a desire to be and do likewise, and being set upon by a few dozen more very hungry mosquitoes, and having a tantalizing recollection at that instant that out upon the cool broad bosom of that moonlit lake no mosquito ever ventured, I called conciliatingly, seductively and withal somewhat anxiously to him of the laurel bedecked brow. "Willie," I said, "if you would like to go, I will go with you, and we will see how the bass will jump to-night." "Bring the lantern, and get in," was the immediate response. And I hastened to ensconse myself in the bow of the skiff with the lantern in front shining out over the waters.

We were proceeding up the lake, keeping within about twenty-five yards of the bank. And I had scarcely settled myself for a comfortable smoke, while Willie was paddling smoothly and silently along, when from the shoal waters at the mouth of a bayou we were passing, there sprang first one, then another, then a dozen, until the air seemed alive with bright objects, springing and splashing in every direction. Some jumped clear over the boat, some fell short of it in their frantic leaps, while a majority of them jumped immediately in front of the boat. Two fine fellows fell squarely into the boat, where, as soon as I had recovered somewhat from my surprise ("scur" as Willie in his pleasant way remarked), I found them to be two bass weighing about two or two and a half pounds each. We went to camp at once, as I was desirous of sharing such an unusual experience with my friends.

Accompanied by Edward F. Campbell and Alva Collins of our party we were soon on our way back up the river, with two lighted lanterns in the prow, and two bright tin plates from our camp chest doing duty as reflectors. For several hours we paddled about the bars and the mouths of the bayous, watching the bass leaping from the silvery lake, and now and then taking aboard a big one, which had through some miscalculation or rendered frantic by the lights or the noise of the paddle, paddling never so softly, fell into the skiff. One fine fellow I remember fell squarely into Edward's lap, where he was at once warmly embraced. Another struck Alva in the chest, and rebounding was soon speeding his way to deeper and quieter waters.

When we reached camp we were accompanied by ten or a dozen nice bass, none weighing less than two pounds, which of their own free will had taken passage with us. No cruel spoon, or deceptive phantom minnow had lured them to their door. These they had seen and rejected; but they fell victims to their fear.

We had fished over all the deeper water adjoining these shoals, time and again, on the two previous days, meeting with but moderate success with the bass, though we could see numbers of big, savage-looking fellows, ensconced in secluded crevices of the big cypress stumps in perhaps ten feet of water, or lying under partially submerged logs evidently in a state of repose with their hunger satiated. We saw none during the day at the places where they seemed most abundant at night.

Willie informed us that the bass always bit better when the nights were dark.

Another thing I noticed was that we took none but bass, though, of course, there may have been other species jumping. Garfish, grindles, striped bass, pike, jack salmon, numerous varieties of perch, and catfish were abundant in these waters, and all but the catfish bit freely during the day.

I do not remember ever having seen it noted before that bass are in the habit of jumping at night from a light, but I am assured that it is not an uncommon thing with the St. Francis fish. But that night's experience coupled with the disposition of the bass during the day satisfied me that the bass was a nocturnal feeder, and that they were not stationary in their habits at night. I would like to know if any other reader of the Forest and Stream ever met with a similar experience

KAN-A-WHA.

GOLDFISH BAIT FOR BASS.

Editor Forest and Stream.—I read with interest the article in your last number on the query as to whether goldfish would make a good bait for blackbass, and as I have experimented in this direction I think you might like to present your readers with my experience.

It was in the month of October or November and bass and good bait were getting scarce on Lake Hopatcong, when I made up my mind to try how goldfish would do, hoping that the novetly might prove sufficiently alluring to overcome the growing indifference of the bronze back warrior. I bought twleve goldfish 2½-3 inches long, and with them and great expectations repaired to the lake. The following morning I set out with Mr. David Everett as companion and in order to ascertain the relative value of goldfish as against the bait commonly used there, the so called herring and the shiner, it was agreed that Mr. E. should use the latter and I the former all through the day, the mode of fishing being the one most commonly practised up here, trolling.

E. secured the first two fish, but afterwards the catch proved about equal, with the result that at the end of a whole day's fishing honors were about evenly divided between the goldfish and the other bait. In attractive qualities, therefore, the goldfish could not claim superiority over the ordinary bait, at least not in the clear water of that particular lake, the bass evidently not regarding them as special tid-bits nor as deserving any marked attentions over the silvery sheen of the herring or the darker hues of the shiner.

In one respect, however, the goldfish proved far ahead of the other bait, and that was in toughness. While the herrings in particular are very tender and die soon after being placed on the hook, thus making a constant change necessary, the goldfish seemed to be endowed with everlasting life. Strikes which invariably kill other bait, never seemed to have any effect on them, and I had that day one case where I landed the bass with the goldfish actually pouched, and after extracting it from the stomach of the bass it was just as lively as ever and proved itself good for another fish. Of the twelve goldfish that I took out with me I brought back two which had never been on the hook, while my companion had used up at least fifty of the ordinary bait fish.

The experience of that day therefore sums up to the effect that in killing powers the goldfish is not superior to the ordinary bait, but it presents great advantages on account of its greater hardiness. This same advantage, however, would be found to an equal extent in the young of any of the carp family to which the goldfish properly belongs, and which as the common carp can be had at much less cost. C. B.

Birds of Eastern North America.

Messrs. D. Appleton & Co. have in press, and will publish in April, "A Hand-book of the Birds of Eastern North America," by Frank M. Chapman. It will be fully illustrated, and is designed to render the identification of birds, either in the field or study as simple a matter as possible.

The Megantic Club.

Durng the season of 1894 the Megantic Fish and Game Club entered on a new system in the management of its supply or catering department. Previous to 1894 the club has hired a steward, under whose direction the wants of visiting members and their friends have been provided for. The steward bought quite all the supplies, and to him went the profit accruing from their sale. Under the new system the club paid for all supplies and covered the profits into its treasury. The result has been highly satisfactory. Mr. Fred M. Viles, a brother of Julian K. Viles of Tim Pond fame, was put in charge, with headquarters at the clubhouse at Spider Lake. The superintendent, Mr. Robert Philips, attended to the several camps, assisted by Samuel Henderson at North West, Mr. and Mrs. Weeks at Big Island, and Mr. and Mrs. Blaowkell at Chain of Ponds. The same methods will be adopted the coming season of 1895, and Mr. Viles, together with all his assistants mentioned above, have been re-engaged for this season.

Another departure made necessary during 1894 was the purchase of land on the shore of Spider Lake. This was found needful to protect the club interests. It was to be sold under foreclosure proceedings, and the club felt that it might come into the hands of those who would have cut it up into farms, thereby in a measure destroying the value of the site of the clubhouse. The land purchased (with the exception of a few small lots) includes the entire shore line of the lake for one and one-half miles each side of the clubhouse running from Thomas Point to the Spider River. In addition to this land purchased last season the club has within the past two weeks bought 1,000 acres of land right in the center of the preserve in Maine. This tract is a mile and one-quarter square and includes the land on which are located the camps at Chain of Ponds. It is in the southwest corner of Chain of Ponds township and borders on the northeast shore of Big Island Pond. Rock Pond is included in the tract.

The fish hatchery of the club is also in good condition and bids fair to be of great benefit in restocking the waters. Six thousands eggs were obtained from L. Pond and 24,000 from Northwest Pond. These eggs have been during the past winter in the care of Isaac Tibbets of Rangely, and his reports on their condition have been very gratifying. One thousand land-locked salmon, which had attained a growth of 2½ to 4 inches, were liberated in the brooks flowing into Big Island Pond. Of this lot about 20 have been caught 5 or 6 inches in length, showing conclusively that they have obtained a good start. Undoubtedly the future of the Megantic Club is bright indeed. Fish and game, which are the chief objects of the organization, are on the increase, and everything points to a long continued career of prosperity.

Mr. Edward A. Samuels, formerly president of the Massachusetts Fish and Game Association, will again locate in Boston, after quite a lengthy residence in Nova Scotia. No truer sportsman can be found, and his scores of friends will be pleased indeed to see his familiar face. HACKLE.

Boston.

Senasqua Rod and Reel Club.

SING SING, Feb. 20—One year ago on Feb. 17 the Senasqua Rod and Reel Club was organized, so on Monday evening the occasion was celebrated with due and proper ceremonies, the main attraction, as it were, being a banquet given to the members by President A. Fred Carpenter. The Senasquas are a kindred lot of sportsmen, not sporting men, mind you, who delight to lure game fish from the water with rod and line.

First the organization had a business meeting, during which the following officers were chosen for the ensuing year: President, A. Fred Carpenter; Vice-President, Anthony B. Murray; Secretary, George W. Kipp; Treasurer, William M. Carpenter; Weigher, B. Frank Kipp.

When the session had adjourned, Secretary Kipp, on behalf of the members of the organization, bestowed upon President Carpenter a handsome gum wood cane, with a colored ivory handle, a silver band encircling the stick bearing an appropriate inscription. The cane was given as a token of the appreciation of President Carpenter's loyal interest in the organization, which his efforts have done much to establish. President Carpenter acknowledged the gift in as pretty a style as a surprised person can do.

Rall's orchestra played a selection, and the guests sought their places at the banquet board, President Carpenter being at one end and Vice-President Murray at the other end of the long table, which was attractive alone in its decorations and surroundings. These whose presence graced the occasion were Superintendent Henry G. Fithian, of the Broadway Mission, who offered the blessing; Supervisor Gilbert M. Todd, Assessor Robert Smith, Village Trustee Edwin T. James, School Trustee Thomas E. Hopgood, Dr. Joel D. Madden, ex-Village Trustee Randolph Acker, George W. Kipp, William A. Duke, Winfield S. Smith, Leonard Porter Kipp, George W. Lyon, Edgar Storms, Gilbert H. Davis, B. Frank Kipp, Harry M. Carpenter, J. Herbert Carpenter, William M. Carpenter, T. Henry Calam, William Mattocks, Benjamin C. Acker, Paul M Pierson, Ralph Baker, John V. Cockcroft, ex-Village President Wm. Clinton Mead and Town Clerk Robert T. Dennis, Mr. Cockcroft being an honorary member of the Senasquas, and Messrs. Mead and Dennis invited guests.

That Fly-Rod Muskrat Dilemma.

GRANBY, P. Q.—Replying to your inquiry as to how I got out of that scrape, told in your issue of Feb. 23, when I went into a deep hole with a muskrat on the other end of the line, my first thought was to hang on to the pole, which I did. But in coming up I was so weighted down with my clothes that I had to use both hands to swim; and in making the strokes the rod cut the water in such a way, and bent so much that I was afraid it would break, so giving it a push toward the rat I let go and swam back to the canoe. I gathered in the paddle, pushed the canoe ashore, took off my waders and emptied out the water and then had a picnic to get them on again. I cut a forked stick, went out with the canoe and fished up my pole, winding in the line with the reel. It finally came up, with the hook and I should judge a couple of feet of line gone. I rowed across to the other shore, but could find no trace of the rat, nor even where he landed; and came to the conclusion that he had gone into a hole in the bank and either bitten the line off or it had caught on the edge of a clam-shell and been cut

Adirondack Guides.

The second annual meeting of the Adirondack Guides' Association was held at Saranac Lake Feb. 27, with a banquet and camp-fire in the town hall. An address was delivered by Mr. A. N. Cheney, on fish culture. The object of the Association, as set forth in the constitution, is "to promote and facilitate travel in the Adirondacks; to secure to the public competent and reliable guides, thus assuring the welfare of tourists and sportsmen; to aid in the enforcement of the forest and game law of the State; to secure wise and practical legislation on all subjects affecting the Adirondack region; to maintain a uniform rate of wages of guides, and to render financial assistance to its members in case of sickness or other disability, or to their families in case of the death of such members."

The rate of wages fixed for Association members is $3, and the ordinary expenses. It is made the duty of members to assist each other in obtaining employment in preference to others who are not members. The membership fee is $2, dues $1.

Game and Fish Protection.

The South Dakota Gun Tax Bill.

A bill for an act to provide for the levy and collection of a tax on shot guns and rifles, for the purpose of creating a fund to pay game wardens and protecting game.

Be it enacted by the Legislature of the State of South Dakota:

Section 1. That each and every assessor in this State, when making the assessment, shall annually make a list of the names of all persons who own or keep a shot gun or rifle, or more than one of either of said guns, and set opposite the name of such owner or keeper, the number of either or both of such shot guns or rifles, he or she has in his or her possession or that is or are kept on his or her premises, which list shall be returned by such assessor to the County Clerk or Auditor of the County in which said list is taken with the assessment roll.

Provided; however, that no such list shall be made of any shot gun or rifle kept in stock for sale only, or had in possession for the purpose of being repaired; but all such shot guns and rifles so held for repair, or after the same are repaired, shall be assessed to their respective owners.

Section 2. That the County Clerk or Auditor of each County, shall charge upon the tax list against the name of each person reported and returned as the owner or keeper of a shot gun or rifle, or of more than one of either of said guns, the sum of fifty cents for each gun or rifle owned or kept by such person, which tax shall be collected at the same time, and in the same manner as other taxes upon personal property.

Section 3. The money secured and collected under the provisions of this act shall be paid into the State Treasury and credited by the State Treasurer, to the State Game Protective Fund.

Section 4. That all acts or parts of acts in conflict with this act are hereby repealed.

Section 5. Emergency: An emergency is hereby declared to exist and this act shall take effect and be in force from and after its passage and approval.

The Maryland Game Laws.

Baltimore, Feb. 24.—On March 6 a meeting will be held at the Carrolton Hotel, that has excited a great deal of interest among the sportsmen throughout the entire State. The object of the gathering will be, to try and draw up a uniform State game law, for the protection of game birds. As matters now stand it would take a Philadelphia lawyer, with a North Carolina search warrant, to tell when and where a sportsman could gun without being in danger of arrest. There is now a general game law, while each and every county has its own separate law. In many cases new laws have been passed without going to the trouble of repealing the old ones. In fact everything is in such a jumbled state that a leading daily in making up the annual publication of the laws, mixed up such a cocktail, that had one swallowed it they would have landed in jail. Dr. Massamore, one of the leading sportsmen, is the instigator of the present movement, and is meeting with the hearty support of all the lovers of gun and dog. Each county is expected to send on three delegates, while Baltimore city will be represented. All those that desire can express their views, and submit in writing anything that they think will help disentangle the present muddle. When a suitable law has been drawn up, it will be presented to the Legislature. Among those who will be present will be the present Governor of the State, Hon. Frank Brown, Mayor Latrobe, John H. Keene, E. D. Mallory and many other leading citizens of the State.

WM. L. STILES.

The New York Game Bill.

Lyons, N. Y., March 2, 1895.—Editor Forest and Stream: The Senate bill has just come to hand. Commenting upon it I desire to call the attention of all true sportsmen throughout the State to several sections which appear extremely detrimental to the interests of fish and game protection and which are in direct contradiction to the recommendations of both my own association and the New York State Association, which we adopted last January. I am not fully advised of the merit contained in the bill as affects other localities, but Section 141, which permits spearing for certain kind of fish in all waters of the State not inhabitated by trout, would work great injury to this section. Now, if the spearing for suckers, etc., is good, why not allow it in the trout waters of the State? Are the trout the only game fish to be protected? The fact of it is that when spearing for certain kinds of fish is allowable it is impossible to detect and convict any offender who may succeed in spearing game fish.

We will not dwell upon the cruel method, as it may effect the game fish mentioned, but it is a well-known fact that only about one in three of the fish so killed is landed, and that after a spearing expedition the shores of lakes and streams are often well supplied with fish so mutilated and killed. If this measure becomes a law it will be ruinous to the best interests of fish and increase and protection throughout this entire section. It seems that no fair minded sportsman can ask for such a measure.

The bill also provides for spring shooting throughout this entire section of the State which is in direct contradiction to the earnest work of our Association for many years. There will be no one so foolish as to argue that the killing of one female duck on her way to her place of nesting will not soon materially decrease the number of those birds.

The bill also provides for grouse and woodcock shooting, August 15 to January 1, which I am sure is not the wish of those interested.

I trust that all sportsmen may see the necessity for immediate action in getting these improper provisions amended. A prompt request from sportsmen throughout the State to their Assemblymen and Senators so to do will carry much weight with it, and be in full accord with the earnest efforts of the Associations striving for the betterment of our game laws.

W. S. GAVITT,
President Central N. Y. G. and F. Prot. Asso.

Pennsylvania Game Laws.

Editor Forest and Stream:

Of course you can't be expected to remember a frantic appeal which I sent you about two years ago, when an effort was being made to amend the Pennsylvania game law, to have the non-sale and transportation clause eliminated. I aslo wrote to our game committee in the same spirit, because I was so thoroughly convinced that no game act would pass our Legislature so long as such a clause remained. My conviction was inspired by a visit to a cold storage game house, and the convincing statements of one of the firm. A view was courteously shown of thousands of dozens of quail, thousands of grouse of all kinds, hundreds of tons of the deer family, the house containing but a small amount of game in comparison with their stock in various game States. I was told of the immense profit, and a positive assurance was given that the last item included sufficient money to defeat any law that would destroy their buisness. Certainly our legislators are all honorable men, not purchasable. No one who has any knowledge of legislatures will proclaim them actuated more by "what is in it," than by a conscientious desire for public benefit. But I venture to say that a season game law will fail this winter in the Pennsylvania Legislature, as it did two years ago unless your Plank (every real sportsmen's plank) is made a separate bill, a whole platform in itself, which cannot be defeated by innumerable amendments of woodcock shooting or sucker net fishing, and so delayed by procrastination, but will have to be met upon a square issue.

My personal belief is that non-transportation and non-sale would afford more protection for game and fish, than the season law. Both will do much. How shall we get them?

THOMPSONTOWN, PA. JUNIATA.

Sparrow Bounties.

A bill introduced in Albany to add New York to the States offering bounties on the English sparrow has brought out this protest from Buffalo and vicinity, extensively signed by citizens of that community.

Buffalo, N. Y., Feb. 20.—To the Committee on Game Laws. Gentlemen: We, the undersigned residents of Buffalo, N. Y., do respectfully petition your honorable body to report unfavorably upon the bill introduced in the Senate and Assembly respectively by Mr. Parsons and Mr. C. J. Smith numbered in the former 341 and in the latter 668; the title of such act being: "An act to amend the Game Law by fixing a bounty on English sparrows and providing for the payment therefor."

We protest against such proposed amendment to the Game Law on the ground that the proposed bounty if made of force even during the winter months, would endanger the lives of the various insect eating birds now protected by law, and which in many respects resemble the English sparrow (Passer domesticus) whose extermination the above act seeks to effect.

We submit that as the present game law does not protect the English sparrow, that bird is sufficiently discriminated against, and that nothing would be gained by its further proscription at the possible cost of killing many of those birds valuable to the great agricultural interests of this State.

We submit that to the average person there is no distinction in "sparrows," and the premium put upon the head, nests and eggs of the imported bird would serve only to open another avenue of destruction for our native species of all families, already so reduced in numbers. The small boy and the grown person alike, ignorant as to the identity of the birds would, through error or by intention, take their lives indiscriminately and probably receive a bounty order therefor at the hand of an equally uninformed alderman or supervisor.

We trust that your honorable committee will take these facts into consideration and allow the "bird" section of the Game Law Code to remain unaltered respecting the insect-eating birds (not game) unless change would afford further protection for these "the winged wardens of your farms."

The Kennel.

FIXTURES.

BENCH SHOWS.

March 12 to 15—Denver.—Western K. C. Co., E. T. Weiant, Sec'y.
April 10 to 13.—Pittsburgh—Duquesne K.C. W. E. Littel, Sec'y.
April 16 to 19—Boston.—New England Kennel Club. D. E. Loveland, Sec'y.
April 17 to 20. Los Angeles—Southern Cal. Kennel Club. Dr. R. J. Withers, Sec.
May 1 to 4.—Oakland, Cal.—Alameda County Sportsman's Association. F. Boell, Sec'y., Oakland, Cal.
May 8 to 11—San Francisco, Cal.—Pacific Kennel Club. Howard Vernon, Sec'y, San Francisco.
Oct. 8 to 11.—Danbury, Conn.—Danbury Agricultural Society G. L. Rundle, Sec'y.

FIELD TRIALS.

Sept. 10—Morris, Man.—Manitoba F. T. C., John Wootton, Sec'y, Manitou.
Nov. 5.—Chatham, Ont.—International F. T. Club. W. B. Wells Sec'y.
Nov. 7 to 11.—Trials A. U. S. F. T. Club at West Point, Miss. W. B. Stafford, Sec'y, Trenton, Tenn.
Nov. 18.—Eastern F. T. Club, at Newton, N. C. W. A. Coster, Sec'y, Saratoga Springs, N. Y.

The Detroit Dog Show.

A very pretty exhibition was the verdict of those who attended the third annual show given by the City of the Straits Kennel Club, in the Auditorium at Detroit last week. Although the bulk of the classes were not so well filled as at last year's event, yet the average quality was quite up to previous years.

The money prizes offered are not such as would tempt the attendance of prominent kennels, still the fact that the Detroit fixture is a half way resting place between the New York show and the big Chicago event the week after, makes it convenient for many crack dogs to occupy the benches. This will always be the case, if the same arrangement of dates remains in force. Next year, the club promises to increase its prize list, and profiting by the experience gained this year, expects to give a show that will be independently good and not so local in tone. A little more attention to preliminary kennel press notices will doubtless aid them to this end.

The show was fairly well conducted, though there is room for a little improvement in the cleaning away of the inevitable litter which attends a dog show. The ventilation and light at the Auditorium are not all that could be desired, but as the arrangement of the benching, which as usual was in the hands of Spratts Co., was a great improvement on that of last year, and especially in regard to the judging ring, visitors this year had better opportunity to see the dogs. Last year the judging ring was on the satge, most inconvenient and dangerous arrangement, but this time, with less entries to bench, the ring was placed on the main floor in the centre of the hall.

Judging commenecd promptly on Tuesday morning, and with the exception of a few specials was finished by Tuesday evening. The judges—Messrs. Davidson and Mortimer—seem to have given almost complete satisfaction, though one or two upsets afforded material for discussion among the "talent," and

served to dispel to some extent the inevitable ennui of a four days' show.

There were few visitors from outside cities this year, and many of the faces of those who contributed to the enjoyment and pleasure of last year's event were not to be seen.

President Hendrie devoted himself entirely to the duties of his office, and was ever ready to lend his aid. Among the active members of the bench show committee, whom we continually encountered, may be mentioned: C. A. Parkinson, T. C. Oulette, Guy D. Welton, J. W. Garrison, the Secretary, and C. F. Backus, who holds the key to the safe. And his office was not altogether a sinecure, for after the first two days of the show the "quarters" came in with a rush and changed dire predictions of failure, due to the very limited attendance, to a feeling of enthusiastic contentment and hopeful plans for a still better show next year. Although the admission fee was so small the class of people who attended was composed of some of the best people in the city, due no doubt in great part to the interest in the affair displayed by the daily press.

A very creditable performance of trick dogs added no little to the enjoyment of the visitors. On the last day, a reduction in admission price for the benefit of school children brought out a crowd of interested youngsters and although the presence of the ubiquitious small boy, who inevitably manages to push himself to the front, may be irritating to the old fogies, the wise show management should never neglect to provide such an opportunity; for in nine case out of ten young hopeful is accompanied by the older members of the family and thus additional income accrues to the show's exchequer. The sight of so many good dogs, and a knowledge of their importance are apt to create a feeling of respect for the dog and call forth in the youthful mind a desire to view a dog from a different standpoint to that of its possibilities as a subject for prankish attentions with tin can attachments.

There were no unfortunate contretemps this year, everything progressing smoothly to the end. Among those whom we saw at the show were: C. A. Pratt, L. Klein, R. Bangham, W. B. Wells, Mr. Nimo, Mrs. Lee, of Toledo, O; E. M. Oldham, Major J. M. Taylor, Frank F. Dole, E. B. Elliott, George Thomas, Ben Lewis, Joe Lewis, Arthur Trickett, Donald Monroe, J. W. Fornof, E. W. Warner, W. J. Tulk, Dr. Keim, Jos. Spracklin, pere. A good feature was the accuracy of the marked catalogue which can be accepted with two H. C.'s added as perfectly correct. The criticism of classes follow:

MASTIFFS (James Mortimer, Judge).—With ninety dollars offered in prize money, it seems ridiculous that there were only five entries, and excepting two of these, worth but little more than their entry fee. Challenge classes were drawn blank. In open dogs, our old favorite, Prince Cola, he of the ginger face, easily took premier position; shown in faultless condition, his head, while correct in shape, is not improving, for he is getting a little houndy in expression. Open bitches had three entries, Minnie Beaufort is far superior to the others. She was never shown in better condition, which served to bring out her beautiful quality very prominently. The light-muzzled Ripplette, made a very poor second; head should be deeper and have more volume, better ribs and stronger behind. The very inferior puppy Boyas was complimented by second, the first being withheld.

ST. BERNARDS (James Mortimer, Judge).—The quality of the exhibit was scarcely up to the average of last year, although individual entries made the display a very interesting one. In rough challenge classes, Sir Belvidere, in his New York condition and Rustice Beauty, still thin, occupied their usual positions. Open dogs had nine entries, but the chief interest centered in the meeting of American Caesar and Le Prince, and the decision which placed American Caesar over the New York winner, was a surprise to many, but there are several points in which the award must be considered just Le Prince is not entirely himself, while American Caesar, who has habitually been shown in wretched condition has often forfeited the premier position on that account at past shows. With a few more pounds of flesh his condition there could not have been better. In massiveness of head he is superior to Le Prince, but he lacks the correct formation, beauty of expression and extreme quality of the English dog; while his head is deep and broad, the lower jaw should be better formed, and a better defined stop would add a touch of quality which he now lacks. In bone, body and coat he excels Le Prince. The decision is an open one and their future placing will depend on condition. The big, flat-sided dog, Scion Lomond, was reserve; good forelegs but light in bone, nice skull and short muzzle; deeper shadings would improve his expresion. Lord Dante, an unfortunate dog, had he been in better shape would no doubt have been better placed. He suffers from ear canker and is thin. The Toronto winner last year, Imperial, fully deserved his three letters. Earl Douglass also vhc., depended upon his good body and beautiful coat for his position. Three very nice bitches came forward in the next class, but La Princess' good, deep head, massive, long body and action, left no doubt of the result. Artilla, a much improved bitch, second, is capital in body and bone, and fairly well formed head. She shows considerable quality; in fact, is the best that we have seen from this kennel. The well-known Lady Taylor loses in head and body to Artilla, but made a good reserve. I could scarcely follow the puppy award, for Suzon, the winner, though good in body and bone, is lamentably weak in head properties. A very fair daughter of Grand Master came second, but for character and promise another son of his, Prince Victor Emanuel, I thought might have gone to the head of the class, for he beats the others in skull, type, legs and size, but of course is not developed in body yet. Moleskin, a son of Jim Blaine, was reserve, and a low set bitch in Vesta Belle, with good body and bone was vhc. Another of the same build, Miss Nell II., but with a better head, and the narrow, long-faced Tyrass were in the same position. Two typical ones came forward in smooth challenge dogs, the two brothers Alton II. and Lawrence Garza, the latter may be termed the baby of this illustrious family. Alton beats in head, bone and size, and is improving right along. In open dogs, not considering condition, St Augustine was well ahead, but his wretched condition should have brought a warning setback from the judge. Considering the quality of Lord Milton (Alton-Judith), although not straight enough in back, dipping behind the shoulder, and too high hips, his all-around good head, legs and color might have put him first, though he shows too much coat for a smooth. Reserve to Nicodé, who has grown into a fine, large dog, loses in muzzle to Lord Milton, but is a larger and better formed dog in forelegs and body. Hero Frank, vhc, has a massive head, good outline, but too long, curls his tail; should have more rib and is straight behind. Clovis, in such a class should have had another letter, his head is well-formed, showing very much quality, lacks depth of body and size; a good little dog. In open bitches the well-known matron, Judith, was easily first. Her change of home has evidently been beneficial. She seems to have filled out in head and was beautifully shown. A rather plain-headed bitch, Empress of Windsor, came second, head too long and not enough stop, nice body and legs, and especially good in breadth of hips. Gemmi is rather plain-headed, especially in muzzle, but deserved her card. A pretty bitch all round is Lady Marian, vhc., a daughter of Canada's Merchant Prince. Lord Clive, hc., is a rather nice headed young dog, good in expression and very fair in coat. In Rustic Beauty's present condition, there can be no fault found with La Princess winning the special for best dog in the show, Sir Bedivere barred, but the old dog had his innings by winning outright Smith & Co's silver cup for which he qualified last year. Most of the other specials were locals.

BLOODHOUNDS (James Mortimer, Judge).—There were five entries in all, Buccaneer and the well-known Vigilant were the only two which appeared. Buccaneer has a fair head with no great depth or length, fair wrinkle and earage; Vigilant, the better one of the two, might be better behind the shoulder; nice length of skull and good earage.

RUSSIAN WOLFHOUNDS (James Mortimer, Judge).—The display here was a sort of reduced echo of New York. Though entries were few, the quality was among the best we have. In the challenge class, Ch. Princess Irma, in excellent condition, was correctly placed over old Ch. Argoss who, though well shown, was short of coat. Princess Irma excels in expression and quality, and distinctive character, and is quite as good in loin and quarters. In open dogs, Ataman IV., the new dog, is a well modeled animal of the Leekhoi type, perhaps a trifle heavy in shoulders, but more than ordinarily well-ribbed for a dog of this breed; should be stronger on pasterns, is correctly formed in hind legs, and all topped by a strong, powerful head. Czar came second, losing in loin, ribs and quarters to the other, but quite as good in coat; a handsome black and white dog that might be improved in front and in head. Trajan, reserve, another dog of this distinctive type, in nice coat, is better fronted than Czar, especially good behind, and I thought him more than equal to second, though a longer head and more size would improve him. In the bitch class, as between Olga IV. and the black Riga, there is just a question of type, for Olga has the sweet, long head of the Irma type, is a bitch of very pretty outline, well shown and in good coat; in my opinion beats the other well in character, type and general formation. Riga, second, well built bitch that she is, is more greyhoundy in build and is out of coat. Ataman IV. was, I thought, lucky to take the medal for best from Princess Irma.

GREAT DANES (James Mortimer, Judge).—There was a falling off in both quality and numbers this year in Great Danes. No challenge entries. The winner in open dogs, Beau Brummell, is faulty in legs, fore and aft; a good ribbed dog with just a fair head. Second to Prince Charlie, a shelly, slack backed dog, but good on his pins. Wolverton Haddie, the puppy winner last year, beat Madge in open bitches; this she does in head with something to spare. Both are fairly good in body, though the winner is the best; she would do with more bone. Madge's weak muzzle and broad skull are not what we require.

FOXHOUNDS (John Davidson, Judge).—In open dogs, any type, first went to Songster, who shows a good hound head, should be better sprung in ribs and should be cleaner in shoulder; good fore legs and feet. Big Strive, second, who I last saw among the "natives" down in Kentucky, is one of the best coated ones I have met in some time. A well put up hound, whom more rib would improve and whose muzzle should be stronger. Clinker, reserve, is rather dish-faced, but he is good on his pins. The well-known Bow Sprit and Vexation, in the order named, took the money in the bitch class. The winner is a very pretty bitch, full of hound qualities, might be cleaner in shoulders but has excellent fore legs. Vexation is going off and getting bossy in shoulders, and a trifle more defined stop would improve her head. Pearl Strive, reserve, is a weak-muzzled, flat-sided hound, more of the American type, while the others were of the sturdy English sort.

DEERHOUNDS (John Davidson, Judge).—Only three, and Lochiel, the New York winner, just romped in front of Bruar II., beating him in head, coat, ribs and general substance. Paul Potter, a cream colored dog, is rather plain headed and loses to the others both in coat and shoulders.

GREYHOUNDS (John Davidson, Judge).—Although the entries were not numerous the quality was such as we rarely meet with, in fact, the best dogs that we can place on the benches filled the classes. The challenge class should have been divided, for taking all things into consideration it is a hard matter to separate four dogs like Gem of the Season, Wild Rose, Southern Beauty and Bestwood Daisy, every one a champion. Though Southern Beauty was placed second to Gem of the Season, considering his faults from the ribs back, and the fact that he is getting heavy in shoulder, the beautifully formed Southern Beauty, with whom little fault can be found all around, might have taken his place. Between Wild Rose and Bestwood Daisy there is always a question as between beauty of form and physical attributes that pertain to what is requisite in the field. In open dogs, three cracking good ones came out and the black dog, Southern Rhymes, though rather plain in head has a beautiful, long clean neck set in to fine sloping shoulders, well sprung ribs with the depth where it is wanted most, good loin and quarters. Spring of the Valley, second, is getting a little heavy in shoulders, is too full in brow, but from shoulders back is a well-built greyhound, especially in loin and quarters, wherein he beats Dallas who is rather long cast, was well shown and is making up into a fine hound. Wild Lily, another new face, and Southern Gay Girl, were first and second in bitches. The winner should be straighter up in pasterns, a little stronger behind, is a trifle long cast and stands over a lot of ground. Gay Girl is a rather soft, full-coated bitch; toes should be better, and pasterns shorter; is rather plain behind and has a coarse tail, good neck and shoulders, but weak in muzzle, a handsome fawn and white. Reserve went to Lucy, an unformed but promising youngster. Southern Rhymes won the specials.

ITALIAN GREYHOUNDS.—Challenge Dogs or Bitches—1st and 2d, Joseph Lewis' Spring and Sprite. Open—Dogs—1st, Joseph Lewis' Prince; 2d, Charles Lohman's Souris. Bitches—1st, Joseph Lewis' Jennie II.; 2d, Mrs. A. E. McKee's Beauty; 3d, Mrs. Julia Lohman's Folly; res., H. S. Wisner's Gyp.

SCHIPPERKES.—Dogs or Bitches—1st, E. S. Woodiwiss' Shtoots; 2d, 3d and res., F. W. Connolly's Skipper and Cople Sophia and Sophia Drieske.

MISCELLANEOUS CLASS.—Dogs or Bitches—1st, Townsend Lawrence's Kimo; 2d, Mrs. D. F. Lloyd's Dock; 3d, Mrs. H. Moore's Bianco, Rover—Rosie; res., Mrs. Wade's Romeo; .v h. c., C. W. Lougest's Mount Vernon Rake.

The A. K. C. Meeting.

The annual meeting of the American Kennel Club was held on the afternoon of Feb. 22, in Madison Square Garden, Mr. Thos. H. Terry presiding. The roll call was responded to by Dr. H. T. Foote, associate member; G. G. Stephenson, American Mastiff Club; John Moorhead, Duquesne K. C.; W. Fiske, English Setter Club; Robert Leslie, Mass. K. C.; C. F. R. Drake, Mascoutah K. C.; H. F. Schellhass, National Beagle Club; Edw. Brookes, New England K. C.; Frederick S. Webster, Northwestern Beagle Club; Dr. M. H. Cryer, Omaha K. C.; J. Mortimer, Pacific Kennel Club; J. Watson, Southern Cal. K. C.; E. H. Morris, New Jersey Kennel League.

The minutes of the last annual meeting were accepted.

The Secretary then read the credentials of C A. Pratt, St. Louis Kennel Club (new club); O. F. Joslin, Brunswick Fur Club; L. A. Burritt, Boston Terrier Club; Maj. J. M. Taylor, Columbus Fancier's Club; Joseph H. Hunter, Washington City K. C.; Thos. H. Terry, Westminster K. C.; J. E. Sears, Danbury Agricultural Society; Maj. Taylor and Mr. Hunter were absent.

The Secretary's annual report set forth that the depression in business had affected the club's interests. The income had fallen off in all departments. The balance carried over had enabled the club to meet all expenses. Also the indebtedness for legal expenses had been reduced to $472; $300 had been paid on it since the January statement, published in the Gazette. The list of Associate Members is 204. Active membership, 45 clubs. Delegates were urged to work to increase the revenues of the club.

The Treasurer reported that his report had been published in the January Gazette.

Following is the list of officers: President, A. Belmont; Vice-President, Thos. H. Terry; Secretary-Treasurer, A. P. Vredenburgh.

Maj. Taylor and Mr. Edward Brooks were re-elected members of the Advisory Committee.

Stud Book Committee, Messrs. Schellhass, Watson and Fiske.

Field Trial and Coursing, Messrs. J. M. Taylor, L. C. Whiton, Frederick S. Webster, Wm. C. Bayliss, Herman F. Schellhass.

Constitution and Rules, Messrs. J. Watson, H. F. Schellhass, F. S. Webster, H. T. Foote and A. P. Vredenburgh.

A communication from the Canadian Kennel Club, on the long-pending matter of wins, etc., was read, as follows: "That this club will be willing to recognize an agreement on the basis of mutual recognition of wins and disqualifications, the wins at shows held under C. K. C. rules to be published in the A. K. C. stud book. All dogs exhibited from Canada in the United States to be listed or registered with the A. K. C All dogs from the United States shown in Canada to be listed or registered with C. K. C. prize winners; in either case where qualified must be registered with the club under whose auspices the show is held. Messrs. T. G. McEwen and T. S. Wetherall were appointed a committee to confer with the American Kennel Club. If further information is necessary please advise me." This communication was from Mr. H. B. Donovan, Secretary-Treasurer C. K. C. It was carried that the matter of suspensions and disqualifications be referred to the committee originally appointed, and that said committee confer with the C. K. C., with a view to a mutual agreement concerning suspensions and disqualifications, said committee being given power to act.

The proposed amendment, of which notice was given by the Committee on Constitution and Rules, was next considered. It read as follows: In the event of any person or club, not a member of the American Kennel Club, holding a show at which the entry of any person not eligible to make entries at American Kennel Clubs shows, is accepted, or who may be permitted to show dogs, or act as agent for any other exhibitor, and officiate in any capacity at the show, every person officially connected with such show shall at once be suspended by order of the President, and deprived of all privileges of the American Kennel Club, pending the holding of the next meeting of the Executive or Advisory Committees, at which meeting the committee must either remove the suspension or impose a penalty of disqualification for such period as they may decide upon."

The first vote was on Mr. Morris' motion that the amendment be not embodied in the American Kennel Club's rules. To get an affirmative action, this one being negative, this motion was voted down. On the motion to adopt, there was not the necessary two-thirds vote and the amendment was lost.

The amendment which read that "The secretary of every show must forward to the secretary of the American Kennel Club, a duly certified copy of the judge's awards within seven days of the closing of each show," was carried.

The Executive Committee then held its meeting. Mr. Edw. Brooke presided. The minutes of the last meeting of the Executive Committee were approved.

The resignations of the Saratoga Poultry and Kennel Club and Western Michigan Kennel Club, were announced.

Balance on hand, $2,747.63.

The Auditing Committee announced that it had examined the accounts of the Club for the year 1894, and found them correct.

The English Bloodhound Club, of America, and the Wilmington Kennel Club were admitted to membership.

Prefixes were asked and granted as follows: To James B. Blossom, the prefix "Bedford;" to A. M. Young, the prefix Ballywynn; to S. J. Bradbury, the prefix "Drayton." Mr. G. W. H. Ritchie was refused the prefixes "Mr." and "Mrs."

The appeals of Dr. W. A. Bruette and Thomas Potter for reinstatement were granted.

In the matter of the request of the Spaniel Club for a ruling in respect to the cup donated by Mr. Geo. Bell, it was carried that the club could go on offering the cup as the ownership or custody of the cup was now vested in the Spaniel Club.

Mr. Bell's appeal for reinstatement and apology for past utterances and the charges preferred by Platt Brothers against the Des Moines Kennel Club, were referred to the Advisory Committee.

The following resolutions, adopted by the Pacific Kennel Club, were read and referred to the Committee on Rules:

"To the American Kennel Club, New York, N. Y.

"Whereas, the American Kennel Club was organized for the purpose of fostering the general interest in dogs throughout the United States; and

"Whereas, a very large portion of the dog men of the Pacific Coast are members (through their clubs) of said American Kennel Club and are therefore interested in all of its acts and legislation; and

"Whereas, the Pacific Kennel Club was led to join the said American Kennel Club through the representation and belief that it was a national organization, laboring for the best interests of the dog owners and kennel organizations of the whole country, regardless of location; and that the young and the weak would receive the same consideration and the same fostering care as was accorded to the strongest and most powerful; and

"Whereas, the isolation of the Pacific Coast from other populous centers is such as to produce conditions that do not obtain elsewhere, and cannot, with justice, be controlled in all respects by rules that may be just and advisable for other sections, without seriously crippling its best interests; and

"Whereas, section one of Rule XV. has in the past, does now, and will for many years to come, work an injustice and a positive injury to this and other clubs on the coast, viz.: By making it absolutely impossible for an exhibitor to advance his dog beyond that of a challenge class winner; the effect of which is to cool his enthusiasm, and by the realization of the evident injustice wrought by said rule, to cause him to lose his interest in shows and cease to partonize them, therefore, be it

"Resolved, that the American Kennel Club be, and it is hereby, earnestly requested to so amend Section 1 of Rule XV., so far as it applies to shows held West of the Rocky Mountains, and to dogs, the bona fide property of residents thereof, that three firsts in the challenge class, one of which is won in a show of not less than 300 entries, shall entitle the winner to the title of champion.

"Resolved, that a copy of this resolution be forwarded to the said American Kennel Club, requesting that it take immediate action thereon."

The charges of Mr. E. H. Morris against George R. Preston were referred to the Committee on Rules.

The secretary was authorized to make the necessary expenditure for the removal of the belongings of the club, to its new office, 55 Liberty street.

It was carried that it was the sense of the A. K. C. that the dog now in the possession of Martin Fallon is Beauford Prince, bred by J. L. Winchell, and successively owned by Charles B. Fraleigh, Herbert Meade and Dr. C. A. Lougest, and that said dog be debarred from competition till restored to the possession and ownership of Dr. Lougest.

Dr. A. L. Spanogle was disqualified, Dr. J. S. Werntz was suspended.

The recommendation, concerning Boston terriers, that no pedigree be accepted which contains more than one first outcross in the third generation, was adopted.

The following resolution was adopted: The American Kennel Club deplores the poisoning of toy spaniels in the building of the Westminster Kennel Club's show this morning, and hopes that the culprit be brought to speedy justice.

The matter of licensing the Country Club, of Brookline, and the Hempstead Farm, was referred to the Committee on Constitution and Rules.

A New Field Trial Club.

This week, on Tuesday evening, a number of the sportsmen of the United States meet at Battery D, Chicago, for the purpose of organizing a new field trial club. A large attendance is expected either in person or by proxy. While the club will have an up-to date policy, it will draw a sharp line between the club management and the competition.

Boston Show.

Boston, Mass.—I beg to advise you that we have decided upon judges and assigned classes as below for our coming show: Mr. James Mortimer, bloodhounds, mastiffs, St. Bernards, Great Danes, Newfoundlands, Chesapeake Bay dogs, beagles, bull dogs and fox terriers. Mr. Chas. H. Mason, spaniels, dachshun ls, poodles, collies, sheep dogs, terriers (except Boston and fox), pugs and miscellaneous. Maj. J. M. Taylor, foxhounds, pointers and setters. Mr. Harry W. Smith, Russian wolfhounds, deerhounds and greyhounds. Mr. Arthur Mulvey, Boston terriers. D. E. LOVELAND, Sec'y.

Duquesne Show.

Pittsburgh.—We are receiving many communications in regard to who will judge at our show, which will be held on April 9th, 10th, 11th, 12th, not 10th to 13th. As our premium lists will not be ready before next Monday, we herewith send list of judges: Mr. H. W. Lacy, St. Bernards, pugs, beagles, Boston terriers. Mr. C. H. Mason, pointers, setters, English retrievers, all spaniels except toy, Chesapeake Bay dogs, whippetts, bassett hounds, dachshunds, greyhounds, collies, old English sheep dogs and bull te riers. Mr. James Mortimer, mastiffs, Great Danes, Russian wolfhounds, deerhounds, poodles, all fox terriers except bull terriers; Italian greyhounds, schipperkes, toy spaniels, fox hounds, bull dogs and miscellaneous class. JOHN MOORHEAD, Jr.,
President Duquesne Kennel Club.

The English Bloodhound Club.

The first annual meeeting of the English Blood Hound Club was held Feb. 21, 1895, at Madison Square Garden, New York, Mr. J. L. Winchell, presiding. The Secretary and Treasurer's report was read and accepted, there being a balance in the treasury after the payment of all liabilities.

It was voted to offer specials at the Boston show, and at the Western shows in the future. It was also voted that photographs of the winner at various bench shows be sent to the club members.

The committee appointed to investigate the registration of dogs, reported that several "fake" pedigrees had been discovered. It was also found that many foxhounds and bloodhounds had been bred together, and the offspring advertised as pure bred bloodhounds. Many instances of this kind were brought to the attention of the club by Mr. Winchell, Mr. Davidson, Dr. Lougest and others, and several letters from those who had been victimized in this manner were read.

On suggestion of Mr. Davidson, a committee consisting of Merrs. Winchell, C. W. Lougest, and Dr. A. F. Stahl was appointed, to communciate with the Secretary of the American Kennel Club, with a view to obtaining a copy of all applications for registration, in order that they might be thoroughly investigated, and any fraud detected before registration. It was also voted that the club keep a stud book of its own.

The following officers were elected to serve for one year: President, S. L. Winchell, Fairhaven, Vt.; Vice-President, Dr. C. W. Lougest, Franklin, Mass.; Secretary and Treasurer,

harles H. Innes, 23 Court street, Boston, Mass.; Delegate to ie American Kennel Club, Dr. A. F. Stahl, 38 Appleton street, Boston, Mass.

After an informal discussion the meeting adjourned, subject c the call of the chair.

Great Dane Club.

The annual meeting of the Great Dane Club was held in ladison Square Garden, on Feb. 22. The following list of fficers were elected: President, Charles Fisher; Vice-President, Vm. Younge; Treasurer, Henry Bord; Secretary, and Dele- ate to A. K. C., Clifford Wood.

Ten new members were added to the club's list.

The delegate was instructed to secure the co-operation of the Committee on Pedigrees of the A. K. C., so that the pedigrees f all Great Danes would first be sent to the Committee on Pedigrees of the Great Dane Club.

It was resolved that the club be incorporated, and that meetings be held quarterly.

At the next meeting, a Great Dane standard will be adopted.

The Gordon Setter Club.

The annual meeting of the Gordon Setter Club, of America vas held in Madison Square Garden on the evening of Feb. 20. Messrs. Blossom, Van Zandt, Oughton, Hendee, Billings, Lee, Meister, B. Seehuson, Speery and Harrington were present in erson or by proxy.

The report of President Blossom upon the field trials, held at Assonet, Mass. last November, was approved; as also that of Secretary-Treasurer Van Zandt, showing a balance of over $50 n the treasury, and a good list of paying members.

The old board of officers and Executive Committee was lected, and it was resolved to hold field trials next summer, vith the hope that Gordon men would respond in goodly num- ers, as the interest in the Gordon setter seems to be increas- ng.

The Pointer Club of America.

The annual meeting of the Pointer Club of America took place at the Westminster Kennel Club's show, Feb., 21. The meeting was well attended and unusual interest was manifested. There were present: Hon. John S. Wise, T. G. Davey, Charles Heath, Thomas H. Terry, Frederic S. Webster, C. F. Lewis, Geo. Jarvis, A. C. Pickhardt, F. E. Lewis, J. R. Purcell, R. A. De Rusy.

The report of Secretary Webster was read, which commented upon the increase of interest in pointer affairs among the mem- ers, and the prospects for the coming year. The inauguration f the Annual Sweepstake and Produce Stakes was referred to, nd the continuance of those events was strongly recom- uended.

Treasurer Lewis made a report of the finances of the club, vhich showed a respectable balance on hand. Messrs. George . Gould and Geo. S. Mott, were elected to membership.

The election of officers for the coming year resulted in the choice of Thomas H. Terry for President; T. G. Davey, of Canada, Vice-President; Frederic S. Webster, Secretary; C. F. Lewis, Treasurer.

The Board of Governors are: Hon. John S. Wise, George Jarvis, James Mortimer, George W. La Rue, Samuel Warren, George J. Gould, and B. F. Seitner, Dayton, O; Delegate to American Kennel Club, Geo. Jarvis.

After a general exchange of plans for the welfare and ad- vancement of pointer breeders, the club adjourned.

DOG CHAT

Mr. T. G. Davey, has sold the famous field trial winning setter, Brighton Tobe, to the Eldred Kennels, of New York City. He will compete in the trials for further honors.

Mr. George J. Gould has engaged the services of Mr. Jack Armstrong, the field trial handler who distinguished himself by skillful handling at the field trials of Canada last season.

Mr. W. B. Stafford, Secretary-Treasurer of the U. S. F. T. C., under date of Feb. 26, sends us the following dispatch: "There will be a called meeting of the Board of Governors of the U. S. F. T. C. held at Louisville, Ky., at 10 A. M. All members of the club are invited to be present at the meeting." Mr. Stafford omitted mention of the date and place of holding the meeting, and it was also sent to us too late for publication last week.

The Pacific Coast Field Trials were concluded on Feb. 22. The Derby Winners are, first, C. Z. Hebert's liver and white pointer bitch Doris (Glenbeigh Jill); second, J. G. Edward's orange and white English setter dog Nimrod (Sportsman-Stephanie); third, S. F. Hughes' lemon ticker English setter bitch Silverplate (Fred W. Countess Noble). In the All Age Stake, the winners are, first, Howard Vernon's liver and white pointer dog Glenbeigh (Grouse V.-Rita); second, W. G. Kerckhoff's black, white and tan English setter bitch Betsy Mark (Gath's Mark-Ightfield Sophie); third, divided between J. M. Kilgarif's orange and white English setter dog Sirius (Sportsman-Sweetheart), and C. A. Haight's liver and white dog Honest John (Dick H.-Lady Max). The Amateur Stakes were won by W. Harlan's black white and tan English setter dog Midas (Mercury-Johanna), and J. W. Tholcke's lemon ticked English setter bitch Salina Noble (Fred W.-Countess Noble) and R. Storm's Irish setter Red Dan, first, second and third in the order mentioned. At the club's annual meeting, held in Salinas, Cal., the following list of officers was elected: President, W. G. Kerckhoff, of Los Angelos; first Vice-President, J. E. Terry, Sacramento; second Vice-President, Howard Vernon, San Francisco; Secretary, J. M. Kilgarif, San Francisco; Executive Committee, J. T. Wattson, C. A. Haight and H. T. Payne, of San Francisco; C. N. Post, of Sacramento, and C. Z. Hebert, of Salinas.

Mr. John Davidson will judge the show of the Pacific Kennel Club, in May next.

From Winnipeg.

The second annual dog show, under the auspices of the Manitoba Poultry Association, will be held in Winnipeg this week. I should say it will be a success, judging from the number of classes for which prizes are offered and from the interest dog men generally are taking in the show.

Mr. E. Hughes, of Branton, has undertaken to pick the winners in the sporting classes, and Mr. T. Moore, of Virdon, will endeavor to perform a similar duty for the others.

The field trial interests, as usual at this season of the year, are not attracting much attention, still, in a quiet way, some of our local experts are preparing for an active campaign just as soon as the season opens.

The officers of the Manitoba Field Trial Club are not manifesting much zeal just at present, but, no doubt when the ice begins to move in the Red River, they will be on deck with renewed vigor after the long rest taken.

I was informed yesterday that a new club was about to be organized here for the purpose of holding trials this fall (at Morris, I suppose), either the week preceding or the week following that of the Manitoba Club, and that should this movement materialize, a strong effort will be made to equalize matters between the amateur and professional owners, without pressing too severely on either party. I trust it may be carried out, as it is in my opinion a movement in the right direction. Those who are now moving in the matter are the right men to take hold of it. G.

A meeting will be called this week at Chicago Show with a view to organizing a Dachshund Club, an intimation of which was given in these columns last week.

Mr. James Robinson was the only American exhibitor to bid God speed to the English contingent on their departure on the Servia, the day after New York Show, their dogs being shipped back on the Mohawk. For the Woodlawn Kennels he has purchased the noted bull bitch Bubble from Mr. S. Woodiwiss, of London, England. She will be sent out in whelp to one of the cracks. The unfortunate dog Facey Romford, who by many is considered the best bull now in England, is also being nibbled at from this quarter. Woodlawn Park Kennels had a corner on the bulls here at Detroit and evidently intend to do the same trick all around.

Mr. Moorhead attended the New York Show and was very busy making preliminary arrangements for the show which is expected to excel all previous ones in Pittsburg.

The many friends of Mr. John Davidson will be pained to learn of the death of his wife. During the judging at Detroit on Tuesday afternoon, Mr. Davidson was advised by telegram of the sad event and hurried to his home. Much sympathy was expressed by the visitors, and which took material form in a beautiful floral piece that was sent to Mr. Davidson's home.

Low Rates South.

March 5, April 2 and April 30, tickets will be sold via Chicago & Eastern Illinois Railroad to various points in Alabama, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee and Virginia, and to points in Florida west of River Junction, at one fare for the round trip. For tickets and information apply to your nearest agent. City Ticket Office C. & E. I. R. R., 230 Clark street, Chicago, and C. W. Humphrey, Nor. Pass. Agent C. & E. I. R. R., St. Paul, Minn.—Adv.

Taxidermists.

The partnership existing between Wm. W. Hart and Thos. W. Franklin was dissolved by mutual consent Feb. 23. Mr. Hart will carry on the business at the same address as heretofore, and under the firm name of W. W. Hart & Co.

In order to secure much-needed facilities, Mr. F. S. Webster has removed the manufacturing part of his taxidermy business to Vernon, N. Y. The office and salesroom will be continued at the old address.—Adv.

Trap-Shooting.

FIXTURES.

All ties divided unless otherwise reported.

Send notice of your shoot like the following:

March 12.—MORRISTOWN, N. J.—Handicap at 50 live birds per man, $50 added to three high guns, 25 entrance.

March 13 to 14.—HOT SPRINGS, Ark.—First annual live bird tournament of the Southern Gun Club at Whittington Park; 50 live birds, $25 entrance, four moneys, $500 guaranteed in this event. Entries close March 9 to H. O. Price, Southern Club, Hot Springs, Ark.

March 26-27.— ROCKFORD, Ill.—Live bird tournament of the Rockford Gun Club.

March 27.—SPRINGFIELD, N. J.—Tournament of the New Jersey Trap-Shooters' League, under the auspices of the Union Gun Club, of Springfield, N. J. E. D. Miller, Sec.

March 28.—NEWARK, N. J.—Live bird handicap at Erb's grounds, under the auspices of the Newark Gun Club; 25 birds, $10 entrance, birds extra, handicaps from 33 to 26 yards, class shooting, four moneys. W. H. Green, Sec.

DRIVERS AND TWISTERS.

Lynchburg, Va., Feb. 19,---The Interstate Association's shoot has been postponed until May 17-18. It was thought best to select these dates so that shooters going to Knoxville could have the opportunity to attend the shoot here. Everything will be done to make the event a successful one. I am very sorry to hear the reports coming in of the wholesale destruction of the birds. The slaughter by the cold weather has been distressing. Efforts are being made to restock, which, I hope, will prove successful. The regular shooting season of the gun club will not open for six weeks unless the weather improves. There are two feet of snow on our grounds.—F. M. D.

Syracuse, N. Y., Feb. 19.—H White, Geo. Mann, H. Jones and Joseph Montgomery, four members of the Onondaga County Sportsmen's Association, shot a match to-day at Masena Springs. The conditions of the match were 20 sparrows each, plunge traps. Montgomery won by killing 18, Mann was second with 17; White and Jones killed 15 and 14 respectively.—A. R. K.

I suppose George Work and J. P. Knapp will soon have another race at live birds, as each is now credited with a victory by three birds. Their united totals for the 200 birds they have shot at just average 85 per cent. In both instances, at Babylon and Larchmont, the conditions were entirely favorable to the birds, the wind blowing a gale behind the birds on each occasion. The pigeons, too, in both matches, were an extraordinary lot. As regards guns and ammunition, both men stick to their colors; Work shoots a Purdey and E. C. powder; Knapp trusts to a Purdey-Francotte and Schultze.

Fred. Waddell, of Chattanooga, Tenn., better known perhaps as "Dupont" Waddell, from his connection with the Dupont Powder Company, called at Forest and Stream's office on Saturday, Feb. 23. Mr. Waddell had a good deal to say in regard to the big tournament at Cincinnati, May 7-10, which is promoted by the Dupont Company. The programme, which will be ready for distribution before long, will tell of a system for running tournaments that will be tried at Cincinnati on the above dates. The plan, as outlined by Mr. Waddell, gives promise of making the tournament a popular one.

The Southern Club, of Hot Springs, Ark., has issued a programme for March 13 and 14. The programme contains but one scheduled event, a 50 live bird race, $25 entrance, $500 guaranteed, four moneys, each money containing not less than $200, $150, $100 and $50 respectively; all surplus added. Amateurs stand at 30 yards, experts at 33 yards. Other events will be shot to suit the taste of those present Entries for the guaranteed event close March 9. For any further information, apply to H. Price, Southern Club, Hot Springs, Ark.

Ellicott City, Md., Gun Club will hold a live bird and target tournament in the near future. Ellicott City has several good shots among its gun club members, and any persons who want to spend a pleasant day at the traps cannot do better than visit them at one of their club's tournaments. Dr. Samuel J. Fort will doubtless be glad to answer any inquiries.

Fred. Quimby is rustling around among the Southern boys. A letter written by him from Louisville, Ky., date Feb. 22d, shows that Fred's effervescent spirits have suffered no check during the recent cold snap in the South.

The U. M. C. Co., of Bridgeport, Conn., have gotten out a new shell to take the place of their "Nitro Club" shell The new shell is maroon-colored, with the new No. 5 primer on which "U. M. C." Thomas has been figuring for some time. That the shell and primer in the proper hands can do good work is proved by a pattern made by Justus Von Lengerke, on Saturday last, Feb. 23. Under perfect climatic conditions, 100 feet range, with 45 grains Schultze powder, 1 1-8 oz. of No. 4 shot, Francotte gun, Justus placed every pellet, except 12, inside a 19-inch circle.

The New Britain, Pa., Gun Club has elected the following officers for the ensuing year: President, Frank LeFevre; Secretary, C. J. Conard; Treasurer, Paul Van Toor. The club is only a small one as regards membership, but it is full of energy; it will probably erect a club house before next season.

Newburgh, N. Y, Feb. 20—The Cobweb Gun Club, of New York, came to this city this morning and shot a race with a 10-man team of the West Newburgh Gun and Rifle Association The cost of the birds and suppers for the crowd at Gedney's was to be borne by the losers. The home team won by 3 birds, killing 83 out of the 100 shot at, to their opponents' 80 out of a like number. J. S. Taylor and Dain, both Newburghers, made the only straight scores of the shoot.

The Brewer-Reinhardt race, shot at Willard Park, Paterson, N. J., on Wednesday, Feb. 27, resulted in a victory for Brewer by the score of 95 to 84. The birds are said to have been a good lot.

Omaha, Neb., Feb. 22.—J. W. Den, of Arapahoe, and J. C. Read have posted their $100 with the sporting editor of the Bee for their 100-bird race, which is scheduled for March 30.

SANDY GRISWOLD.

The Onondaga County Sportsmen's Association, of Syracuse, N. Y., have put in a new switchboard for their electric pull. The switchboard is an invention of James Montgomery, of Prettie & Co., sporting goods dealers of Syracuse; by means of this invention it is claimed that any number or combinations of traps can be pulled at once.

The Valley City Gun Club, of Grand Rapids, Mich., whose tournament is advertised for May 30-31, will be assisted by the Interstate Association. Last year's tournament, under the same conditions, was a great success, and Mr. Rood, the secretary of the Valley City Gun Club, promises that the coming tournament shall be at least as good as its predecessors.

The Interstate Association has contracted to give inanimate target tournaments at Pittsburg, Pa., April 16, 17 and 18; Wilmington, N. C., May 9 and 10; Lynchburg, Va., May 17 and 18; Grand Rapids, Mich., May 30 and 31. Gun clubs in Kentucky, Tennessee, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi and Louisiana, desiring the aid of the Interstate Association in giving tournaments should write the manager, who will furnish full information upon application for same.

ELMER E. SHANER, Manager,
122 Diamond Market, Pittsburg, Pa.

The Wawaset Gun Club, of Wilmington, Del., holds regular monthly badge shoots for club members only. At the semi-annual election of officers of the club held on the 16th, the following officers were elected: President, Robert Miller; Vice-President, Jacob Huber; Treasurer, T. W. Weldon; Secretary, W. E. Buckmaster; Financial Secretary, C. M. Buckmaster; Quartermaster, Fred. C. Martin; Captain, George H. Huber. Directors—Ed. Mason, H. H. Hawthorne, George Gillespie.

Dr. Carver easily defeated Charlie Budd in the 100-bird race, shot on Feb. 22 during the tournament of the Forester Gun Club, at Davenport, Ia. Carver won by 89 to 77, the Des Moines man's score showing that he was clearly away off.

The Altoona Rod and Gun Club has changed the dates for its tournaments from June 25, 26 to July 11, 12. This change was made to accommodate those shooters of the State of New York, who would like to attend both the State shoot at Saratoga and the Altoona tournament at Wopsononock.

Pittsburg, Pa., March 2.—Programmes for the Interstate Association's Grand American Handicap tournament at live birds, to be held at Willard Park, Paterson, N. J., on April 3, 4 and 5, have been mailed to every live bird shooter whose address is in our possession. We fully realize that there are any number of lovers of this popular sport throughout the United States and Canada, who have not received programmes of this big event, simply because we do not know their address. For the benefit of all such, I wish to state that we will be pleased to mail a copy to anyone applying for same. All that is required is the dropping of a card to the New York office, J. A. H. Dressel, 313 Broadway, New York, or to the Manager's home address, Elmer E. Shaner, 122 Diamond Market, Pittsburg, Pa. This will insure their names being placed on our list of addresses, to be referred to as future occasions may require. Judging from the number of inquiries we have already reecieved for programmes, book of rules and information relating to the Grand American Handicap, we are assured of a large and influential list of entries. ELMER E. SHANER,
Manager Interstate Association.

Syracuse, N. Y., March 2.—George Luther, a popular member of the Onondaga Sportsmen's Club, died on Feb. 25, at 6 P. M. His death was the result of an attack of pneumonia; he was ill but a very short while. As a trap shot he was very well known in this State, and had helped his club to win many valuable trophies. His greatest work with the gun was done on glass balls, at which sport he had few superiors. At his funeral, his body was carried to the grave by a number of his fellow club members.—A. R. K.

Will K. Park, whom shooters will remember as a representative of the Wilkesbarre Gun Company, writes that he has taken charge of the gun department of the Sporting Life, a newspaper devoted to field sports and athletics, published in Philadelphia, Pa.

On Tuesday next, March 12, there will be a live bird handicap at the Morristown, N. J., Driving Park. The conditions are 50 live birds, $25 entrance, birds extra, $50 added to three high guns, money divided 50, 30 and 20 per cent; over 10 entries, 4 moneys Entries can be made up to the end of the first round, $5 to accompany each entry. Shoot called at 12 o'clock.

The Forest Gun Club, of Philadelphia, Pa., will hold an all-day shoot on Easter Monday, April 15, on its grounds at Twenty-seventh street and Lehigh avenue, Philadelphia.

Aiken, S. C., Feb. 21.—A. H. Kallies, of Utica, N. Y., and E. L. Smith, of Ballston, N. Y., shot a match to-day at 50 targets, $25 a side, loser to pay for the targets. The race was a pretty one from start to finish, both men shooting in very good form. The weather was all that could be desired, and a large number of spectators from Highland Park Hotel, among them being several ladies, were on hand to witness the sport. There was quite a little wagering on the outside, some $500 changing hands. Kallies is a member of the Utica Gun Club. Score: Smith 47, Kallies 46, Smith missed his 16th, 27th and 35th targets; Kallies dropped his 23d, 29th, 39th and 43d.

On Washington's Birthday the Worcester, Mass., Gun Club's five-men team went to Wellington, Mass., to meet a team of the Boston Shooting Association, the home team winning by 11 targets. The conditions were 50 targets per man, 25 of them known angles, and 25 "reversed." Scores: Wellington—Dickey 42, W. Bennett 41, Sawyer 37, F. Bennett 36, Federhen 30; total 186. Worcester—Davis 41, A. W. Walls 40, Kenerson 34, R. C. Walls 31, Mascroft 29; total 175. This gives the Wellingtons 4 wins and the series against the Worcester men's single victory.

EDWARD BANKS.

Hartford Gun Club.

Hartford, Conn., Feb. 23.—The weekly shoot of the Hartford Gun Club was held at our grounds this afternoon. The weather was very cold, and there was a gusty wind which made shooting difficult, thus accounting for the poor scores. Only eight shooters present. Following are the scores: "Ford," 22; Melrose, 18; Tucker, 18; Wadsworth, 18; Lyman, 14; Ropkins, 14; Smith, 14; Briton, 12.

March 2.—The scores given below were shot this afternoon; 25 targets, known angles:

Ford	1111111111111111111111101—24
White	1111011110110110111011111—20
Tucker	1101100011111111111110101—19
Wadsworth	1111011011000111111011110—18
Lucus	1010111101111001111000101—16
Smith	1010111100101111010011011—16
Wilcox	0100110101100111111010110—15

D. S. WADSWORTH, Sec'y.

New York County Gun Club.

New York, Feb. 21.—The following are the scores made by the members of the New York County Gun Club at their last shoots:

No. 1, 10 targets, known angles, and 15 targets unknown angles: Schorty, 22; Josh, 18; Place, 16.

No. 2, 50 targets, handicap of misses as breaks: Schorty (scratch), 43; Josh (5), 43; Place (10), 39; P. Woelfel (15), 33; Muller (20), 32; J. Woelfel (15), 29.

No. 3, 25 targets: Schorty, 20, Josh, 18; Tiernan, 19; Place, 21. (Last two shooters allowed five breaks.)

No. 4, 15 targets, even up, everything known: Schorty and Josh, 14; Place and Tiernan, 10.

No. 5, match at 15 targets for a "consideration": Josh, 13; Schorty, 12.

No. 6, 50 targets, handicaps similiar to No. 2: Wash (5), 43; Schorty (scratch), 41; Place (10), 39; P. Woelfel (15), 38; Tiernan (5), 34; Muller (20), 32; J. Woelfel (15), 31. HALF SHELL.

Buffalo Trap Notes.

Buffalo, N. Y., Washington's Birthday.—A free-for-all live bird shoot was held at Daw's Park. Over a score of shooters, including Lefever, the well-known Syracuse crack, and Kelsey, of Aurora, were in attendance. The weather was very favorable for the contetst, and some of the men did excellent work. There were six money prizes. Scores: Kelsey, 47; Tolsma, Burkhardt, Sully and Oehmig, 41; Besser, Daw, Fisher, and Federlein, 40; Ball, Smith, Lefever, Bennett and Story, 37; Duley and E. S. Burkhardt, 36; Hill, 33; E. Inderbitzen, 30; Williams, Willett and Lawson, 28; Brundel, 26; Rounds, 22.

William Daw recently issued a challenge to shoot a match at 100 birds with any man in Buffalo. He had it published in the papers of Feb. 21. The next day Emil Inderbitzen called on him, and arrangements were made to shoot a match of 50 birds for $50 a side. The date of the contest has not yet been decided, but it will be held at Daw's Park within a short time.

The Audubon Club, Feb. 20, held their first regular meeting in their handsome new club rooms on Eagle street. In celebration of the event, the club's chef, W. H. Jaeger, prepared a bountiful spread. It was resolved at the meeting to hold a live bird shoot at an early date. Sides will be chosen, each man to have ten birds, and the losing side is to give a dinner to the club members at fifty cents a plate. Domestic pigeons will be used, and President Burkhardt appointed Barker Tolsma and U. E. Story as captains of the respective sides. The shoot is to be conducted under the rules of the American Association.

H. J. BALLIETT, Sec'y.

Endeavor Gun Club.

Jersey City, N. J., Feb. 22.—The Endeavor Gun Club of this city held its monthly shoot this afternoon. The attendance of members was small, but several visiting shooters were present, making the afternoon's sport an enjoyable one. The wind blew at a 40-miles-an-hour gait directly across the traps, making the shooting difficult, and good scores an impossibility. Two of the monthly prize contests were shot off by the members, after which sweepstake shooting was indulged in by all hands. Below are the scores in the club races:

A Strader	10110011101101010110110101110 —19
A E Fry	10101001111000110110001111010 0 —16
J Crevelling	01100010100111110101011111 —17
*Dr Fletcher	01111111010100001101001101111111—21
*J Polhemus	01111110100100111111001111101 1 —21

*On the shoot off at 10 targets Polhemus won by 7-6.

No. 2, same conditions:

Fry	11110110001111000001010011111 1 —18
Creveling	00110111011110111111001111 1 —20
*Fletcher	01011001001011001111101111111101—21
*Polhemus	00110110001111011111111010111 —21

*On shoot off, Fletcher at 10 and Polhemus at 9, Fletcher won by breaking 8 to Polhemus' 7. J. A. CREVELLING, Sec'y.

Rochester Gun Club.

Syracuse, N. Y., Feb. 22.—Several Syracuse shooters had arranged to go to Rochester this morning to take part in the shoot of the home club. The forbidding nature of the weather, however, put a stop to such intentions, with the result that only J. Herman and myself put in an appearance. It snowed and blew hard all day, making good scores an impossibility. The Rochester men turned out well, considering the severity of the weather. The club house, claimed to be one of the best in the country, was just what we wanted on such a day. This club house cost a few thousand dollars and is owned by a stock company of shooters. It is completely furnished, has two fireplaces, 50 lockers for members' clothes, an office, and a kitchen, where a warm meal can be gotten up at a very short notice. The club house and grounds are taken charge of by Mr. Hicks, who is always to be found on the spot when wanted. Scores made to-day are as follows, all events being at unknown angles:

No. of event:	1	2	3	4	5	6	7	8	9	10
No. of targets:	10	10	15	10	15	10	10	10	10	10
Glover	8	9	11	10	14	8	..	..	..	..
Meyers	6	5	13	8	11	..	7	8	6	..
Nichols	5	10	12	5	11	9	6	6	8	..
Stewart	8	10	11	8	10	10	9	9	9	..
Herman	..	6	9	4	12	..	..	..	..	7

A. R. K.

Woodruff Won by Four Birds.

Fanwood, N. J., Feb. 22.—Neaf Apgar, a member of the Climax Gun Club of this place, and Aaron Woodruff, of Elizabeth, N. J., shot a 100-bird race this afternoon on the grounds of the Climax Club, the stake being $250, winner to pay for the birds. The match was shot under American Association rules, 30yds rise. The birds provided for the occasion by John Benner, landlord of the Fanwood Road House, were a corking good lot of flyers. A strong wind, that blew across the traps from left to right, aided them in their flight, making flyers liberated from Nos. 4 and 5 traps extremely hard to kill within bounds when the wind was at its height. In his second string of 25 Apgar drew an unusual number of those traps, the luck of the birds being decidedly against him. Scores:

Woodruff	121222*21202120012212220 2—20
	12221001212112222222022022—21
	22202222222102222222122222—23
	00011222222121212201120 11—20—80
Apgar	22221220*2221222222*221212—23
	22201020*122010200110*122—15
	*021212022*12122222220112—20
	10012*1122120121122111012—20—78

Wm. Terry, referee; C. Smith, scorer; Nate Astfalk, trap puller.

After the above match was decided, a miss and out, $2 entrance, was shot off; re-entry was allowed in the first round. The result was as follows: Keller (re-entry) and Ross, 6 (divided); C. Smith and Scott (re-entry) 5; D. Terry (re-entry) 3; Apgar, Astfalk and Earl 2; Batsch 1; Keller, Scott and D. Terry 0.

The Cold Snap at Hot Springs.

Little Rock, Ark., Feb. 15.—Once more the inclement weather played havoc with the anticipations of the trap shooters in this section of the country. Such a protracted spell of severe weather the oldest inhabitants cannot recall. For three weeks the ground has been covered with snow and ice, during which time the thermometer has rarely got above freezing, and frequently down to zero. The Hot Springs Club had hoped to make this the most successful winter tournament ever held in this State. Their expectations would probably have been realized had it been possible to overcome the elements. As it was, two more disagreeable days than Monday and Tuesday of this week could not have been selected. The day preceding the shoot it snowed, rained and sleeted, in turn. When the time to begin the shoot had arrived, everything was covered with snow and ice; dark, lowering clouds overcast the sky, and the wind that blew from the West, brought with it an occasional snow flurry, and had a penetrating effect that would take all the snap and vim out of any one but a gun crank. Very few visiting shooters put in an appearance, as winter tournaments are new things down here, as previous to this winter scarcely any trap shooting has been done at this season of the year. It was nearly 11 o'clock before the first event was started, but after that the boys kept steadily at it until nearly dark. Some fine scores were made during the day, and the shooting of G. W. Hughes was of an exceptionally high order. While the other shooters were complaining of the poor light and the bad background, he said nothing but kept on smashing the targets. He made one run of 53 straight and another of 46. This is all the more remarkable, when one considers the fact that Mr. Hughes is 50 years old. The visitors in attendance were Tom A. Marshall, of Keithsburg, Ills.; Dr. W. F. Carver, from everywhere; W. R. Duley, and your correspondent from Little Rock. The second day the weather was the same as the previous one, only much colder and very little shooting was done. The most of the day was spent in Sumpter's gun store, swapping ghost stories, Mr. Hughes and Mr. Sumpter were untiring in their efforts to make it pleasant and agreeable for all. They were the first on the grounds, and the last to leave them, and shot in every event during the shoot. All events were known traps, unknown angles. Two moneys when less than seven entries, and three moneys when more. The following table of the scores tells the story:

FIRST DAY.

No. event:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17
No. targets:	15	15	15	20	15	15	20	15	15	15	15	15	15	20	15	15	20
Sumpter	12	14	13	13	14	10	15	13	10	15	12	12	12	16	11	9	17
Hughes	12	13	11	19	15	15	19	12	..	..	14	15	13	20	15	14	6
Duley	13	14	13	15	14	11	16	13	13	12	14	9	12	16	14	12	18
Marshall	13	15	14	19	13	14	15	13	..	12	12	12	13	19	13	13	16
Carver	12	13	14	17	13	13	18	10	..	11	13	11	8	16	13	9	13
A R Smith	..	..	..	16	10	12	15	9	9	12	11	12	12	17	12	12	..
Little	..	..	..	..	..	..	..	..	10	10	12	13	11	16	13	13	..
Cox	..	..	..	..	..	..	..	..	11	14	13	12	12	17	12	12	15
*Rix	..	..	..	..	..	..	..	..	12	11	7	9	10	13	3	..	
Dobbins	..	..	..	..	..	..	..	..	..	..	..	..	10	14	13	8	..

* Rix shot at 7 targets in event No. 16, Hughes at 13 in No. 17.

This shows that 1,955 targets were shot at during the day, 1,584 being broken. Hughes leads with the score of 213 out of 238, averaging 91 per cent; Marshall with 226 out of 260 comes second with an average of 87 per cent. Then comes the rest in the following order: Duley, 229 out of 275, average, 83 per cent.; Cox, 118 out of 145, average, 81; Sumpter, 218 out of 275, average, 79; Carver, with 204 out of 260, and Little with 98 out of 125, are tied with 78 per cent; Smith, 159 out of 210, average, 76 per cent; Rix, 74 out of 102, average, 73 per cent; Dobbins, 45 out of 65, average, 69 per cent.

SECOND DAY.

No. 1, 15 targets, $1: Duley, 14; Sumpter, 13; Marshall, 12: Cox, 12; Hughes, 11; Woodcock, 10; Dobbins, 9.

No. 2, 15 targets, $1: Hughes, 15; Woodcock, 14; Marshall, 13; Duley and Sumpter, 12; Dobbins, 11; Kittleman, 9; Wiley, 3.

No. 3, 10 live birds, $5: Dobbins, 10; Marshall, 9; Duley and Sumpter, 8; Kittleman, 7; Woodcock, 6.

No. 4, 10 targets, expert rules: Marshall, 8; Hughes, 6; Sumpter, 5; Dobbins, 4; Duley and Woodcock, 2.

Feb. 21.—The fourteenth contest for the Pulaski County medal took place this afternoon on the club grounds in North Little Rock. Although the weather was fine, and the prevailing conditions conducive to large scores, the shooting of the majority of the contestants was very ordinary, with the exception of C. A. Damon, representative of the Burgess Gun Co., who was a guest of the clubs. Mr. Damon set the pace for the boys; he made the best score in the medal contest, and broke 25 straight in the next event, making the fine run of 40 consecutive breaks. Dickinson managed to retain possession of the medal, although he only scored 41 out of 50. While Duley, who has been shooting a strong race of late, only scored 39. The attendance was rather slim, only a few of the old reliables participating. Medal contest, conditions, 50 singles, unknown angles:

Dickinson	01100111111111111110011011 1100111111111110111111111—41
Damon	01110101101101111111111 1111111010111111111111111—43
Duley	11111101111101111111100 0111111111101100011112011—39
Irwin	11010101111111111100100111 1111110111111101110101111—39

Stowell	11101101001110111101110 11—18

PAUL R LITZKE.

Nebraska Trap Notes.

Omaha, Neb., Feb. 22.—One of the most enjoyable and best attended trap shoots that has been held here in ten years was that which took place to-day between a team of nine from the Council Bluffs Gun Club, against a team of a like number from the Omaha Gun Clubs. The conditions were 15 live birds per man, 28 yards rise, 50 boundary, American Association rules, for the price of the birds. The day was as rare as the celebrated June article and over one thousand men assembled on the Bemis Park Gun Club grounds to witness the sport. Bunker D. T. Stubbs, one of the old-time trap shooters, was selected as referee and scorer. Promptly at 10.30 A. M., Dr. West, the first man, stepped to the score for Council Bluffs. They shot in pairs, each shooting his score out, and so even was the shooting that the score was a tie down to the last pair. The score:

Council Bluffs.		Omaha.	
West	021*12220101221—11	Blake	1121002002222111—11
Campbell	200012211101010— 9	Jones	2220020220022220— 9

	100		97

The Bluffs' boys were much elated over their victory, and the Nebraskans were subjected to a good deal of guying during the balance of the day. Following this main event was a miss and out race, $2 entrance, which resulted as follows, Messrs. Montmorency and G. W. Loomis, both B. and M. R. R. officials, dividing on eight birds each: Peters, 2; Smead, 1; Jones, 0; Montmorency, 8; McFarlane, 0; McMullen, 2; Dickey, 4; Dr. Wert, 7; Bingham, 0; Loomis, 8; Campbell, 6; Ackerman, 1; Hughes, 1; Townsend, 0; Stubbs, 5; Fogg, 0; Beershiem, 7; Rickman, 1; Hoffmeyer, 1; Hart, 4; Parmlee, 2; Heindrick, 0; Sheppard, 1.

In addition to these there were one or two small individual matches and a sweepstakes target shoot. Altogether the day was a red letter one for the devotees of the hammerless.

SANDY GRISWOLD.

For Cleaner Tournaments.

Mr. H. Bishop, under date of Feb. 18, writes as follows: "At last the keynote has been struck! At last the true method of purifying trap shooting has been evolved! At last an anti-gambling man has stepped forward and had his say in the person of Narragansett, whose letter appeared in Forest and Stream of Feb. 16. I have, also, for a long time, taken the position he does, but the trap shooting business has become so completely a gambling scheme, that, like Narragansett, I have thought it hopeless to say anything. The first real sign of better things came from Dr. Jackson; then came the by-law against betting and shooting for money in the Constitution of a Pennsylvania Gun and Rifle Club, recommended by Forest and Stream as a good one to copy; and now comes Narragansett, bold and fearless. Well, let's speak up, anti-gambling men, and see if we do not outnumber, "Expert, Shark, Rounder & Co." ten to one. I shoot a good many targets in a year, but only at home with an expert trap, and my family and friends for a club, I believe the majority of the customers of the manufacturers and dealers are the stay-at-homes to whom they never cater, There is also the vast army of Forest and Stream readers of whose trap shooting the paper never hears. The effort to purify trapshooting is heroic and praiseworthy, but it will never be accomplished so long as trap shooting is carried on as a gambling scheme, and in connection with some hotel or road house. There may be such a thing as a dishonest gambler, but to kick him out only leaves honest men engaged in a dishonest sport. If we are going to purify, let us purify. Speak up, some more of you."

Dunellen Gun Club.

Dunellen, N. J., Feb. 22.—The first invitation shoot of the Dunellen Gun Club was held to-day and was well attended by members of neighboring clubs, an enjoyable shoot being the result. We wish to state that at the next invitation shoot our visitors will find everything in line and up to date, as our club is now on a solid basis and will soon number 40 members. The result of to-day's events are as follows:

	No. 1.	No. 2.	No. 3.
J G Linsey	00212..3	10020—2	20 —1
T H Keller	11222..5	11100—3	
T Brantingham	21012—4	20111—4	110—2
G H Smith	02111—4	01021—3	
Geo Davis	11110—4	11011—4	0
T W Sisty	11110—4	11121—5	212—3
"Scott"	02221—4	21202—4	122—3
D Terry	12211—5	22101—4	110—2
A Brokaw		00100—1	
*Nelson		02202—3	
*F Van Nuis		20110—3	
F Creely			0 —0

*For birds only.

Nos. 1 and 2, 5 live birds, $3 entrance, 2 moneys. No. 3 was a miss and out; $1 entrance, no re-entry.

In another miss and out, similar to No. 3, with five entries, Sisty and Davis divided at the end of the first round, Linsey, Brantinghan and Creely missing their first birds. Event No. 5 was another miss and out, same terms; Davis, 2; Sisty and Brantingham, 1; Linsey, 0. Four 10 target races with about 15 entries followed; J. G. Linsey, with an allowance of three targets, was the chief winner. COMMITTEE.

Trap Shooting at Wilmington, Del.

Wilmington, Del., Feb. 20.—An interesting shoot took place this afternoon on the grounds of the Wilmington R. & G. C. It was the third of a series of three matches between team of the Wawaset and the home clubs; the honor in dispute was the State championship. The full score of the shoot is given below, each man firing at 50 blue rocks, everything known. The score shows that the Wawasets won by 3 breaks. The first match was also won by the Wawasets, but by a larger margin —116 to 110. The Wilmington Rod and Gun Club took the second after a long fight, both teams tieing on 116; the tie was shot off at 10 targets per man, the result again being a tie; as ammunition was running short, it was agreed to shoot off the tie at 5 more targets, the Wilmingtons winning by one target. The last and deciding match shot to-day gives the State championship to the Wawaset Club, and, I think, establishes its superiority over its opponent. The Wawaset Gun Club also holds the trophy donated by Shooting and Fishing for 5 men teams, 50 targets (30 singles, 5 unknown traps, one man up, and 10 pairs). We won this trophy on August 12, 1893, and have held it ever since without a contest. Score of to-day's shoot as follows:

Wawaset Gun Club.

W. E. BUCKMASTER, Sec'y W. G. C.

Memphis' Winter Tournament.

Little Rock, Ark., Feb. 23.—The winter tournament of the Memphis Gun Club, which was held yesterday and to-day, was the most successful winter shoot that has been held in the South in recent years. The club had been contemplating moving to East End Park, which was deemed more accessible. Previous to this shoot the electric cars did not run through to Billings Park, where the club's shooting grounds are located, but arraugements have now been made by which all cars will run to the park whenever the club has a shoot. As a long lease has been secured on the park, this will remain the club's permanent shooting grounds. It was here that the club held its first tournament last summer, the success of which brought it so prominently before the shooting fraternity that, although the club was organized less than a year ago, it now ranks among the first organizations of its kind in the country. This speaks volumes for the pluck and enterprize of its officers and members. At their big annual shoot next June, the club proposes to give away $500, to be divided equally among all the amateurs who shoot in all programme events during the entire tournament, regardless of what their average is. Manufacturers' agents and members of the Memphis Gun Club are not eligible to any part of this money.

Owing to the fact that considerable time was consumed before satisfactory arrangements were made in regard to grounds, the programme for the winter tournament could not be gotten out as soon as they should have been to allow visiting shooters to make preparations for such a trip, otherwise the attendance would have been much larger. Nevertheless, the tournament was, as stated above, a success, and the attendance exceeded the expectations of its projectors. It was originally intended to be only a one-day shoot, but as the attendance was large, and the prospects for fine weather on Saturday were very promising, the officers finally yielded to the entreaties of the participants and continued the shoot a day longer. Friday, the opening day of the shoot, did not dawn very promising. When our party arrived in Memphis at 6.30 A. M., it was raining hard, and the indications were not very flattering for an early

cessation. It is always the unexpected that is happening, and by 9.30 it had ceased raining; at noon the clouds had all disappeared and the sun was shining brightly, making it an ideal day for target shooting, and one that should have been productive of big scores. Saturday was another perfect day for shooting. The following visitors were present: Paul North, Cleveland, O.; Thomas Callender, representing the Troisdorf Powder, Nashville, Tenn.; J. B. Duncan, Lucy, Tenn.; John W. Dickinson, Jr., W. R. Duley, C. A. Damon, of the Burgess Gun Co., and your correspondent came over from Little Rock, Ark. It was 11 o'clock before the first event was started, though very little time was lost from then until dark, and 3,745 targets were thrown during the day. The shooting, taking the favorable weather in consideration, was the poorest I have ever witnessed, where so many good shots were entered. A. B. Duncan, a member of the club, won the $5 for the best average in all programme events, with an average of 77 3-5; W. R. Duley won the $3 for the second best average on 75 1-5, while Damon captured the $2 for the third average, scoring 72 4-5. Only two straight scores were made during the day, and they were in 10 bird races. Duley made the first one in the 8th event, and Paul North's proposition that three cheers be given for Duley was heartily responded to. Damon was the other fortunate individual, making a straight in the 10th event. The best score of the first day was Dickinson's 19 out of 20 in the last event. A man who could have shot 85 per cent. on the first day would have won lots of money at this shoot. In the 7th event, a 15 bird race with 36 entries, Duley won first on 13 all alone; Divine being the only one to score 12, took second money. The attendance on the second day was not so large as on the first, but the shooting was somewhat better. On this day, Frank Poston made the only straight score of 15 that was made during the tournament. Neither Divine nor Bennett shot up to their usual form, but this is accounted for to a certain extent by the fact that they acted as hosts, and also assisted Messrs. Poston and Schmidt in conducting the shoot.

The first day's programme consisted of ten events. Five 10 bird events, $1 entrance, and five 15 bird events, $1.50 entrance, $5 added to each, and $10 for average money, four moneys in each event, 40, 30, 20 and 10. The second day there was no added or average money, and but three moneys, 50, 30 and 20, three cents were charged for targets on the first day, and two cents on the second day. All events were known traps and unknown angles. Empire targets and North's electric pull and expert traps were used. Scores:

PAUL R. LITZKE.

In the Same Strain.

Mountville, Pa., Feb. 16.—Editor Forest and Stream: I have read with much interest the efforts to break up the dropper, and the proceedings of the meeting lately held in your city. I hope the result will be that every honest shooter will shun a dropper; his game is only one of theft, and is the cause of weakening many of our young gun clubs. I could cite several very promising clubs that held one or two tournaments; they soon saw the game of the dropper and one by one grew tired of the sport, and withdrew their membership without stating their reasons; sometimes this happened after club houses had been built. Others will tell you, "Why, I had better put my hand in my pocket and hand the club $10 or $15, than attend our tournament and distribute it among a few of those droppers. Many of these gentlemen who have left local clubs now have their own traps and shoot among themselves, and for the shells and targets. But they would gladly attend a tournament and mingle with genial artists of the gun if it were not for the droppers. Mr. Gosser, of your city, a member of our Mountville Club, was elected as a delegate to attend the meeting at the Astor House and assist in your effort to do something to brand this element. I am very sorry to admit that there are some of our best and noblest fellows, who would not take a nickel from anyone dishonestly, let alone a brother sportsmen. I believe these gentlemen will see their error and quit the game, as it has not been looked upon as being dishonest We have many pleasant little shoots here, friendly ones, and find they are becoming very popular. TELL.

Duane Won the Gould Cup.

The contest for the Gould Cup at the Country Club, Westchester, N. Y., on Feb. 22, brought out 17 entries, amongst the number being, Messrs. Seaver Page, H. A. "Butler," W. S. Edey, E. C. Potter, N. C. Reynal, Chauncey Floyd-Jones, Arthur Duane, George Gould (the donor), W. H. Sands, etc. The contest called for 10 birds, ties miss and out, handicap rise, 40 yards boundary, allowance of one miss as a kill to 27 yards men and under. Arthur Duane, after a tight finish with W. H. Sands, won the cup with the good total of 14 straight on

fast birds. Seaver Page, on the 30 yards mark, killed his 10 straight, but dropped the first of his tie birds. Score:

A Duane, 28	11111111111111—14	De F Marnie, 27	0101111— 5

Maplewood Gun Club.

Maplewood, N. J., Feb. 22.—The shoot of the Maplewood Gun Club to-day was an entire success. Manager Van Iderstine had the traps in capital order, and as a number of shooters from neighboring clubs put in an appearance, about 11 o'clock, some 2,000 targets were thrown between that hour and sundown. The scores are good, as the shooting was very difficult. Below are the scores in tabulated form:

No. of Targets:	10	10	15	10	10	15	10	15	15	10	10	10	10	10
Van Dyke	10	10	11	9	7	15	10	13	14	8	10	9	8	10

Reeves, 10	0010100101110101001001010—11

The above scores were made to-day at the regular monthly contest for the silver cup. W. N. DRAKE.

Rye Gun Club.

Rye, New York, Feb. 22.—A large number of shooters attended the club's Wsahington's Birthday shoot to-day, twenty-five participating in the several events. Prominent among them were W. R. Hobart, of the Winchester Repeating Arms Company, Messrs. Blakeslee, Wilson, Sanford and Gerard, of the Bridgeport Gun Club; Hendrie, Woodruff and Burdette, of Stamford. The Cos Cob Club members were "all there," and with a party of their friends, who came to see their boys defeat the Rye Club and carry the load of game back home with them. The numerous misses of the Rye Club can be particularly accounted for as the majority of the birds were hit, but with the strong wind managed to easily drop out of bounds. The results of this match gives the Cos Cob Club the glory, but arrangements have been made to shoot another series of matches during the coming club shoots. Our boys will work hard to win. Scores of the day's shoots:.

Live bird shooting was as follows: No. 1, 3 live birds; Wilson, Kalb, Woodruff and Ingersoll, 3; Hobart, Sanford and Cummings, 2; Hendrie and Muller, 1; Blakeslee, 0. The next event was a team race, 9 men to a team, 5 birds per man, between the Rye and Cos Cob Gun Clubs. The Cos Cob men won easily by 9 birds. Scores: Cos Cob. Woodruff, 5; Raymond, 5; Wood, 4; Martin, 4; Burdette, 4; Peck, 2: Lockwood, 2; Ingersoll, 2; Cummings, 2; total, 30. Rye, Budd, 5; Bulkley, 3; Gedney, 3; Raymond, 2; Doyle, 2; Moller, 2; Ferguson, 2; Graham, 2; Lyon, 0; total, 21. W. R. Hobart was referee, P. G. Sanford, scorer. E. J. POPE, Secretary.

The Emeralds' Monthly Shoot.

Dexter Park, L. I., Feb. 19.—In perfect weather, the Emerald Gun Club brought off its regular monthly shoot this afternoon. As usual, the members turned out in large numbers, no less than 30 shooting their string of 10 in the club race. Gus Greiff and E. Bell were the only ones to make clean scores; eight men scored 9, and six were credited with 8, while eight more retired with totals of seven. This was the last live bird shoot of the Emeralds' year, the badge for the season of 1894-95 being given to F. W. Place, for the highest average. The next club shoot starts a new series. Scores:

Ellicott City Gun Club.

Ellicott City, M. D., Feb. 22.—The Ellicott City Gun Club had made preparations for many more of the fraternity than the meager few who braved the windy and extremely cold weather, and who shot until the last cartridge was gone. H. Kelso, chief of the gun department of Carlin & Fulton, was the only Baltimorean present; T. Cole, Jr., of Harmans, came up to shoot and invited everybody to attend the tournament on the Harman Gun Club's grounds. The following scores speak better for the courage of the shooters than any ability with the shotgun.

No. 1, 15 targets, everything known, Talbott, 10; Kirby, 10; Wilson, 10; Hardinge, 9; Ford, 8; Talbott, Jr., 6; Haggs, 7: Hillsinger, 4; Cole, 9; Groves, 5:; Jones 8; Kelso, 9.

No. 2, same as No. 1: Ford, 12; Talbott, 12; Kirby, 11; Kelso, 10; Cole, 10; Wilson, 9; Hardinge, 8; Jones, 8; Hillsinger, 8; Groves, 7.

No. 3, same over again, and so on for eight other similiar events. One or two one-hand races and exhibitions of "field shooting," W. Wagner's patent. The scores were near enough to above to make their repetition unnecessary. Two "Clover" traps were at work to-day and gave excellent results.

SAM'L J. FORT, M. D.

Altoona Rod and Gun Club.

Altoona, Pa., Feb. 22.—The following scores were made by the members of the Altoona Rod and Gun Club to-day. No. 1

was a 15 bird race, $5 entrance, birds extra, handicap rise. Scores:

Clark, 33	0102111121111201—12	B'kwal'r27	011020111102212—11
Sands, 30	2101201222112O2—12	"Adams"	3020020012222l202—10
Killits, 28	2111012100021 21—12	"Clover"29	2102202102222O0—10
Bell, 28	2111110212002 22—12	Doerr, 23	1121101220001 10—10
Clark, 21	1021012211112 10—12	Parker, 27	1220200021110O2— 9
Kottm'n, 28	1101200212202 12—11	Carlin, 21	1021000010101 10— 7

No. 2, miss and out, $3 entrance: Clark, 3; "Clover," 2 Killets, "Adams" and Sands, 1; Bell, 0.

No. 3, 5 birds, $3, three high guns: Clark, Killits and Sands, 4; "Adams," Kottman, "Clover" and Bender, 3.

R. S. Clark, commonly called "Beesey," and Parker shot a 5 bird race, "Beesey" beating the Englishman by the score of 4-3. Clark and "Adams" also shot a race at 10 birds, the score being a tie with 9 each; on the shoot off at 5 birds, Clark won by 4 to 3.

Two target events at 10 targets, $1 entrance, targets extra, were decided as follows: No. 1, "Adams," 8; Bender, "Clover," Killits and Bookwalter, 7; Sands, 5; Kotty, Parker, Fay and Rohrer, 4; Bell, 3; House, 1. No. 2, "Adams," 8; Fay, "Clover" and Bell, 7; Sands and Bender, 6; Rohrer, 5; House, 1.

GRANT.

The Elizabeth Bi-Monthly Shoot.

Wednesday, Feb. 27, was the opening day of the Elizabeth Gun Club's bi-monthly two days tournament. The weather was delightful in every respect, save that the wind during the afternoon played all sorts of tricks with the Empire targets, especially when they were thrown right up to windward. On such occasions the "dippers" and "towerers," wrought havoc with the scores. The shoot itself was well conducted, and it is a matter for regret that more shooters were not in attendance to enjoy the sport and encourage the management. Everything was done to make those present feel at home, and the business department certainly gave them all the shooting they wanted. As it was, 2,000 targets, less 50, were thrown, although shooting was over by 4.15 P. M. The Elizabeth Gun Club also deserves a word of praise for the attention it pays to the accomodation of its guests in the commissary department.

From the scores given below it will be seen that 20 shooters took part in the different events of the day. Among those present were: F. Van Dyke, W. R. Hobart, Major R. Heber Breintnall, Lemuel Thomas, John Hoffman, Leutbuesser and Reibold, of Newark, N. J.; T. H. Keller, "Dutchy" Smith, D. Darby and Scott Terry, of Plainfield, all members of the Climax Club; Al Heritage, of Marion; "Billy" Drake, of Maplewood; and W. M. Parker, Roberts, "Lever," C. Hebbard and Aaron Woodruff, of the home club. President Robt. E. Chetwood and H. Davey looked after the cashier's department and (secretaries! read this!) manifolded the scores and handed them to the newspaper men with every detail plainly marked on them. This fact, so little thought of by most secretaries, means an awful lot to the overworked editor of a trap department!

F. Van Dyke, as his name implies, of course led in the averages. He shot consistently well all through the day. "Uncle Al," as the boys term Heritage, was in great form, as also was Major Breintnall. Charles C. Hebbard was present for business, not for pleasure. Mr. Hebbard is one of the chief spirits of the Empire Target Company; this company has just gotten out a new trap, a specimen of which he had along with him. This trap differs from the one now in use in many particulars, but most noticeably in the absence of the heavy round base and in its self-locking catch. The ease, also, with which the angles can be changed, a great desideratum when unknown angles are being thrown, is worthy of special note. The trap was placed in position as No 2, and threw targets all day, thus giving an object lesson of its real value. Hobart's scores show plainly that something was radically wrong on this day. On inquiry, it turned out that some alterations had been made to his gun; that the change was not beneficial is apparent. "Dutchy" Smith, of course, was to the front with some good scores; the difference between his chest measurements after event No. 5 and after events, Nos. 6, 7 and 8, was astonishing, yet not unusual. The balance of the story is given by the following table:

No. of Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
No. of targets:	10	10	15	10	20	15	20	25	20	10	10	10	10	10	10	10
Van Dyke	8	9	14	9	19	12	19	21	10	8	10	8	10	8	10	..

Roberts	6	..	10	..	18	9	11	..	18	9	9	7	5	..	..	8
Lever	..	..	12	..	..	..	..	..	..	..	9	5	8	..	8	..
Hebbard	..	..	13	..	..	..	..	..	..	..	..	..	..	..	..	..
Keller	..	..	..	6	14	11	14	21	17	8	..	..	..	9	10	..
"Dutchy"	..	..	..	10	13	14	18	22	18	9	..	..	..	9	9	9
Leutheusser	..	..	..	..	..	..	..	16	17	4	..	..	..	6	8	8
Reibold	..	..	..	..	..	..	..	15	14	4	..	..	..	7	9	6
Darby	..	..	..	..	..	..	..	..	13	7	..	..	..	4	..	..
Woodruff	..	..	..	..	..	..	..	..	..	..	8	5	..	..	..	..
Anthes	..	..	..	..	..	..	..	..	..	..	..	..	..	3	0	..
Scott	..	..	..	..	..	..	..	..	..	..	..	..	..	..	7	..

No. 1, 3, 5, 8 and 11 were at known traps and angles; Nos. 2, 4, 7, 9, 13, 14, 15 and 16 were at known traps and unknown angles; No. 6 was shot under expert rules, use of both barrels; Nos. 10 and 12 were shot at known traps and angles in reversed order. Events 1 to 10 were at a uniform entrance of 10 cents per target; 11 to 16, 5 cents per target.

SECOND DAY.

Feb. 28—To-day being live-bird day there was a much better attendance of both shooters and spectators than there was yesterday. The chief misfortune was the failure of some crates of pigeons to arrive before the club's supply was exhausted. This necessitated an early stoppage of affairs and the winding up of a 25-bird race at the close of the 16th round. The first event was a 7-bird race, $5, birds included. This had five entries and resulted as follows: Capt. Money, Ivins and E. M. Cooper 7, Woodruff 6, Allen Willey 4. The scores in the other events are given below. No. 2 was a 10-bird race, $5, birds included; No. 3, 25 birds, $10, birds included. Scores:

No. 2.

Capt. Money	1222121211—10	"Jersey"	2122111*01— 8
A Willey	2122220222—10	A Woodruff	1*10222211— 8

RAVELRIGG.

Grand American Handicap.

The Interstate Association has forwarded a copy of its programme for the Grand American Handicap week at Willard Park, Paterson, N. J., April 3-5. The Association starts out with the following introduction:

"In presenting this programme of the third annual Grand American Handicap, we would respectfully call the attention of all lovers of live bird shooting to the growing popularity of this event. From its inception three years since it has rapidly grown in favor, until to-day it is justly recognized as the leading bird event of America. It will, no doubt, eventually attract shooters from abroad, as the monetary returns to winners are increasing with each handicap; last year they exceeded the anticipations of the most sanguine—first money amounting to $667.50; second money, $400.50, and third money, $267.00. The officials of the Interstate Association noting the requirements for this year's handicap, deemed it advisable to procure grounds located within a short distance of New York city, easy of access, and large enough to permit the use of two sets of traps. Such grounds were secured in Willard Park, Paterson, N. J. This busy city, the "Lyons of America," is beautifully situated on the Passaic River, about 30 minutes ride by steam railway from New York. The association at its annual meeting held in December, recognizing the necessity of having a handicap committee, thoroughly posted as to the respective merits, and in touch with the shooters of America, appointed Messrs. Jacob Pentz and John S. Hoey to that responsible position. The reputation and sterling integrity of the gentlemen named is of such a high character as will command the respect and confidence of the trap shooting fraternity throughout the country. This year's handicap will be conducted on the same equitable lines as has characterized our previous tournaments. Each shooter taking part will be the recipient of every attention and just consideration, consistent with the fairness that has always been a feature of the Interstate Association's events. May the best men win."

This is followed by a large amount of useful information under the head of "Announcement." It will be noted that "droppers" will be dealt with in a proper manner.

"Any shooter who intentionally misses a bird in order to obtain a certain place, shall forfeit all his interest in the purse, and will be debarred from taking part in any tournament given under the auspices of the Interstate Association. The Interstate Association's rules (Hurlingham rule revised) will govern all points not otherwise provided for. No guns larger than 12 gauge allowed. Weight of guns limited to 8 pounds. The Grand American Handicap will not be class shooting, and the three highest scores will divide the purse 50 per cent. to first, 30 per cent. to second, and 20 per cent. to third. All ties must be shot off at the regular handicap distances, at rounds of ten (10) birds, until only three high guns remain in. Messrs. Jacob Pentz and John S. Hoey have been appointed a handicapping committee, and they will handicap all contestants from 25 to 33 yards. 'A dead heat between three or four contestants is a veteran handicapper's delight.' This will be the aim of Messrs. Pentz and Hoey. They will endeavor to ascertain the correct shooting form of all contestants, each entry will be carefully considered, and every shooter will be placed at a mark where he will have a chance to win. In order to place all contestants on equal footing, handicaps will not be announced until the evening of April 2. Mr. Jacob Pentz will referee the Grand American Handicap.

"During the progress of the Grand American Handicap, sweepstakes will be shot on an extra set of traps in accordance with the programme. All contestants in the Grand American Handicap will shoot their score from the same set of traps. In case the Grand American Handicap entries are so numerous that it cannot be finished in good light on April 4, the referee shall stop the shooting at any time he may deem necessary. In this case the shooting of the Grand American Handicap will commence at 11.00 o'clock, sharp, Friday, April 5. Positively no entry will be taken after the second round. In order to expedite the shooting of the Grand American Handicap, a contestant missing three (3) birds shall drop out with the privilege of re-entering in case he has a chance to win. Contestants in the Grand American Handicap will pay for the number of birds they shoot at; shooters calling "no bird," on birds slow to start will be charged for same, providing they prove good flyers. Arrangements have been made to provide the very best of birds for all three day's shooting, and they will be trapped at the rate of 25 cents each. The Interstate Association reserves the right to refuse any entry which they may deem as proper.

"Headquarters for sportsmen during the tournament, will be the Astor House, Broadway, Barclay and Vesey streets, New York city. To reach Willard Park, take the Erie railroad from the foot of Chambers and Twenty-third streets, New York, to Paterson, N. J. Or take the New York, Susquehanna and Western railroad (Pennsylvania line), from foot of Desbrosses and Cortlandt streets, New York, to Paterson City, N. J. On arrival in Paterson, take the Central Electric street car line at Park avenue and Straight street (one block from either depot), direct to Willard Park in ten minutes. Arrangements have been made for a special car on Electric line to run from the depot in Paterson, direct to Willard Park without stop. Due notice will be given as to what train the special car will meet. It will take about 50 minutes to go from the Astor House, New York City, to Willard Park. In order to keep out that undesirable element so frequently in attendance at large tournaments, admittance to the grounds will be by card of admission, which can be obtained free of charge by applying to the secretary-treasurer, the manager, or any of the subscribers to the Interstate Association. Address communications and make entries to New York office, J. A. H. Dressel, sec'y-treas., 313 Broadway, New York City."

The conditions governing the Grand American Handicap are as follows: 25 live birds, handicaps ranging from 25 to 33 yards, 50 yards boundary with a dead line at the 33 yard mark. The three highest scores to take the purse. Entrance money $25, $1,000 guaranteed by the Interstate Association, and all surplus added. Regular entries must be made on or before March 30, 1895, and must be accompanied by $10 forfeit. The remaining $15, may be paid up to the last shot of the second round. Penalty entries may be made after March 30, and up to the last shot of the second round, by paying $35. Entries will be received at the New York office.

The programme contains the following sweepstakes: First day, April 3: No. 1, Willard Park Introductory, 7 birds, $7, birds included, 28 yards rise, class shooting, three moneys. No. 2, Passaic Falls Sweepstakes, 7 birds, $5, birds extra, 28 yards, three high guns. No. 3, Nitro Powder Handicap, 15 birds, $15, birds included, handicaps 25 to 33 yards, class shooting, four moneys. No. 4, Sportsmen's Handicap, 7 birds, $5, birds extra, handicaps 25 to 35 yards, three high guns. (A note adds that "this programme will be shot at two sets of traps, and if finished in good time, miss and out events will be shot the remainder of the day at uniform entrance of $2, birds extra.")

The second day of course commences as above, with the Grand American Handicap, promptly at 10. Two events will be shot on the side traps as follows: No. 1, Highland Sweepstakes, 7 birds, $7, birds included, 28 yards rise, class shooting, three moneys. No. 2, Kittatinny Sweepstakes, 7 birds, $5, birds extra, 28 yards rise, three high guns.

The third day will probably see the conclusion of the Grand American Handicap; if left over from the second day this event will be continued at 11 o'clock sharp. Other events scheduled are: No. 1, Paterson Scramble, 7 birds, $7, birds included, 28 yards rise, class shooting, three moneys. No. 2, Champion Sweepstakes, 7 birds $5, birds extra, 28 yards rise, three high guns. No. 3, Consolation Handicap, 10 birds, $10, birds included, handicaps 25 to 33 yards, class shooting, four moneys. No. 4, Auld Lang Syne Handicap, 7 birds, $5, birds extra, handicaps 25 to 33 yards, three high guns. A note is added to the effect that, "in order to keep the programme running properly, extra events and miss and outs will be introduced whenever they are deemed necessary."

The above gives the programme in detail. A perusal of the same discloses the fact that Manager Shaner has, to use a slang phrase, spread himself in his efforts to produce something attractive. Any shooter who attends the big tournament at Willard Park on April 3, 4 and 5, is sure of receiving fair treatment and plenty of shooting. This year's Grand American Handicap promises to be the biggest live bird event ever held in this country. It should be remembered that the Interstate Association absolutely guarantees that the three high guns shall receive cash prizes amounting in all to not less than $1,000; in addition, all surplus will be added.

Pigeon Shooters Arrested.

Baltimore, Md., Feb. 22.—To-day was a gala day around Baltimore, and no less than three trap tournaments were held on the outskirts of the city, all of which were largely attended. The boys are not likely to forget their experience at one of the tournaments in a hurry. A live bird shoot was billed to take place at Christian Hesse's, near Highlandtown, and about fifty shooters gathered to enjoy the sport. The crack of the guns had only been heard about twenty times, when Chief-of-the Police Hosstetter, Constable Creamer, Deputy Sheriff Gorman and Officer Miller swooped down on the whole outfit. The chief produced a letter signed by State Attorney Dunan calling on him to arrest everyone found shooting live birds under the Cruelty to Animals Act. The way the crowd scattered was a caution. One sportsman who walks with a cork leg, left the van, and now holds the world's record for 500 yards over ploughed field; another, a tall lanky chap headed for Chicago should you see him out in your parts, please turn him around and start him back home. He answers to the name of "Mac." Four of the gunners were arrested and taken before Justice Hevern, who, by the way, is an ardent sportsman, and was just on the eve of going out to take a few shots at the birds himself. The prisoners, at the advice of their friends, had the case postponed until Friday next, each one furnishing $20 security. All the gunners boarded the cars after the hearing and adjourned to Point Breeze, where there was a target tournament in progress. The targets were kept flying until dark and some excellent scores were made.

If promises go for anything, Baltimore will shortly be the Monte Carlo for trap shooters. A leading manufacturing firm has offered to give 100,000 targets and to hang up $1,000 as the principal prize. This to be an annual event. Such an event as that, together with the hospitality shown every one that visits this town, will insure the presence of nearly all the star shots of the country.

WM. L. STILES.

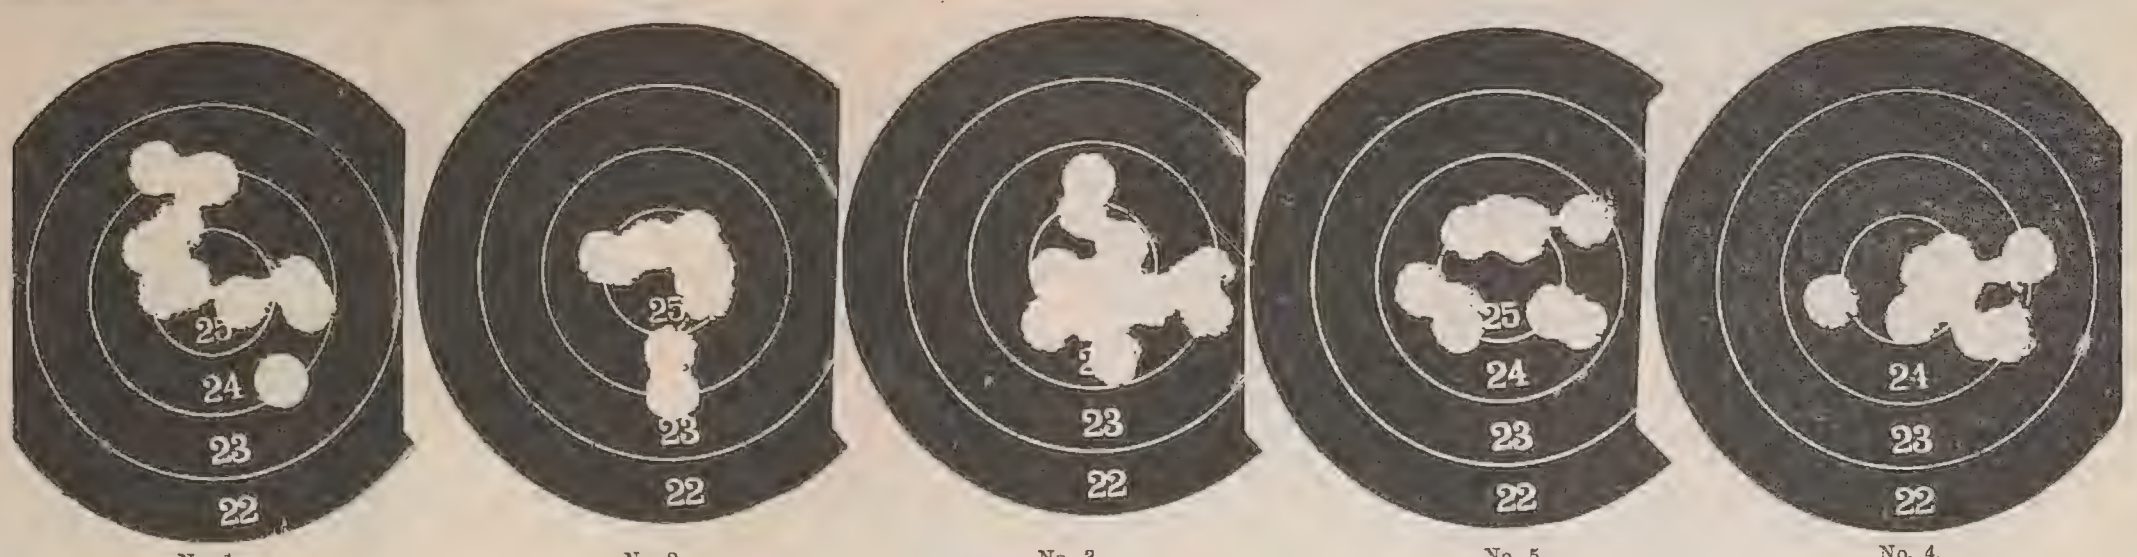
Rifle Range and Gallery.

Missouri Rifle and Pistol Club.

St. Louis, March 1.—The following scores were made by the Missouri Rifle and Pistol Club at its regular weekly gallery shoot held yesterday: H. Kephart 233, R. W. Staley 232, G. T. Dunn 22[illegible], Col. R. Buchanan 226, A Gfeller 225, W. P. Schaaf 225, J. H. Kra[illegible] 221, G. F. Knapp 218, C. B. Smith 214, E. Kaiser 210, T. Nelson 20[illegible], W. Zink 209, V. Lingenbrink 203, W. E. Wolcott 201.

The club is now looking for a suitable site upon which to erect a club house and range. Progress will be reported later.

HORACE KEPHART, Secretary.



Derryfield Rifle Club.

Manchester, N. H.—A new rifle club has recently been formed in this city and christened the "Derryfield Rifle Club." It has Dr. I. S. Adams for president, already a long list of members, the promise of scores of applicants in the near future, and accordingly has bright prospects of success as the source of much pleasure for those who see fit to profit by its advantages. There is plenty of room and abundant material for just such a club; hence the promising outlook. Arrangements are being made to secure one of the best ranges in the country, and also to fit up a place for inside practice will be an early move

PAYSON.

From the Pacific Slope.

San Francisco, Cal., Feb. 24.—The various schutzen clubs held their usual bull's-eye shoots at Shell Mound to-day. A. Mocke was the lucky man, getting the best bull's-eye in both the Germania Club and the Schutzen Verein. Some good shooting was done in the Columbia Club contests, notably the pistol score of

No. 1. No. 2 No. 3. No. 5. No. 4.

ROSENBAUM'S SCORE.

E. Gorman, who is a beginner. The military target was the center of effort by most of the Columbians present.

Scores:

Target rifle, Kuhnle medal: F. O. Young 90, Dr. Rodgers 87.

Military Rifle, 8-inch bull's-eye, old Creedmoor target, Glindermann medal: A. H. Pape 47, H. R. Brown 47, Col. Kellogg 46, F. O. Young 45.

Rest shooting, Young medal: Lieut. Davis 96.

Pistol, Blanding medal, open to all comers: J. E. Gorman 95, C M. Davis 94, F. O. Young 91, Ed. Hovey 89, Dr. Rodgers 87, Col. Kellogg 87, D. W. McLaughlin 85.

22 calibre rifle for ladies, 50 yards, Rodgers medal; Mrs. Nichols, 93. 96.

Next Sunday Capt. Siebe, the proprietor of Shell Mound Range, will formally open the park for the season.

There will be music and dancing. Cash prizes will be given for rifle shooting ($207 divided into 20 prizes) and bowling ($100).

ROEEL

Cincinnati Riflemen.

Cinciunati, O., Feb. 24.—The following scores were made by members of the Cincinnati Rifle Asssciation to-day at their range, Four-Mile House, Reading Road, under the following conditions. 200yds. off-hand (strictly) at the Standard target:

Gindele	8	9	7	6	6	7	9	7	6	10—76
	7	8	10	9	9	6	4	7	7	9—86
Louis	7	8	10	9	9	6	4	7	7	6 75

Rosenbaum's Good Average.

New York, Feb. 7.—The five targets which accompany this note were recently shot by Mr. Wm. Rosenbaum, otherwise known as Buff, of the Empire Rifle Club. The scores are as follows: 246, 246, 246, 248, 249—1,235, and have an average of 247 for 10 shots, which equals Mr. Dorrler's famous score of 1,235, made sometime ago. These scores Mr. Rosenbaum shot in a match with Mr. Bayer, of the Empire. After finishing this match, he started off on a 100-shot race with Mr. Baldwin, also belonging to the Empire. Mr. Rosenbaum allowed him 7 points on each target. Winding up with a 248, Rosenbaum managed to average 246 1-2, which certainly deserves credit, and which also proves that he knows a thing or two about gallery shooting.

EMPIRE RIFLE CLUB.

Pistols That Had Seen Service.

Mr. Walter Winan's, writing from Lightwater Grange, near Bayshot, Surrey, England, gives the following interesting account of a pair of old duelling pistols that had seen service: "On August 20 of last year a friend found an old pair of G. Manton muzzle-loading duelling pistols, which had belonged to his uncle and which had been in at least three duels. He had them left him about the year 1840, just after they had been used in a duel in Egypt, his uncle having shot his man in the shoulder. These pistols had not been fired since. We thought it would be interesting to try how they shot.

The old pistol case contained bullets (the surface of the bullets was mildewy with age), caps, etc., but the powder flask was empty. My friend has an old Joe Manton shot-gun of the same age, and in its case was some powder, so we emptied it into the pistol flask. The patches for the balls were about an inch in diameter, of thin greased linen. I thought the bullets ought to be wrapped in them, but when this was done they would not go into the bore, so we put the patch flat over the muzzle and pressed the bullet down onto the powder. The charge the flask measured out was very small, I should say 5 grains, the powder was very fine grain, and had rather a peculiar smell when fired, the bullets, which appeared about 48 calibre (anyhow larger than a 45 revolver bullet), were round and had to be hammered down till they were flush with the muzzle (with a hammer on the loading rod), after they were so far they pushed down easily. There was a hair trigger, but we thought, after over fifty years without use, it would be unsafe, so we shot with the ordinary pull which seemed about 3 lbs. We shot at the 50 yards Standard American pistol target (reduced for 20 yards pistol practice), but shot at only 12 yards, that being the duelling distance of these old weapons. The pistols had a lot of very shallow grooves, they were practically smooth bores, the grooves were so shallow. We had no hang-fires, but a few of the caps needed a second blow before they went off, as we did not get some of them quite down enough on the nipple at first. I think we are the only shooters now living who have shot powder and caps and bullets 50 years old out of a pistol still older. Yours truly,

WALTER WINANS.

Walnut Hill Scores.

The Massachusetts Rifle Association held an all-day rifle and pistol shoot on Friday, Feb. 22, to commemorate the birthday of the Father of his Country. A large number of riflemen were in attendance, as well as a big delegation of militiamen who were on hand to qualify for 1895. The shooting conditions were decidedly unfavorable for high scores, the weather being quite cold, with a strong "9 to 11 o'clock" wind blowing. Humphrey's 92 was a brilliant effort. The special prizes for rest, off-hand, military and pistol matches, caused lively competition. Below are the scores made at 200 yards, standard American target:

Rest Match—*J. French, 112.

Off-hand Match—J. T. Humphrey, 92.

Military Match—W. J. DeLoriea, 46.

Pistol Match (50 yards)—H. S. Herris, 96.

All Comers' Rest Match—*J. French, 109; *H. W. Greene, 106; B. E. Hunter, 104; C. A. Browne, 103; A. W. Hill, 102.

* Telescope sight.

Medal Off-hand Match—H. E. Tuck, 88; J. Busfield, 82; G. S. Sampson, 79; F. H. Wheeler, 78; A. W. Hill, 75; S. D. Martin, 69; J. B. Hobbs, 67.

All Comers' Off-hand Match—J. Hadley, 86; W. Chanler, 85; C. A. Coombs, 80; A. Law, 77; J. B. Hobbs, 73; C. A. Browne, 71; B. E. Hunter, 69; S. D. Martin, 67.

Merchandise Off-hand Match—S. T. Parks, 78; M. A. James, 77; B. E. Hunter, 74; G. S. Sampson, 72.

Merchandise Military Match—W. J. DeLoriea, 72; M. T. Day, 70; C. E. Mason, 67.

All Comers' Military Match—G. R. Russell, 45; G. R. Russell, 45; W. T. Abbott, 44; C. H. Parker, 40; A. W. Hill, 39.

Medal Military Match—W. C. Gannon, 45; W. C. Gannon, 44; A. W. Hill, 44; J. B. Barter, 40.

All Comers' Pistol Match (50 yards)—H. S. Harris, 93; C. E. Davis, 91; M. T. Day, 87; A. W. Hill, 85.

Merchandise Pistol Match—J. B. Fellows, 93; C. E. Davis, 93; M. T. Day, 90; A. W. Hill, 89; S. D' Martin, 87; B. E. Hunter, 86.

Canoeing.

In Fly Time.

(Concluded from page 180.)

Of the portage I will say little. We made three dreadful trips, finally dragging the canoe on a piece of a ladder. The carry took all day, and in fact more, for we left the canoe three quarters through, and passed a very comfortable night on the unattractive shores of Mud Pond.

Paddling across to the dam, a quick run down Chamberlain Stream brought us to Chamberlain Lake. We had a rough trip across to the farm, arriving in time to escape a heavy shower. The proprietor met us cordially and gave us a fine dinner of baked beans fresh biscuits and strawberries. One of the men showed us two mounds of earth, the unmarked graves of lumbermen. "They died of heavy colds," he said; "we could do nothing for them." This, coupled with his remark that a man might as well break his neck as his leg in this region, opened our eyes to the fact that it would go hard with us, should an accident happen to either.

Pushing on a couple of miles to the dam and lock, we made two short carries, and running some quick water, came to Eagle Lake. This was our favorite lake. Irregular and containing two large islands, it lies hemmed in by mountains, some of them reaching above the clouds. On a pretty point short of Pillsbury's Island we made camp. After supper, we lit our pipes, and, dosing up, braved the midges awhile, watching a pair of does feeding along the shore two hundred yards away.

Near the mouth of Thoroughfare Brook, we came suddenly on to a cow-moose, standing in mid-stream. For an instant only she watched us, then breaking into a swinging trot, cleared the water and crashed away. Steve, with his ever-ready camera, got an excellent landscape. The moose, however, for he is there, is so minute that we do not call this a moose picture.

While ashore that noon, the mainspring of my watch broke. Thus we were without the time of day. An involuntary plunge, while attempting to pole through the first falls on the Caucomgomoc, had killed Steve's. We felt the loss sorely, especially in regulating our speed and getting away in the morning.

The afternoon was well along when we passed between two sandy points at the foot of Churchill Lake and entered the head waters of the Allagash River. The current was strong; the shores low and marshy. Soon the dull rumbling of Chase's carry came to our ears. No need to consult the guide-book. We knew the page by heart, especially the lines "to be attempted when the river is neither very high nor very low, and then only by experienced canoeists." Well, the river was very high, and our handling of the canoe thus far not especially brilliant. But I will say that what we lacked in skill we made up in nerve. Taking off our coats and rubber boots and making everything fast, we set out to do or die, Steve holding the stern paddle.

On the right is an old lock. Here the water runs deep, in the shade of overhanging trees. Choosing this to a broad shallow stretch on the left, I gave the word, and down we shot, past a few scattering rocks, the current drawing us out toward the middle where the water ran deep and yellow. Time and again there seemed no escape for us, so choked was the stream with ledges and boulders. We would clean one by a hair, only to grate heavily from another. Standing up in the bow and warding off with a heavy maple paddle, I called the course to Steve, ready to jump should we strike heavily. But the pitch of water and our keeping well toward the middle carried us through the carry proper.

A half-mile below is a bad place known as the Devil's Elbow. A ledge runs out on the left nearly to a mass of rocks, through which there is no passing. Directly across this opening is a second ledge, between which and the rocks a canoe must shoot into clear water. We made the opening all right, but our canoe was heavy and slow and hung up squarely on the lower ledge. Seizing the setting pole, Steve caught the stem, but no canoe could live across such a current. The water poured over the gunwale, threatening instant destruction. It was a critical moment. Letting the stern sweep on to the rocks, he jumped. The canoe, thus lightened, bumped across into deep water. At the same time I stepped out on to the ledge and freed the bow. Thus end for end we ran some five miles of heavy rapids to Urusaskis Lake, where, wet and tired, we made a late camp.

Setting out the next morning in a dismal drizzle, we arrived at noon in a pouring rain, at Depot Farm, Long Lake. There being no signs of a let up, we accepted the hospitality of Mr. Harvey and passed a very pleasant afternoon and night in his stuffy kitchen. Toward evening the cry of "a white deer" from young Johnnie brought us all to the door. Sure enough, among several deer feeding along the further shore of the river, was a white doe. I should have said a light-colored one, although Mr. Harvey declared that white deer were sometimes met with in the forest. The temptation was too much for the old man, and getting down his Marlin he sent a couple of balls whistling across the river. The first however, struck the water some distance short, and the second cleared the woods beyond. The deer, a good three-quarters of a mile away, paid little attention to the shooting. After breakfast we photographed the whole family, lined up in front of the cabin. Promising to send them a picture, we said good-bye, and clearing the lake, took up the river once more.

From Depot Farm it is thirty miles to Allagash Falls. There is quick water most of the way, but no rapids. Eating dinner on a high bank overlooking Musquacook Stream, we pushed on, hoping to make the falls that night. There was a good wind at our back, and with one paddle we easily made five miles an hour. A cabin appeared on the right; then another. The river made a wide sweep to the left, and we passed McLennans. We regretted these signs of approaching civilization. They meant that our trip was soon to be of the past. Hurrying clouds and mutterings of thunder roused us. Putting in a paddle, we flew along, past Moirs, past the nine islands, till an increasing current warned us that the falls were not far distant.

To the right of the boom we raced. A few drops of rain splashed on our rubber blanket. "The carry," I shouted, as ahead on the right appeared the steep bank and well-worn path. A dug-out poled by two men passed us going up. "Better take out," they cried. And we did. Too rough and dark to run to the second carry almost at the brink of the falls. Putting on rubber coats, we carried everything up the bank to an old shed. Fearing a rainy night, we hurried supper, finishing as the sun dropped in a cloudless horizon below the dark wall of the forest.

It was a beautiful, clear night, our last on the river. Spreading our blankets, we slept out and slept like tops.

We had a grand run of thirty miles our last day. It rained most of the time, and we wore rubber coats, taking them off only when we ran the Twin Brook and Nigger Brook rapids. The former are the worst on the Allagash below Chase's Carry. The latter, on the Main St. Johns, just below its junction with the Allagash, are the first of six sets, lying above the mouth of the St. Francis. It was grand sport. We had only to dip a paddle occasionally to correct our course, so swift was the current. So high was the water that we were bothered fully as much by choppy waves as by rocks, and we kept rubber blankets spread all day. It was a wild race inside the boom below St. Francis. Only a sharp lookout with a setting pole prevented our being crushed by floating logs.

At Connors we left the river after an eminently successful cruise of over two hundred miles through the grandest hunting and canoeing region in the country. We had come, we had seen and been conquered by the invincible Maine woods, even though we had visited them "in fly time."

PHILIP A. FOWLER.

A New "One-Design" Canoe Class.

Whatever interest in the revival of canoeing was awakened by the meeting of the A. C. A. Executive Committee, last November, and the ensuing discussion over methods of handicapping and similar proposals, has died down and left no results. It is probable now that canoe sailing will this year follow its regular course, which, we say with regret, is by no means upward and onward; the only ray of hope being in the efforts which the A. C. A. regatta committee is directing toward the renewal of the interest in the Meet races. About New York, Lowell and Albany, the old centers of canoe sailing, matters are in a very dull state, with no new boats building and no promise of racing on the part of the old craft.

With the idea of attracting some of the old canoe sailors who have gradually dropped out as the sliding seat has lengthened and the sail plan increased, several New York canoeists have lately decided on building a special type of "one-design" craft, of considerably more beam than the standard canoe, of limited sail and length of slide; and of such size as to be easily handled and housed. The class is intended for general sailing about New York waters, and for racing within itself, no competition with the 16x30 canoes with unlimited rigs and seats being contemplated, as it would be manifestly impossible. The general dimensions and details were decided on by Messrs. W. S. Elliott and Schuyler Schieffelin, of the New York C. C., and Mr. W. J. Stewart, of the Ianthe C. C., and the working out of the design was intrusted to Mr. W. P. Stephens. It was decided to take as small a boat as can be sailed to advantage in New York waters, and at the same time to use as far as possible the successful features of the modern small craft, such as Scarecrow and La Gloria; the dimensions submitted to the designer being 15ft. over all, 12ft. 6 in. l. w. l., under 6 in. draft, 36 in. beam, not over 110 sail area, no limit to drop of board, and deck seat limited to beam of boat, when closed.

The design has been completed, and a contract made for three boats with the St. Lawrence River Skiff, Canoe and Steam Launch Co., of Clayton. We shall publish the lines very shortly, it being the wish of the founders of the class that as many canoes as possible shall be built. While individual preferences differ widely as to details of rig, etc., it has been agreed that the three boats shall be identical in all respects, and it is hoped that others who may build will adhere to the designs throughout, in order that the class may give some interesting racing, as well as to serve for a handy knockabout canoe.

The dimensions are 15ft. over all; 12ft. 6 in. l. w. l.; fore overhang, 1ft. 6 in; after overhang, 1ft.; beam, 36 in.; draft, 5 in.; freeboard, 10 in.; sheer, bow 7 in, stern 4 1-2 in; crown of deck, 3 in. The two bulkheads will be 4ft. 6 in. apart, one forward of the centerboard trunk and one just under the sliding seat; the well opening being 4ft. long and 20 in. wide, with pointed flaring coaming forward. The centerboard will be of 3-16 brass, weighing about 40lbs., and dropping, if desired, to an almost vertical position. The bottom of keel will be a fair rocker from end to end, without deadwood, the board and rudder being depended on for lateral resistance. The deck seat, drop rudder and deck tiller will be of the usual canoe types, the slide of seat being 36 in. long.

The sail plan will include two canoe sails, each with one batten, of the cut so long used by Mr. Vaux, a short mast and hoisting yard. The disposition of man and board, and the absence of after deadwood, makes a comparatively small mizzen a necess ty, and the proportions will be about 75 and 35. The sails will be of Union silk and the spars will be hollow; the masts, made by the St. Lawrence Co., being hollowed and glued up, after which they are spirally wound with canvas, two layers laid in paint and rubbed down. The hulls will be smooth-built, with a new seam just introduced by the company, the edges of each plank being scored with a groove in which a thread of cotton is laid by a special tool. When a plank is worked, the strand of cotton is laid in the groove in the upper edge, the open groove in the lower edge fitting over the cotton in the adjoining plank, previously set. The seam makes a smooth, tight joint, and the tests already made promise excellent results in continued use. The upper strake and decks will be of Spanish cedar, and the boats will be varnished throughout. Two deck hatches will give access to the compartments. It is quite probable that other boats will be built to the class about New York, enough to make some interesting racing in what promises to be an otherwise dull season.

The Red Dragon C. C. Smoker.

The inclosed programme, with its outrageous disregard for the proper names of the performers, is only part of a long night's

sport, which was enjoyed by the Red Dragons at their midwinter camp-fire on Feb. 23.

The new enertainment committee—we always have a new entertainment committee after the annual meeting, who immediately proceed to distinguish themselves, or extinguish themselves, by giving the annual winter camp-fire—I say the new entertainment committee did themselves proud. We haven't had such a smoker in a long while. From 8 P. M., when the Dragon's spike tail and forked tongue began to waggle with glee, till long after two in the morning, when that noble, long-suffering beast, who ever grasps the fiery paddle in his forward flippers, was lulled to deep slumber by the classic air "As long as the beer goes round the Sons of the Dragon made merry.

The minstrel part was pretty good, especially when Pat, our new bull-terrier pup, took a fancy to Fleischmann's red stocking. The Living Pictures were masterly examples of scenic art; but the farce-comedy, which almost turned to a tragedy (again the new bull-terrier pup), was out of sight.

Be it known to all, the Sons of the Dragon play tennis, some of them; some play at football, and some, alas! shoot the janitor's chickens. Therefore, a large field of sport is opened up; and as four champions of these manly recreations, including canoeing, loomed up on the improvised stage, to be afterward thrown out the window (the stage, not the champions), and began to sing of their own powers, the audience rose en masse and cheered till they scared the aforementioned bull-terrier pup out of the room. Some more pictures, all more or less living, came next; and then the farce-vaudeville-tragedy-comedy-drama-grand-bouffe-opera-roof-garden performance began to slow music.

Description is impossible; it was out of sight, and will be forever; for was it not for one night only?

After it was over, the stage was slipped through the forward hawsehole out into the cold night air, and some boxing came off. Then some more singing and boxing, and then the worst singer in the A. C. A. had to get up and do his little part. This made most of the audience very thirsty, and what follows is another story, as Kipling has it.

Skating has been very good on the Delaware for nearly four weeks past, but it was at its best on the night of Feb. 23.

M. D. WILT.

(We regret that we cannot reproduce the programme.)

Canoeing at Santa Barbara.

A correspondent writes to know whether a canoe yawl or smal sailboat can be used to advantage at Santa Barbara, Cal., and if so, whether there is any builder near at hand. Possibly some of our readers can give the information.

12. Sea Cliff, L. I. Sound.
14. Larchmont schooner race, L. I. Sound.

The news of the week includes three important events, the illness of Mr. N. G. Herreshoff, the selection of a material—aluminum bronze—for the skin of the Cup defender, and the promise of an international contest in small yachts.

The illness of the designer and builder of the new defender is at best a very serious matter at the present time, as all work on the Herreshoff boats is done under his immediate direction; and even in the case of the speediest convalescence which can be looked for, and the absence of the after-effects which follow the grip, the work must suffer more or less delay.

Mr. Herreshoff has undoubtedly been under severe nervous strain in dealing with the many details of model, construction and rig of the new boat in addition to other similar work, and at the same time he has exposed himself to the severe weather of last month, falling into the icy water when the Eugenia was launched, and being outdoors during the long operation of casting the new keel. As a result, he has been for some days prostrated with the grip, and is now very ill, from all accounts, with typhoid fever; the disease which resulted fatally to Mr. Burgess and Mr. George A. Stewart. With a splendid constitution to help him, there is no reason to anticipate such a result in Mr. Herreshoff's case; but there is reason to fear that his illness, which is likely to be followed by a long period of convalescence, will be a serious drawback to the proper defense of the Cup.

The sudden and unexpected illness of the principal one of the three or four men on whom the defense of the Cup depends, shows clearly the danger which we have so often commented on, of putting all of one's eggs in one basket; no matter how large and strong this basket may be. The best defense of the Cup cannot be

SAIL PLAN OF "PETIT POUCET."

obtained by the mere lavish expenditure of money, or even through the skill of any one designer; but through the combined efforts of the leading yachtsmen in building many boats and encouraging the best efforts of all designers.

It is quite safe to assume that the new boat represents a distinct advance on Vigilant, quite as much as Mr. Watson has made on Valkyrie II.; but even then her best speed can only be obtained by constant racing with others of her class. On the other hand, there is much about her that is experimental, and the possibility

J. ARTHUR BRAND—From the Yachting World.

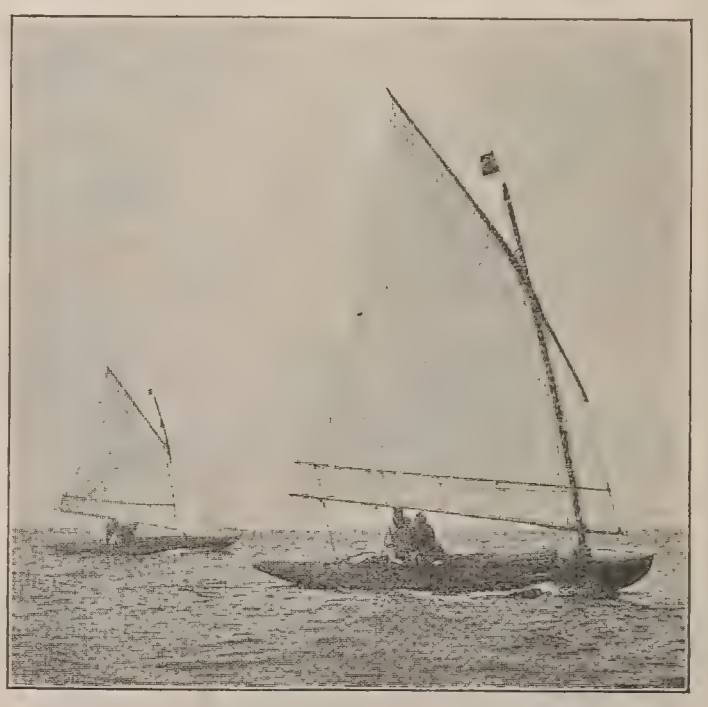
certainly exists that she may turn out a Navohoe or Colonia in place of a Vigilant or Wasp; in which the America's Cup would probably take a sea voyage. If the Cup is held again this year, the first move of the New York Y. C. for its proper defense in the future should be to transfer the racing to a class in which a number of yachts will be built, and in which many of the leading yacht owners will take a direct and personal interest.

At the present time, with the entire defense of the Cup depending on two yachts, first the unnamed and untried syndicate craft, and secondly on Vigilant as a trial boat and last resort, there is dire need of a little patriotic effort on the part of American yachtsmen. The construction of a second new defender is now hardly possible, but a great deal may be done in the way of providing an adequate fleet for the trial and working up of the new boat, if not to provide a substitute in the event of any failure on her part. There should be in the New York Y. C. the spirit and money to take in hand at once both Jubilee and Colonia, making such alterations as are known to be necessary, and having both at the line by the time that Vigilant is ready; and with her and Navahoe serving to tune up the new boat in good season.

While Volunteer can hardly be expected to hold her own with the newer craft, she, too, if properly rigged, would add materially to the interest in the class, and help to keep up that steady and sustained racing which has been the mainstay of Cup defense in the cases of Puritan, Mayflower, Volunteer and Vigilant.

The late completion of purely experimental craft was a marked feature of the Cup defense of 1893; and, though no harm resulted, the lesson of Jubilee, Colonia and Pilgrim should not be unheeded this year. With plenty of boats and plenty of races before the first of September, the chances of success against the new challenger may be easily trebled over those now existing.

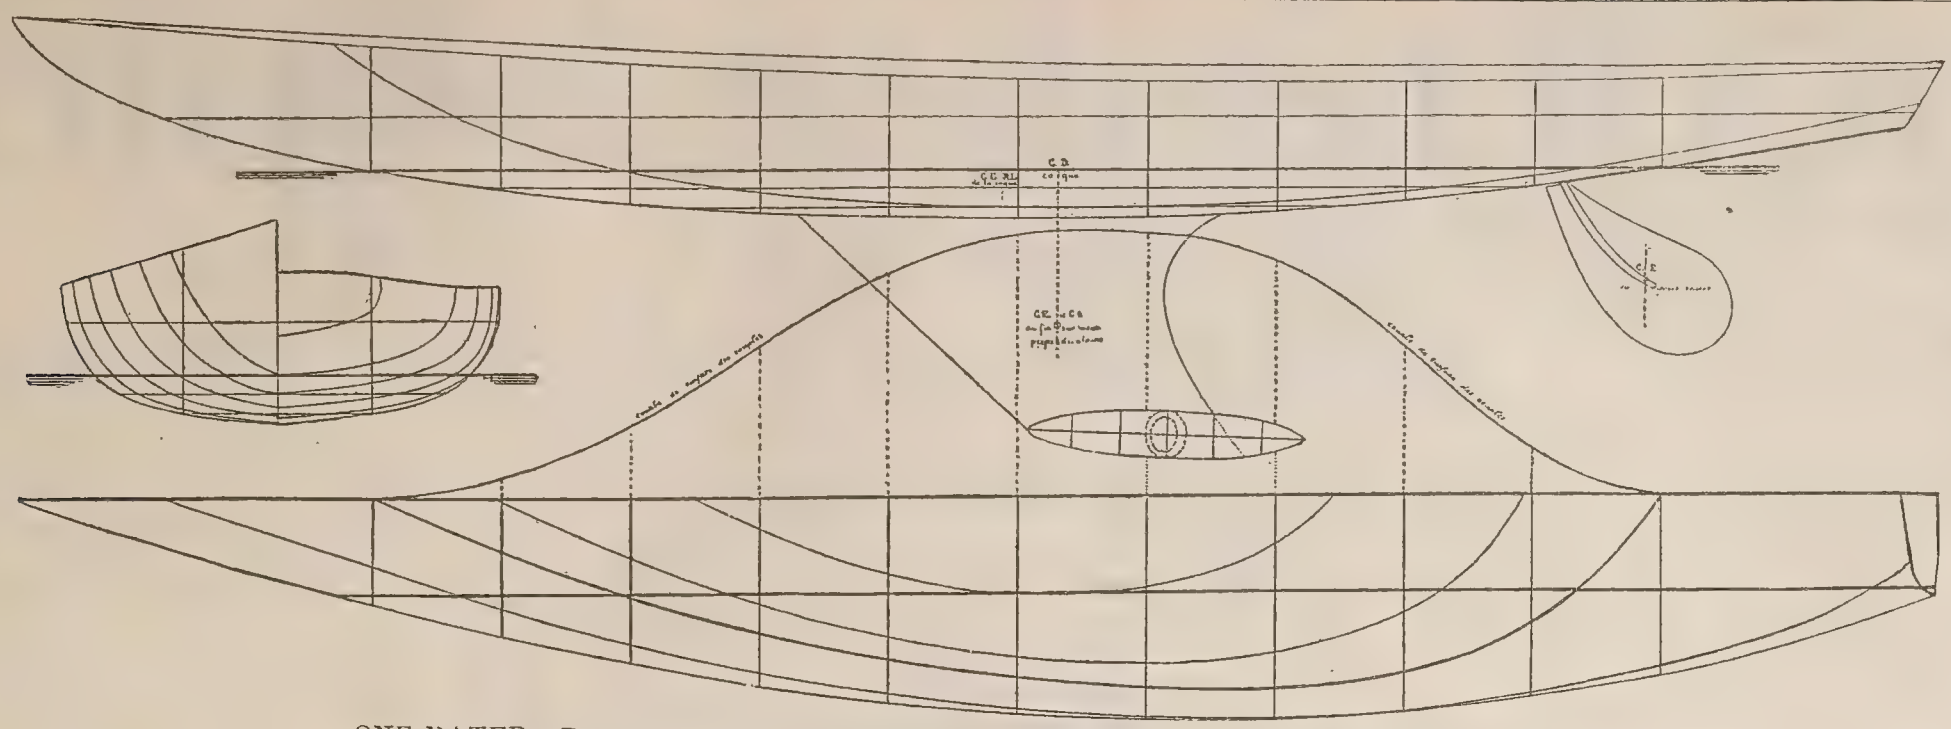
The latest report as to the material of the new boat states that a contract has been made with the Pittsburg Reduction Co., makers of aluminum bronze, an alloy of great strength, containing a evry small percentage of aluminum. According to various estimates, the added strength over Tobin bronze means a gain of at least 4 tons over that metal, or more than by composite construction; while the surface is quite as good as that of Tobin bronze. There is no doubt that the entire range of materials, steel, wood and the different patent alloys, has been carefully studied by the designer of the new defender, and while a week since the indications were strongly in favor of the composite construction, there is good reason to believe now that aluminum bronze has been chosen.



Compared with the racing of real 90-footers, such small craft as the half-raters seem but children's toys; but while even the wealthy yacht owner is able to participate in the 90ft. racing, only through a binocular from a club steamer, the small class is within the reach of all; and the racing may be made quite as keen and exciting. We hope that the proposed races may be arranged, and that Spruce III. may be seen here next fall, with a suitable fleet of boats to meet her. It must not be forgotten that one of the fastest boats in the half-rating class on the Sulent was the Herreshoff Wee Win.

In the course of some discourteous remarks concerning the Forest and Stream, the Yachting World asserts that we have misrepresented the feeling of British yachtsmen over the surrender of the Royal Yacht Squadron.

While we are aware that one swallow does not make a summer, we cannot forbear quoting the following from a letter received by the same steamer as the journal mentioned. The writer is an English yachtsman and Corinthian sailor. "I must congratulate you over the line you have taken over the Cup negotiation. It passes my comprehension to divine how the R. Y. S. could have let us down so heavily as it has over the whole business. There is no doubt that Dunraven is very popular, but a more complete back out of a distinctly tenable and very justifiable position on the part of the R. Y. S. cannot be imagined, and I think your people must hug themselves over the very decided victory in tactics they have gained over slow-witted John Bull."



A Chance for Small Class Racing.

What promise of sport there is for the coming season is confined mainly to the latter part, after the three or four largest cutters have been set going in earnest. As for general class racing in the medium sizes, it will probably be limited to a few schooners, and,

"SPRUCE III."—From the Yachting World.

as last year, to Wasp, Gloriana, Queen Mab, Minerva and Gossoon. With no yachts building and no general interest, the racing promises to be anything but exciting and interesting until the final Cup contests come off. Within the past week, however, there has been a development in an entirely new direction which promises plenty of keen and exciting sport, and of a sort within the

ONE RATER.—PETIT POUCET.—Designed and Built by C. Sibbick, 1894.—From Le Yacht.

reach of all yachtsmen, if the necessary arrangements can be carried out.

A letter has been received, addressed to several New York canoeists, from Mr. W. W. Howard, the American canoeist, who has been in England for nearly a year, stating that Mr. J. Arthur Brand, owner of the ½ rater Spruce III., would like to visit this country next summer with his boat, providing that a challenge cup could be arranged for, and some open races for the class. The gentlemen to whom the letter was addressed felt that while there were some difficulties in the way, such a visit and trial would be most important, not only in filling out a dull season, but possibly in after results, of establishing a new racing class about New York. As the matter is of interest to yachtsmen as well as canoeists, it was broached at the meeting of the Seawanhaka Cor. Y. C., which was held the same evening, and met with a most emphatic indorsement from the members present. The regatta committee was empowered to make any arrangements necesssary for a race or series of races, and sufficient money for the purchase of a challenge cup was immediately subscribed. With this auspicious indorsement, and the support it is certain to receive from other yacht clubs and the canoeists, there is good reason to hope that the project may be carried out successfully.

Mr. J. Arthur Brand is a well-known sailor of small craft in England, having owned many boats, canoes, canoe yawls and 1-2 raters, and won many prizes. His first racing was done while at Oxford, from 1885 to 1888, in the local type of canoe yawls on the Upper Thames, and also on the South Coast. He was one of five who, in 1889, established the very successful Minima Yacht Club, to which much of the present popularity of the small rating classes is due. He owned for some years the 8-ton yawl Cornavia, and for the past three seasons has owned the 20-ton cutter Tina, which he uses for cruising, and as a tender to his racing boat. He is the son of John Alexander Brand, Comptroller, and one of the Lieutenants of the City of London, and is by profession an architect. He is a member of the Roy, Southampton, Roy, Corinthian, Start Bay and Minima yacht clubs, the Oxford University, Thames, Thames Valley, Teign Corinthian and Dart Boat sailing clubs, and the British Canoe Association, as well as an associate of the Society of Naval Architects.

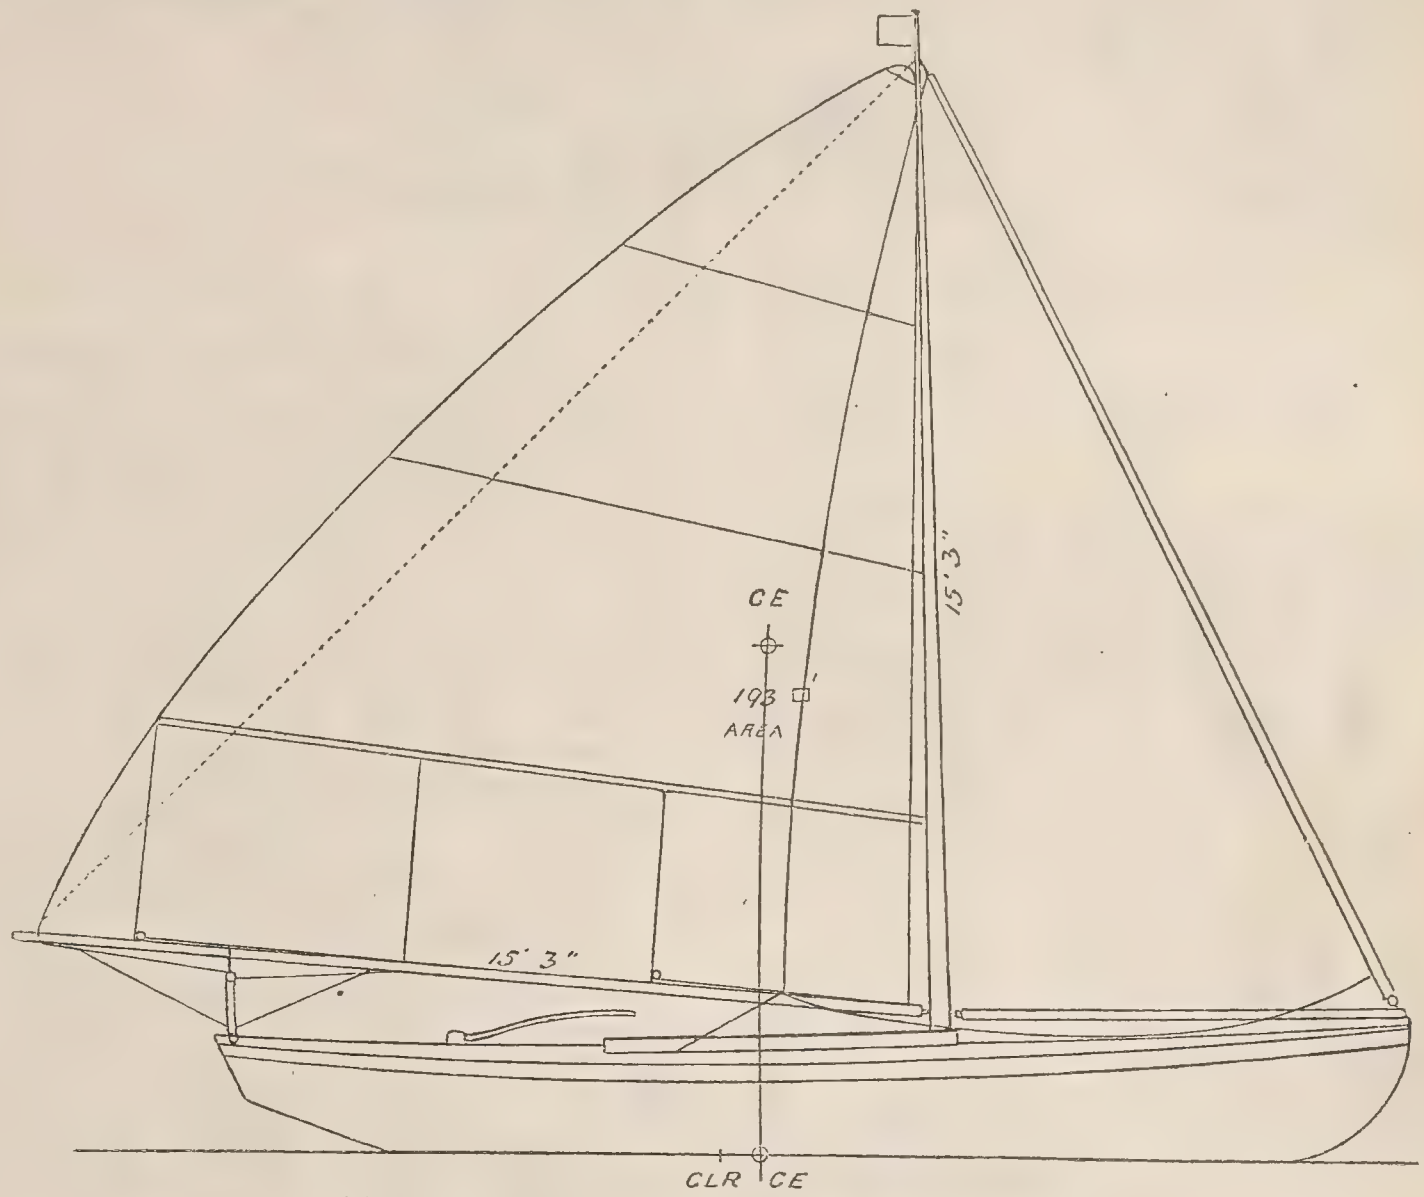
The 1-2 rating class, to which Spruce III. belongs, is measured by the Y. R. A. rule, $\frac{L. W. L. \times S. A.}{6,000}$ = Rating; the water line now being measured with crew on board. Spruce III. is 15ft 6 in. in l. w. l., about 25ft. over all, and 5ft. 6 in beam, we believe of the general type of Scarecrow in model, but with a loaded centerboard of 300lbs. in place of a bulb fin; the latter having been tried in 1893 on Spruce II., and discarded with good results. She was built by Henry Smith, of Oxford, the builder of many successful small racers. She was first rigged with one balance lug, with a total area of 190 sq. ft., as allowed by the rule; but later she was changed, with good results, to the sloop rig, but with lug mainsail. She has raced on the Thames, the Solent, and on the South Coast, and at the meet of the B. C. A., scoring a large number of wins. As illustrative of the general type of small rater, we reproduce from Le Yacht the accompanying designs of a boat of one ton by the French rule or a little smaller than the English 1 rater, but designed and built by Sibbick, of Cowes, one of the leading builders of these diminutive craft. The design shows the latest development of the bulb fin; but both beam and draft are somewhat reduced, as girth is measured in the French rule. The Petit-Poucet, which, by the way, was built complete in but two weeks, is 17ft. l. w. l., 26ft. 9 in. over all, 6ft, beam, and has about 300 sq. ft. of sail.

In considering the possibility of arranging suitable races for an English half-rater, the first point which suggests itself is that there is not a boat in this country that is fitted to make a fair match with one. There is no racing class of such boats, and really no boats of 15ft. l. w. l. that can be classed as other than cruisers. The best of the boats of this size, both in model and construction, are those built within two years from the designs of La Gloria and Scarecrow, as published in the Forest and Stream; but even these would measure over 1-2 rating, as rigged for sailing in this country; and the lightest of them are not of racing build, or fit to compete with such a craft as Spruce III. To make certain of any good racing, it would be necessary to build a lot of boats; and indeed the prime reason for fosteringthe scheme would be the creation of such a new class. In doing this, the question of rules arises at once, the Y. R. A. rule is not used and only imperfectly understood in this country; which fact would make it difficult to establish a class exclusively under it.

What is quite practicable, however, is the establishment of a class of 15ft. sailing length; practically the same thing, as Spruce III. could readily adjust her measurements exactly to this limit; say 15ft. 6in l. w. l. and 200 ft. of sail. Such a class limit would be better understood from the start here, and we can see no reason why it should be any less advantageous to the visitor than the Y. R. A. class. Of course it would be necessary, in these small boats, to measure after the Y. R. A. method, with crew aboard, and some special provision outside the regular Seawanhaka rule might be necessary for the measurement of the odd-shaped rigs; but these details would be easy of adjustment. We have no doubt that if Mr. Brand is willing to come out to meet such new boats as may be built, and under such conditions as these, that there will be plenty of races, good prizes, and a number of boats to meet him. The new class is one that is likely to attract some of the old canoemen, and also men who have always sailed much larger boats; the experiment would call for comparatively little money, and we hope that nothing will occur to prevent its trial.

YACHT NEWS NOTES.

Gitana, schr., P. W. Clement, arrived at Charleston from Boston, on Feb. 26, and sailed on March 1.



The new courses of the Harlem Y. C. are: From an imaginary line between Belden Point Dock and Old Tom Buoy to and around the stakeboat off Throgg's Neck to Matinnicock Buoy and back to Belden Point Dock, about twenty nautical miles. Course No. 2—From Belden Point direct to Matinnicock Point Buoy and return, about sixteen nautical miles. Course No. 3—From Belden Point Dock to Throgg's Neck, then to the Old Hen Buoy, and return to Belden Point, about twelve nautical miles.

Coronet schr., Messrs. James, sailed from New York for the West Indies on Feb. 27.

Wanda, steam yacht, H. S. Henry, was beached on March 1, at Jacksonville, having sprung a leak.

Amerita will be the name of the new Smith schooner for Mr. Brokaw.

A steel steam yacht, the first ever built in Chicago, is now under construction by George Warrington for H. F. Balch, of Minneapolis, a wealthy contractor. The yacht, which will be named "New Alcyone," will be 135ft. over all, 17ft. beam, 11ft. depth and 8ft. draft. Her engines are triple expansion, 12, 19 and 32x18 in., with two water-tube boilers, the propeller being 6ft. 6 in. in diameter. She will be schooner rigged. The steel will be made in Chicago, and the yacht was designed by Mr. Warrington. She will be fitted with an electric plant for lighting, ventilating, ice-making and even cooking. The interior will be elaborately furnished.

SAIL PLAN OF THAMES "ONE DESIGN" BOAT.

It is probable that Capt. Wm. Canfield, of Valkyrie II., who will sail Valkyrie III. in this country next fall, will be assisted by Capt. Sycamore, the experienced skipper of Corsair, Vendetta and Carina.

The Columbia and Lincoln Park yacht clubs, of Chicago, will consolidate this spring, locating in the boathouse of the former

Messrs. Coursens & Pratt, the Boston sailmakers, have issued their usual artistic calendar this year, the picture showing the start of Vigilant and Valkyrie in one of the Cup races of 1893.

Bamboo is not wood, but dried grass, and not dutiable. These two points were laid down yesterday by Judge Coxe in the United States Circuit Court of Appeals in reviewing two decisions made by the General Board of Appraisers. The China and Japan Trading Company had been compelled to pay duty on a large consignment of umbrellas, with bamboo handles and stems, which were assessed as woodwork. Experts testified that bamboo was a species of dried grass and Judge Coxe took the same view.—N. Y. TIMES.

Alfred Van Cott, of Glenmore Landing, L. I, is building a catboat of his own design, similar to the noted Onaway, owned by Mr. S. C. Peril, Sea Cliff, Y. C. The new boat is 22ft. 6 in. l. w. l., and 22 in draft, with as great power as Onaway, but finer lines aft. The construction is excellent, and the interior will be handsomely finished in mahogany.

Algonquin, steamer, J. C. Watson, sailed on Feb. 23, from Nassau for Havana.

The New York Herald claims that its competition for a name for the Cup defender has brought in over 300,000 coupons, and that over 14,000 names have been printed.

The Thames "One-Design" Class.

We are indebted to the Field for the accompanying sail plan of the boat designed by Mr. Linton Hope for the new Thames class, the design of which we published on Feb. 9. The following specifications are from The Yachtsman:

Frame—Keel, American elm, 6in. wide x 3in. deep amidships, with 1-2in. back rabbet. Tapered fore and aft to following sizes, as shown in sheer draught:

At. No. 1 mould—4in. wide x 2 1-4in. deep, 1-2in. back rabbet.

At No. 4 mould—5in. wide x 2in. deep, 1-2in. back rabbet.

At transom—4in. wide x 1 1-4in. deep, 1-2in. back rabbet.

Timbers, 3-8in. x 5-8in.—6in. to center, of American elm steamed.

Stem—3in. x 2in. at deck, 1 1-4 outside rabbet, 3in. x 3in. at scarph.

Apron, 1 1-2in. thick, and 1ft. below deck.

Breast-hook, 1in. oak crook, 9in. arms, 3in. at throat. Floor timbers to be fitted at each section shown on sheer draught—to be 1in. oak, 1 1-2in. deep at throat, and to be fitted to plank. To be 2ft. each side center line amidships at Nos. 4 to 7 sections—No. 3 and No. 8 sections to be only 1ft. 6in. from center line, and No. 2 section 1ft. from center line. Those floors abreast of center case to be checked 3-8in. into side of case before case is put in and dovetailed; all other floors to run right across and to be good grown crooks.

Transom to be 1in. mahogany, fastened to stern knee with 3 stout through fasteners. Stern knee to be 1 1-4 in. oak crook, 2 1-2in. deep at throat; upper arm to run up to deck, and lower arm to be 1ft. long and fastened to keel same as to transom, and well fitted.

Quarter knees and lodging knees abreast of forward bulkhead and aft bulkhead to be 3-4in. oak, 2in. deep at throat, 8in. arms.

Rudder trunk to be 3in. x 4in. Kowrie pine, bored to take 1 1-4in. rudder neck, and fitted with a rudder case as shown in sheer draught. Case to be rabbetted 3-4in. into aft side of trunk, and screwed every 2in. from each side.

Sides of case to be 3-4in. of pine, screwed up from keel with 3in. brass screws every 4in. and fitted same as center case.

Center-plate case—Fore side of fore stanchion aft of fore side stem at deck, 8ft. 6in.; aft side of stanchion, aft of fore side stem at deck, 13ft. 10in.; length of slot, 5ft. 1in.; width, 3-4in.; deptn of fore end of case from under side keel, 1ft. 6 1-2 in.

Case to be shaped to fit plate as shown in sheer draught, and to be of 1in. yellow pine, well fitted and rabbetted 1-8in. into keel.

To be screwed from under side of keel with 4in.x12g. stout, brass screws, well put in, and 6in. apart, and bedded in with red and white lead. Stanchions to be 3-4in. x 1 1-2in. oak, and side of case to be through fastened every 2in. on each stanchion.

The hole for the center-plate bolt to be 6in. from fore side of fore stanchion, and 4 1-2 in. above under side keel.

Gunwales to be 1 1-2 in. x 1in. American elm.

Deck beams to be 3-4 in. spruce, 1ft. apart, and 3in. deep amidships, and 2in. at gunwale, into which they must be checked, and skew nailed. Carlines of cock-pit to be 1in. x 2in. spruce, and 1-2 beams to be 3-4in. spruce, 2in. deep, and 1ft. apart.

Plank (ribbon carvel built)—3-8in. picked cedar to be fastened every 3in. 10 strakes a side. Top strake to be 1-2in., with 1-2in. hollow and gold line. Ribbons, 3-4in. x 3-8in. of Kowrie pine.

Deck, 3-8in. matchboard (beads underneath) of first quality and clear of bad knots, to be well fastened, and to be covered with stout unbleached calico, well painted and rubbed down, and to be laid on a coat of white lead and varnish so as to stick to deck.

Rubbing streak, 3-4in. x 3-8in. American elm, bilge pieces, 1in. x 3-4in. x 4ft. long, tapered at ends.

Combings to be 1-2in. American elm; to be 3in. high forward, and 2in. high aft.

Side benches and thwart to be 3-4in. mahogany; side benches, 9in. wide; thwart, 7 1-2in. wide; space between side bench and side of boats to be filled in with 3-8in. mahogany.

Bulkheads to be 3-4in. of pine, all joints matched and well fitted, and bedded with red and white lead; and each to have a watertight door (rubber round inside of landings and wedge buttons).

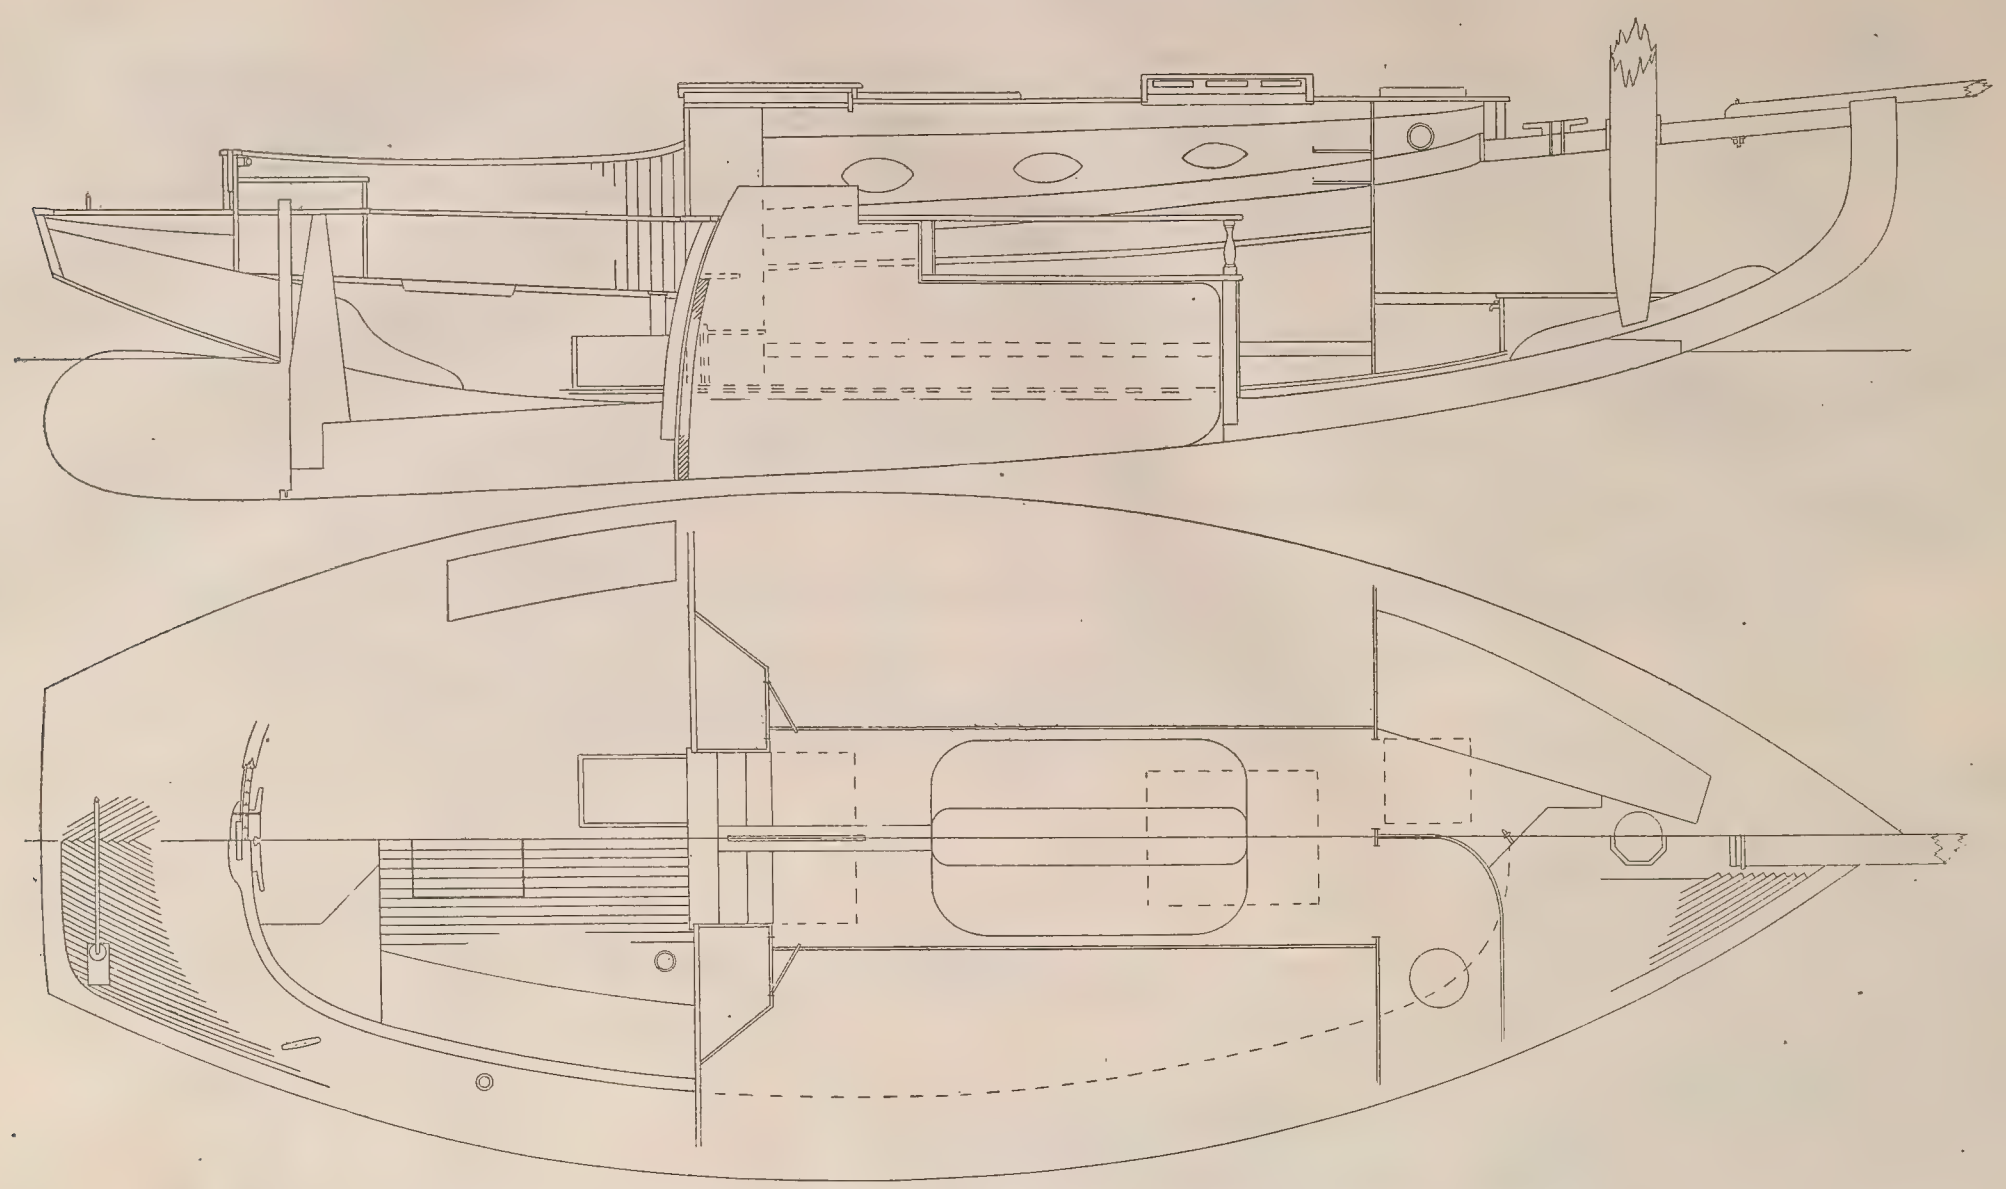
Cock-pit floor to be flat and level with l. w. l. on sheer draught, of 1-2in. spruce, with 3-4in. x 2in. bearers every 9in. (to be in easily movable pieces), or fitted up on top of floors in cock-pit.

All fastenings to be copper or metal, and through fastenings of stem scarph to be 3-16in. diam.; those of stern knee to be 1-8in.

Iron-work—Center-plate to be 3-16in. galvanized steel, as shown in sheer draught, and small sheave in end of arm for wire, and center-plate to be hung on a 1-2in. galvanized iron bolt, with rubber and iron washers each side.

Rudder plate to be 1-8in. galvanized steel as shown, with a neck of 1 1-4in. stem pipe and fork of wrought iron 1 1-4 in. wide and 1-4in. thick at end next to neck, well riveted to plates and with a 2in. plug screwed into neck and then riveted. Top of neck to have a 2in. plug fitted same way and with a 3-4in. square for the tiller and nut on top—the whole to be galvanized.

Tiller to be 3-4in. galvanized octagon bar with square hole to fit rudder head, of size and shape as shown.



Half-inch galvanized iron main sheet horse full width of transom.

One eighth of an inch galvanized keel band and 1-4in. ditto stem band, fastened with brass screws.

One double galvanized iron gooseneck band and goosenecks for main and spinnaker booms.

One pair shroud plates, galvanized iron.

Spars—Mast to be a good spruce spar, with as little of the outside

CRUISING CAPE CAT "CLIO"—Designed and built by the Cape Cod Agency, 1895.

taken off as possible; 3in. dia. at deck and 15ft. 6in. deck to cranse iron; dia. at head 2in.

Boom, same as mast—15ft. 3in. pin of gooseneck to hole; 2 1-2in. dia. at sheet, brass ferrule on end next gooseneck.

Roller, 1 3-4in. dia. of yellow pine 17ft. 6in., well screwed together annd with 1-4in. hole through center, brass ferrules on ends and short length of 1-4in. brass tube in each end (1in. long), 4in. dia. brass flange on lower end (1-8in. thick), soldered to bottom ferrule.

Spinnaker boom of yellow pine 1 1-2 dia. 7ft. 6in., brass ferrule on end next gooseneck, and chock to take roller on fore end.

Reef batten of yellow pine, 1 1-2in. x 3-4in. ⊂ section 13ft. 6in. long with small pair brass or galvanized iron jaws put on over

5-16in. American elm, 10ft. and 6ft. long.

Sheet.—Two 2 1-2in. single rope strop, one on a 3ft. wire span on boom just over

sheave in cranse and one 2in. single block

2in. single iron block.

Reef Gear.—5 1 1-2in. single rope strop, and one 1 1-2 in. double ditto.

Tack of Foresail.—Two small bull's eyes, one to be seized to outer end of spinnaker boom, and the other to have a brass strop screwed to breast hook.

Center-plate fall, two 2in. flat iron blocks.

All cleats, etc., required, and leads for jib sheet, etc., American elm.

Standing Rigging—Shrouds, 3-4in. circumference best wire rope, with thimbles and lanyards.

Foresail wire, 3-4in. circumference best flexible steel wire

Running Rigging—

Main Sheet	1-4in.	cir.	best	yacht manilla

Sundries—1 pair 9ft. ash oars and gun metal crutches; 1 gun metal boat hook, 1 1-2lb. galvanized anchor; 1 1-2 fathom 1 1-2in. manilla cable; 1 fairlead on stem, and a large cleat on deck for moorings.

Limited Crews in the Small Classes.

Georgetown. Mass., Feb. 24.—Editor Forest and Stream: I would like to express, through the columns of the Forest and Stream, an idea which the "one design" racers and "knockabouts" have suggested. I think there are boat sailers, who, like myself, desire to race, but do not care for a racing machine that is good for nothing else, as in the racing class; nor are they willing to accept the restrictions on model as in the "knockabout" class.

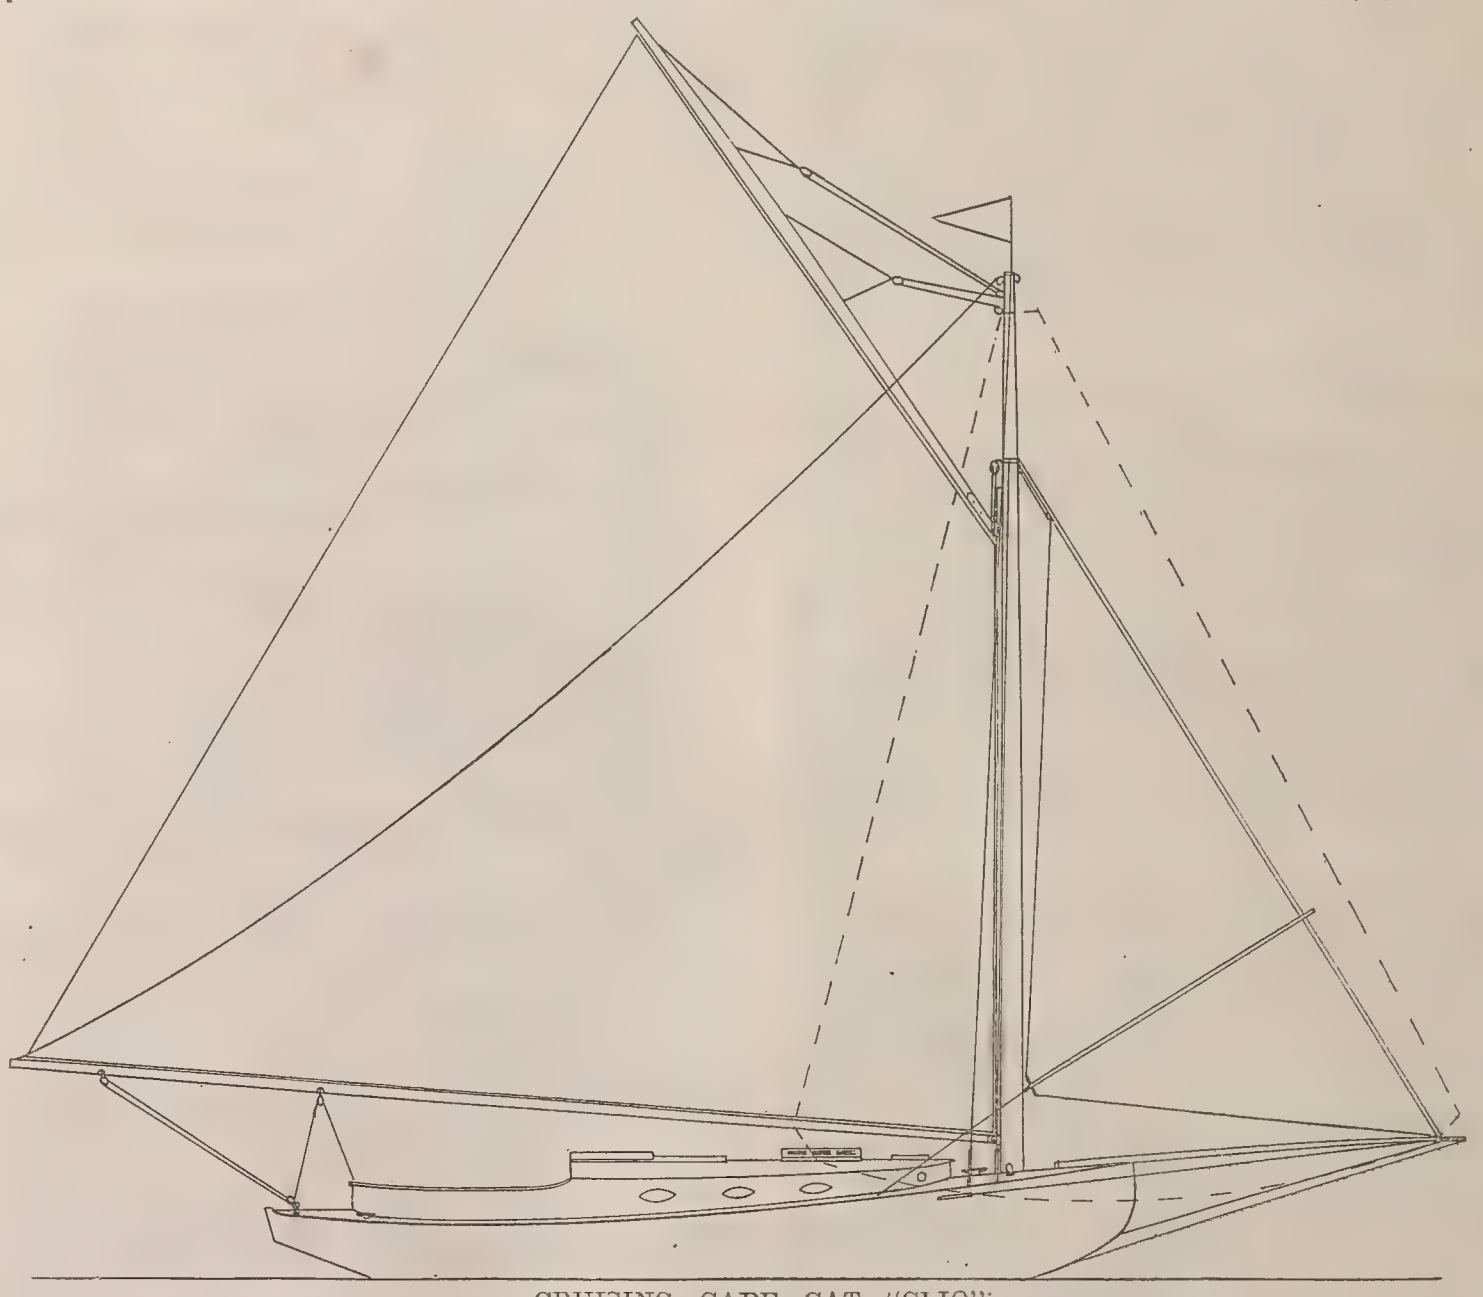
Now, I think the most objectionable feature in the racers is that they are so over-rigged that they cannot be sailed in ordinary use with safety or comfort without as many men as are carried in a race, which is neither pleasant nor convenient. I am speaking of boats 21ft. and under.

Nor, if, as in the "knockabouts," the crew were limited to three men in the 21ft. and two in., say the 17ft. classes, the sail plans would have to be reduced to reasonable size; and, with some restrictions against fin keels, an honest, useful craft might be raced with a show of success. What I would like to see is a class of about 16 or 17ft. water line with a crew of two; there are boats enough of this size in this vicinity to make interesting racing if a rule can be devised that would enable a boat with a reasonable amount of sail in proportion to its stability, to compete with a chance of success. I would like to hear the views of other boat sailers on this subject. W. F. NASON.

(We have long contended for the limitation of crews, and to a comparatively small number, and we are heartily in sympathy with our correspondent's suggestions. We shall be glad to hear from others in the East who are interested in the matter, one way or the other.)

Clio, A Cruising "Caper."

In common with all other types of yachts, the Cape Cod catboat is rapidly changing under the influence of modern theories as to full waterlines and long ends; and it is impossible to predict what the end may be. From the latest developments in the racing cats, such as Cleopatra, it would seem that the machine is not far off, and that the distinctive features of the type as known for the last half-dozen years must soon disappear altogether. At the same time, there still remains the cruising variety of the type, which thus far, at least, has been helped more than it has been harmed by the adoption of the new ideas. The division of the Cape type into two distinct classes, the racing and cruising, is now an accomplished fact; it only remains to be seen whether the course of development will follow the usual line, the racing craft becoming too elaborate and perfect for general use, and dropping off to a mere handful of boats; while the crusing class is at the same time spoiled by the over-predominance of racing features.



The cruising Caper of the present time is most certainly an excellent craft, the best that has yet been produced on a draft of under three feet, both as regards safety, comfort, speed and general hardiness; and to this class belongs the boat here illustrated, through the kindness of Mr. V. D. Bacon, of the Cape Cod Yacht Agency. The boat was designed by him, and is now building, the order being for a cruising boat of 25ft. l. w. l., and not over 30-in. draft, with all the room possible.

She is for a member of the Plymouth Y. C., and is 33ft. over all and 25ft. l. w. l., with 3ft. 9-in. overhang forward and 4ft. 1 in. aft. Her beam is 12ft. draft, 2ft. 6-in. without board, and least freeboard 2ft. The cabin is 12ft. 6 in. long, with 5ft. head room. The cabin transoms make up four large berths, the two after ones being only 6 in. narrower than the average double bed. On each side of the companionway are clothes lockers, of full height of the cabin, with shelves back of them; while on each side, just under the deck, are long shelves, running the full length of the cabin. The table leaves are hinged in the usual way to the centerboard trunk, on which are racks for glasses. Two large drawers form the lower step of the companion ladder, on each side, pulling out on to the cabin floor, for ice and stores. Beneath the deck abaft the cockpit are two water-tanks holding a half-barrel each, piped into cabin and forecastle.

The toilet room has a Sands W. C. Forward is a good forecastle, with one berth, galley, china racks and shelves, etc.

The cockpit is, of course, water-tight, and is quite roomy, with movable seats; in the floor is a water-tight hatch, giving stowage room for anchor, etc., while under the wheel box are two large boatswain's lockers. The boat steers with a 24-in. wheel.

The sail plan is the "cat sloop," mainsail 900 sq. ft., jib 170 sq. ft., with one light headsail for use as balloon jib or spinaker. There are two shrouds on each side, one to the hounds and one, with a spreader, to the truck. The patent sail hoist is used, with Babbit blocks. The construction is thoroughly strong, with due regard to economy of weight, but no attempt at racing build. The cost will be well inside of $1,500, depending on fittings and finish. Mr. Bacon informs us that a boat of this general type, but adapted in size and model to the new Larchmont 34ft. class, with pole-masted cutter rig, can be turned out for $2,500 for the best materials and a good but plain finish; and for more elaborate fittings well inside of $3,000.

CRUISING CAPE CAT "CLIO".

New Yachting Terms.

Editor Forest and Stream: As to the word "widening" proposed by Amateur as a new yachting word applied to the wind, it is quite as good as "narrowing." But it reminds me of an old boatman who once told me that his cranky sloop sailed a good deal better since she had been "widthened." How's that?—K.

Seawanhaka Cor. Y. C.

The regular meeting of the Seawanhaka Cor. Y. C. was held on Feb. 26, with Com. Benedict in the chair. The regatta committee, through Messrs. Cromwell and Wetmore, presented a very full report of the recent conference of Long Island Sound clubs, and recommended that the S. C. Y. C. should lend its aid to the movement. A resolution was passed giving the regatta committee full power to represent the club in future meetings of the conference.

The committee also recommended that, as the date originally set for the annual regatta was claimed by the Douglaston Y. C., which latter club could only make a change by an amendment to its constitution, the date of the Seawanhaka Cor. regatta be changed to June 24, in place of June 22; the recommendation being adopted.

A letter was read, as given in detail elsewhere, relating to a possible visit from Mr. J. Arthur Brand, of London, with his half-rater, Spruce III. The idea of such racing was warmly received by the club, and the regatta committee was given power to provide prizes and arrange conditions. After the meeting the necessary funds for a cup were quickly subscribed.

A motion was made and carried to appoint a special committee to confer with other clubs concerning the adoption of the closing of the racing season, of a uniform system of classification by sailing length, as recently adopted by the New York Y. C., as well as any changes of sailing rules that may be deemed necessary. The following members were elected to the committee: W. P. Stephens A. Cass Canfield, Oliver Cromwell, L. F. d'Oremieulx and John Hyslop.

The Mediterranean Regattas.

The first race of the Mediterranean regattas was sailed on Feb. 23, Britannia beating Valkyrie I. by 23 min. in six miles. The second race was sailed on March 1, Britannia beating Corsair and Valkyrie I., while Dacotah won in her class. Ailsa, the new Fife cutter, reached Gibraltar on Feb. 25, after a hard passage across the Bay, in which her copper was damaged. She will repair at Marseilles, but will not be ready before March 6, or later. Lampa, Mr. R. S. Palmer, has arrived at Naples from Gibraltar.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, MARCH 16, 1895.

VOL. XLIV.—No. 11. No. 318 BROADWAY, NEW YORK.

For Subscription and Advertising Rates see Page iv.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order Make orders payable to

FOREST AND STREAM PUB. CO., New York.

THE NEW YORK ZOO BILL.

We are told by the newspapers that Mr. Foley is the leader of one of the political parties in the New York Assembly. At the present time this party happens to be in the minority, and can do little or nothing in the way of initiating legislation. However, free speech is not denied it, and on Mr. Foley, as its leader, falls the agreeable duty of ojecting to everything which may be advocated by a member of the dominant party. Thus it is that Mr. Foley is often on his feet, gesticulating violently, roaring savagely, pounding his desk vigorously and calling on even-handed justice, the goddess of liberty and other mythological characters to come to his aid and help him to foil the wicked plots of the party that he does not lead. Mr. Foley is thus much in evidence on the floor of the Assembly Chamber; in fact—not to put too fine a point on it—Mr. Foley makes frequent exhibitions of himself.
